It is envisaged that all detention and internment camps will be numbered; the number of the camp in which the subject may be found will be entered in spaces 56 - 58.

59 - 60 DISPOSITION OF CASE - two digit code.

As pending cases ("2" in space 55) are closed, "3" will be entered in space 55 and the disposition will be shown in spaces 59 - 60 according to the following code:

1 - Evacuated as a prisoner of war.

31 - Transferred to French authorities.

32 - Transferred to Belgian authorities.

33 - Transferred to Luxembourg authorities.

34 - Transferred to Dutch authorities.

49 - Interned by military authorities.

50 - Released by military authorities without trial.

60 - Tried, acquitted, and released by military authorities.

- Tried, acquitted, and released by French authorities.

62 - Tried, acquitted, and released by Belgian authorities.

63 - Tried, acquitted, and released by Luxembourg authorities.

64 - Tried, acquitted, and released by Dutch authorities.

70 - Tried, convicted, and imprisoned by military authorities.

71 - Tried, convicted, and imprisoned by French authorities.

72 - Tried, convicted, and imprisoned by Belgian authorities.

73 - Tried, convicted, and imprisoned by Luxembourg authorities.

74 - Tried, convicted, and imprisoned by Dutch authorities.

79 - Died during imprisonment.

89 - Reliably reported dead before capture.

91 - Tried, convicted, and executed by French authorities.

92 - Tried, convicted, and executed by Belgian authorities.

93 - Tried, convicted, and executed by Luxembourg authorities.

94 - Tried, convicted, and executed by Dutch authorities.

99 - Tried, convicted, and executed by military authorities.

61 - 65 CASE NUMBERS

It is envisaged that each card, as its subject changes from status "1" to status "2" on being apprehended, will become the primary document is a dossier. This dossier will be assigned a number which will be the number of the case. This number will at that time be entered on the MRU card.

66 - 67 ARRESTING AGENCY - two digit code.

The following code has been established to indicate the agency which arrests the subject individual.

1 - First Army

3 - Third Army

7 - Seventh Army

9 - Ninth Army

11 - First French Army

12 - 12th Army Group

15 - Fifteenth Army

16 - 6th Army Group

21 - 21 Army Group

22 - Communications Zone

25 - 15th Army Group

29 - Russian Armies

31 - French authorities

32 - Belgian authorities

33 - Luxembourg authorities

34 - Dutch authorities

70 - 76 MRU CARD NUMBER

To facilitate the handling of MRU cards, each personality card has been assigned an arbitrary number which is likewise carried by its MRU counterpart. This is a filing aid and has no significance for any office except the MRU office.

80 - DUPLICATE CARDS

Whenever a duplicate MRU card is created for a single personality, because an individual has an alias or is associated with more than one town, the existence of the second card is noted by an asterisk in column 80.

CONFIDENTIAL

PART IV - COUNTERINTELLIGENCE STAFFS AND PERSONNEL

A statement indicating the areas allotted to CI staffs and the resources of CI personnel available in each area.

HEADQUARTERS 12TH ARMY GROUP
COUNTERINTELLIGENCE (CI) DIRECTIVE FOR GERMANY

CHAPTER VIII

COUNTER INTELLIGENCE CORPS

70. GENERAL. Pursuant to the instructions contained herein, personnel of the Counter Intelligence Corps will be administered and operated under the direction of the G-2 (Chief, CIB) of the command to which they are attached, and in accordance with the provisions of letter, Headquarters, European Theater of Operations, file AG 322 OpGB, dated 2 December 1944, subject "Counter Intelligence Corps", which quotes the War Department letter, file AG 322 CIC (31 Oct 44) B-S-B-M, dated 13 November 1944, same subject.

71. STANDARD INSTRUCTIONS.

a. Procurement. Procurement will be effected in accordance with letter, this headquarters, file 200.3 (G-2), dated 9 December 1944, subject "Enlisted Personnel for CIC Detachments".

b. Training. Detachment Commanders are responsible that personnel of their detachments maintain high standards of operational and administrative efficiency.

c. Uniform.

(1) Enlisted personnel of the Counter Intelligence Corps will wear the uniform prescribed for enlisted men of the U.S. Army with or without sleeve insignia of rank, excepting as follows:

(a) Enlisted personnel may wear the enlisted uniform without insignia of rank and with metal "US" insignia on both sides of the shirt collar when actually engaged in interrogation duties at interrogation centers, internment camps, detention facilities and similar installations.

(2) CIC credentials and badges will be carried and CIC armbands will be worn as part of the uniform except when they might jeopardize the safety of the agents or the successful accomplishment of their mission.

d. Vehicles. Vehicles used by CIC personnel will bear no markings identifying them as CIC vehicles. Appropriate steps will be taken to eliminate

CIC identification and substitute therefor markings which will conceal the true assignment of the vehicles. This action will be coordinated with appropriate authorities of the unit to which the detachment is attached.

e. Operations.

(1) Operational Functions.

(a) The operational functions of personnel of the CIC and that personnel which operates under the supervision of CIC personnel are as follows:

1. To arrest any person who constitutes a threat to the security of the Allied armed forces, including leaders of the Nazi Party and affiliated organizations, as directed. (See Chapters V and VI).

2. To investigate cases of espionage, sabotage and subversion.

3. To search buildings, billets and installations which are known to or may contain documents of CI value. The appropriate G-2 or S-2 will be notified at once if documents or articles of intelligence value are found during the search of such premises.

4. To search for documents which the Germans consider important as a basis for creating a new military machine or for the continuation of the Nazi Party.

5. To contact the civil authorities initially with MG, if practicable.

6. To establish informant systems among local persons known to be friendly to the Allied cause in order to procure all possible information of CI interest, particularly that information relating to underground Nazi or anti-Allied activity.

7. To locate and seize enemy sabotage equipment. It will be placed under guard until instructions for disposition thereof have been received from the G-2 of the appropriate Army/Military District, to whom a report will be made describing such equipment in detail.

8. To coordinate with MG in the discovery and collection of any hidden armament, radio transmitters or equipment which have not been surrendered or reported in accordance with MG proclamations, laws, ordinances, notices or orders.

9. To cooperate with MG and PM regarding security requirements involved in marshalling refugees and the screening of refugees for individuals of security interest.

10. To coordinate with MG the establishment of check points for travel security control and to recommend to MG approval or disapproval of requests of applicants for travel permits.

11. To conduct security surveys and make continual security checks for protection against sabotage of military, public and private installations, the continued operation of which is essential to the Allied armed forces.

12. To coordinate with AAA to secure information indicating the dropping of parachute agents.

13. To check, in coordination with MG, the observance by the civil population of all security provisions contained in the proclamations, laws, ordinances, notices and orders issued by MG and to make recommendations to MG for added measures or for improvement in the enforcement thereof.

14. To recommend to MG the removal of unreliable officials. Civil officials will be arrested by CIC without consulting MG only when immediate apprehension is necessary for security reasons.

15. To investigate civilians employed by the Army in capacities which might endanger classified information or equipment.

16. To report all trends of civil dissension to the appropriate G-2 (CIB).

(2) Security of CIC Personnel, Credentials and Records.

(a) Before complete subjugation of conquered German territory, CIC Detachments may billet in town with MG and MP units or bivouac with the CP of the unit to which it is attached. Detachments will not detach small numbers of agents to isolated towns, but will work in these towns during daylight, returning to a secure bivouac at night. CIC armbands will not be worn in GERMANY except when such identification is absolutely necessary, the occasion warrants the risk and their wearing is directed by the Detachment Commander. Detachment Commanders may consider it inadvisable to establish a publicly known CIC office until such time as the most dangerous Nazi elements have been arrested and security control measures have been effectively established in the area. They should be guided in these decisions by consideration of the prevailing counterintelligence situation to the end that members of their commands will not be unduly imperiled and the success of their missions impaired by early publicity of their counterintelligence status.

(b) CIC personnel undertaking missions in forward combat areas will deposit their credentials and badges in their Detachment safe or with the G-2 of their unit and will not carry on their persons any documents or article susceptible of identifying them to the enemy as intelligence personnel in the event of capture. Intelligence material obtained or notes made in the performance of their missions will be destroyed if it appears that capture by the enemy is imminent.

(3) Discovery and Apprehension of Known or Suspect Enemy Agents and Persons Engaging in Subversive Activities.

(a) Persons of this category may come to the attention of CIC in one or more of the following ways:

1. Information furnished by CI staff of this and other headquarters. (See par 8, Chapter I).

2. Identification as enemy agents through interrogation of captured agents.

3. Detection in the act of espionage, sabotage or subversion.

4. Voluntary surrender.

5. Capture of documents or materials disclosing sabotage, espionage or subversive activities.

6. Security screening operations at ports, frontier crossings, MG security check points and other security controls. (See Chapter III).

7. Denunciations.

8. Security raids.

9. Violations of security control ordinances. (See Chapter VI).

(b) Known or suspect enemy agents will be taken into custody and escorted by CIC at such times and under such conditions that the fact of their capture will, whenever possible, be concealed from the public and the local police. (See Chapter VI).

(c) Arrestees will be processed according to the instructions set forth in Chapter VI.

(d) The CIC of each division will insure that all line crossers apprehended by combat troops are delivered by them with the least practicable delay to MP or CIC custody. A short, signed statement of related facts will be obtained from the apprehending troops and will accompany the prisoners.

(4) Civilian Informants.

(a) There are two categories of civilian informants: overt denouncers and covert informers.

1. The minimum record of denunciations will consist of name and address of the denouncer and the denounced, a short synopsis of the information given, and the interrogator's evaluation of the source of the information. These denunciations will be dealt with methodi-

cally, culling out rumors and hearsay information and pursuing specific leads.

2. A system of informants will be developed by CIC within the civilian population. These informants can be paid from confidential funds either for spot information or on a salary basis. A CONFIDENTIAL file will be maintained by CIC in each office giving the name, address and description of each informant. Entries will be made on the records of these informants referring to information in the files which they have furnished.

3.

(b) Reliable members of anti-Nazi groups may be of great informant assistance to CIC Detachments. However, many persons, by reason of self-interest, are expected to pretend membership and participation in such groups. Verification of these representations must be made by referring names to known leaders or members of these organizations and by examination of lists of anti-Nazi persons furnished by this and other headquarters.

(5) Files and Indices.

(a) Files.

3008

1. When sufficiently numerous, files will be separated into the following classifications:

   a. Individual suspects.

   b. Suspect organizations.

   c. Names of informants.

   d. Records of denunciations.

   e. Security controls.

   f. Passes and permits.

   g. Copies of completed Arrest Reports.

(b) Card Index.-

1. Particulars of all suspects, suspect organizations, informants and addresses, will be carded on half sheets of 8 x 10 1/2 paper.

2. Cards relating to individual suspects will record:

   a. Full name (with any aliases), address, occupation and description.

   b. Any details of the case and of action taken which will assist in identification.

   c. Reference to files on the case.

   d. Cross-reference to names of any associated individuals.

3. Cards dealing with organizations, suspect establishments (cafes, etc) will record:

   a. Names and address (addresses)

   b. Brief case history.

   c. Reference to any files dealing with it.

d. Cross reference to individuals connected with it, if not in files.

e. Action taken.

4. Cards relating to informants will record:

a. Full name (with any aliases), address, occupation and description.

b. Reference to files containing any related documents.

c. Unless already noted in files:

(i) How first contacted.

(ii) Estimated reliability.

(iii) Cross reference to any suspects or cases reported by the informant.

(c) Because of the transitory nature of the occupation of the smaller towns by any specific CIC personnel during the advance, the foregoing records must be turned over completely to the CIC personnel relieving the withdrawing Detachment, or, if continued CIC coverage of the town is not planned, the records will be turned over to the CIC in the nearest city permanently occupied by CIC personnel.

(6) Captured Records and Archives. Captured records and archives will be disposed of according to the instructions contained in paragraph 9, j, Chapter I.

(7) Liaison.

(a) Liaison between CI personnel and all Allied CI services is the responsibility of CI staffs. However, members of the CIC will work in closest cooperation with:

1. MG

2. MP and PM personnel

3. SCI personnel

4. SCI/Radio DF personnel

5. Document teams

6. Civil Censorship personnel

7. IPW teams

8. MII teams

9. P & PW personnel

10. Signal security services

11. Attached Allied CI personnel

12. Naval, Air Force, and Com Z personnel

(b) Before undertaking an investigation in any area, representatives of CI agencies will clear with the CIC team responsible for the area.

(8) Scope of Employment of CIC Personnel. CIC personnel will be employed only on tasks involving counterintelligence interest. They will not be employed on combat intelligence missions, routine PW interrogations, black market investigations, nor other work which is properly the function of another agency and which may retard or interfere with their performance of counterintelligence duties. CIC personnel will not be assigned to kitchen police, fatigue, guard, or other duties of a comparable nature.

72. SPECIAL INSTRUCTIONS TO BE IMPLEMENTED IMMEDIATELY.

a. Requirements.

(1) An extensive and flexible CIC organization is required in order to assist in the accomplishment of the CI mission in GERMANY. The strength of the CIC of the 12th Army Group is not presently sufficient to accomplish fully their assigned missions and for that reason, action is now being taken to supplement the present personnel with additional CIC officers and agents from other commands, and to effect a partial reorganization of the 12th Army Group Counter Intelligence Corps.

b. Reorganization. The reorganization will be effected as follows:

(1) A single CIC detachment is being activated consisting of 323 officers and 1100 enlisted men and organized in appropriate teams in accordance with T/O & E 30-500. Personnel will be made available for this organization by the simultaneous inactivation of the following detachments and portions of detachments.

Communications Zone Detachments	611
SHAEF Detachment	14
Hq, 12th Army Group Detachment	245
56 teams, type B-2, from Divisions	560
TOTAL	1,430

(2) The bulk of the detachment (hereinafter called "Occupation Detachment") will consist of 83 teams type B-3, composed of 3 officers and 11 enlisted men. The balance of the detachment will consist of various headquarters teams.

(3) Appropriate type teams will be placed on detached service with Army Group/U.S. Zone headquarters, Army/Military District headquarters, headquarters of the Port Enclave, and to the BERLIN Military District Headquarters in BERLIN. Initially, teams will also be placed on detached service with SHAEF, 6th Army Group and Com Z. Armies/Military Districts will make such distribution of teams to subordinate headquarters as circumstances require.

(4) This reorganization brings about no change in existing detachments attached to headquarters of Armies or Corps but reduces the Division detachments to one team type A-1 and one team type B-1, totaling 2 officers and 5 enlisted men. Detachments remaining with tactical units will accompany them in the event units leave this theater of operations. However, all officer and enlisted CIC personnel who possess particular qualifications of value to CI operations in this theater will be transferred into the Occupation Detachment. The primary mission of Corps and Division detachments in the post-hostilities period will be that of insuring the internal security of headquarters, personnel and material. However, they can be assigned additional CIC missions by Armies/Military Districts in the vicinity of the headquarters to which they are attached if there

is no conflict with their internal security mission and if they can be assembled without delay in the event of a movement of the headquarters to which they are attached. As warranted by future developments, detachments attached to tactical units may be relieved from such attachment and attached to the Occupation Detachment; if so, they would be re-attached to the tactical unit when transfer of the unit from this Theater of Operations appears imminent. Units from which CIC detachments are thus withdrawn will be afforded necessary CI coverage by the CIC personnel responsible for the area in which the unit is located.

c. Implementation.

(1) Upon activation of the Occupation Detachment, Headquarters, ETOUSA, will publish orders transferring personnel from the inactivated detachments and portions of detachments into the Occupation Detachment. Such personnel, in the case of Division detachments, will consist of those officers and men who are best suited for work within GERMANY, especially those who speak European languages. Division detachment personnel affected by such orders will be placed on detached service with the several Armies/Military Districts, which may effect further distribution of personnel to subordinate headquarters.

(2) 12th Army Group CIC Reserve Teams transferred into the Occupation Detachment will be placed on detached service with Armies/Military Districts, Port Enclave Headquarters and BERLIN Military District. Com Z CIC personnel transferred into the Occupation Detachment will be withdrawn from the Communications Zone as rapidly as the situation permits and likewise, placed on detached service with the aforementioned headquarters.

(3) Immediately upon transfer of the personnel from Division detachments to the Occupation Detachment, an appropriate division of organizational and investigative property will be made between the Division detachment and the transferred personnel. The highest ranking officer on the team will be designated Team Commander and will assume responsibility for such property. Each team will receive a number designation from the Commanding Officer of the Occupation Detachment for use thereafter in identifying the team.

d. Administration. The following administrative instructions pertaining to CIC personnel in the 12th Army Group will become effective immediately:

(1) Correspondence dealing with Occupation Detachment administrative matters will be forwarded through CIC channels in the 12th Army Group, except when instructed otherwise by Commanding Officer, Occupation Detachment.

(2) Subject to operational needs, every effort will be made to keep Occupation Detachment teams intact.

(3) Orders transferring Occupation Detachment personnel between Armies/Military Districts will be issued only by this headquarters.

(4) Personnel will not be shifted among teams of the Occupation Detachment except by authority of the Commanding Officer, Occupation Detachment.

(5) Promotions of officers and enlisted men of the Occupation Detachment will be accomplished only at this headquarters. Officers will be promoted upon the recommendation of the G-2 of the headquarters to which they are attached for duty. Enlisted personnel will be promoted when recommended by the team commander and approved by the CIC Detachment Commander of the Army/Military District to which they are attached.

(6) Copies of all orders affecting personnel of the Occupation Detachment will be furnished the Commanding Officer, Occupation Detachment.

(7) WD AGO Forms 66-1 of all officers of the Occupation Detachment will be maintained at the office of the Commanding Officer, Occupation Detachment.

(8) Service records and allied papers of Occupation Detachment enlisted personnel will be maintained by the detachment to which the personnel is attached for duty unless instructed otherwise by the Commanding Officer, Occupation Detachment.

(9) Personnel matters requiring entry on the Morning Report of the organization to which the Occupation Detachment personnel is assigned, particularly hospitalization cases, will be reported to Commanding Officer, Occupation Detachment without delay.

(10) Occupation Detachment Team Commanders will maintain appropriate property records of organizational and investigative property.

(11) Organizational equipment listed in T/O & E 30-500 and investigative equipment listed in the Special List of Equipment and Supplies for the Counter Intelligence Corps will be requisitioned by Occupation Detachment Team Commanders from the Commanding Officer, Occupation Detachment.

e. Organization of CIC Personnel, 12th Army Group.

(1) The planned distribution of Occupation Detachment personnel in the 12th Army Group/U.S. Zone is as follows:

(a) 12th Army Group/U.S. Zone Headquarters: 15 officers and 36 enlisted men.

(b) Port Enclave: 9 officers and 33 enlisted men.

(c) BERLIN District Headquarters at BERLIN: 7 officers and 22 enlisted men.

(2) A number of teams will be placed on detached service with each Army/Military District Headquarters to perform the CIC mission in the Army Zone or Military District. It will be the responsibility of Armies/Military Districts to allot this personnel to the Military Sub-districts, installations and areas where they will be most effective. Armies/Military Districts will request additional teams from G-2 (Chief, CIB), this headquarters.

73.

74.

75.

HEADQUARTERS 12TH ARMY GROUP
COUNTERINTELLIGENCE (CI) DIRECTIVE FOR GERMANY

CHAPTER IX

(U) SPECIAL COUNTER INTELLIGENCE (SCI) DETACHMENT

76(U) GENERAL.

(U) a. The SCI Detachment, 12th Army Group, furnishes a channel for special information pertaining to the German intelligence services (GIS), which is available in LONDON but which is not suitable for transmission through ordinary intelligence channels, and advises and assists in the use of this information. It also interrogates and makes use of captured GIS agents and officials, introduces penetration agents into the GIS, and provides additional special CI assistance as outlined herein.

(U) b. Pursuant to these instructions, SCI personnel operate under the direction of the G-2 (Chief, CIB) of the command to which they are attached.

(U) 77. ADMINISTRATION. The SCI Detachment operates as part of the CIB, G-2 Section, this headquarters, but is administered by Hq, Special Troops, 12th Army Group.

(U) 78. ORGANIZATION.

(U) a. The SCI Detachment maintains its principal offices in proximity to the office of the Chief, CIB, G-2 Section, this headquarters.

(U) b. The SCI Detachment will provide liaison officers to the headquarters of Armies and "T" Force of 12th Army Group and to Hq, 21 Army Group, so as to ensure proper coordination of SCI activities between these headquarters. The SCI Detachment will also be responsible for proper coordination of SCI activities with Supreme Headquarters, Allied Expeditionary Forces, and with the British-U.S. CI War Room in LONDON. In order to carry out this duty, the SCI Detachment is provided with its own radio communication facilities which maintain direct contact with the SCI liaison officers at Armies, "T" Force, 21 Army Group and with OSS in PARIS and LONDON.

(U) c. Whenever elements of the SCI Detachment operate with an army, their operational control is vested in the Army Commander concerned (Chief, CIB, G-2 Section). Copies of reports rendered by those SCI elements will be furnished to the Commanding Officer, SCI Detachment, this headquarters.

3016

CONFIDENTIAL

80. OPERATIONS.

a. Enemy Radio Agents. SCI officers will be notified immediately, through G-2 channels, of the capture of an enemy agent equipped with radio, so as to evaluate and possibly exploit the case with the minimum loss of time or of security. The radio equipment, ciphers, codes, instructions and all documents captured with the enemy agent will be turned over to SCI personnel for examination.

b. Double and Penetration Agents. The operation of double agents or of penetration agents by the SCI Detachment will be conducted under the supervision of the Chief, CIB, G-2 Section, this headquarters, in conjunction with Special Plans, G-3 Section, this headquarters.

c. Detection of Clandestine Radio Transmitters.

(1) In order to make most effective use of the mobile radio D/F (Direction-Finding) units available to this headquarters for determining the location of clandestine radio transmitters, SCI will be furnished, through G-2 channels, the fullest information possible on radio signals which indicate the existence of such illicit transmitters. This information will include, as far as possible, the following data:

(a) Time and date of transmissions.
(b) Frequency of signal.
(c) Call signs.
(d) Sample of preamble and procedure.
(e) Sample of traffic.
(f) Whether telegraphy or telephony.
(g) Type of receiver on which signal heard.

(2) The SCI Detachment will forward such information to Central Control, which monitors and analyzes the traffic. If Central Control determines that the signal is clandestine, it provides necessary operational data for the mobile radio D/Fing units. The SCI Detachment will coordinate with the Signal Intelligence Service of this headquarters the dispatch of such units to the indicated area.

d. Reports. The SCI Detachment will furnish to Chief, CIB, G-2 Section, this headquarters, weekly operations reports and special reports, when necessary, regarding the progress of radio double agents and of penetration agents.

79. FUNCTIONS. Normally, SCI personnel will function in a staff capacity as advisers without executive responsibilities. However, they will also be used to assist in exploiting CI targets such as GIS headquarters, personnel and documents, which require detailed knowledge of the enemy intelligence services. They will not be employed on other than CI duties nor will they be employed in areas where there is danger of capture. Their principal duties are to:

a. Provide a direct channel, using their own communication facilities, for the special information pertaining to the GIS which is available in LONDON, PARIS and WASHINGTON.

b. Advise and assist with reference to the use of the aforementioned information.

c. Aid in compiling, preparing and disseminating, in required form, all available information concerning the GIS.

d. Advise in the selection and method of handling countersabotage targets and assist, as required, in the exploitation of such targets.

e. Assist in the interrogation of captured GIS agents, officials or employees and in the examination of captured enemy material of CI interest.

f. Operate radio or other double agents, under the supervision of Chief, CIB, G-2 Section, this headquarters, and in conjunction with Special Plans, G-3 Section, of this headquarters.

g. Recruit, train and dispatch penetration agents to infiltrate the GIS, or, for CI purposes, any other subversive organization.

h. Evaluate and check reports of possible clandestine radio transmitters so that the location thereof may be pinpointed through monitoring and through the use of mobile radio D/F (Direction-Finding) units.

i. Coordinate and supervise the special CI activities of any Allied Special CI services operating in the 12th Army Group zone of operations and report thereon to the Chief, CIB, G-2 Section, this headquarters.

j. Transmit to LONDON, PARIS and WASHINGTON information on the GIS collected in the field, including captured documents and other material of purely CI interest, as approved by the G-2 of this headquarters.

k. Check the CI records of LONDON, PARIS and WASHINGTON for background information on captured GIS agents, officials or suspects.

HEADQUARTERS 12TH ARMY GROUP
COUNTERINTELLIGENCE (CI) DIRECTIVE FOR GERMANY

CHAPTER X

ALLIED CI LIAISON PERSONNEL

85. GENERAL. Liaison personnel of the French, Belgian, Dutch, Polish and Luxembourg Security Services will be attached to the G-2 Sections of this headquarters and the headquarters of the Armies/Military Districts.

86. FUNCTIONS. The functions of the Allied CI liaison personnel are as follows:

a. To provide liaison with the security service of the nation they represent.

b. To cooperate with US CI personnel in conducting necessary investigations pertaining to operations of the German intelligence services and of individual German intelligence agents which were conducted in their respective countries or territories.

c. To aid in the security check of (see paragraph 22, Chapter III) and .o exploit as sources of CI information prisoners of war and displaced persons of their respective nationalities. The detailed security control of Allied prisoners of war and displaced persons will be effected at Reception Centers in their own countries.

d. To recruit and run agents for penetration purposes, under the direction of the appropriate G-2.

87. OPERATIONS.

a. Besides acting as a channel for information collected by their respective national security services, Allied CI liaison personnel will advise and assist US CI staffs in the exploitation of such information.

b. The following limitations will govern the activities of Allied CI liaison personnel in GERMANY.

(1) Such personnel will not engage in CI activities within GERMANY without the prior approval of the appropriate G-2 in each specific case.

81. SPECIAL INSTRUCTIONS FOR THE ADVANCE INTO AND OCCUPATION OF GERMANY. In addition to continuance of its functions and operations, as stated in pars. 79 and 80 above, the SCI Detachment, during and following the occupation of GERMANY will:

a. Overrun and pick up the penetration agents it sent into GERMANY, and utilize their information to ascertain the activities or whereabouts of GIS officials, agents and documents.

b. Reinsert into GIS such of these agents as are deemed suitable.

c. Provide additional penetration agents to contact the underground GIS.

d. Provide a channel for the flow of information from Hq, 21 Army Group, Allied Force Headquarters, LONDON, PARIS, WASHINGTON and neutral countries regarding GIS agents and officials to be encountered in 12th Army Group area in GERMANY.

e. Supply LONDON, PARIS and WASHINGTON with information on GIS officials and agents who have fled from GERMANY so that they can be tracked down.

f. Provide specialized officer and enlisted personnel for attachment to the CI Branch, G-2 Section of this headquarters and to the CI Branch, G-2 Section, of each Army/Military District headquarters; also liaison officers with the Zone Headquarters of Allied nations in GERMANY, with the U.S. Group Control Council in BERLIN and with Allied Force Headquarters.

g. Furnish each such Army/Military District SCI office and SCI Liaison officer with radio equipment for communications direct to the 12th Army Group SCI Detachment.

h. Take over at the proper time and reallocate, as necessary, the SCI personnel of 6th Army Group which is to be absorbed at a specified future date into the SCI Detachment, 12th Army Group.

82.

83.

84.

(2) In every case, such personnel will transmit a complete report of the results of operations conducted by them in GERMANY to the appropriate G-2.

c. Allied CI liaison personnel will be notified of the arrest of all members of the German intelligence services who have operated in their respective countries or territories. Every facility will be given to Allied CI liaison personnel to interrogate such members of the German intelligence services whose activities are or have been of interest to their respective nations.

88.

89.

d.

e.

f.

g.

h.

i.

91. MASS TESTING. The Intelligence Laboratory is not designed for mass-testing of correspondence or for mass-photography of any kind and will not be called upon for such work.

(U) 92. REQUIRED INFORMATION. CI questions submitted to the Intelligence Laboratory for technical opinion and CI documents or articles sent thereto for examination will be accompanied by the fullest possible information as to the general nature and significance of the case.

(U) 93. CHAIN OF EVIDENCE. Attention is directed to the strict necessity for maintaining the chain of evidence where CI material of any nature, submitted for analysis or examination by the Intelligence Laboratory, may be required at a later date for submission or evidence in legal proceedings.

94.

95.

96.

HEADQUARTERS 12TH ARMY GROUP
COUNTERINTELLIGENCE (CI) DIRECTIVE FOR GERMANY

CHAPTER XII

CENSORSHIP

97. GENERAL. The establishment of policy pertaining to and the supervision of censorship control of civilian postal and electrical communications and communications carried by civilian travellers in GERMANY, will be conducted by the G-2 (Censorship Branch) of this headquarters.

98. COMMUNICATIONS CONTROL.

a. Public Law No. 76 (amended), promulgated by MG, suspends civilian use of all communications channels in areas of GERMANY occupied by our forces.

b. The re-opening of suspended communications for civilian use whether intra-city, inter-city, or passing across Army Group boundaries is a command function, and any authorization for the re-opening of communications will be in accordance with directives issued by Army Group/Zone Headquarters.

99. CENSORSHIP OPERATIONS.

a. While hostilities continue, censorship control will be exercised by Advance Censor Sections attached to Army headquarters (G-2 Section). These sections will, primarily, ascertain that unauthorized facilities are suspended and apply spot-check examination and monitoring to authorized communications. As a result of such spot-check examinations and monitoring, information considered detrimental to the Allied cause, as well as material of operational value, will be made available immediately to the appropriate intelligence agencies.

b. Upon cessation of hostilities, censorship control of the U.S. Zone of Occupation will be maintained by the establishment of Censorship District Stations. Field Stations for travel censorship and electrical communications control will be established as required.

100. ASSISTANCE TO CI.

a. The accomplishment of the CI mission will be assisted by civil censorship through the surveillance which can be afforded to communications to and from suspect persons or groups. Within operational limitations, watch will be maintained and information furnished upon request by authorized CI agencies.

3024

b. In addition, civil censorship will afford CI and other agencies access to information which will assist in:

(1) The destruction of the NSDAP and its affiliates.

(2) The detection of underground military, para-military, secret police, intelligence and political bodies.

(3) Uncovering possible subversive activities and anti-Allied agitation by groups or leaders within or out of occupied areas.

(4) The apprehension of collaborators and War Criminals.

(5) The prevention of acts of espionage, sabotage and subversion.

(6) The detection of individuals using secret inks, codes, ciphers, "cleaks" and intermediaries with subversive intent.

(7) The disclosure of hidden arms, munitions, war equipment and material and unlawful trafficing therein.

(8) The maintenance of law and order and the enforcement of the terms of surrender.

(9) The apprehension and prosecution of individuals or groups of individuals evading or violating MG laws, ordinances and proclamations.

(10) The apprehension of persons concealing their identity or impersonating others.

(11) The recovery of permits and personal documents unlawfully in use or possession.

(12) The investigation of irregularity of and trafficing with documents, passports, travel permits and visas.

(13) Stopping unauthorized travel or the evasion of frontier security control measures.

(14) The protection of intelligence items and the revelation of means by which unauthorized individuals procured such knowledge.

(15) Following important political and economic trends.

GERMANY OVERRUN

SCHEDULE OF COURSES

XXII CORPS CI SCHOOL

GERMANY, APRIL 1945

XXII Corps

Annex 3 to G-2 Periodic Report No 22, XXII Corps, 26 Apr 45, s/Crystal, G-2

--copy--

HEADQUARTERS XXII CORPS
Office of the A. C. of S., G-2
US Army

25 Apr 45
GERMANY

SCHEDULE OF INSTRUCTION - CI SCHOOL

FIRST DAY

Period	Subject	Instructor	Staff Action
1	Introduction to CI. Mission of school; methods used; documents; Internal SOP; discipline; student notebooks will be kept; daily written exams; practical work in course.	Col CRYSTAL	Issue CI Opns Ltr XXII Corps (20 Apr 45)
2	History of CIC. Basic operations plan; CI estimate of situation in Rhineland today; explanation of CI Handbook.	Maj CAMPBELL	Issue XXII Corps CI Handbook
3	The Rhineland and XXII Corps Area. History; geography; pertinent facts.	Capt VOLK	School maps and XXII Corps Chart displayed.
4	Powers of Observation Test.	Capt HAYES	Issue Blitzquiz No 1 - 15 min.
	Newspaper reportorial style. PRO attitude toward visiting correspondents.	Capt VOLK	Issue News Release on XXII Corps; History of Corps Insignia; biography of CG.

3028

XXII Corps
Annex No. 3 to G-2 Periodic Report No. 22, XXII Corps, 26 Apr 45
Schedule of Instruction -- CI School (Continued)

Period	Subject	Instructor	Staff Action
	Internal school SOP. Student internal organization for administration and discipline.	Capt HAYES Senior Student	Organize class into 10-man sections each of which has 2-3 German speakers.
5	Organization of German Intelligence and CI network; police; underground; Abwehr; SIPO; GESTAPO.	Capt BAER (15th Army)	Blackboard and chalk. Issue Chart I, II and III.
6	Interrogation of Germans. General background of Hitlerite Germany; importance of documents.	Capt BAER (15th Army)	Blackboard.
7 & 8	The Nazi party; rise of Hitler. Organization of Germany since 1934.	Agent KLINGER	Issue pamphlets: CIC vs Naziism (VII Corps), CI Opns in Germany (FUSA), CI Opn Info (15th Army). Issue: SHAEF/ CI Handbook, SHAEF CI Directive for Germany.
	SECOND DAY		
1	Criminal Investigation Division of Provost Marshal's office; functions; and duties; contact and work with G-2 and CIC and S-2s.	Lt LIPSIT (CID)	
2	Post World War I Germany. The German psychology and people.	Lt MEISEL	Maps of Germany on display.

hedule of Instruction - CI School (Continued)

eriod	Subject	Instructor	Staff Action
3	G-5 and its relations with CI. Security Screening of German MG appointed officials; organization and functioning of MG; Pragebogen.	Col McFARLAND (G-5)	Display of all MG Proclamations, Ordnances, etc., now applicable.
4	Foreign Liaison Officers and their work with their nationals in screening.	Lt SERINGE (Fr Ln O)	
4 1/2	Examination on night study assignments, with markings by students and discussion of solution.	Capt HAYES	Issue Blitzquiz No 2.
5 & 6	German Frontier Control. SHAEF Policies and directives; problems of enforcement; frontaliers; Frontier Command.	Maj HILL (15th Army) Capt PRESCOTT (Frontier CIC Detachment)	Map of Border, Chart of CI Cover.
& 8	Counter Espionage. Experience in this war; German techniques and equipment.	Lt BEACH (15th Army CIC Det)	Equipment brought by Lt Beach.
	THIRD DAY		
1	Post, Installation and Area Security Survey.	Lt COULTER	
2	Public Safety Officers in MG Detachments. Their duties and administration; Fragebogen.	Lt BLANTON (Public Safety Division MG)	
3	Displaced Persons. Their processing, administration; security screening; present status.	Capt CAMPBELL (Corps DP Office)	
4	Corps of Army Interrogation Centers. Their operation; function; liaison with MG, PM, G-1.	Lt COULTER	

3030

XXII Corps
Annex No. 3 to G-2 Periodic Report No 22, XXII Corps, 26 Apr 45
Schedule of Instruction - CI School (Continued)

Period	Subject	Instructor	Staff Action
4 2/3	Examination on Second Day's Instruction.	Capt HAYES	Issue: Blitz-quiz No 3
5 plus 1/2 of 6	German Sabotage Techniques. Experiences in this war; equipment.	Lt DRESCHLER (15th Army)	German Sabotage Equipment. Table for display.
Last 1/2 of 6	How to make a "Spot Check".	Capt WILLIAMS (15th Army)	Issue: Spot Check List.
7 & 8	Students go out in 1/2 sections of 5 each; they stop and "Spot Check" all civilians encountered in MUNCHEN-GLADBACH; each student in turn acts as chief and examines those Germans' identity documents and fills in check list; ends up with decision to permit to circulate or else detains; all groups return to Opera House prior to 1630 with detainees for further checking or account to rest of class of each's experience.	Capt WILLIAMS (15th Army)	Students turn in one report per student.
	FOURTH DAY		
1 & 2	CI methods, techniques and principles.	Capt WILLIAMS (15th Army)	Blackboard.
3	Interrogation of suspects "Screening	IPW or MII Students	Issue: Interrogation Blank Form.
4	Typical day in CI Office. Normal problems and their solution.	Lt RUTLEDGE	Group from various XXII Corps teams assist in demonstration.

XXII Corps

nnex No. 3 to G-2 Periodic Report No 22, XXII Corps, 26 Apr 45
chedule of Instruction - CI School (Continued)

Period	Subject	Instructor	Staff Action
5,6,&7	Practical interrogation; students go to MUNCHEN-GLADBACH jail and in 1/2 sections of 5 each interrogate known suspects or criminals; each writes separate report using interrogation blank form and ends up with recommended disposition of case.	IPW, MII and CIC students assist in this exercise.	Arrange for 25 prisoners in MUNCHEN-GLADBACH jail and 25 rooms each with 6 chairs and a table.
8	Return to Opera House; each group, in turn, tells all rest of its experience and findings.	Maj CAMPBELL	Students turn in one report per student. Issue: Student critique of course forms.

FIFTH DAY

1	Informants. How to get them; use them; what to do to get the most out of them; denunciations.	Agent OHLIN	
2	CI Files. Card forms; personality targets; reports; forms; administration of a CI office; how to take over and turn over; initial scanning of MG registration file copies and local civic files; fragebogen	Agent JOHNSON	Issue SOP blank forms: Card file Arrest form. ((sic))
3	Review of all pertinent CI documents containing directives (SHAEF, 12th Army Group) on restrictions on and policies toward Germans; procedures to get assistance on CI targets, handling suspects.	Maj CAMPBELL	
4	Students turn in all documents that they were not issued to keep; pack so as to leave school after CG presents diplomas.	Capt HAYES	

XXII Corps
Annex No. 3 to G-2 Periodic Report No. 22, XXII Corps, 26 Apr 45
Schedule of Instruction - CI School (Continued)

Period	Subject	Instructor	Staff Action
5	The G-2 Section and its functions, duties, resources today; handling of visitors; war correspondents.	Col CRYSTAL	Issue: Rhine Province Survey Questionnaire on Occupied Germany (12th Army Group) Visitors Bureau.
	Division G-2, Brigade and Group S-2 and their relation to CI and CIC.	Div G-2s, Brig S-2s, Gp S-2s	
6	Provost Marshal and his relationship to CI; handling and processing of PWs; CID and Liaison with CIC and Provost Marshal.	Col GRUBB (Provost Marshal)	
7	Student critique of CI School. Course; ideas to make it better; questions; free discussion.	All of instructors who can be present.	
8	Graduation; presentation of Certificates.	Gen HARMON	ARC Clubmobile Group "A" with... (sic)

NOTES:

Each day's instruction consists of 8 one-hour periods; the normal period consists of 40 minutes of instruction followed by 10 minutes of discussion and questions; then a 10 minute break. Instruction periods are numbered as follows:

1	0800 - 0900
2	0900 - 1000
3	1000 - 1100
4	1100 - 1200
Lunch	
5	1300 - 1400
6	1400 - 1500
7	1500 - 1600
8	1600 - 1700

XXII Corps

nex No. 3 to G-2 Periodic Report No 22, XXII Corps, 26 Apr 45
hedule of Instruction - CI School (Continued)

Documents are issued on the first day of the course; students spend two hours study on them each evening. One examination is given daily; this is normally a 10 statement "True-False" "Blitzquiz" with some written opinion appended.

Students march from quarters to class; retreat formation is at 1700 daily. All tests are brought to all classes.

FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Section 1

CIC GIVEN MISSION IN INDIA-BURMA CAMPAIGN

Before the war was two years old, Burma, a strange and little-known country in Southeast Asia, had assumed a strategic importance probably unsurpassed by any other area in the world. This country of rugged mountains, dense jungles and disease-laden swamps, known to most Americans only through Kipling's stories, offered the only life-line to China. China was still struggling on, although supplies, arms, and equipment were practically nonexistent.

By early summer 1943, the situation was truly desperate. It was recognized that Chiang Kai-shek could not hold out much longer unless the United States could get to him trucks, artillery, tanks, and other heavy equipment. Major General Chennault's Flying Tigers were desperately trying to ferry in 10,000 tons of supplies a month via the famed Hump route over the Himalayan Mountains from Assam, India, to the Yunnan plateau in China, but they could not fly in the heavy equipment. If China fell, Japan would be able to exploit tremendous resources without harrassment, and, when the United States was finally able to apply pressure to the home islands, the Government could even flee to the mainland and continue the war, perhaps for years.[1]

United States Army Forces, China-Burma-India (USAF CBI) had been activated on 4 March 1942 with headquarters in Chungking, China, later transferred to New Delhi, India, where British headquarters were located. Chungking then became the forward echelon. Gradually the mission, which had started out to "increase the effectiveness of United States assistance to the Chinese Government for the prosecution of the war and to assist in improving the combat efficiency of the Chinese Army," had been enlarged to include specifically "the exploitation of the development of overland communications to China."[2]

At the Casablanca Conference in January 1943 and at the TRIDENT and QUADRANT conferences later in the year, plans were made to build a road through North Burma, paralleled by an oil pipeline which would connect with a similar one to be built from Calcutta to Ledo, not only to supply the Generalissimo's hard pressed forces, but to supply the B-29 bases which were to be built in China to bring to the Japanese islands the same kind of devastating air assault that was pulverizing Germany. The road and the pipeline would make it possible to get in 85,000 tons of general supplies and 54,000 tons of petroleum products each month.[3]

after the Italian campaign was well under way, and Tyng joined the China detachment in early summer of 1945.[6]

As Colonel Kibler had anticipated, the requisition did come through, and although it was impossible to provide the number of men the theater considered an absolute minimum, he was able to assemble and train a group of ten officers and 100 enlisted men.[7]

By the time Major MacKenzie arrived in India in September 1943, the Japanese had conquered all of Burma except for fringes of mountain, jungle, and swamp on the north and west, and were threatening to seize the British base at Imphal and sever the Bengal-Assam railroad below the base, on which Hump air transport and the projected road depended. General Stilwell's famous "walk-out" was now past history and the Allies were preparing for major offensives from both India and China, offensives which had to await the end of the monsoon season in November. Lord Louis Mountbatten, Commander of the Southeast Asia Command, was assembling troops and supplies in Bengal and Mainpuri; General Stillwell, who held the dual role of Mountbatten's deputy and Chief of Staff for Allied operations in the China Theater, was training two Chinese divisions, who as "X" Forces, were to push through the jungle to clear out the Japanese ahead of the road; and Generalissimo Chiang Kai-shek was strengthening his "Y" Forces, with headquarters at Kunming, along the Salween River in Yunnan.[8]

Prior to the war, only one road had connected Burma with China. This was the Burma Road, extending approximately 1,445 miles, from Rangoon to Chungking. Actually it consisted of a railroad from Rangoon to Lashio; a new motor road from Lashio to Kunming, constructed by the Chinese between 1937 and 1939; and an old highway on to Chungking. Engineers under Brigadier General Lewis A. Pick were to build a road from Ledo, in Assam, to the Irrawaddy River near Myitkyina, down the river valley around the southern end of the impassable Kumon mountain range to cross the Shweli River and intersect the old Burma Road at Mongyu, near the Yunnan border.[9]

When Major MacKenzie reported to the office of Col H. T. Creswell, AC of S, G-2, at New Delhi, he was appointed head of the CIC for the theater and

charged with the mission of setting up a counterintelligence section within the G-2 Section. He learned that no ground work had been done and that there would be no personnel to assist him until the arrival of Lieutenant Wilson with his divisional detachment in November.

First CIC Work Begun

Major MacKenzie set about his first task of separating the counterintelligence files from the others in the G-2 Section. Upon completion of this, he prepared a directive to be published by theater headquarters directing the submission of monthly counterintelligence summaries by base sections and units in the field.

Early in October he went up to the Service of Supply (SOS) Base area in upper Assam, accompanied by a representative of the Inspector General, to investigate a rumored widespread espionage ring among civilian employees and a reported theft of a tremendous amount of ammunition. Thorough investigation proved the report on ammunition loss to be grossly exaggerated and the espionage ring rumor completely unfounded. The trip, however, gave him opportunity to make security surveys of the SOS installations, revealing a lack of security planning. Each evening, instructions for the next day's air shipments to China were being given in the clear over field telephones whose wires ran along beside the public highway within easy reach of anyone who might desire to tap them. Countermeasures against sabotage were practically nonexistent.[10] Warehouses containing vital materials were left unguarded, or at best guarded only by unarmed Chinese or Indian watchmen. Unguarded bamboo sheds held large quantities of smokeless powder, some of the boxes broken, and the powder leaking onto the ground. Responsible authorities, whose attention Major MacKenzie called to these discrepancies, explained it away by "lack of personnel." All this occured within easy infiltration reach of the Japanese.[11]

According to Major MacKenzie, there ran, throughout all ranks, a persistant belief that there was no use in trying to conceal information because the Japanese knew everything we did or planned to do immediately. Various recommendations were made, and some were adopted to help the situation somewhat.

"It is a bit hard to account for this ready acceptance of the omniscience of Jap Intelligence," Major MacKenzie wrote. "No evidence was ever obtained that the Japanese did obtain the information which passed over the phone lines, but if they had agents in the area, every opportunity was given them to get it. Available

3043

evidence appears to indicate that they did not have either spies or saboteurs in the area, because although opportunities for both types of agents were unlimited, no sabotage occured, and there is little concrete evidence that they obtained information of value."[12]

Major MacKenzie also noted the increasing number of potentially subversive personnel arriving in the theater, most of whom were suspected of being involved with Communist activity among the restless Indian population. There was as yet no trained personnel in the theater to conduct an organized campaign of security education, or to investigate these cases.[13]

Upon his return to New Delhi, Major MacKenzie proceeded to China to make surveys of various headquarters there at the request of the G-2. He discovered that security measures were adequate at Forward Echelon Headquarters at Chungking, and excellent at "Y" Force Headquarters at Kunming. They were lax, however, at the others visited: 14th Air Force and SOS Headquarters at Kunming and the 14th Air Force Forward Echelon and SOS installations at Kweilin. Recommendations which were submitted to the headquarters concerned and to the theater commander were put into effect within the limitations imposed by personnel and equipment.[14]

However, even the best of physical security measures could not counter the danger found in the probability that Kweilin, the site of 14th Air Force installations, was a center from which Japanese espionage agents were being distributed throughout Free China. Refugees from the Canton area, many of whom were suspected of being in Japanese pay, had collected in Kweilin and reports were circulating that Japanese radios were operating in the Kunming and Kweilin areas. The list of subversive suspects among the Armed Forces or employed by them was growing. Obviously CIC was needed.[15]

First Small Detachment Arrives

While Major MacKenzie was away on this assignment, Lieutenant Wilson and his detachment of five arrived at Calcutta and, while awaiting Major MacKenzie's return, made a security survey of the base section and the port, working under the supervision of the S-2. Early in December the detachment was transferred to theater headquarters. McArdle and Fong were sent to the British Field Security School at Karachi, where they not only received valuable instructions, but also made a number of British friends who proved valuable to them in their work in the field.

14 History of CIC in CBI, Ibid.
15 Counterintelligence Summary Nr 1, CIC Det, Hq USAF CBI, dtd 31 Dec 43, (CONFIDENTIAL) (Central Records Facility).

Comisky was assigned as liaison agent with the Field Security Section. McArdle was sent to Calcutta and Nowlan to Bombay, in both of which the security situation was extremely bad, to accomplish what they could and to make plans for adequate coverage when the bulk of the detachment would arrive the following spring. When the Japanese cut off Imphal and laid seige to the city in April 1944, Edmond Fong was flown in to assist the S-2 of the Special Headquarters. A little later two agents were sent to make a security survey of conditions along the portion of the Bengal-Assam railway that was being operated by American personnel. From their findings, it was decided that as soon as the bulk of the detachment arrived, agents would be assigned for liaison work between the railway operating units and the Field Security detachments, who were responsible for the actual security of the line.[16]

Specialized Training for Selected Group Begins

In the meantime, the requisition for additional men had come through to the Office of the Chief of CIC. The men had been assembled and were undergoing training. There was time for the training, not only the specialized training for intelligence under combat conditions which the men in North Africa, Sicily, and Italy had needed so badly but had not received, but also training in special political, geographical and psychological conditions they might expect in the Orient.[17] Amusingly, one of the complaints made and reported in an official survey of the work of CIC personnel in the theater was that the emphasis on "front line activities" in their training, given as a direct result of recommendations from the Mediterranean area, had been of little value since their mission was mainly that of protecting the security of transportation and supply installations.[18]

A group of 25 men who were to be assigned to Air Force installations were trained in means of detecting airplane sabotage in a six weeks Field Service School at Hill Field, Ogden, Utah. Various short courses in specialized subjects, one of which was the Motor School then at Camp Holabird, were attended by some of the group. On 3 January 1944 most of the group arrived at the CIC staging area at Camp Ritchie, where they were given instruction in special theater conditions and field service training in problems involving German and Japanese maps and weapons,

map reading and various combat situations. Additional staging area training was given at Camp Holabird, Camp Ritchie, Fort Meade, and Camp Patrick Henry, Virginia, their last stop before sailing from Hampton Roads on 2 March 1944.[19]

Maj Fariss Hardin and S/Sgt Donald M. Bernston remained behind to obtain equipment and supplies for the detachment and later joined them in Karachi, India.

Everyone seemed to agree that this was one detachment that went to the field with all the equipment and supplies they needed, including, of course, much for which they had no need.[20] Writing later of his experiences, Capt Philip F. Shapiro, who went to the China Theater in the spring of 1945, stated: "This unit was one of the best supplied I have ever seen....this unit brought their own equipment, mainly transportation in the way of jeeps, to this theater. As we had the longest delivery line in the world, I saw many units of other organizations arriving in China without equipment, and they would be bogged down for months because of lack of transportation..."[21]

The bulk of the group, nine officers and 99 enlisted men, with Capt Harold G. Gelwicks in command, sailed from Hampton Roads on 2 March and, upon their arrival in Oran, Algeria, were sent for two weeks to a staging camp known as "Lion Mountain." During their stay, Captain Gelwicks assigned a small group under S/Sgt William Hoffman, to prepare a port security plan which they could later use in CBI Theater ports. They worked with CIC agents in Oran in handling port security problems, which included boarding incoming ships, giving instructions to ship officials and issuing passes.

On 4 April they continued their journey on a Dutch ship operated by the British, through the Suez Canal with stops at Suez, Alexandria, and Port Said, and across the Indian Ocean to Bombay, arriving there on 25 April 1944. A few more agents were sent later, and a few were recruited locally, but this group furnished the bulk of CIC for the CBI Theater throughout the war.[22]

According to a prearranged plan, they were sent through a two-weeks course at the British Field Security School at Karachi, where they were briefed on operational methods of British intelligence organizations and on the general conditions existing in the theater, most of which were new to them.

Theater CIC Headquarters at New Delhi

Major MacKenzie, with Lieutenant Wilson as his executive, 2d Lt Edward White as his administrative officer, and several enlisted agents set about their work of organizing CIC on a theater wide basis from their headquarters at New Delhi, a process which was more complicated than in some other areas. Lt Charles D. Farris was added locally as supply officer.

Following completion of the British Field Security School at Karachi the men who were to be assigned for duty in Assam, India, and with the "X" and "Y" Forces in Burma were sent to the British Jungle Warfare School at Budni, in the Central Provinces, where they were put through a conditioning course, and given combat training under the jungle conditions with which they would have to contend.

Many of the others were sent directly to stations in India where they operated for a time as teams with letter designations. Records seem to indicate that there was a certain amount of confusion regarding their status while final word from the War Department was awaited. Then on 18 August 1944, 12 detachments were set up at War Department order. The 405th CIC Detachment was designated as Theater Headquarters, with the additional duty of covering the New Delhi area; the 406th was assigned to Karachi; the 407th, Bombay; the 408th, Calcutta; the 409th, Chabua; the 410th and 414th, Ledo, Assam; the 411th, 412th, and 415th, China; the 413th, 10th Air Force; and the 416th, XX Bomber Force, then at Kharagpur, India.

As in all theaters, the number of CIC agents was considered inadequate for the tasks they were expected to perform, and even before those present had been assigned to stations, requests were forwarded for additional men. In response to a War Department cable asking for estimated requirements,[23] Major MacKenzie asked for a total of "70 officers and 212 EM against the present authorized strength of 12 officers and 104 EM."[24] MacKenzie also asked for an allocation of 20 direct commissions to CBI "for exclusive use of CIC in preference to requisitioning officer personnel from U.S. This is deemed eminently desirable from standpoint of morale. CIC enlisted personnel qualified by training, character and ability to fulfill the duties of CIC officers are present in theater in sufficient number to fill existing officer vacancies if direct commissions are authorized."[25]

There is no evidence that this proposal was favorably considered until six months later. On 31 March 1945 the following were commissioned as second lieutenants: Joel M. Brecheen, W. F. Davis Gebhart, James H. Carr, Jr., Richard W. Klise, Karl R. Manwell, James F. Murray, Leroy T. Newland, Jr., Charles F. G. Smith, and James L. Beauchamp. In the meantime, several officers, untrained in counterintelligence work, had been added from troops already in the theater, and shortly thereafter a number were brought over from the United States.[26]

Major MacKenzie also came up against an inflexible wall in setting up his detachments, a situation that greatly increased administrative and supply problems, and, due to particular situations in the theater, hampered operations. In spite of repeated requests that only one detachment be set up for the theater, composed of appropriate teams as authorized by T/O&E 30-500, the War Department was adamant in its decision that 12 detachments, numbered 405 through 416, be set up for the theater. The problem as it affected operations was that, although this was, from an allied standpoint, a combat theater, the mission of the overwhelming majority of US troops was a logistical and advisory one. Except for a small group, it was not contemplated that CIC agents would be utilized in a tactical situation, and even these would not operate with divisions, corps, and armies, as was true in other combat theaters. Even selection of the static areas in which they would operate would depend upon changing conditions, and no one could anticipate those changes. Organization into a single detachment, composed of teams as authorized by T/O&E 30-500, would have permitted the rapid shifting of teams into areas as the situation demanded.[27]

The inflexibility of the War Department order forced certain detachments to be set up immediately, earmarked for eventual shipment to China. They then sat around for months until the China Theater was ready for them. Some of these agents were placed on TDY with other detachments after it became evident that the wait would be a long one, but efficiency and morale suffered in the meantime.[28]

Administration Becomes Complicated

With the constant shifting of personnel from one detachment to another as well as a liberal use of detached service and temporary duty assignments, administration became a highly complicated procedure. At times half the men working with a detachment would be on TDY or DS orders from another detachment, while several members who actually belonged would be with another outfit. The long distances involved and the shortage of transportation would not permit getting agents back to their outfits as the situation changed and others from nearer stations would be sent in to take their places, all still remaining by name with their parent organization.[36]

An idea of the extent of the confusion can be gained from a letter written to all detachments on 23 August 1944, explaining how morning reports were to be kept: "Changes affecting a man on detached service (DS) should be reported by the detachment with which he is actually serving. He will be carried as absent by the detachment to which he is assigned. For example: Lt Kendall and the men under his command are assigned to the 412th CIC Detachment (Capt Grieve), but are on DS with the 414th CIC Detachment (Lt Thorn). They will be carried as absent on the Morning Report of the 412th and picked up as 'present for duty, attached from other organizations,' by the 414th.

"Although most of the personnel of the 412th are on TD with the ATC, Capt Grieve will submit a daily morning report covering all changes affecting such men in addition to changes affecting Lt Kendall and his men. He will, however, carry Agent George Reynolds as absent, and Lt Steptoe will report changes affecting Reynolds, who is on DS with the 406th Detachment as 'Present for duty, attached from other organizations.' The same principle will apply in the case of Agent Ballou, who is on DS with the 416th Detachment. In a like manner, Capt Gelwicks and Lt Dailey will prepare morning reports, and neither they nor their men will appear on SAC Smith's report."

Anticipating the bewilderment of the detachment commanders who would receive this letter and expressing perhaps some of his own, Lieutenant White, administrative officer at Theater CIC Headquarters, and innocent victim of the situation; added, "The reasons for many of these instructions will not be clear to you. It is sufficient to say, however..."[37]

36 Hq USAF, China, Burma, India, CIC Det, Memorandum to all CIC Detachments, subject: "Activation of CIC Detachments and Related Administrative Duties," dated 23 August 1944, (Unclassified) (Kansas City Records Center, Folder, "Correspondence 10/44 to 6/45,").

37 Memo to all detachments, subj: "Activation of CIC Detachments and Related Administrative Duties," from CIC Det, Hq USAF, CBI, dtd 23 Aug 44, (Kansas City Records Center).

Supply Problems Acute

Under existing conditions, supply and property accountability problems became acute. Particularly difficult was the situation encountered by the "Interrogation Teams" operating along the Ledo Road. Actually five detachments were assigned to this area, but the nature of this work and the necessity for rapid mobility required that they operate under one commander. Since the set-up required, however, that property accountability be kept strictly separated by detachments, an officer was designated as commanding officer for each of four of the detachments with the stipulation that: "This designation extends only to assumption of property responsibility." The commanding officer of the fifth detachment remained the commander for all the detachments "for operational purposes."[38]

To further complicate the property situation, detachments and individuals were sent out on assignments before the actual formation of the 12 detachments by War Department orders on 18 August 1944. Before leaving Theater Headquarters, these detachments as well as individuals were issued property on memorandum receipts. After the detachments were activated officially, there followed the necessity of setting up property accountability books which were sent out to each detachment, along with shipping tickets representing the property thought to be in the possession of individual members of the detachment.

Since, by this time, much shifting had taken place among the various detachments, each commander was directed to adjust his property books: "Commanders of detachments losing any persons...(by such person's either being assigned to another detachment or being placed on detached service, but not temporary duty, with another detachment) will ascertain what items of detachment property were taken away by such person. The commander of the detachment losing such a person will then prepare shipping tickets for such items (one shipping ticket to cover items for each supply service) and forward the shipping tickets to the new detachment commander for signature and return." Inactivation of the detachments at the end of the war found some commanders still trying to trace property allocated to individuals.[39]

Although as previously mentioned, CIC had come to the theater well equipped, at least in comparison with the detachments going to other theaters, there were

38 Ltr, Hq USF, IB Theater, CIC Det, Subj: "Property Responsibility," to 406th, 407th, 408th, 414th, and 416th Detachments, dtd 4 May 45, (R) (Kansas City Records Center).

certain additional items required from time to time, either because these items were not obtainable in the beginning or because of loss or wear-out. These became almost impossible to obtain, mainly because these items were on the Special List of Equipment (SLOE) which, by War Department order, were to be requisitioned from MID, Washington, even though many of these items, such as weapons and various signal items, could have been obtained from supply services then in the theater. Major MacKenzie in a letter to the War Department in October 1944, recommended that the SLOE be reexamined, and that items which were regularly stocked by established supply services be removed and added to the T/O&E.[40]

Delay Encountered by Detachments

Although the 12 detachments were activated and assigned to the areas indicated, some of them did not get to their stations for many months, and several others did not remain long in their assigned spots. The 411th, in command of Captain Gelwicks, the 412th, under Capt William G. Grieve, and the 415th, under 2d Lt Daniel H. Dailey, all earmarked for China, were sent to Calcutta to await, impatiently, the word that they were to fly over the "Hump." This word was slow coming.

It had been planned that Captain Gelwicks and his detachment of six agents would be the vanguard for the China detachments. The China Theater was notified on 13 July 1944 that these six men, along with 1,900 pounds of organization equipment (including investigative), plus four jeeps and two trailers, were in Calcutta, awaiting transportation. In answer, the China Theater, which was then known as the Rear Echelon of the CBI Theater, sent the following message: "Due to tactical situation causing limited tonnage to be used for vital war supplies...it is not deemed advisable for CIC detachment to be shipped at this time. Will advise when tonnage can be spared for them."

In the meantime, Captain Grieve, realizing that the wait would be a long one, had sold the services of his group to the Air Transport Command,[41] and through ATC was able to get over to SOS Headquarters in China to assess the possibilities of CIC's departure for that area. In his report to Major MacKenzie and Captain Gelwicks can be seen the oft-repeated story of the lack of understanding of CIC's mission on the part of other Army personnel and especially of those assigned to intelligence work. Grieve reported an interview with the S2 at SOS Headquarters to whom "the operations and functions of CIC were explained in detail with apparent futile results." The S2 estimated that in their installations at Chungking, Kweilin, Chanyi, Tuyon, Yunnanyi and Burma Road Engineers (Grieve added that the S2 was

40 Ltr Hq, USF, India-Burma, file 320.2 (28 Oct 44), subj: "TO&E 30-500," To CG, Army Service Forces, Washington, D.C., dtd 28 Oct 44, (CONFIDENTIAL) (Kansas City Records Center).

41 Memorandum to Director of Intelligence by Colonel Gray, Ibid.

3054

not sure that this list was correct), there was only about "one incident a month that could in any way be estimated as coming under CIC jurisdiction, and that these were turned over to the 14th A.F., since they have investigators." Grieve added, in parentheses, "The 14th AF has no investigators known to this Officer." The S2 added that later, "when the supply problem is lessened," he would like to have a detachment, but doubted that he would need six men. After observing that the S2 "apparently has no understanding of the possibility of subversive activities," Grieve recommended that the negotiations for the detachment be taken up with higher authorities.[42]

Captain Grieve's estimate of the S2 seems to have been valid when it is remembered that for at least eight months previous, numerous reports had indicated that the Japanese had sent not only espionage agents but also trained saboteurs in large numbers to operate in the vicinity of Kweilin and Kunming; that the Japanese Special Service had organized an assassination squad of about 200 men with British and American officers in China as their targets and with bonuses of from CN$ 500,000 to CN$ 700,000 as rewards; and that the Japanese were introducing poisoned liquor and poisoned cigarettes into China for sale to American troops. In addition, there had been numerous reports of sabotage to telephone wires, including two occasions when the lines in the air warning net were cut prior to raids at Hengyang on 10 December 1943 and at Yunnanyi on 15 December 1943.[43]

In September, Grieve's group was attached to Theater Headquarters for Army Air Forces. When the work with the Northern Combat Command increased with the progress of the Stilwell Road, several men from both the 411th and the 412th were detached for work there, as were members of the 415th. When the alert finally came, on 6 December 1944, for the 411th, 412th and 415th to prepare to move to China on about 5 January 1945, the personnel of these units had been so shifted about that their rosters bore little resemblance to the original rosters.[44]

The same kind of shifting about occurred with the other detachments. The 406th, 407th, and 408th were removed from their locations and sent up to join the detachments operating in upper Burma in the vicinity of the Stilwell Road, and branch offices of the 405th were set up to take their places.

Because of this constant shifting of detachments as well as the shifting of agents among detachments, the remainder of the history of the China, Burma, India Theater will be recorded by areas rather than by numbered detachments.

"Selling CIC" is First Task

To all of these groups the first immediate task was that of "selling" themselves to the people under whom and with whom they were to work. It was the same old story with which the CIC was confronted whenever it first arrived in a theater--few persons had more than a vague idea of CIC's mission and few preparations had been made for their arrival. They found their own billets, set up liaison with the British and with other staff sections, plotted their own missions, and so insinuated themselves into the military mission of the theater that, before the end of the war, they had won the warm commendations of practically everyone from the Commanding General on down.

Their pathway was smoothed somewhat by the publication, even before they began work, of a directive containing operational prerogatives which had been won by CIC agents in the North African and European Theaters only after a long struggle. On 10 June 1944, over the command line of Lieutenant General Stilwell, a directive was published which contained the following:[45]

> "c. Civilian Clothes. CIC personnel are authorized to wear civilian clothes or the uniform prescribed for civilians serving with the armed forces.
>
> "d. Protection of Identities. It is necessary that CIC enlisted personnel wearing civilian clothes or the civilian uniform be addressed and referred to as 'Mister,' and not by military title, and that they be extended the same facilities and afforded the same treatment as civilians serving with the armed forces. Unless unavoidable, under combat conditions, such personnel will be billeted, messed, hospitalized and draw supplies under the same conditions prescribed for civilians."

This directive did not solve the civilian status problem completely, and there were scattered incidents of resistance on the part of commanders, S2's and G2's, but its observance generally made it possible for CIC to operate effectively from the very beginning. One serious incident which occurred in Karachi in December 1944 in violation of the theater ruling made it necessary for two agents to be transferred to another detachment. The detachment CO had introduced the two agents

45 Ltr; Hq CBI, file 350.09-4, Subj: "The Counter Intelligence Corps, USAF, CBI," dtd 10 June 44, as quoted in Ltr, Hq 406th CIC Det, Subj: "Protection of Identities of CIC Personnel," (CONFIDENTIAL) (Kansas City Records Center).

to the Executive Officer of the SOS Base Section, who examined their credentials and listened without apparent disagreement to the explanation of their mission and the theater ruling which specified their treatment. Yet six days later, their status as enlisted men was revealed when they were ordered out of the officers' mess hall by the mess officer, acting upon specific orders of the Executive, who had already appealed to the brigadier general in command of the base section to back up his order. An attempt by the S2 and the detachment SAC to obtain an explanation from the Executive resulted only in the Executive's declaration that "some civilians" serving with the armed forces were "treated and messed as enlisted men and others as officers," and that the agents involved would "fall within the class of civilians who were treated and messed as enlisted men." He was unable to cite any regulation upon which his decision was based or to name any instance within his experience in which civilians were messed as enlisted men.

There seemed to be no solution to this situation, which CIC had encountered upon many occasions in other theaters, in which individuals in a subordinate command had overridden explicit orders of higher authority in venting their spleen at CIC.[46]

Happily, incidents such as the above were rare. Usually resistance was met only before the arrival of the CIC detachment, and before the Intelligence Staff and the Commander had met the agents and learned of the help they could give. In most instances, they responded rapidly to education. In two areas, attempts were made to place CIC under control of the Provost Marshal. In one, Karachi, the quickly discarded attempt seemed to be caused by a basic misunderstanding of CIC's mission; in the other, New Delhi, the continued attempts seemed to stem from the head of the Criminal Investigating Division in the office of the theater Provost Marshal, who was unrelenting in his attempts to force the CIC agents to live in the enlisted barracks. In both places the attempts were unsuccessful, but operations were believed to have suffered, and much time was consumed by the officers and SAC's of these detachments in fighting off the attempts and convincing top-side officials each time the question arose.[47]

Political Unrest in India Complicates CIC's Task

Although U.S. authorities in the China, Burma, India Theater had concentrated their security fears upon the dangers of espionage and sabotage by Japanese infiltrees, it early became evident that the situation was far more complex. The

46 Ltr, Hq CBI, file 350.09-4, Subj: "The Counter Intelligence Corps, USAF, CBI," dtd 10 June 44, as quoted in Ltr, Hq 406th CIC Det, Subj: "Protection of Identities of CIC Personnel," (CONFIDENTIAL) (Kansas City Records Center).

47 History of the 406th CIC Detachment, by Steptoe (L-17) (R); and Memorandum for the Director of Intelligence, ASF, by Col Gray, Ibid.

anticipated danger was of course a real one, and was augmented tremendously by the tendency of troops distant from actual combat to indulge in "loose talk." But it soon became evident that U.S. troops were in the middle of a cauldron of political unrest. Long-time hatreds of Hindu and Burmese Nationalists for the British, further played upon by Communist agitation, provided fertile ground for Japanese propagandists who were not slow in taking advantage of these easily won allies. Because of their subversive potentials, protection against sabotage became, perhaps, CIC's most important mission in the theater. Sabotage was particularly difficult to control, since it could come from so many sources: a disgruntled worker, who had been influenced by Communist agitation; a British-hater who identified all Caucasians with the British; or a bona fide Japanese agent of whom many were suspected to be in the theater.

Branch Office Number 1 Covers New Delhi Area

To cover the New Delhi area, Branch Office Number 1 of the 405th was set up and operated throughout the war under Special Agent James L. Beauchamp, at first a sergeant and later a second lieutenant. With Beauchamp throughout most of this period were Bernard Auer, George F. Lynch, Norman Brasseur, and James D. Brooks. These five men were credited by Major MacKenzie with making a "vast improvement" in the security situation in the area, "working against the inertia of men who felt that Delhi was too far from the combat areas for security to matter."

The problem of security was an engrossing one, and not only did this branch office attack it with vigor in its own area, but made their program felt throughout the theater. Auer was credited with establishing a theater-wide program of security education. He designed security posters which were duplicated and sent to all detachments for use in their own areas; he wrote security slogans and persuaded the Army Radio Service to use them throughout their daily programs; and he obtained British security-trained lecturers to address troops in the area from Karachi to Ledo.[48] The Theater Chief of X-2, OSS, added his words of praise for the program which he rated "of exceptionally high calibre."[49]

A practice manhunt put on by this detachment during an "Allied Security Week" in February 1945 aroused the interest of the whole area. In advance of the stunt, 1,500 posters carrying the picture and description of Norman Brasseur as the

48 Ltr, Hq USF, IBT, CIC Det, Subj: "CIC Branch Office Nr 1, New Delhi," to AC of S, G-2, Hq US Forces, India-Burma Theater, dtd 14 Aug 45; (Unclassified) (Kansas City Records Center); and History of CIC in CBI, by MacKenzie, Ibid.

49 Ltr to Mr Bernard Auer, Special Agent, CIC, US Army, New Delhi, dtd 18 Oct 45, from Joseph P. McCarthy, Chief, X-2, OSS, IBT, (Unclassified) (Kansas City Records Center).

"wanted man" were distributed and five particular areas were designated as ones through which he would pass. The prize for the first person to recognize him in each of the areas as he wandered about in various uniforms ranging from private to colonel was a $10 War Bond.[50]

In February 1945, Auer made a tour throughout Burma and India and in numerous places where there were high concentrations of U.S. and British troops, put on a well planned "Security Drive," of a week's duration. The type of activity used in this program can be seen from highlights from a report on the drive in Calcutta which was rated as "highly successful:"[51]

a. Over 20,000 officers and enlisted men saw security films in a total of 71 showings.

b. All civilian employees in the area, totalling 20,000, attended lectures given by members of the British Inter Services Education Department.

c. Fifteen thousand security posters, most of which were prepared by the British, were used.

d. All daily news sheets and menus in all hotels and restaurants patronized by Allied military personnel carried security reminders.

e. A large security banner was suspended over the street in front of Base Headquarters.

f. Security slides were shown in a number of theaters prior to the showing of the feature film.

g. Radio talks were given by seven high ranking officers, including General Stratemeyer.

h. A security contest, the purpose of which was to increase the vigilance of installation guards was judged to be the most successful device used. One security officer reported that, for the first time in months, the guards were scrutinizing every person who entered the installation.

51 Ltr, Subj: "Security Drive, APO 465," dtd 22 Feb 45, (Unclassified) (Kansas City Records Center).

These agents were credited also with establishing and maintaining excellent relations with all British civil and military security agencies, not only in Delhi and New Delhi, but in numerous cities over a large surrounding area from Lahore in Pakistan to Agra in Northern India. These efforts at liaison not only made CIC operations more effective throughout the war, but on one occasion at least, brought a letter of personal praise for Brooks and Lynch from the American Consul General for their assistance during a visit of the State Department's relief vessel to Bombay, and "most important of all" for obtaining "the cooperation of their British counterparts to the end that the work of embarkation was not impeded."[52] They were sent to Bombay on this special assignment after the CIC office in Bombay had been closed.

Several other agents were assigned to New Delhi, but records do not indicate whether they were with Headquarters or with the Branch Office: Philip Detweiler, Keith M. Peterson, and Francis S. O'Neill. In addition, several others appear to have worked for short periods in this area. Also carried as members of the 405th were James F. Murray, who throughout the war performed security duties along the railway from Calcutta to Ledo, with a private car as his residence, and Charles Schultz whose duties were concerned with the Theater Postal Office.[53] Eugene Redden was assigned for several months to railway security up in the Assam area.[54]

Karachi Detachment Meets Administrative Difficulty

The Karachi group, the 406th, although they were ready for work as soon as they finished the British Field Security course, seemed to have more difficulty in getting started than did some of the other groups. In commenting upon this in the official history, Capt Thomas W. Steptoe, then 1st Lieutenant Steptoe, attributed this partially to their location in a remote rear area which encouraged a general apathetic feeling in regard to security and an increased amount of "red tape."

In a letter to IBT Headquarters written on 1 June 1944, Steptoe pointed out that certain difficulties had already arisen, partly because the S2 of the base section to which they were attached preferred that they not begin any operations

52 Ltr from Charles O. Thompson, American Consulate General, Bombay, India, to Major D. E. MacKenzie, CIC, USF, IBT, dtd July 21, 1945, (Unclassified) (Kansas City Records Center).

until the orders activating the detachment arrived, in the hope that such orders would clarify "such matters as quarters and rations, method of dress and uniform, office space and other operational data."[55]

The orders activating the group as Detachment "A" and placing it on temporary duty with Headquarters, Base Section Number 1, SOS, arrived on 14 June 1944. Steptoe reported a generally helpful attitude on the part of base officials, and an easing of supply problems, but delay in finding billets and further delay in finding office space postponed the day when the detachment could begin work.[56]

The detachment also had to fend off attempts to place them under the control of the Provost Marshal, and although this action was not taken, Steptoe explained that operations were somewhat hampered by these administrative tangles.

At first the detachment, in addition to providing security coverage for all SOS installations in the area, provided security coverage for all Air Force installations with the exception of the Air Transport Command, but with the establishment of a Headquarters Air Force Detachment, this area of their work was relinquished.[57]

Early in November, Steptoe left to take over the 409th up at Chabua, in Assam, and soon thereafter the 406th was officially transferred to the Myitkyiana area. In addition to Steptoe, the original group consisted of William W. Blanton, Ernest E. Heim, Charles A. Gerlach, and Thomas P. Whelley, who, before the transfer, had been joined by George L. Reynolds and Bart R. Hynes. As with all the detachments in the CBI, the members were fairly well scattered at about the time of the transfer. When the detachment moved, a small field office under the 405th was set up in Karachi for a short time, with Blanton in charge.[58]

Plans for Bombay Detachment Go Awry

In no place in the theater was the arrival of CIC anticipated with so much eagerness as was the 407th in Bombay and in no spot had so much been done to

prepare for them. Viewing the records ten years later, it is difficult to understand the complete "snafu" attendant upon their arrival.

The military observer attached to the American Consulate, Capt Coulter D. Huyler, had asked for a CIC detachment for the area long before they were sent, and evidently had worked ceaselessly to prepare the way for them. Because of the need for CIC, Nowlan, one of the five who had arrived with Lieutenant Wilson in November 1943, was sent for a short time to Bombay, and, according to Huyler, had been of great assistance.

In several letters to the theater CIC Chief in April 1944, Huyler described the mission for CIC in the area as principally that of security education of troops arriving in the theater. He had already secured promise of complete cooperation from the British, who also were eagerly awaiting the detachment. Another need for CIC, Huyler pointed out, was the screening of Americans in transit to the United States, since large numbers from the whole Far East were passing through the Bombay Port. He pointed out that many of these persons were "considered to be corrupt--dealing in narcotics, stolen Army property and espionage." He told of one case in Bombay on which he was then working: "She will be jailed tomorrow and will be interrogated by us after she has been stewing for several days. She is an ex-brothel proprietress in Chungking, now headed for the States, and has in her possession, among other things, some opium. Chungking wired the Consulate to watch out for her, as she is believed also to have indulged in espionage....

"I have already chinned with the Chairman of the Port Authorities, the Commissioner of Police; British GSI; and am rapidly developing contacts that the CIC will want," Huyler wrote.

Huyler asked for any theater intelligence bulletins or summaries which he could use for the "education" of the SOS Base Commander, from whom he feared not much cooperation could be obtained. The S2, a young lieutenant, Huyler pointed out, was untrained in intelligence work and had the additional duties of "Special Service Officer, Liquor Rationing Officer, etc., etc..." However, he appeared anxious to learn, and Huyler thought he could keep him "in line." Because of his doubts about the attitude of the base commander, Huyler strongly recommended that the agents be sent on detached service rather than be attached to the SOS Base. Even if DS could not be arranged, he asked that the agents be directed by orders to report directly to the office of the military observer, a maneuver which would weaken the "strict jurisdiction" of the base CO and "would doubtless give them more freedom."

In response to a question from the CIC Chief about quarters for the men, Huyler wrote that he had an apartment with ample space to put them up almost indefinitely until they could find quarters of their own. This would be possible

only if they arrived in civilian clothes, a request that he had made in previous letters, with the usual reasons carefully explained. He added that he could not house them in his apartment if they were in uniform, "as people would frown." Huyler explained that, while he could not "be officially tied in with CIC," he could and would be able to give them a great deal of assistance "without attracting notice..."

Regardless of the status under which they would arrive, Huyler asked that he be notified of the exact time of their arrival so that he could be on hand to greet them. He gave his office and home addresses and telephone numbers for both places.[59]

Huyler's earnest desire to help CIC, his insight into the problems they would meet and the means for anticipating some of them in advance is understandable when a check of the records reveals that he had entered the CIP in October 1941, had been commissioned and assigned as a CIC officer a year later, and at the end of December 1943, had been transferred to MIS and sent to his assignment in Bombay.[60]

After all of Huyler's planning and the correspondence between him and the CIC Chief at theater headquarters, the four-man detachment consisting of Edwin W. Simpson as SAC (Simpson was then a staff sergeant), John T. Cox, Milton Musick, and Daniel E. Teeter arrived in Bombay on Sunday, 18 June 1944, in uniform, completely unexpected, and carrying only Restricted orders attaching them to the SOS Base. Captain Huyler did not learn they were there until the next day. By then the agents were well known by their rank, and Captain Huyler could not share his apartment with them as he had planned or perform many of the path-smoothing tactics he had in mind, all of which he had believed acceptable to the CIC Chief of CBI.

The men were disappointed and bewildered by this situation. In his first biweekly report to the theater CIC Chief, SAC Simpson wrote:

"Detachment arrived this station A.M. Sunday, 18 June 44. No advance knowledge of or plans for arrival. Met by MP in charge at station and conveyed

60 G2 Files, Ft Holabird.

to military barracks; thence to the adjutant at headquarters, port of debarkation, then to rooming house near Taj Mahal Hotel, quartering military personnel by arrangements of billets NCO at Hq POD. Four men assigned one room off rooming house dining room which affords no privacy until change can be effected. . . .If the detachment had been provided with civilian clothes and arrived in such, they could have been quartered in Capt Huyler's place of abode. But no time, funds, travel orders, or information in this wise were granted to the detachment prior to its arrival at this station to effect the 'civilian status' clause of the Secret Orders."[61]

The only comment Simpson received from the chief about this predicament was the following: "I find it a bit difficult to understand your remarks. . .It seems to me that on the journey to Bombay there was ample time to have made the change from military to civilian uniform, since all that was needed was to attach the 'U.S.' collar ornaments to the men's shirts."[62]

It was obvious that inadequate briefing had been given the men, probably because they left for Bombay directly from Karachi after attending the Brisith school,[63] while the correspondence between Captain Huyler and the Chief in New Delhi had been kept as a matter of concern only to headquarters. A partial explanation may be found in a letter from the Chief, CIC, CBI, to Huyler in mid-July in answer to several letters of inquiry concerning funds, clerical assistance and other matters of interest to the detachment in which this statement is found: "I have not been ignoring the need of funds for operations, but have been so darned busy trying to find our missing equipment and getting what we did have issued to the detachments that it has taken most of my time and temporarily at least other things had to wait."[64] Briefing evidently had been one of the "other things."

On 12 July, nearly three weeks after the detachment arrived in Bombay and learned that they were to live as civilians, but with no means provided for doing so, the Chief, CIC, CBI, wrote to Simpson, "With reference to your difficulties about obtaining suitable quarters, I would suggest that you arrange for the entire detachment to be placed on Commutation of Rations and Quarters and have each

man try to find a room or other suitable quarters as an individual. While I realize that this will not be easy in Bombay, I believe that it is the only way in which separate quarters can be arranged."[65]

Simpson was unable to arrange the Commutation of Quarters and on 8 August wrote to headquarters (his letter was written with a "scratchy pen" since, although the equipment mentioned earlier had arrived on 24 July, they had not been able to unpack it since they had not yet obtained an office):[66] "...although the Col C.O. instructed the billeting officer to locate us appropriately, and he thought we were, we are still in one boarding house room without telephone (and our contact net is really hampered there), without privacy for discussion (and the house manager is a very curious Goanese; besides the fact that the house is constantly full of transients, all types), and without adequate safe-keeping of our files, so we have them in a tin trunk and one man guarding them all the time."[67]

Adequate quarters were not arranged until 22 August 1944,[68] but by that time the detachment had been able to accomplish a considerable amount of work and set up such excellent liaison with all American and British personnel in the area and local police officials that they already were considered indispensible. Within a few days after their arrival they had made the rounds to meet the officials with whom they would have to work and learned that Captain Huyler and, under his tutelage, the S2, had prepared well for their coming.[69] "The British are expecting us to take over and are willing to help us in any way we require." Simpson wrote.[70]

Huyler's preparatory work obviously smoothed the way for the detachment in advance, but records indicate that these agents in Bombay more than lived up to Huyler's advance promises. One outstanding indication of this fact is that the base commander, whom even Huyler had not felt could be won over, became one of the detachment's greatest boosters. Late in December the SAC wrote: "As of 1 January 1945 we are to have three weeks to do what we want in the way of security surveys, telephone monitoring, night raids, etc. This is to be done with the full support of the commanding officer and any one not showing proper cooperation is

to be taken to him at once." He also reported that the CO had decided to appoint a security officer since the S2 was too busy to give proper attention to these duties; the new man would be turned over to the CIC agents for instructions on his job.[71]

Throughout CIC's stay in Bombay, until the office was closed in the latter part of June 1945,[72] ship boarding was one of CIC's principal duties. All ships entering the harbor were boarded, all crew members' papers were inspected and crew members were interviewed for any information of a security nature which they might have. All repatriates going through the port were also interviewed.[73]

CIC agents in Bombay also had to deal with their share of the attempts made by certain dissident groups to draw Americans into their quarrels with the British and by others to inflame the populace against them, as did other detachments throughout India.

They were plagued by a flood of rumors derogatory to the United States, some of which were printed in pamphlets and newspapers. The Bombay Sentinel and the Free Press Journal, both English language newspapers, were particularly scurrilous. "You would hardly believe that the Philippines are to be liberated by the Americans from the Japs to be reoccupied by the Americans. The New World Order is at work," and "You would hardly believe that in Belgium the people starve and the food situation is much worse now than it was in preinvasion--apparently famine and the Allies go hand in hand," were quoted in an October report as typical of the inflamatory statements made.[74] "Shoe-shine boys and beggar girls seem to be the only caste and community with which groups of soldiers and most Yankees have come to form bonds of fraternity," one charge read. Rumors also were rife--rumors of outbreaks of leprosy, of impending air attacks, of an influx of Japanese espionage agents, of peace to be made by Germany and Russia. All of these called for CIC attention.[75]

The Bombay detachment had its share of personnel changes. Before the end of June 1944, Musick had been reassigned to the 413th and Michael Whyte sent in his place. In September Simpson was sent to Chabua, Assam, and Comiskey was sent to Bombay as SAC. Later in the year the 407th was officially withdrawn from Bombay and sent to the Northern Combat Command, but Comiskey and Whyte remained in Bombay to operate as a field office under the 405th. In May 1945, Comiskey returned to the United States to attend OCS and George F. Lynch went to Bombay until the office was closed in June 1945.

Calcutta Area is Security Problem

Calcutta, as the chief port of entry for American supplies to the theater, was considered particularly vulnerable, especially since early intelligence reports had indicated the state of Bengal as the gathering place for all espionage agencies operating in India as well as the seat of the most violent anti-British political movements. Prior to the arrival of the bulk of the theater detachment, Agent Paul J. McArdle who had arrived in November 1943 with Lieutenant Wilson, was sent to Calcutta to work with the Intelligence Section there and survey the situation in preparation for the arrival of the rest of the detachment. There he found that every incident occurring between U.S. soldiers and the native population--and of course there were some--was played up beyond all actual proportion. One incident, which he reported in April 1944 in which a Sikh taxicab driver was stabbed by a U.S. soldier, resulted in a strike by all taxicab drivers in the city, and a plethora of rumors including one that the cab driver had been attacked by four colored soldiers. Actually the soldier in question was white.[76]

When Harry G. Smith, a master sergeant who was to be special agent in charge (SAC) of the Calcutta office, designated originally as the 408th CIC Detachment, and Agents Richard W. Klise, Lawrence F. Hughes, and Young W. Chinn, arrived in June, they found much work awaiting them. Twenty separate incidents of wire cutting along the telephone lines between Calcutta and Kharagpur, the base of the XX Bomber Command, had been reported. Although many were thought to be pilferage cases, several were judged to be deliberate sabotage; whatever the cause, the destruction had to be stopped. Klise was assigned to investigate and take remedial action. He travelled the length of the line, about 100 miles, stopping in all adjacent villages to visit with the police chief and other village leaders. He complimented them on past cooperation, passed out cigars judiciously and generally won their friendship. Along with the friendly conversation and the cigars, he added the precaution of reminding them that each village

76 S/I, Subj: "Killing of Civilian, APO 465," to Officer in Charge, Theater CIC Detachment, Rear Echelon Hq USAF, CBI, APO 885; dtd 15 Apr 44, signed Paul J. McArdle, SAC, (CONFIDENTIAL) (Kansas City Records Center).

would be assessed a fine whenever an accident occurred to the line within their area. Interruptions on this line were practically ended.[77]

Fearing that the gasoline pipeline, which had just gone into operation to carry oil from Calcutta to the beginning of the Ledo Road, would prove a target for saboteurs, agents were sent the length of the line with similar instructions for establishing village responsibility. This proved a valuable precaution, since there were few interruptions in the operation of the line for the remainder of the war.[78]

In July, Pardee Lowe was sent from the New Delhi detachment to survey the possibilities of undercover operations in Calcutta's Chinatown. After a complete survey of the area, in which he was assisted by Agent Chinn and several OSS officers with whom Chinn was working closely, his conclusion was that such an attempt would be impossible, because the complete Americanization of the Chinese-American personnel available would mark them immediately in such a compact racial community. The survey further seemed to indicate that the situation there was not serious enough to require such an operation. Although the CIC in Calcutta kept a close watch on the community throughout the war, there is no evidence that it caused any serious threat to security.[79]

CIC had to remain alert to rumors, of which there seem to have been an abundance, many of which were natural to concentrations of troops in a noncombat area, but many of which were believed to have been maliciously inspired for the purpose of lowering the morale of American troops and increasing civilian unrest. Among the rumors which the Calcutta detachment had to attempt to trace and to make plans for overcoming were: that U.S. troops would be put into British uniform with pay cuts and lengthened service to correspond with the British; that the Bengal food shortage was due to the feeding of large numbers of troops in India and the export of grain to other Allied armies; that the rotation plan had been abandoned; that no Christmas packages would be allowed to be sent into the CBI Theater; that the American Red Cross refused to send cables for servicemen; and that many cholera fatalities had occurred at the Great Eastern Hotel, which was occupied by high ranking U.S. officers (actually one civilian had died from cholera).[80]

80 CI Summaries, Nr 5 thru Nr 10, dtd 30 Apr 44 to 1 Oct 44, CIC Det, Hq USAF, CBI, (SECRET) (Kansas City Records Center).

The absolute necessity of making free use of civilian clothing and civilian status for CIC agents is found in documents concerning this period in Calcutta, a situation which, in fact, was true all over the theater. At a meeting in December 1944, "convened by the Deputy Inspector-General of Police, Burdwan Range, to discuss ways and means of checking the pilfering of military and other stores from railways," the roster, which contains the names of several high-ranking railway and police officials, and several British officers, contains only one American: "Harry G. Smith, Esq., CIC, U.S. Army Base Section."[81] Smith was a master sergeant.

A short time later, after Smith had been assigned to Air Force Headquarters and Klise had been designated SAC of the Calcutta office, Klise reported that he had become disturbed by the lack of security of advance information on ship arrivals at the port, and that numerous civilian agencies seemed to have access to the information.

Klise continued his report, "I had a conference the early part of this week with Commander Benkart, the United States Naval Liaison Officer, and he is in accord with my opinion that a general survey of the situation is indicated. It is planned, therefore, that Naval Intelligence and the CIC will make a joint survey, and the British will be asked to participate."[82] Klise was then a sergeant.

As mentioned previously, the 408th, as a numbered detachment, was sent up into the Myitkyiana area in December 1944, and a branch office of the 405th was set up to take its place. Not all the personnel were moved, however, and February 1945 found Klise and McArdle still in Calcutta. The following had been added: Ernest E. Heim, John T. Cox, and Keith M. Peterson. The 408th returned to Calcutta for a while and finally was inactivated in March 1945 and a branch office under the 405th was set up.[83]

First Group Arrives in Jungle Area

The 409th Detachment was activated while its members were attending the jungle training course at Budni, Central Provinces, and was assigned to the Intermediate Section Nr 2, SOS in Assam, India. Upon completion of the course they went to Calcutta to draw their equipment and be processed through staging. On 8 July they began their four day trek to Chabua, first by train to Bongaigaon,

Assam, and the rest of the way by jeep. 2d Lt Robert Puryear was in charge, with William C. Holland, Alexander Monro, Andrew P. Lee, John D. Vorhees, and George F. Lynch.

The detachment had the usual personnel changes. In November Lieutenant White, from headquarters, replaced Lieutenant Puryear, who joined one of the detachments preparing to go to China. Holland and Lee also were assigned to a China detachment and Lynch was sent to Bombay. Edwin W. Simpson and Donald E. Teeter from the Bombay detachment were added to the group. In January, Lieutenant White joined another China detachment and Steptoe, by then a captain, took over as CO.

They were temporarily lodged with the ATC, CIC Detachment in a bungalow on the Deohall Tea Estate, at Hoograjon, Assam, but two weeks later moved into their own bungalow with the equally strange-sounding address of Dhoedaam Tea Garden, Barahapjan, which was located near the town of Doom Dooma, about 35 miles from Chabua.[84]

In January 1945 their bungalow was so damaged by fire that they had to move to another one on the same estate, but no one was injured and loss of detachment equipment and property was slight.[85]

Although the distance of their headquarters from the SOS headquarters under which they were to operate was inconvenient, it no doubt had its advantageous side. At any rate, this detachment seemed to run into none of the difficulties anent their civilian status that were suffered by some of the others.[86] They also had the advantage of having received positive directions before they left Calcutta. In a letter to Lieutenant Puryear on 9 June 1944, directing him to proceed to Chabua, Major MacKenzie stated: "You will request the commanding general to furnish quarters suitable for civilians attached to the Army, and will operate on a civilian status. You will also request him to furnish office accommodations which are physically removed from the headquarters of Advance Section Nr 2, SOS."[87]

87 Ltr Orders, Hq CIC Det, USAF, CBI, to 2d Lt Robert Puryear, O-1595109, dtd 9 Jun 44, (SECRET) (Kansas City Records Center). NOTE: Although the Letter Orders refer to the Base as Advance Section Nr 2, SOS, all other documents refer to it as Intermediate Section Nr 2, SOS.

This group was responsible for coverage of most of Upper Assam except the Ledo area and the 726th Railway Operating Battalion at Pandu. They met with immediate cooperation from the S2 of the Base Section who leaned heavily upon them for security surveys of installations and for security education of personnel assigned in the area.[88]

The detachment felt that much of their success with security surveys was the result of careful planning as well as the whole-hearted support of the base S2. Prior to a survey of an installation the base S2 would send to the commanding officer a letter outlining the purpose and scope of the survey and the need for full cooperation with the surveying agents. Prior to the survey the agents would visit the installation, confer with the CO and the S2 and have them send to each section a similar letter. At completion of the survey, before writing a report, agents would again confer with the CO and the S2. In his official history, Captain Steptoe stated that these measures had contributed to a spirit of cooperation throughout the command and "have proven quite successful as a means of breaking down the inherent suspicion which otherwise attaches to an independent investigating agency checking conditions in a U.S. Army unit.[89]

One of the more important responsibilities was the security of the gasoline pipelines. Early in January 1945, Captain Steptoe and Agent Monro traveled to Calcutta to coordinate with the detachment there plans for a survey of the Chittagong-Tansukia pipeline; and two days after their return to Chabua, Monro and Voorhees set out to cover the upper end of the line to meet Calcutta agents who were covering the lower end.[90]

Late in February, upon the completion of the Stilwell Road, Agent Simpson traveled the length of the road, 1,120 miles, from Doom Dooma, Assam, to Kunming, China, with the 610th Ordnance Ammunition Company, the first complete unit to make the trip. Before the trip he assisted in the necessary security planning, conferred with key officers and gave security lectures. On the ten-day trip Simpson made a study of the SOP for convoys on the road and after completion prepared a written report containing his comments and recommendations.

Along the way he also collected considerable information of counterintelligence interest from Indian soldiers and civilians, an operation that was possible only, it was pointed out in the official report, because he was able to speak fluent Hindustani.[91]

91 CIC Monthly Information Report, 409th CIC Det, dtd 2 Apr 45, (CONFIDENTIAL) (Kansas City Records Center).

Late in April 1945 the detachment was given the temporary responsibility of questioning approximately 2,000 refugees from French Indo-China for strategic information of interest to intelligence. Three French speaking agents, Leroy T. Newland, Julian H. Nixon, and Maurice F. McMahan, who had been with the interrogation teams operating in the Myitkyiana-Bhamo area, were sent on temporary duty to assist with this work.[92]

Along in May 1945, as additional men were being pulled from the Burma-India detachments for China, the detachment was reduced in size, and at the end of July, the 409th was combined with all the detachments operating in Burma and Assam.[93]

410th Assigned to Ledo Area

Early in February 1944, recognizing that the large number of Chinese shopkeepers and dentists in the Ledo area, many of whom were newcomers, posed a security threat to our forces in this extremely strategic area, an attempt was made to place _ there in an undercover capacity. It was learned, however, as it was in other sectors, that the clannishness of the Chinese would make such a maneuver impossible. Therefore, early in April, he was sent there in a semi-undercover role as a Chinese-American soldier, in an attempt to ascertain whether the sudden influx of Chinese shopkeepers in Ledo and Margherita was based upon any espionage plans or was merely for the purpose of doing business with Allied soldiers. He found an interesting situation, particularly among the dentists. Most of them were Hupeh Chinese, among whom the profession of dentistry had been handed down for generations. When large numbers of colored soldiers began arriving in the area in January 1943, the Chinese found them excellent customers for gold crowns; many more rushed to the area from Calcutta and set up business in bazaars owned by friends or relatives. When a theater order in September 1943 had banned American patronage of local bazaar dentists on the basis of unsanitary conditions, most of the dentists remained and became shopkeepers.

managed to strike up a friendship with several of the shopkeepers and came to the conclusion that there was little danger of espionage among the Chinese in the area, and that even this danger would be lessened soon by a U.S.

military order that all shopkeepers except those who had been in business prior to 1 January 1943 would have to leave.[94]

However, a real security threat remained, due to their strategic location at one end of the road which, when completed, would furnish the only land route to China and the necessity for protecting the gasoline pipelines which passed through the area. On 15 July 1944, three days after the 409th had arrived at Chabua, the 410th arrived at Base Section Nr 3, SOS, popularly called the Advance Section, with the assignment of covering an area extending approximately 300 miles, from Digboi, Assam, to Myitkyina, Burma, then under seige by American and Chinese forces. The famed Ledo-Burma Road, later to be named the Stilwell Road, was by this time open to Warazup, Burma, approximately 190 miles from Ledo.

Staff Sergeant Arnold B. Reinertson was SAC of this group. Other members were John E. Rebman, James G. McNamara, John C. Nebo, and
A short time later was added, and he and worked in an undercover capacity similar to that used previously by in order to keep watch over the Chinese in the area.[95]

Recognizing early the strategic significance of this area as the entrance to the Burma combat zone, CIC immediately set about planning means of controlling movement. Among their most effective recommendations was the establishment of the Hellgate Control Post at Hellgate, Assam, where it could be readily ascertained that convoys were not carrying undesirables in either direction. CIC made periodic spot checks of this post and drafted regulations to cover any weaknesses found in its handling.[96]

On 28 February, James G. McNamara completed a survey of the pipeline from Tinsukia to Myitkyiana to determine the extent of security measures and

recommend measures to prevent sabotage. The Calcutta and Chabua detachments had completed the survey up to the point where the 410th took it over.[97]

As in many other areas throughout the war, CIC found itself performing tasks which were not included in the book, but which served to increase the respect in which CIC was held by other units and their commanders.

When it was recognized, in December 1944, that four of the seven battalions in the 45th Quartermaster Group, a negro outfit commanded by white officers, was having to replace its trucks at a far lower mileage than the other battalions, CIC was called in to investigate. They interviewed numerous persons and drew up charts and graphs showing performance and repair records. The cause was found to be as suspected: wilful neglect of first echelon repairs by the drivers and a few cases of intentional destruction, all traceable to a notoriously bad morale situation. CIC Agents Rebman and Nebo, who conducted the investigation, made recommendations which were accepted thankfully by Base Headquarters.[98] Some of the causes, of course, nothing could be done about--length of time overseas, the debilitating climate and the long monsoon season--but their recommendations for improvements in living conditions and recreational facilities were put into effect immediately with a noticeable upturn in morale. Publicizing the charts and graphs also helped by making even those who had been wilfully negligent aware of the seriousness of the situation. CIC's gain was that the survey revealed a number of disaffected persons who were deliberately causing trouble. One miscellaneous case concerned a private with one of the units along the Ledo Road who was receiving letters from a woman in New York claiming that he was the father of her illegitimate child and urging him to desert the Army. Another was the case of a master sergeant suspected of disaffection but revealed by the investigation to be mentally ill.[99]

Their survey also revealed a need for more security education. Nebo was assigned to put on a special program along the lines of those undertaken in other parts of the theater.

Prior to CIC's arrival in the area no background checks had been made on the civilians working in and around American installations along the Ledo Road, and there was no pass system for identification. McNamara was assigned to set up a program for processing these individuals, including interviews, photographs, and fingerprints. A pass system was also inaugurated.[100]

CIC agents discovered a number of discrepancies in the handling of classified documents, including the fact that many documents were being over-classified merely to speed up deliveries, and that some of the units were taking their documents to the air strips for delivery to the pilots rather than go through the necessary registration with the courier service. CIC's recommendations were credited with bringing noticeable improvement in the situation.[101]

It was estimated that prior to the Japanese invasion, the Chinese population of Myitkyina, Burma, was about 200 persons, most of whom escaped to the walled city of Teng Chung, in Yunnan Province in China, about 120 miles away. Prior to the war a rough but passable road between these two cities had served as a smuggling route between China and Burma. With the recapture of the city by the Allies in August 1944, the sudden influx of Chinese to the city again posed a security problem. By March 1945, the Chinese population had grown to 2,000, drawn by the possibilities of black market operations, as well as legitimate business operations with the chances of easy money. CIC recommended that the Bazaar area be put off limits to discourage the "easy money" idea and that a frontier control post be set up and controlled by both American and Chinese soldiers. Manning the post with Chinese soldiers only would be pointless, since experience had taught that the Chinese soldiers would protect Chinese civilians in their activities.[102]

In June 1945, Reinertson returned to the United States and Lt William Daube, newly arrived in the theater, was placed in command.[103] At about this time operational functions of the detachment were combined with the 406th, the 407th, and the 409th all operating in Assam and Burma under the direction of Captain Steptoe, CO of the 409th.[104] Considerable shifting of members of the detachment began soon thereafter and, on 30 October 1945, the detachment was inactivated.[105]

Group Assigned to 10th Air Force

The group assigned to the 10th Air Force, the 413th CIC Detachment, was activated on 9 June 1944, with Maj Fariss Hardin in command, and left Calcutta early in July in three groups. Major Hardin, Don B. Bernston, Jack A. Hockman, Lionel J. Hall, Francis W. Krauser, and Milton Musick went to 10th Air Force

Headquarters at Kanjiloa, Assam, near the India-Burma border. They later were joined by Lt Thomas Kendall and Joseph Fuchs. The group attached to the 7th Bombardment Group at Kurmitola, India, near Calcutta, consisted of S/Sgt Donald C. Mauro (SAC), Harold T. McGovern, William J. Adams, Walter B. Baker, Jr., Harold M. Fetters, and Press C. Southworth, Jr. To the 12th Bombardment Group Headquarters at Feni, India, east of Calcutta near the India-Burma border, went S/Sgt William E. Hoffman (SAC), Joseph A. Smith, Norman E. Albright, John McDonnell, Earl C. Snyder, and Robert Vautrain.

As with other groups there was a certain amount of shifting of personnel. Early in November 1944, because of the progress of the campaign in Burma, there was a complete reorganization of the unit. Headquarters moved to Myitkyina up in Northeast Burma; Krauser and Musick went to set up a field office at Dinjan, Assam, 32 miles west of Ledo, within driving distance of four airfields; and Bernston and Southworth were sent to Tingkawk, Sakan, Burma, headquarters of the 80th Bomber Group, to furnish security for four airfields along the Stilwell Road.[106]

Another shift came in December when the detachment was assigned to Theater Air Force because of the increased Air Force jurisdiction. Several new members were added, and Hoffman, Mauro, and McDonnell were assigned to the 412th which was preparing, finally, to go to China. As soon as an airstrip was taken from the enemy, an advance CIC party preceded the move to check physical security of the location and security of communications and native personnel.

Security was the all-consuming mission of this detachment. They made security surveys of air bases; investigated all civilian employees; set up identification systems for travelers; conducted security campaigns among the military and the civilian employees; and investigated all explosions and fires on air bases for possibility of sabotage. They maintained close liaison with all other intelligence and police units, British and Indian as well as American. Through this liaison, they were able to assist in working out a solution for civilian refugee problems in Burma through which they obtained much information of counterintelligence value. Investigation of all cases of suspected sabotage of planes at 10th Air Force Base came within their purview.[107]

One "loose talk" investigation which this group brought to a swift climax concerned an impending large scale operation planned for 11 February 1945. On 31 January, a warrant officer assigned to Publications ran a stencil outlining instructions for the operation. That same evening he told a lieutenant assigned

3076

to the Photo Laboratory, "I think I can tell you boys something and trust that you won't talk. The first part of February there is going to be an all out show. It will be the biggest ever attempted. The Rangoon area is going to catch hell. All Allied aircraft are participating, including the B-29's."

On 5 February the lieutenant passed the story on casually to two Red Cross workers and an Army captain. On 8 February one of the Red Cross workers repeated the story to a captain and a major, both members of the 7th Bombardment Group. This time the hearers were conscious of the security implications and questioned her until she admitted from whom she had heard the story. The case was immediately turned over to CIC agents who were able to round up all the persons who had heard the story. They were not hard to convince that it should go no further. As for the persons involved, two were tried by General Court, with the result that one was fined $50 per month for 12 months.[108]

A similar case, referred to them by the British Field Security Section, also involved the Rangoon operation. An American glider pilot was charged with having discussed the planned operation with an Indian woman who in turn passed on the information to a British officer. The suspected pilot had already left the theater, but the information was sent forward with a request for disciplinary action.[109]

An interesting document, prepared in February 1945, lists in brief form 32 types of activity performed by this detachment in India and Burma. "Close contact" and "liaison" are the key words in practically every activity listed. "...together with NCAC, CIC, CAS and British Intelligence agencies, raided..." "...close liaison between British civil affairs in Burma..." "...assistance of a counter-intelligence nature...to China National Airways Corporation..." The above are typical comments.[110] How much bearing this constant stress upon liaison had upon the successful operations of the detachment cannot be estimated from a study of documents after a lapse of ten years, but it is significant that the records contain no mention of the occasional petty, but nevertheless annoying, types of difficulties encountered by some of the other detachments.

Even more significant perhaps is the letter of commendation written by Maj Gen Howard C. Davidson, 10th Air Force Commander as the unit was preparing to leave for China. General Davidson wrote in part, "The devotion to duty of these CIC agents is exemplified in the high esteem held for them by 10th Air

Force personnel who have had occasion to deal with them. They have been a major asset in the assurance of security within the Air Force and I greatly appreciate their constant material aid.... The integrity and loyalty of these agents has been shown by their activities in the successful completion of counter-intelligence investigations.... I wish to commend Major Hardin and each of his 10th Air Force agents for the accomplishment of their counterintelligence duties..."

This letter was indorsed by Maj Gen George E. Stratemever, Commander of Theater Army Air Forces, in part, "It is a pleasure to add my personal commendation to that of the Commanding General, 10th Air Force, for the outstanding performance of duty by your organization throughout your tour of duty in this theater. You have justifiably won the respect and pride of the services..."[111]

Early in May 1945, the entire detachment, less a few who were transferred to other detachments and augmented by personnel drawn from other Burma and India detachments, was alerted to move to China.[112]

General LeMay Backs CIC "To the Limit"

The 416th CIC Detachment, under command of Lt Paul F. Ward, was sent to Tactical Section #5, then at Kharagpur, India, the secret base of the XX Bomber Command. With him went Lawson A. Moyer, John F. McElligott, Harold C. Dorn, and James G. Brock.[113] Most of their work was with the XX Bomber Command, in which they found their principal problem to be that of security which was considered particularly lax. By early November 1944, security surveys and general security education, as well as investigations of reports of "loose talk," were credited with having brought about considerable improvement. According to official reports, CIC's measures for improving security were backed "to the limit" by Maj Gen Curtis LeMay. A variety of cases of suspected sabotage, including the presence of loose bolts in the magneto housing of an aircraft, "shot bags" found in a parachute, and fires at breaks in air oil pipe line were investigated as were numerous suspected espionage cases.[114]

In September, three members of the detachment were sent to an advance base at Chengtu, China, and early in 1945, the remainder of the unit moved up to Bhamo, and for a time worked in conjunction with the Northern Combat Area Command detachments, until they were transferred to the 703d CIC Detachment and moved out of the theater with the XX Bomber Command.[115]

In May 1945 the unit was reorganized with six agents assigned and travelled to China to join the detachment there.

China Detachments Deployed to Other Units

As previously mentioned, the 411th, the 412th, and the 415th CIC Detachments which had been earmarked for China simply had to wait and in the meantime were sent to Calcutta to find whatever work they could do. Captain Grieve and his 412th Detachment of 2d Lt Thomas H. Kendall, W. F. Dennis Gebhart, Robert L. Baldwin, William R. Boggs, Hugh Gregg, John J. Brennan, William T. Elliot, Kong T. Louie, George L. Lyan, and George L. Reynolds seem to have been somewhat more successful than the others, since they sold their services to the ATC and later to the Air Force.[116]

After several delays made it clear that even the small detachment under Captain Gelwicks would not go to China for some time, Captain Gelwicks was sent to the British school at Karachi and his 411th Detachment of Robert B. Edris, George E. Nixon, Sum M. Seto, George G. C. K. Mah, William A. Reynolds, Wah Foo Quon, Edwin S. Belknap, and Charles F. Gentile was merged with Lieutenant Dailey's 415th Detachment consisting of Charles F. G. Smith, John Nowlan, Joel Breechen, Laurence H. Ballou, and John P. Shanley.[117]

By October, most of the members of these three groups had been sent up to the Northern Combat Area Command (NCAC), and when, on 6 December 1944, they were alerted to be ready to leave for China on about 5 January 1945, it was necessary to reassign a number of them to Burma detachments and substitute others from other detachments.[118] During their stay in Burma, these three, along with the other detachments there, operated as one unit.

Agents Assigned to GALAHAD Force

The Northern Combat Area Command (NCAC) was at first doubtful about accepting its assigned CIC detachment, but after Lt John H. Thorne, officer in charge, traveled to NCAC Headquarters at Shadazup, about 100 miles down the Stilwell Road, for conferences with the G2, G3, and the Chief of Staff, it was decided not only that they could be used, but that an additional detachment was desired, to be made up of persons awaiting shipment to China. One detachment would be utilized as a security detachment at headquarters while the other would be assigned to the GALAHAD Task Force, the code name given to Brig Gen Frank D. Merrill's jungle troops. This force, popularly called Merrill's Marauders, had moved through the jungle to cut off the Japanese at several spots ahead of General Stilwell's Chinese divisions, and had by that time captured the airstrip at Myitkyina and laid seige to the city, key strategic spot near the projected road. Lieutenant Thorne flew to Myitkyina airport where he received the approval of the G2 and other ranking officers, who said they would welcome the CIC detachment as soon as they could be flown in. Thorne returned to Ledo where arrangements were made for flying in the detachment with necessary equipment and a jeep for transportation, and for bringing the additional group up from Calcutta. Still later, additional agents from the China group were brought up into Burma to join the NCAC detachment, and the 406th, the 407th, and the 408th Detachments were brought in. Although these units kept their own identities for administrative purposes, they all operated as one unit under Thorne, by then a captain.[119]

The specific mission for the NCAC group is outlined by Col Joseph W. Stilwell, Jr., AC of S, G2, was to install an effective and rapid system for classifying the native population into "black" and "white" categories; to apprehend known enemy agents, collaborators and saboteurs; to maintain security between the front lines and the rear areas; and to effect close liaison with the British Civil Affairs Service.[120]

CIC Enters Myitkyina With First Wave

Thorne and the members of the 414th CIC Detachment, Leroy T. Newland, Karl R. Manwell, Jean A. Curran, and James H. Carr, Jr.,[121] joined the GALAHAD Task Force in time to enter Myitkyina with the first wave of assault

121 Ibid; and Interview with Leroy T. Newland, Washington, D.C.

troops when the city fell, and search enemy headquarters for documents of intelligence interest, with the result that for the first time in the Burma Campaign a quantity of valuable enemy documents was obtained for use by G2.

About two and one half tons of documents were secured, but it was believed that a much greater quantity had been destroyed by the Chinese because they had not been trained to collect such items. By the time the second group arrived on about 7 September, the detachment was engaged in clearing local civilians for employment by the Army and in hunting the persons who were on the previously compiled Black List. The first three they found were employed by Civil Affairs, who knew they were on the list, but insisted they had to employ them because of their special qualifications. CIC was able to apprehend and send them out to India for further interrogations and probable trial only after appeal to NCAC Headquarters. Searches for wanted persons required extensive travel through the jungles to remote villages, by jeep, elephant, boat, and foot.[122]

One outstanding case was conducted by S/Sgt Edmund Fong, who set out on 21 September, accompanied by a Burmese Sub-Inspector, to apprehend Sinwa Nawng, headman of Kansi Village in North Burma, a notorious Japanese collaborator who was charged with seizing, disarming, and turning over to the Japanese, 15 native Indian-British troops and Lt Stewart Walker, a downed American pilot. Although suffering from malaria and jaundice, Fong traveled with his companion for two weeks by plane, jeep, and motor boat, and on foot. Upon their arrival in the area, the U.S. liaison officer protested the man's arrest, explaining that he had been very helpful in obtaining foodstuffs and laborers for them and expressing the opinion that he had helped the Japanese only to the extent to which he had been forced. Sensing that the Chinese had been taken in by the man, Fong realized that they would not permit his arrest and that he would have to be removed from the territory by subterfuge. Therefore he told the Chinese officials as well as Sinwa Nawng that he was wanted in Myitkyina to relate his experiences during the Japanese occupation in order to aid the Allied forces in Burma to understand the Japanese tactics in dealing with the civilian population. Such subterfuges often had to be used in dealing with the Chinese. During the return trip to Myitkyina, Fong picked up another prisoner who was wanted in Myitkyina and also accepted two other prisoners whom other units wanted sent back. Upon his return with his four prisoners Fong entered the hospital for treatment for malaria and jaundice.[123]

122 History of CIC in CBI Theater, by MacKenzie, (R).

123 Case Supplement to Report, CIC Operations in Burma, 31 Sep 44 to 5 Mar 45, (R) (Central Records Facility).

Interrogation Teams Organized for Jungle Work

In October 1944, all the members of the detachment, with the exception of the headquarters group consisting of Lieutenant Thorne, Lt Daniel Dailey, S/Sgt Charles Smith, and Cpl Joel Breechen, were organized into interrogation teams, a set-up unique to this theater. For the remainder of the campaign these teams, consisting of two or three CIC agents accompanied by native Burmese interpreters furnished by the Office of Strategic Services (OSS) Detachment 101, traveled throughout the area, each team equipped with its own jeep and necessary bedding, food and other supplies. Their mission was to apprehend enemy agents and collaborators; obtain additional names for the Black List; secure enemy documents; and, in general, obtain all possible information concerning the enemy.

Combat Interrogation Team (CIT) #1 began operations on 4 November at Mohnyin, south of the Stilwell Road between Myitkyina and Indaw. This team, consisting of Karl R. Manwell, L. T. Newland, Jean A. Curran, and Wah Foo Quon, all corporals, handled several interesting cases, most notable of which was the capture of the leaders of a bandit gang which, operating under the Japanese, had captured and tortured many Allied soldiers. Both Saung Swe, the leader, and the second in command of the gang later were executed. Two spies who had reported movements of the Chinese forces were captured and interrogated. In all, 26 arrests were made in this area, resulting in three death sentences, four life imprisonment sentences, and two sentences of shorter duration.

In mid-December, Manwell and Curran moved on down to Indaw, while Newland and Quon formed a new team, Team #4, and moved over to Katha near the Chinese border, between Indaw and Bhamo. The Indaw area proved to be seething with intrigue, particularly the village of Manlai, headquarters of a gang which, witnesses claimed, had tied an American soldier to a tree and burned out his eyes. Ten members of the gang were arrested. While here Manwell and Curran became great friends with the local leaders who, as a mark of honor, christened them "Bo Gyi" and "Bo Gale." Their largest weapons haul was made here, 300 Japanese rifles in addition to other weapons.

The next location for Team #1 was Tigyaing, where they were joined by Cpl Thomas P. Wheeley, who had been with the detachment at Karachi. Here they arrested many Japanese collaborators, among whom were five natives who had ferried a party of the Wingate (British) force to an island in the river and then reported them to the Japanese. Leaders of the Tigyaing Women's Thakin League, who had collaborated wholeheartedly with the Japanese and had acted as procuresses for them, were arrested. Arrests in this area totaled 12, and a number of police documents were obtained.

Roads were practically nonexistent, although the natives called a trail through the rice paddies a motor road. Late in February the team was ordered to join the British 36th Division which was operating in an area about midway between Katha and Mandalay. Again they were told that a motor road was available, but at several places they had to hire natives to clear trees from the trail, and to build a raft to get them across the Schwei River. After joining the division they operated with the forward troops in the occupation of captured villages. By the end of March they had arrested 18 persons, including one whom they had trailed from Mohnyin, and another who was charged with the arrest of Lt Joe Wilson of the U.S. Air Corps. They then established a listening post in Mogok to serve the area between there and the Stilwell Road.

Team #2 Travels by Boat and on Foot

CIT #2 was formed at Myitkyina on 8 November and two days later moved to Schwegu, situated on the Irawaddy River half way between Bhamo and Katha. This team, consisting of Sgts James H. Carr, Jr., and Sick Foon Woo; Cpl Robert B. Edris and an interpreter from Detachment 101, was augmented from time to time by personnel of Headquarters Company, 96th Signal Battalion, for radio communication, and by Kachin Rangers from Detachment 101. Since there were no roads in the area, the team was given a boat with outboard motor which they could use along the river and neighboring streams; the rest of their travel was done by foot. In addition to investigating suspected collaborators, they spent much time in hunting radio transmitters that reportedly were operating from the area. On one occasion a six day search was conducted arodnd the Kaukwe Chaung area, and a road block was set up in an attempt to head off an enemy radio team rumored to be escaping down the Kaukwe River.

Rumors of looting of Burmese villages by Kachins and by Chinese guerillas had to be investigated as did various Japanese-inspired societies set up among the natives, but one of the major tasks encountered was the uncovering of the so-called Anti-Fascist League, organized by disgruntled members of the Thakin League.

In mid-February, the team journeyed by boat to Moda Gyi Village where they arrested six members of "Wa-Bat," a raiding gang who had been trained by the Japanese in jungle warfare and who, at the instigation of a Japanese agent, had sabotaged the railroad line above Mawlu, Burma.

In all, the team arrested 40 persons and developed sufficient information against most of them to warrant their being brought to trial as Japanese collaborators.[124]

124 History of the 406th, 407th, 408th, 414th, and 416th CIC Detachments in the CBI Theater, 31 Jul 44 to 31 Mar 45, (Central Records Facility).

One of the most ambitious projects undertaken by the team was a survey of the area bordered by the towns of Namkham, Hosi, and Muse between 1 March and 12 March 1945 to determine the attitude of the natives toward the Allies and to learn of their food problems; to investigate the reports of raids by Chinese guerillas; to obtain any intelligence information about the enemy; and to learn the extent of collaboration with the enemy.

For 12 days, Edris, Carr, and Woo, accompanied by interpreters and radio men, slogged over 120 miles of barely discernible trails through difficult mountain terrain, visiting 15 villages where they interviewed the headmen and village elders. It is interesting to note that the monthly report in which this information is contained states, in the space allotted for "recommendations," "...that the physical condition of CIC personnel continue to be stressed."[125]

Team #3 Organized to Enter Bhamo

On 19 November, CIT #3, consisting of S/Sgt Edmund Fong and Cpls Edwin S. Belknap and W. F. Davis Gebhart, with two interpreters from Detachment 101, were sent to 48th Division Headquarters, then ten miles north of Bhamo, to be ready to go into the city as soon as Chinese forces invaded it, to sift the civilian population for Japanese collaborators and to obtain any military information before it could be destroyed. They departed Myitkyina by jeep and within two days had advanced beyond the construction work of the engineers. The trip took four days, a distance that could be traveled in six hours after the road was completed.

Upon arrival, Fong attempted to establish liaison with the G2 of the Chinese division, which operated its own counterintelligence system. For a time this was unsuccessful; the Chinese persisted in jailing collaborators and turning enemy agents over to civilian authorities without informing CIC of their action. The CIC, therefore, had to set up its own independent informant system and proceed with the interrogation of suspects without help from the Chinese. To make the situation more frustrating, the Chinese ordered all civilians to move outside a five mile radius of Bhamo, thereby shattering CIC's newly created network. With the assignment of a colonel from the Chinese First Army to act as their liaison with high Chinese officials, the situation improved; the Chinese began to understand CIC's mission and to turn over enemy agents to them.

Upon the fall of Bhamo one month after the team's arrival, they entered the city while the Japanese snipers were still active and found many documents of interest to G2. Team #3 then set up its office in Minhla Village in north Bhamo where, in coordination with the Chinese, they investigated and arrested 43 Japanese

125 Monthly Information Report, 414th CIC Det, NCAC, dtd 2 Apr 45, (CONFIDENTIAL) (Kansas City Records Center).

agents and collaborationists. At first, information on individuals and on the activities of various pro-Japanese organizations was difficult to obtain, because the Japanese had instilled fear in the people by telling them that they were retreating merely to create a trap for the Allies and that they would return, bringing reprisals to those who cooperated with the Allies. Gradually, the large amount of American equipment impressed the natives with the permanency of Allied intentions. The greatest factor in winning their confidence, however, was CIC's insistence that Civil Affairs employ only those who were truly pro-Ally and who had suffered during the Japanese occupation because of this sympathy, by-passing those whose sympathies had been in doubt. A system was set up whereby every civilian employed had to be approved by CIC and the Chinese police.

On 17 January the team moved to the Namhkam area in order to maintain contact with the rapidly moving Chinese First Army, leaving Bhamo relatively secure. CIC agents moved into Namhkam with the Chinese on the heels of the retreating Japanese; however, few documents were found as the garrison had been small and had withdrawn without prolonged seige. The CIC agents stayed at Namhkam only about two weeks, a period which proved to be a pleasant interlude. The natives, particularly the Shans of the Schweli Valley, were so happy to be rid of the Japanese oppression that they forgot their former petty grievances against the British and even dropped their traditional feuds with the Kachins of the hills in appreciation of the Kachins' part in driving out the Japanese. Even the food supply was fairly adequate since the Japanese had failed to destroy the rice paddies in the Namhkam Valley before their retreat; however, practically all the cattle of the area had been destroyed. The effective Chinese counterintelligence system rid the area of most enemy agents ahead of CIC's arrival. Those arrested later were turned over to CIC, as evidence of improved relations brought about through the dual efforts of Agent Fong and Roderick Du, of the Chinese First Army.

Since this quiet, peaceful area offered little need for CIC, the team reluctantly moved, on 5 February 1945, to Muse, near the border between the Northern Shan States and Yunnan. Here also they found little counterespionage and countersubversive work to do, but they did meet a serious situation that required CIC attention. Two gangs of Chinese bandits were operating across the border into Burma in the guise of intelligence agents, without the authority of NCAC or the new First Army. They pretended to be hunting Japanese spies, but investigation revealed that all the persons arrested were wealthy and were released after payment of ransom. This situation offered a serious security threat, not only because of the attitude engendered among the natives but also because the bandits could tap the pipe line for gasoline and the telephone line for critical metals. In mid-February, leaving in the jail 23 collaborationists who had been rounded up at Namhkam and Muse, the team moved on to Kutkai to replace Team #5, which had moved in immediately after the fall of the city. At Kutkai, only four or five collaborationists were found, but investigation of the bandit gangs continued.

Team #3 Divides

Early in March Team #3 divided, Belknap and an interpreter proceeding to the Hsenwi area a few miles south of Kutkai, while Gebhart and Cpl Julian H. Nixon, who had recently been added to the team, went to Lashio, arriving while the town was still under Japanese artillery fire. At Hsenwi, Belknap found many important civilian government documents, obtained information on a school conducted by the Japanese for the administration of the Shan States, and an account of Chinese political aspirations in North Burma. He also arrested a Burmese who had worked for the Japanese and had turned over to them an American pilot shot down near Kulong.

The agents who went to Lashio found the city to be a center of considerable Japanese espionage and political activity. They arrested eight suspected agents and collaborationists the first week and 12 the second, using as their guide the suspect list compiled by headquarters, augmented by information locally obtained. Most of these were in the nature of collaborationists, since the Japanese had taken most of their trained agents with them when they retreated. They also arrested a Burmese, long sought as an officer in the Japanese Army who had fought actively throughout the Hukawang Valley Campaign; and, through questioning, obtained much valuable information from 20 escaped Indian prisoners of war.

As soon as Lashio was made secure for the incoming Allied installations, the team extended its activities southeast to Mongyai and northeast to Mongyang, all the while maintaining its connection with the NCAC Forward Command Post.

Team #4 Arrests 21 in Katha Area

On 14 December, Newland and Quon, who had began operations with Team #1 at Mohnyin, were designated as Team #4 and set out for Katha, accompanied by an interpreter. They arrived three days after the fall of the city. A brigade of the British 36th Division and a company of Kachin Levies were also in the city for about two weeks, but when they moved on, the CIC team was left in control except for a British Civil Affairs team with whom some difficulty was encountered because of the Civil Affairs policy of handling Japanese collaborators according to peacetime rules. CIC insisted upon holding these persons under arrest instead of permitting them to move about freely while their cases were being investigated. The team felt that its policy was correct because they quickly won the respect of the population, and the saying became common that "if one was picked up by the CIC jeep, one did not come back."

A total of 21 outstanding suspects in the area were arrested by CIC. Few documents were found since the Japanese had moved their headquarters to a village about 30 miles down the Irawaddy River two months before the Allies moved in.

However, a contest with awards for the persons who turned in the most material found in the villages in the area 15 miles south of Katha produced a number of valuable documents and propaganda leaflets.

As the only American unit in the area for a time, this CIC team was called upon for a variety of tasks, from acting as information center for incoming American personnel to ruling on the disposition of 18 elephants and their drivers who were trying to contact the Kachin Levies.

An assault boat with outboard motor was added to their equipment for use on long trips up and down the Taiping River, but since gasoline was scarce, most of their travel was by foot. During their stay in Katha, two more interpreters and a Kachin guide were added to the team.

When the area was turned over to SOS jurisdiction, the team proceeded to Bhamo, one agent making the trip by boat and the other by jeep, with a forest ranger as guide. A short time after their arrival in Bhamo on 4 March 1945, Newland and Quon moved south to join Team #5.

Team #5 Responsible for Security of NCAC Forward Command Post

Team #5, consisting of Lieutenant James Lucas and Cpl Seymour Abeles and two interpreters from Detachment 101, was activated on 19 December 1944 to fulfill security requirements of the NCAC Forward Command Post which had just moved to Nansin. There existed the necessity, not only of screening the local population for enemy agents, but also of planning the protection of the Command Post against bands of Japanese stragglers making their way south from Bhamo after the anticipated move to China of the Chinese 22d Division. Since the Japanese had not occupied this area, there was no prepared Black List and no list of friendly natives. In order to set up a warning screen over a large area, the village headmen in all the surrounding areas were contacted immediately and given the responsibility of reporting any information concerning the Japanese or the presence of any strangers in their village, with the threat of punishment if they failed to follow out the order. This system was completely successful with the Kachins, but only moderately so with the Shans.

Late in December the team moved to Si-U where they performed security work for the Chinese 50th Division as well as for the NCAC Forward Command Post. Their duties called for much liaison work between the division and the natives as well as acting as a pro tem Civil Affairs team; this gave them an opportunity to gain the good will of the natives who willingly passed along information.

In January natives reported that Ushikawa, a notorious Japanese agent, was in the area. An agent, accompanied by two interpreters and two Kachins, started on his trail, and although they did not apprehend him, were able to keep him on the move until he left the territory. On another occasion natives reported that two Shans in a neighboring village had worked as spies for the Japanese. When these two men were arrested, they proudly admitted that they were spies and told of their activities as follows: "The headman of Si-U called us in and told us we had to work as spies. We refused but he told us we would be killed if we didn't obey. So he gave us one rupee apiece and some eggs and sent us up to Sikangyi to see if any British or American aircraft were landing there. We went to Sikangyi and told the headman that we were spies and asked him if he had seen any planes. He said no, so we returned to Si-U and reported that. That was all."

Early in February the NCAC Command Post returned to Bhamo. The team remained for a week with the 50th Division, but since the area was static and did not justify their remaining, they soon followed and then were sent to Nampakka, headquarters for the 5342 Brigade. In this area they made several arrests and added several names to the Black List. They set up a security network by visiting, on foot, the headmen of all the villages within a 15-mile area. They moved down the old Burma Road to Kutkai after the Japanese withdrawal and, being the first Allied soldiers to enter, were able to pick up many valuable Japanese documents. In Kutkai they were able to obtain a great deal of tactical intelligence information, leads, and suspects, which they turned over to Team #3 before they left on 21 February.

On 15 February Lucas and Abeles volunteered to help in the rescue of two Americans who had been caught in a Japanese trap six miles south of Kutkai. They discovered that the Americans had been killed before their arrival. As they were bringing out the bodies, their party was ambushed. Abeles was wounded by machine gun fire, becoming the first CIC agent in the theater to win a Purple Heart. A few days later Lucas and Fong, who had joined the team from Team #3, flew to rejoin the 50th Division and marched 25 miles with them to Panghai, a suburb of Namtu, arriving there on 23 February. Panghai was still receiving artillery fire and snipers were active in Namtu. Joel M. Breecheen, who had come from headquarters at Bhamo on business, was wounded by a splinter from a 75mm shell, becoming the second Purple Heart winner.

From then on Team #5 was very busy, since this area was a center of Indian Independence League activities. Within the first two weeks 25 arrests were made, numerous names were added to the Black List, informant systems were established and documents were captured. Interrogation of many Indians and Shans who had come through enemy lines produced much valuable tactical information. At the end of February, L. T. Newland, Eugene Redden, and Wah Foo Quon joined the team, Newland and Quon having previously served with Teams #1 and #4. Shortly

afterward Lucas was hospitalized, and Newland assumed charge of the team. In mid-March two members were sent to Hsipaw, further south, while the Japanese were attempting to infiltrate the town, and the remaining members set up a branch office at Kyaukme on 11 April.[126]

Near the end of January 1945, Newland, Carr, Gebhart and 2d Lt James Lucas completed comprehensive food surveys in the areas in which their teams were operating.

This survey consisted of comparative figures for supply and cost of food stuffs during British and Japanese rule and probable future supply. Although far afield from CIC's recognized mission, it was believed that this survey would enable CIC to deal more effectively with the civil population as well as furnish the Office of War Information (OWI) with good propaganda material.[127]

A further example of the cooperation of this unit with OWI as well as evidence of a wide range of CIC activity can be seen in an "urgent request" to CIC CBI Headquarters for a copy of the Koran "to extract some proverbs to be used in pamphlets for the OWI." A copy of the Koran in parallel English and Arabic versions was dispatched immediately.[128] Lieutenant Farris at headquarters was used to strange requests. In October 1944, before the combat interrogation teams had begun their work in the Burma jungles, he had answered an overnight request for 12 colored silk "escape" maps of Burma, such as used by the Air Corps, needed because they would hold up under constant folding and the damp Burma climate.[129]

While the interrogation teams were ranging throughout the area on their special missions, other agents with NCAC were engaged in a variety of activities. William J. Adams was credited with outstanding work in the investigation of a break in the gasoline pipeline from Myitkyina to Bhamo. A search of three small villages in the area of the break revealed many small containers of gasoline which had been removed for use in lamps and in the fermentation of rice in the Burmese version of moonshining. Adams, accompanied by a CID representative and the civil police, found two persons who had made the gasoline available to the villagers. He also set up a certain amount of assurance against future similar incidents by gathering the headmen of the three villages together and warning them that any

recurrence of such an incident would cause a large fine to be levied upon the village. The civil police added a warning that the villages would be burned if the pipeline were again opened by the natives.[130]

At the direct request of the NCAC Chief of Staff, Edmond Fong was sent in June 1945 to investigate a touchy situation involving armed conflict between Chinese troops and a Kachin rifle company along the Burma-China border, and was credited not only with showing excellent tact in obtaining complete information concerning all the charges and countercharges from both sides, but also exhibiting understanding of the political tensions in the area.[131]

CIC Completes Tactical Mission

By July 1945, CIC had completed its tactical mission in India-Burma and the bulk of the China detachment had crossed over the Hump. There still remained the tremendous task of protecting the China life-line and reporting on the political situation which was becoming more and more difficult.

Early in August all the detachments in Assam and Burma, the 406th, 407th, 409th and 410th, were combined operationally under Captain Steptoe.[132] The 411th, 413th, 414th, 415th, and 416th had gone to China, and the 408th had returned to Calcutta.

With the end of the war, Major MacKenzie returned to the United States and Wilson, by then a major, became Theater Chief.[133]

CIC Turns to War Crimes Investigations

With the cessation of hostilities, all American prisoners of war released from prison camps in Java, Singapore, Burma, Thailand, Saigon, and Indo-China were taken to Calcutta for emergency hospital treatment before being transferred to the United States. To CIC was assigned the responsibility of gathering information for the War Criminals Branch of the Judge Advocate General's Office. Since the utmost speed and efficiency were required in order not to delay liberated

prisoners in their return home, all agents who could possibly be spared from their normal duties in Calcutta, Assam, and Burma, were assigned to this work. Between 17 August and 31 October 1945, they interviewed approximately 750 former prisoners of war and took more than 200 statements and depositions to use as evidence of atrocities committed by Japanese soldiers and Korean guards at prison camps. A lengthy "Rogues List" of wanted Japanese was compiled. The major portion of the ex-prisoners interviewed were personnel of the U.S.S. Houston which was sunk on 1 March 1942 in the Sunda Straits, and members of the Second Battalion, 131st Field Artillery Regiment, which was forced to surrender at Garato, Java, on 9 March 1942.[134]

Almost immediately after V-J Day, deployment to the United States of those eligible began, and, in order to increase the effectiveness of the small number of agents remaining and to accomplish final deactivation more efficiently, all remaining personnel were assigned to the 405th CIC Detachment with headquarters in New Delhi and six branch offices at New Delhi, Karachi, Calcutta, Chabua, Ledo, and Bangalore, all of which were closed as rapidly as the U.S. installations which they served were evacuated.[135]

Prior to the end of the war, CIC's Post V-J Day mission in the India-Burma Theater had been written into a neat little package with the following as the principal activities:

a. To observe and investigate subversive elements within our own forces.

b. To advise and recommend on protective measures to safeguard our installations and equipment against local subversive activity.

c. To observe and report on Inter-Allied Relations.

d. To watch for attempts to involve U.S. personnel in Indian politics and to report on U.S. personnel who may be engaging in local political activity.

e. To conduct security checks upon the evacuation of any headquarters.[136]

135 CIC History, 1945-1948, Ibid.

136 "CIC Operations IBT-Post V-J Day," prepared by Major Wilson, (SECRET) (Kansas City Records Center).

No sooner had the trek to the United States begun than it was realized that CIC's services were needed perhaps more than they had been in many months and that this task was far more complex than the "mission" would indicate.

Throughout India, subversive groups chose the opportunity to stage riots and demonstrations, which had to be observed closely by CIC because of the possible danger to American personnel and installations.

For the Communist Party, the situation was ideal since they could combine the ever-present nationalistic urges with the unrest brought about by the cancellation of many wartime jobs and the rumored lowering of wages. Throughout India, riots and demonstrations called for CIC's full powers of observation. To report and to observe were CIC's only permitted activities in these cases, since they were warned not to become implicated. On 24 November eight Americans were hospitalized and 20 others treated for injuries in Calcutta, but CIC's observation was that the violence was directed only at the British and that Americans were injured only when they went too near the rioters. Constant warnings were directed at Americans not to permit themselves to be drawn into the situation on either side.[137]

One of these in March 1945 warned CIC agents against participating in raids and arrests arranged by British and Indian authorities, and especially those of the "witch hunting variety which seek to obtain evidence of a general nature having no connection with military security."[138]

The success with which CIC agents met the challenge in obtaining the pertinent information to keep War Department officials aware of the political situation, while at the same time maintaining close liaison with the British without becoming embroiled in the situation, can be seen from a number of documents, all of which serve as a tribute to the superior ability and integrity of the individual agents.

In other areas CIC agents were also accepted on exactly the same plane as other officials concerned with security, without any attention to rank. Dressed always in civilian clothes, and other agents in similar situations could be judged on ability rather than on rank.[139]

139 Minutes of 42d Meeting Inter-Allied Conference, 13 December 1945, (CONFIDENTIAL) (Kansas City Records Center).

Gratitude for CIC's "cooperation and the liaison which we have built up since you first came to Calcutta," was expressed in a letter which also commented upon the "smooth work" of the detachment, written by the British Liaison Officer in Calcutta as he was preparing to return to England. This same attitude was expressed many times by the British in this and other sections.[140]

CIC agents were constantly apprehensive of any occurrence or situation which might endanger this liaison which they had arranged carefully and intelligently, and were quick to take up with proper authorities any situation that might endanger this liaison or cause embarrassment to U.S. forces. One such incident occurred in November 1945, when the British objected to the fact that "a considerable quantity of ammunition and stores" had been deposited in a water tank where it was available to natives of the area, with the comment that "in view of the present unrest, can something be done to render it harmless?" From the S4 of the service group to whom the British had reported the situation had come the answer, "Subject matter has been investigated. The condition that exists is normal and it shouldn't perturb anyone concerned."[141]

When Klise received a report of the situation from the British, he reported to the intelligence officer at AAF Headquarters with the comment that "the abandonment of property of this kind may place material in the hands of certain elements who may use it not only against the British, but against the Americans as well... I feel that the British are entitled to a little more explanation than is contained...in view of conditions in India at the present time." He further pointed out the danger that the United States Government "...may some day be called upon to pay damages for the contamination of tanks, which are frequently the only source of water supply for villages."[142]

A month later, Klise again recommended to the intelligence officers at the base section in Calcutta, at AAF Headquarters and ATC Headquarters that "adequate steps be taken to insure that U.S. Army salvage dumps or other

disposal areas do not make...equipment available to the public," and pointed out that this particularly should apply to wireless or radio sending or receiving equipment.[143]

The thing that is particularly significant as a tribute to the recognized capabilities of CIC agents in this theater is the fact that at the time of the above recommendations Klise was a junior second lieutenant, having been, until 31 March 1945, an enlisted man. Yet he made his decisions and recommendations at all levels based upon his own judgment. The records reveal no situation where his judgment or authority was challenged; on the contrary they contain several letters of praise. One, written by Colonel Clarence W. Bennett who held the dual role of Theater G2 and Chief of the U.S. Military Observer Group, described one of Klise's political reports as "the best of its type we have had to date," which, as such, had been sent to the Chief of Military Intelligence Service, War Department.[144]

Records do not indicate to which particular report Colonel Bennett had reference, but it may well have been one which Klise had prepared two weeks earlier on 15 November 1945, in which he painted a gloomy future for any real solution to the Indian question.

"The Hindus are crying, more loudly than ever before, 'Quit India.' The Muslims qualify their demands by saying, 'Quit India, yes, but not until you have secured us against tyrannical rule by the Hindus' (Pakistan theory). The British still say, 'Show us a government capable of taking over and running the country in a democratic way, and you shall have your freedom.' One prominent and influential Indian businessman in Bengal recently told a British official, 'We want complete self-government, yes, but it must be within the British Empire. India cannot get along without Britain'."

Klise pointed out that in recent days the nationalist press had become "increasingly blatant in its printing of seditious copy," much of which was election propaganda in preparation for the All-India elections in December and the provincial elections in February, and that the Government of India was making no effort to curb this propaganda, probably because it did not wish "to create even the appearance of either influencing the elections or of interfering with free and impartial elections." The existence of two major terrorist parties, the traditional hatreds between the Muslims and Hindus, the ultra nationalistic attitude of even the legitimate political parties--all of these factors set the stage for a huge uprising within the next month and a half. Although none of these groups were

144 Ltr, Hq USF, IBT, to 1st Lt Richard W. Klise, Subj: "Commendation," dtd 29 Nov 45, (R) (Kansas City Records Center).

basically anti-American, Klise pointed out, "To predict that any uprising in India would be exclusively anti-British, would seem to be inconsistent with the common knowledge that the Indians are apparently unable to agree to act in concert on any issue... It should be assumed that a low caste Indian in a fanatical mob may be unable to tell the difference between a Briton and an American--or more likely--that he may not bother to attempt to differentiate." On the basis of the prevailing situation, he made definite recommendations for the protection of Americans and American property in India in the event of an uprising, which he expected to occur.[145]

Klise's associate, James M. McTighe, was also praised by Colonel Bennett for a weekly press analysis. "Your analysis of press trends reveals a rare talent for eliminating the mass of extraneous detail presented by a strongly partisan press and selecting only salient points for comment... This report has been of great value as an aid in determining the local attitude toward the United States military establishment in India," Colonel Bennett wrote.[146]

While agents in the base sections in India were observing and reporting on the touchy political situation, agents in North Burma found themselves in a number of roles, one of which was chief relief-giver to the natives. One agent found himself with the only transportation in the area of Hsipaw for a two week period due to floods which had washed out bridges and communications. During this time he transported 80 persons to a refugee camp hospital and for several days was fed only through the kindness of the appreciative Burmese people.[147]

Gradually the detachments operating in Burma and Assam began closing out their activities, and in mid-November, they were inactivated and only a few persons left in Chabua to operate a branch office for a short time.[148]

Klise's predictions, of course, were correct, and the riots began in earnest early in February, with CIC charged with the mission of observing. They were

expected to come up with timely warnings if U.S. personnel or installations seemed to be in danger. Records contain a number of "Spot Reports," principally received at theater headquarters in New Delhi, transmitted by telephone from Calcutta, seemingly the seat of most of the trouble. Insurrections flared up in Calcutta on 11 February, with road blocks set up by the rioters stranding a U.S. convoy of 1,100 soldiers in North Calcutta. Several U.S. soldiers were injured and several vehicles destroyed. The British finally called out troops after it became evident that local Indian police could not furnish adequate protection.[149]

The trouble continued throughout India. On 26 February, McTighe, in his weekly press analysis wrote: "No sooner had the Calcutta disturbances of 11 to 15 February abated than the rated men of the Royal Indian Navy staged demonstrations ranging from sit-down strikes to riots and mutiny aboard docked ships... and Indian students all over the country, notorious for their super-patriotism and their lack of horse sense, staged sympathy meetings and riots. The younger generation was in the saddle...and a bewildered citizenry went along for the ride which resulted, in Bombay alone during four days of rioting, in estimates as high as 250 dead and 1,200 injured...

"The Bombay riots, and the lesser minor incidents in Calcutta last week, received the usual biased treatment in the Calcutta press. Responsibility for both was, according to Indian newspapers, shared by the local police and the British military... Political support for the riots was roundly denied by the parties and the Press...and it is interesting to note that Jinnah arrived in Calcutta the day after the riots ended; Gandhi left Bombay for Poona in the early stages of the Bombay fracas, and Nehru left Allahabad for Bombay the day after the Bombay situation cooled off. Timely intervention by political leaders might well have saved many lives and much trouble, but party business always seems to keep the political leaders far from the trouble spots...

"The Indian Press, from the broad viewpoint, is becoming more violently anti-British each day...and markedly anti-American. While it hastens to give good play to stories of little credit to America, it unfailingly chooses for its American sources of news such unrepresentative sources as Drew Pearson, Anne McCormick and the Chicago Tribune."[150]

About this time the "Bring the GI's Home" campaign reached the India-Burma Theater in full force, and CIC agents found themselves with the extra burden of observing and reporting its various aspects and investigating in detail the

149 Hq, USF, IBT, re Civil Disturbances in Calcutta, dtd 12 Feb 46 to 22 Feb 46, (SECRET) (Kansas City Records Center).

circumstances under which numerous pamphlets and other literature had been distributed to troops,[151] and investigating the persons responsible for mass meetings held in various areas.[152] The situation became particularly difficult up in Chabua, Assam, from which station William A. Blalock reported on 28 February: "The troops have assumed a rebellious attitude toward the Indians due to injuries inflicted by them on American troops in the demonstration in Calcutta and Bombay. The big question in their minds is why they are kept here. Their jobs are over and they have nothing to do. It is also impossible for them to understand why the Negro troops are being sent out in larger numbers than they are. Their attitude is that if you have to make trouble to be shipped home, then why shouldn't they start."[153]

In March 1946, 1st Lt Karl R. Manwell, who had arrived in India with the detachment of 108 men in April 1944 as a corporal, became commander, followed in the position on 16 April by 1st Lt Richard Klise, also a member of the original group as a sergeant.

On 30 April 1946, Klise wrote the last Counterintelligence Summary for the theater, predicting that the trouble would continue. On that date the detachment was deactivated and all personnel reassigned to the United States, with the exception of the commanding officer, who remained for a while as Assistant AC of S, G2.[154]

CIC had closed out another chapter of its history and judging from the letters of commendation contained in the files, a most successful one. Records indicate that a large number of the agents in the Burma-India Detachment were commended at one time or another for some specific task performed well, far too many to include in this account.[155]

Section 2

CIC MOVES TO CHINA

While CIC agents in India and Burma were continuing to make themselves indespensible, agents in China also were having a busy time. As previously mentioned, 40 men had been tabbed for assignment to China even before their arrival in Bombay near the end of April 1944, but with the rapid deterioration of the military situation in China, space on the planes flying the Hump was too precious to be allocated to any but combat personnel and essential supplies. Soon after his arrival, Captain Grieve had flown to China for a conference with Maj Gen Claire L. Chennault at which time it was decided that a detachment would be requested for his 14th Air Force as soon as transportation could be spared.[156] Since those earmarked for China had been selected carefully on the basis of linguistic ability and knowledge of the area, an attempt was made to hold them together, but requirements in the theater, particularly along the Stilwell Road in Burma, had continually drained off personnel until the group had lost its identity by the time China was ready for them.

With the separation of the China Theater from the CBI on 24 October 1944, the China Theater requested a detachment of eight officers and 150 enlisted men, a number which actually was greater than the total then in the entire theater. It was impossible to assign more than a small portion of the number requested, but an immediate shifting of personnel began in order to send as many as possible. Only a few of those originally intended could be sent, however, since many were working on interrogation teams up and down the Stilwell Road where the fighting was still continuing.

A few CIC agents were already in China. In December 1943, Lt Douglass K. Ballentine and Russell Zachis, of the CIC detachment serving with the India-China Division of the Air Transport Command, had set up a field office in Kunming, with the primary mission of protecting ATC bases and operations in China from sabotage and espionage. They were withdrawn in March 1945 and their duties taken over by the regular detachments which had arrived by that time. Three agents had gone from India to the XX Bomber Command advance base at Chengtu, China, in September 1944; when the command moved to the Marianas in March 1945, two of them, Sgt James G. Brock and Cpl Harold C. Dorn, remained in China and joined the newly arrived detachment.

In response to urgent requests from the China Theater, Capt Harold Gelwicks, 1st Lt Edward S. White, S/Sgt George C. K. Mah and Sgt Francis E. Barnhart were sent to Chungking late in November 1944 to perform the necessary staff work and in general lay the groundwork for the CIC detachments then being organized in India-Burma.

156 Memorandum for Director of Intelligence, ASF, by Colonel Gray, Ibid.

3098

CONFIDENTIAL

By the time this advance party arrived in Chunking on 12 December 1944, the Japanese had reached their furthest point of penetration moving westward toward Kweiyang. Base after base had been lost to the Japanese, each loss accompanied by increased undercover activity in the area of the remaining bases. If the Japanese were able to take Kweiyang, they would cut the principal overland route between Kunming and Chunking. Few persons at theater headquarters knew from personal experience what could be expected of CIC, but throughout headquarters there was an appreciation of the vulnerability of military information both from Japanese spies and from dissident groups within the Chinese forces. Certain of these groups, notably the Communists, often seemed less interested in the defeat of the Japanese than in the promotion of their own interests, thereby making it necessary that they be considered almost in the same light as enemy spies, and yet handled all the time with the utmost tact and diplomacy. Diplomacy was a requirement in all dealings in China, since the U.S. Army, with the exception of the Air Corps, was in China in an advisory capacity; in fact, it has been described as a "gigantic military mission."

Advance Party Makes Plans

The four who were assigned the task of planning CIC's activities in China knew from experiences in Burma that their problem was even greater than had been anticipated by the military commanders who were looking forward to their arrival. They had already experienced in Burma the frustration of trying to cope with the Chinese Army's complete disregard for security and lack of any coordinated preventive counterintelligence, a situation so glaring that U.S. military planners had found it necessary to withhold from the Chinese until the last possible moment information concerning projected plans.

In China they met an additional situation that required the utmost diplomacy, the lack of coordination which often amounted to competition between local law enforcement agencies and between these agencies and the military authorities. Even when there was no serious political animosity concerned, activities of these organizations were constantly marked by jealousy, bickering, red tape and jockeying for position. U.S. military agencies often found themselves right in the middle, with one agency subtly refusing to deal with them if they conducted business with a rival agency. One agency had been known even to arrest and hold as hostages members of another, and it was said, with some justification, that almost every Chinese was gathering information for someone in authority.

Against these almost overwhelming odds CIC was brought into China at the orders of Maj Gen Albert C. Wedemeyer, Commanding General of the newly created China Theater, and assigned the mission of protecting the security of U.S. military information and U.S. military installations. It was to call for all the ingenuity, tact and wisdom these CIC agents possessed, since they, like all the U.S. military in China, could act only through the appropriate Chinese authorities.

The advance group found the theater headquarters at Chunking involved in reorganization and expansion to meet the critical tactical situation, and the G2 particularly overburdened and understaffed. It therefore fell upon them to make their own plans with little assistance or guidance. Using CIC's experience in India-Burma and all that could be learned of activities in other theaters as a basis, they formulated a theater directive outlining the mission, organization, operations, and administration of CIC.[157]

CIC Granted Great Authority

Published on 28 December 1944 "By command of Major General Wedemeyer," the directive granted to the China Theater CIC perhaps greater authority and greater freedom of movement than that enjoyed by CIC in any other theater during the war. Defining CIC's mission "...to furnish appropriate commanders with carefully selected personnel specially trained and equipped for investigative and field security functions incident to the prevention or neutralization of the activities of enemy agents," the directive put teeth in CIC's status by the following: "CIC personnel are authorized to call on all military and civilian personnel of this command for any assistance they may require in the performance of their duties. Personnel of this command will extend to CIC personnel such administrative assistance and other facilities as may be necessary to protect the identity of CIC personnel and expedite the accomplishment of their assigned missions."

The directive authorized CIC personnel "...to travel in any manner, and their freedom of movement when on assigned missions will not be hindered at any time of day or night by the military police or other military agency. CIC credentials and badges will be honored at all times." CIC agents were authorized to wear the uniform prescribed for civilians and to operate without rank, and all personnel were warned of the necessity of maintaining the secrecy of the identity of CIC agents, their distribution, training and methods of operation.[158]

Nor was this only a "paper" directive. Writing about CIC's experiences in China in June 1945, about four months after the arrival of the bulk of the detachment, Maj Fariss Hardin, Commanding Officer, wrote: "The peculiar organization and functions of the Corps and the civilian status of the agents have always created administrative problems. The key of the situation has always been the degree of cooperation the Adjutant General is willing to give to such administrative peculiarities. It has been found that in the Army there is always a way, and in

157 Unit History of the Counter Intelligence Corps, China Theater, prepared in June 1945, (Unclassified) (Central Records Facility).

158 Circular Nr 4, Rear Echelon Headquarters U.S. Forces, China Theater, subject: "Counter Intelligence Corps," dated 28 December 1944, (Central Records Facility).

China the theater Adjutant General and his assistants have gone out of their way to provide the means for handling such problems smoothly."[159]

The publication of the theater directive was followed, on 9 January, by a general order which placed the 411th Detachment with the Services of Supply (SOS) Headquarters and the 412th and 415th Detachments with Headquarters, China Forces, but the commander of the Theater CIC Detachment was to retain the responsibility for coordinating CIC activities and insuring proper counterintelligence coverage and effective cooperation between detachments throughout the theater.[160] Even before the detachments arrived from India, a further delineation of CIC responsibility was made in order to fulfill requests anticipated from the 14th Air Force and the China Air Service Command. A letter was published dividing the theater into two areas for the purpose of CIC operations: the northern area, roughly that part north of the Yangtze River, would be handled by personnel attached to Theater Headquarters at Chunking; the area south of the Yangtze would be handled by the SOS Detachment.[161]

Soon after the arrival of the detachments from India it became apparent that CIC personnel could not operate effectively under a headquarters such as SOS and still do the work that was expected of them with other organizations in the area. Consequently, on 28 March, all detachments in the theater were placed directly under theater headquarters, with operational control to be exercised by the AC of S, G2; the arbitrary dividing line was abolished. The personnel at Kunming, however, remained there, attached to Rear Echelon Headquarters for administration only. Commanders of subordinate commands were authorized to request the services of CIC personnel on a temporary duty basis. Authorization also was made for the establishment of resident agencies, with the agents authorized to receive requests for their services.[162]

38 Men Readied for China

As soon as the advance party left India early in December 1944, India-Burma Headquarters began shuffling its personnel about in order to send as many agents as could be spared to the China Theater. Forty persons originally had been assigned to the 411th, 412th, and 415th Detachments, but, as was mentioned previously, personnel had been drawn off so that only six officers and 32 enlisted

men were available for immediate assignment to China with these units, leaving 10 officers and 67 enlisted men in India and Burma.

Late in December and early in January these 38 assembled in Calcutta where they were quartered in luxurious Burdwan Palace while awaiting transportation over the Hump. For some it was a long wait. Movement began on 30 January, but it was not until 23 February that the last of the detachment arrived in China. Negotiations were begun immediately for additional personnel, with the result that the 414th and 416th Detachments, with a total of four officers and eight enlisted men, who had been assigned to the NCAC in Burma, arrived in China on 6 June 1945. A number of these were Chinese linguists and had been among the persons originally scheduled for China. In July the 413th wound up its work with the 10th Air Force in India-Burma and proceeded, on 1 August, to China.

On 12 August 1945, by War Department authorization, all CIC agents in China were concentrated in the 415th, and the other detachments were disbanded. Several agents had been transferred out of the theater and several had been locally procured so that the detachment, at the time of the reorganization, totaled 29 officers and 44 enlisted men as against a T/O authorization of 39 officers and 116 enlisted men.[163]

China Detachment Blazes Its Own Trail

As in all new theaters, the first CIC detachment arriving in China had to blaze its own trail. Only a few of the first agents to arrive had ever been in China, none in recent years, and there was no set pattern for dealing with the complex and often baffling situation in the theater. Protection of the security of information in U.S. Army installations was obviously of primary importance and a mission upon which they could concentrate while in the process of getting their feet on the ground.

In some places agents found security exceedingly lax, but they met instant cooperation of installation commanders in accepting their recommendations for measures to lessen the chances for security leaks. This spirit was augmented, perhaps, by the wide-spread knowledge that CIC had the complete backing of the theater commander.

CIC's biggest problem was in setting up some means of establishing background clearances for Chinese civilians employed by the U.S. Army, especially in SOS installations, where they often had access to classified information or were

163 Unit History of the Counter Intelligence Corps, China Theater, dtd Jun 45, (Unclassified) (Central Records Facility); and Supplement I to Unit History of the Counter Intelligence Corps, China Theater, dtd 15 Sep 45, (SECRET) (Kansas City Records Center).

in a position to obtain it easily. CIC required each Chinese civilian to fill out a personal history statement and to name a guarantor, which gave a basis for checking with Chinese agencies. The frustrations in dealing with rival Chinese investigative agencies could not be completely overcome, but through carefully planned efforts they were able to make considerable headway in establishing good liaison with the principal ones, through whose information they were able to get rid of a number of serious security risks among the Chinese.[164]

Soon after the arrival of the detachment, the requests for CIC agents at installations throughout China became so great that it was obvious that adequate coverage could be given best through the establishment of numerous resident agencies attached to the various SOS and Air Force headquarters strategically located throughout China. By the middle of April, resident agencies had been set up as follows: Chengtu, James G. Brook and George L. Reynolds; Hsian, Lawrence H. Ballou and Eugene D. Tilley; Paoshan, William R. Boggs; Yunnanyi, Lawrence F. Hughes; Chanyi, William E. Hoffman; Kweiyang, Robert F. Scott; and Peishii, Kong T. Louie.[165]

Great Responsibility Placed on Agents

The responsibility placed upon these agents, most of whom were corporals or sergeants--the highest rank represented was technical sergeant--is reflected in directives which stated that "Counter Intelligence Corps resident agents...will lend every assistance to all U.S. Army organizations and installations located within their areas of jurisdiction. They are authorized to receive and act upon requests for their services without prior reference to this headquarters,"[166] and "will have sole authority in assigning priority to these requests."[167]

Each agent was preceded by a command letter to the SOS or Air Force commander in the assigned area, informing him of the agent's expected arrival, and requesting that the agent be provided with quarters, rations, office space and supplies and vehicle maintenance.

A letter written to the SOS Area Commander at Chanyi to apprise him of the assignment of Hoffman as resident agent is typical. "Mr Hoffman has received

specialized training in security matters and related subjects. His services should be of great value in improving conditions at your headquarters and in your subordinate commands... His mission is of vital importance, for it is essential that effective measures be taken to prevent the enemy from obtaining information on our projects and installations."

After directing that the agent's reports concerning security conditions were to be forwarded with indorsement explaining action taken on recommendations made, the letter added, "It is directed that wherever possible security violations be corrected at once and not included in the agent's report," further evidence of the recognition given by the command to the judgement and ability of these agents.[168]

Much of the work of the resident agents was done for the Air Corps. This was especially true of the three who were operating north of the Yangtze: at Chengtu, the former base of the XX Bomber Command; at Hsian, a base just south of the Communist area; and at Paishii, 30 miles southwest of Chunking. The detachment at Kunming also performed many security surveys for 14th Air Force Headquarters and for subordinate commands throughout South China, and investigated all incidents of suspected sabotage or espionage.

CIC investigated reports of flares, fires, rockets, and other obvious signals to enemy airmen, which invariably accompanied enemy air raids up until the time such raids abruptly ceased near the end of March 1945. At most of the air installations, CIC was credited with establishing cordial relations between the American and Chinese security representatives, and in some areas were even able to bring about a certain amount of coordination between Chinese agencies, an almost unheard-of procedure.[169]

Ingenuity--Diplomacy Necessary

Occasionally, these resident agents ran into a case in which they had to use all the tact, diplomacy, and ingenuity they possessed to unravel the fantastic plots surrounding Oriental espionage agents, and to counter the petty jealousies, suspicion, intrigue, and sometimes corruption of Chinese officials. One such case was handled successfully by Agents Ballou and Tilley at the Hsian Office in collaboration with agents of the Office of Strategic Services and a Chinese intelligence agency, with resulting high praise for their work from the Office of Strategic Services.

The case attained high priority in May 1945 when a man named Ching Ming Shang was identified by a former associate as a Japanese agent... The former associate had been induced to come through the lines for this purpose by a Chinese

168 201 File, CWO Hoffman.
169 Unit History of CIC, China Theater, Ibid.

3104

intelligence agent known only by the code name of YSX-007. This coded agent moved in with a small network of agents for a close surveillance as soon as the identification was made. After the surveillance revealed that Ching frequented two places which were registered with the Chinese National Tax Bureau under false names, and that Ching and his brother moved freely back and forth across the lines, the chief of YSX-077's agency, with the knowledge of the two U.S. intelligence agencies concerned, authorized Ching's arrest. Under interrogation, Ching confessed, implicating a sizeable network of agents, including their spy-master. YSX-007 was then authorized to arrest as many of the net as possible. He had accomplished seven of these arrests before he and his men were arrested by Chinese Police of the Hsian Garrison Command through "arrangements" made by the very "chief" whom he had been ordered to arrest.

Two days were required to smooth out the petty jealousies that frustratingly seemed always to exist between rival Chinese governmental agencies. While negotiations were under way for YSX-007's release, the CIC agents and Office of Strategic Services representatives, with forethought and dispatch, removed the seven men, under cover of darkness, to a U.S. compound. Three of the men confessed to their espionage activities and implicated 15 others in the area. A fourth was strongly implicated by a note he was carrying, but escaped before he had made a confession. The remaining three were able to convince their interrogators of their innocence and were released.

Agents Ballou and Tilley turned over the three confessed agents to Tai Li, a Chinese intelligence organization, along with their confessions and information concerning the 15 additional agents. When Agent Ballou conferred six days later with General Wen Ch'ing, local Tai Li head, he found the whole case bogged down in organizational jealousy. It seemed that YSX-007's superior had incurred the general's dislike by purging all his men some time previously. Agent Ballou found the general arguing that YSX-007 had no right to arrest the men in the first place; that the suspects had been tortured to obtain their confessions; and that he had been apprised of the situation only by a very vague letter from Agent Tilley. With these "facts" in mind, the general explained, Tai Li was unwilling to go any further until these two questions were answered:

1. Who first put the "finger" on these men?
2. What assurance did CIC have, other than the information in the letter, that these men were agents of the Japanese?

Smothering his indignation at the inaccuracy and injustice of the general's attitude, Agent Ballou was profuse in his apologies for the mishandling of the case, and carefully presented "new" evidence--actually the same information that had been submitted before. He succeeded so completely that Office of Strategic Services decided in the future to turn suspects whom they were unable

to handle over to Ballou for transmission to Tai Li. In his report of the affair, Agent Ballou wrote: "It will be the job of this agent to train Tai Li not to ask too many questions as to how he gets his suspects."[170]

In their official report the Office of Strategic Services wrote: "It is desired to highly commend the resident agents of CIC for their individual help in this case. Agents Larry Ballou and Eugene Tilley did outstanding work, helping in every possible way. It is believed that the collaboration of the two agencies on this case is an outstanding example of how the two can function smoothly together."[171]

Beautiful and Glamorous Spy

Many espionage cases were handled by the resident agents, most of them of persons found working at the U.S. Services of Supply installation in the area. One unusual case--unusual principally because of the age, name, and beauty of the subject, variously reported at 20 and at 25 years, but consistently reported as beautiful--was handled, among many others, at Chanyi by Agent Hoffman. On 20 March 1945, Hoffman received the information that a typist at Services of Supply Headquarters, had been imprisoned, along with her sister, by the Chinese at Kukong Garrison Headquarters from December 1942 until December 1943, on a charge of spying for the Japanese. They were released at the instigation of a "Mr Phoon," whose arguments and whose complete identity remained vague.

After her release, she had moved through a number of areas and held several U.S. jobs, and had been working at Chanyi for several months before the above report was received.

A general surveillance by Chinese authorities revealed nothing, but on 28 April an unauthorized "coolie" was found sleeping in one of the Chinese interpreters' tents and under interrogation, the story of began to unfold. The "coolie" readily confessed to being a spy for the Kempei Tai, claiming that he acted as a messenger with as his "boss." Their mission, he claimed, was to spy on the U.S. Army in Chanyi, with especial attention to activities and training of troops and the construction of the Chanyi Railway. Some sabotage was planned. He claimed to have come from Burma with seven associates and a number of radios. A search of the place he claimed to have hidden the radios, however, was negative.

A search of quarters revealed a copy of the China Lantern with numerous letters marked by tiny pencilled dots which seemed to contain a message concerning Chinese Nationalist Forces, although the U.S. Signal Corps was unable "break" the code. Co-workers claimed that she had made attempts to listen to ephone conversations and to see classified correspondence not connected with her work.

never admitted anything, although she did change her stories with frequency. The "dotted" China Lantern had been given to her by a soldier, identity forgotten; she had listened to the conversations through boredom; she had used a name other than her own in a bank transaction through "carelessness;" she explained the possession of large sums of money at various times by varying stories; she disclaimed knowledge of the background of the mysterious "Mr Phoon" and his reasons for obtaining her release in Kukong.

Finally, on 26 July 1945, the agent wrote: "It is recommended that the case be closed by this agency and that any further action be taken by the Chinese Government." Oral word was received later that she quickly was executed by the Chinese.[172]

Espionage is Often a Family Affair

CIC agents soon learned that when one member of a family was guilty of spionage, the entire family often was implicated. Such was the case of the family, five of whose members were working for U.S. installations.

This group first came to the attention of CIC in March of 1945 through a letter from the Security Officer of the 14th United States Air Force, stating that both were under suspicion of having acted as espionage agents for the enemy in Kweilin, prior to its evacuation. CIC immediately began an investigation.

Special Agent Charles A. Gerlach unearthed a great deal of background material on the family by scanning records found in the offices of the British Army Aid Group and Chinese Intelligence, Kunming Garrison Command, beginning with the family's return to China in 1936 Later, the migrated to Hongkong where they smuggled and worked for the Japanese, and associated with people suspected of being Japanese espionage agents.

From Hongkong, the family moved in August of 1943 to Kweilin and continued its shady dealings. was implicated in the planting of a time

172 Hq U.S. Forces, China Theater, Summary Rpt, Case D-703, dtd 26 Jul 45, Records Facility); and interview with CWO Hoffman.

Services of Supply office at Kweilin, and the entire family was arrested in 1944 as suspected enemy espionage agents. They were released by the Chinese authorities ostensibly for lack of evidence, although reliable sources later reported that they bribed certain Chinese officials to obtain their release. By December of 1944, had arrived in Kunming, where they obtained employment with a U.S. military unit.

After collating all known facts, Special Agent Gerlach recommended that employed by the Ordnance Section Headquarters, Services of Supply, and handling classified information as part of her duties, be removed to a position of a less sensitive nature where she would have no access to classified data, but that be allowed to remain in their positions with Services of Supply since they did not handle or see classified matter, and because they were under constant surveillance and would escape possible detection if discharged. Moreover, Gerlach did not want to close the case until Chinese intelligence agents finished interrogating an informant, who gave promise of giving information which would implicate the family as espionage agents in Kunming, and result in their trial and imprisonment by the Chinese.[173]

When no significant new trends or leads developed in the case after about a month, Lieutenant Colonel Wells, G2 Services of Supply, decided that he must act to safeguard the security of his organization. Consequently, were discharged from their posts with the Services of Supply in Kunming and from the Laowhangoing Air Base. All five were subsequently placed on the Black List as people not to be rehired by any U.S. employing agency. In so doing, Lieutenant Colonel Wells complied with part of Agent Gerlach's request: he made sure that some distance was put between the and any classified information.[174]

The Colonel and His Ladies

Generally speaking, U.S. military personnel in China were willing to assist agents of the CIC in the performance of their mission. Occasionally, however, CIC met up with an individual in the U.S. armed forces who flagrantly disregarded security requirements. Such a person was the

174 Memo for Special Agent in Charge, Subj: " TO: Lieutenant Colonel Wells, AC of S, G2, Hqs, SOS, APO 677, Case Nr 12 Jun 45, s/Charles A. Gerlach, S/A, , (SECRET) (Central Records Facility).

This commander, was involved in a situation "...which, if permitted to grow, will probably adversely affect the security of the The other principals in the case were who had been employed in U.S. Army installations "...through the personal intervention of...(this officer)."

After scanning the four girls' backgrounds, U.S. officials had cause for alarm. Originally from Hongkong, the had fled from that city shortly before it fell to the Japanese. Subsequently, the opened the Cafe in Kweilin, and moved it to Luichow and Kweiyang following their evacuation from these areas.

In all three areas, the was known to be a favorite hangout for U.S. and British military personnel. During this period, the were, it was alleged, "most intimate" with suspected enemy agents. One, was later executed by Chinese authorities as a Japanese spy.

By December of 1944, went to Chengtu, where the hired as his personal secretary and recommended for work with the American Red Cross club at the same base. About one month later, the appeared at and were subsequently hired by U.S. Ordnance, and at the office of the Red Cross Director,

In each case, it was reported, the personally vouched for the security and other qualifications and barred any investigation of them by American investigative agencies. Moreover, the was "extremely friendly" with the "...living with them at base...driving them to work and arranging accommodations for them at a missionary's home when he drove to "

In recommending that CIC be assigned to investigate the case, higher headquarters requested "...that the investigation be conducted without any 'apparent' cooperation with any other investigative group in order to obtain as free and unbiased a report on the subjects and their activities as possible."[175]

Agents subsequently discovered that the had come by American convoy from stopping overnight at Peishiyi. Kong T. Louie, CIC agent in Peishiyi, learned, through a confidential informant, that the reportedly going to Chunking to rest, were planning to stay with

175 Hqs, U.S. Forces, CT, CIC, SOI, Subj: 12 Apr 45, (SECRET) (Central Records Facility).

CONFIDENTIAL

The informant could not tell Agent Louie what the intended to do once they reached Chunking.[176]

Later, CIC was to learn that the were attempting to leave China for the United States. In attempting to head off this move, CIC contacted head of the Department of Foreign Affairs, , and asked that have a letter disseminated throughout the command directing that air transportation be denied th in the event they made such a request for departure from China.[177]

Evidently, was a little late in getting the letter disseminated because, as one report from the China Theater, Counterintelligence Section, G2, remarked: has left for the States despite the disapproval of the Chinese Government..." Still hopeful of preventing the from leaving China and desirous of learning the full particulars about departure, Theater G2, in a letter to Agent James G. Brock, asked for "any details that you may have in regard to departure for the States." Available records do not give the final outcome of the case, nor was the colonel further identified.[178]

Survey of Chinese Units Reveals Laxness

From the beginning, U.S. personnel of the Chinese Combat Command (CCC) were acutely conscious of the vulnerability of information given to the Chinese unit commanders by American liaison teams in the field and of the weakness of Chinese military counterintelligence. In an attempt to arrive at a plan whereby CIC could best be used to overcome this situation, Lt Edward S. White and George G. C. K. Mah were sent, on 16 April 1945, to make a survey of the situation in the Kwangsi Command. During their 30 day trip they visited the headquarters at Posch and all the subordinate units except the guerilla battalions, and interviewed most of the Chinese generals and ranking members of their staffs, American liaison officers, members of the French military mission in Tingsi and representatives of Office of Strategic Services.

3110

Throughout the command, White and Mah found a most cordial relationship between the Chinese and their U.S. Military Advisory teams, a relationship which the Chinese seemed most anxious to extend to them, but they found an equally serene disregard of any appreciation of the importance of security. Throughout the command they found the telephone to be the principal means of communication. The wires, which ran over mountain trails only rarely patrolled by repairmen, were sometimes exclusively military lines, but more often were shared by the military and the civilians. Daily intelligence reports, reports from division and regimental commanders to higher echelons and directives for tactical operations all went over these lines in the clear. Directives to troops en route often were delivered to the only householder in a village who had a telephone, to be relayed to the unit commander when he arrived. White and Mah made strong recommendations that all Chinese units be provided with radio equipment as the only means of eliminating the danger of compromise through the use of the telephone.

In all the subordinate command headquarters, the intelligence and situation maps, showing Chinese and enemy troop dispositions, and routes and direction of movement, hung unprotected even by a curtain on the wall of the office or the bedroom of the commanding general or the chief of his operations staff. No attempt was made to guard these rooms when not in use. Unit moves usually were preceded by drinking parties and festivities to which the townspeople were invited to help celebrate the occasion.

Although the agents did not include the guerilla battalions in their official survey, they learned a great deal about one of these battalions, including the names of the American personnel attached, the unit's mission and its present location behind the Japanese lines. All this they learned from Chinese civilians during their 125-mile trip from Poseh to Tsingsi. These civilians were anxious to hear the latest news about the welfare of their friends with whom they had become acquainted while the battalion was training in their area. An American officer with the unit later told them that Army headquarters had given the unit its marching orders by telephone in the clear and at the same time had notified all other subordinate units of its plans for the battalion, also by telephone.

Throughout their survey the agents were unable to find any Chinese approximation for the U.S. Army's Regulation 380-5, setting up any prescribed manner for the handling of information which might be of aid to the enemy, and the Chinese seemed blandly unaware that such a system was advisable.

One of the tremendous problems recognized by the Chinese--but accepted as so insoluble as to almost preclude planning--was the penetration of the area by literally thousands of Japanese troops disguised as Chinese coolies or sometimes as Chinese soldiers. These Japanese performed reconnaissance and combat missions, ambushing Chinese patrols, attacking Chinese units on the flanks and

a minimum coordination of effort. To the surprise of the CIC agents making the survey, numerous Japanese agents actually were captured in this confusion of espionage and counterespionage.

To the Chinese officers with whom they discussed this problem, the CIC agents made the suggestion that a special group of troops be trained in the various methods that had proved most effective. In each instance they met agreement that the suggestion had merit, but none of the Chinese officers would commit themselves further. Practically their only plan for meeting the situation was to wait until the Chinese were on the offensive, arguing that at such time the civilian population would become afraid to collaborate with the Japanese and Japanese plainclothes troop activity and operations of the infiltration groups would become less effective. The CIC agents were not convinced of the soundness of this reasoning.

Liaison Personnel Aware of Danger

U.S. liaison personnel were aware of the dangers inherent in the complete lack of security but, with no assigned personnel trained in planning adequate security measures, they had given up and more or less accepted the Chinese view that there was nothing that could be done.

White and Mah had been given three objectives in making their survey: to make security surveys of the headquarters and the subordinate installations of the Chinese Combat Command and make necessary recommendations for improving the security; to determine whether counterintelligence operations could be carried on by CIC in collaboration with corresponding Chinese military agencies; and to determine what specific functions could be carried on effectively by CIC.

They were unable to complete the first of their objectives, since Colonel Bowman did not desire that security surveys be made; however, Colonel Bowman agreed that there had been a degree of deterioration of security in U.S. liaison headquarters. The agents reached the conclusion that it would be useless to attempt any collaboration with the Chinese in actual counterespionage activities since the Chinese regarded this as peculiarly their own field and would be extremely reluctant to include CIC in their activities until after a long and tactful association with them in other activities.

They did feel, however, that if CIC teams were attached to the liaison groups, the Chinese would accept advice on counterintelligence measures in the same spirit that they welcomed American cooperation and assistance in other fields of training and operations. These teams would be in a position to impress Chinese officers with the need for protecting the security of military information, and to assist in working out plans for controlling refugees and commercial traffic.

Although Colonel Bowman's long and often tragic experiences with the deficiencies of Chinese Army counterintelligence had made him pessimistic, he agreed to accept a small detachment in his command, adding the proviso that the personnel of such a detachment must be "in A-1 physical condition," and "willing to go to the front with the liaison teams serving with the subordinate Chinese units, and not satisfied only when they are in the headquarters at Poseh."

The CIC agents felt that two additional objectives could be attained from this attachment: such teams would be in a position to tighten up security within U.S. liaison headquarters, in some of which the Chinese philosophy seemed to prevail; and, through the use of tact and diplomacy, CIC teams could eventually obtain from the Chinese much counterintelligence information concerning Japanese personalities and activities that would be useful in the future.[179]

Study Made of Chinese SOS Installation

At about the same time Mah and White were performing their survey with the Chinese Combat Command, Agent James R. Hunter, a Chinese linguist with considerable previous experience in China, was making a study of means taken by the Chinese in their Services of Supply headquarters for the protection of highly classified information. He found that they had none. He ran into one amusing, although dangerous, example of Chinese handling of a TOP SECRET document. Knowing of the U.S. Army's rigid control system, the Chinese made only one translation of this document and added to it an appropriate cover sheet listing the names of Americans who should have access to it. At the same time they made an unlimited number of copies in Chinese and distributed them throughout the headquarters with no record or receipts of the distribution.

Hunter pointed out that an excellent SOP for the handling of documents had been drawn up by U.S. officers and had been ordered put into effect by the Chinese headquarters commander. The Chinese paid little attention to it, however, because it had not been made official by Gen Ho Ying Chin's "chop;" it was explained that the SOP was not taken to General Ho because "the Chinese do not like to be told what to do; they want to do and think it up themselves." Hunter found that some of the U.S. officers had become lax in their handling of classified information, seemingly feeling that since the Chinese made no attempt to protect information, there was no use in bothering.

179 Ltr Report, Rear Echelon, Hq U.S. Forces, China Theater, CIC Case Nr F-1109, Subj: "Report on Counterintelligence Survey of Kwangsi Command," CCC, dated 15 May 45; Supplemental Memorandum Nr 1, dated 14 May 45; and Supplemental Memorandum Nr 2, dated 14 May 45, signed by Edward S. White, S/A, and George G. C. K. Mah, S/A, (R) (Kansas City Records Center).

Hunter then pointed out that much of the fault lay with many U.S. officers who, by their inability to get along with the Chinese, were actually hindering instead of helping in all phases of the work, including security. "This is one of the reasons that the Chinese are reluctant to accept what the Americans call 'advice'," Hunter wrote. "From observations and interviews, it is this agent's opinion that in many cases this so-called 'advice' is usually in the form of a snobby command or curt and impatient answer. This is usually caused by a feeling of superiority and a complete disrespect of Chinese rank. Few if any of the courtesies and amenities are ever shown by U.S. officers to Chinese officers."[180]

Protection of Pipeline Essential

As in the India-Burma Theater, the protection of the gasoline pipeline was considered of vital importance. The line which started at Calcutta and continued up through Chabua, in Assam, and followed generally the Stilwell Road as it wandered through the mountains of Burma, entered China at Wanting and terminated in two branches at Luliang and Chany. It was discovered that almost probibitive losses of fuel were occurring through numerous taps along the line. Between 27 June and 13 August 1945, William C. Holland personally covered every foot of this line, performing exhaustive investigations of every incident of damage to the line. His investigations not only resulted in arrests of some of the leading culprits, but furnished information from which precautionary measures could be taken for future protection.[181]

CIC Agents Assigned to Chinese Combat Command

As a result of the survey made by White and Mah in April and early May, a seven man detachment was assigned early in June 1945 to work with the Chinese Combat Command on an experimental basis with a three-fold mission: to make a security survey of all American installations; to set up a security education program for all Chinese units being trained by the Command; and to gather tactical and counterintelligence information. The detachment consisted of William Tyng, newly arrived from the North African Theater as SAC, Frank G. St. Angel, and John L. Bates, also new to CIC in the theater, and James H. Carr, Edwin W. Simpson, Robert B. Edris and William R. Boggs, who had come up from the jungles of North Burma.[182]

In addition to the seven-man team, Bernard J. Kotulak was also assigned to the Chinese Combat Command with the specific duty of adapting American training methods for use in a program of security education for Chinese troops.[183]

Tyng later became Counterintelligence Staff Officer for the Command and, aside from other duties, set up a security training program for Chinese troops.[184]

A team from this detachment, composed of Bates and Edris, entered Kweilin on 29 July 1945, on the heels of the first Chinese combat troops, the first Americans to enter the city. There they found a complete traffic jam which was paralyzing the movement of military vehicles. Not only were they credited with getting the situation untangled; but, an even more difficult task, they were able to do so with such tact and diplomacy that they won the complete cooperation of the large number of Chinese commanders in the area. They then set up a refugee control plan which the Chinese accepted, gathered a number of valuable documents and obtained considerable information both of positive and counterintelligence interest, including a large amount of order of battle intelligence, all in one week's time.[185]

The detachment drew up a security plan based upon the weaknesses found in surveys of their installations, but the cessation of hostilities prevented its complete implementation. The same was true of the educational plan for the training of the Chinese in basic security. Although the Chinese viewed their plan favorably, there was not time to put it fully into operation before the end of the war. The team felt more was accomplished in the third phase of their work, the gathering of intelligence information, especially in the Central Command, where they concentrated their efforts. They obtained full cooperation of Marshal Tang En Po, who issued them special credentials and assigned two field grade Chinese officers to work with them.

The principal difficulties encountered lay in the lack of defined jurisdiction of CIC responsibilities and the necessity of "selling" counterintelligence to both American and Chinese personnel. Members of the team felt more complete advance information on the political character of Chinese units and communities would have enabled them to act more decisively without the danger of "stepping on the toes" of the wrong persons. As it was they had to proceed slowly.[186]

Special Security Detachment

In May 1945, numerous incidents of loose handling and compromise of Top Secret information, made it clear that the special G2 sub-section, created in February 1945 to protect security of plans and operations, was simply unable to cope with the situation. CIC was given the job, and a special detachment was created headed by Captain Grieve and consisting of Lieutenant White, William T. Elliot, Charles F. Gentile, George A. Ladner, James R. Hunter, and Paul E. Duffy. All of these men except Duffy had had long experience in the Burma-India Theater before coming to China. Each agent was given special credentials which authorized him to have access to all Top Secret information and ordered all commanders to cooperate fully with him in his task of setting up protective measures. Agents were placed in the planning sections of each of the major commands to study the control of planning material. They discovered that the constantly changing situation made the application of general security measures of little value, and that the only answer was constant daily supervision. As a result of their recommendations, a permanent detachment was set up to carry on continuous investigation of the handling of highly classified information in all commands, reporting directly to the theater commander all violations and recommendations for changes.[187]

Agent Does Background Investigation on Chinese Admiral, General

Although most of the background investigations performed by CIC agents were with U.S. employees as subjects, in April 1945, Agent Pardee Lowe was assigned to conduct such an investigation of a Chinese admiral and a Chinese general. Top U.S. authorities were anxious to learn something of the political and military backgrounds of these two ranking Chinese officers who were to play leading roles in the event Allied military forces attempted to land on the South China coast.

In investigating and reporting on the two men, Special Agent Lowe faced a challenging task-political reporting and interpreting on the highest level. His evaluation of the data he received on the two men could well influence proposed or anticipated Allied tactical plans.

Agent Lowe discovered that, according to the "Chinese Who's Who" section of the China Handbook of 1943, published by the Chinese Ministry of Information, both subjects had a long association with the Kuomintang Party. Both men were evidently ardent friends and supporters of Generalissimo Chiang Kai-shek, who, at that time, was putting the strongest Cantonese leaders he could find in charge of the future affairs of Canton and Kwantung Provinces.

---

187 Supplement I to Unit History, CIC Detachment, China Theater, (SECRET) (Staff and Faculty Library).

Adm Chan Cheuk was being selected as the future mayor of Canton because of his influence over the various political and military elements of Kwantung, his friendship for the British, and his knowledge of the waterways of Canton and Hongkong. Gen Li Fu-lin, despite his apparent uncouthness and age, was being called upon to rally his old bandit and guerilla comrades to serve as possible Fifth Columnists in aiding any possible Allied landings.[188]

In compiling details on the two men for relay to higher headquarters, Agent Lowe ran across an illuminating sidelight in the background of crusty old Gen Li Fu-lin, a sidelight which made it evident why the Generalissimo had such sublime confidence in Gen Li Fu-lin's actions. In March 1938, the Japanese attempted to seize Canton by trickery. They employed a notorious traitor, Chen Chung-fa, to approach General Li, asking him to organize his own staff and new army to support the Japanese advance on Canton. General Li feigned acceptance of the plan, receiving 100,000 yuan and 80,000 firearms which had been shipped from Macao to Canton hidden in a load of potatoes. Ultimately, General Li handed over the funds and the supplies to the Generalissimo, captured the Japanese Fifth Columnists, and for the time being frustrated the enemy's attempt to take Canton.[189]

Other pertinent facts came to the front in the course of the investigation. The intelligence operatives of the National Military Council Bureau of Investigations and Statistics were definitely to be included in every move made by the Central or Nationalist Chinese Government in its plans to recover Kwantung Province from the enemy. The pattern of the future Chinese operations in the Kwantung area was not immediately clear to Agent Lowe. However, as Lowe remarked: "...it was intimated that the infiltration of Chinese agents into occupied Kwantung, the suborning of Japanese puppet troops and leaders with offers of Chinese Governmental support and posts, the enlistment of Kwantung bandits and guerillas, would certainly continue." These Fifth Column activities were typical of the tactics used by Chinese war-lords and the Chinese Government at various intervals in history.

These same Fifth Column activities, Lowe discovered, had also been used with varying success by the Japanese, who had encouraged puppet leaders in Kwantung. These puppet leaders and their troops, according to numerous informants, were not pro-Japanese at heart, but bandits willing to work for the highest bidder. With a leader like Gen Li Fu-lin to rally these people, not much

difficulty was anticipated, informants stated, in winning them back to the Chinese Government's cause, a fact which was undoubtedly heartening to Allied military planners.[190]

Southeast China Project

The investigation of the general and the admiral by Agent Lowe may have influenced the formulation of plans, during May 1945, for one of the most unusual operations assigned to CIC throughout the whole war. These plans embraced the sending of a CIC detachment into Eastern Kwantung Province, east of the Japanese-held corridor, in order to gather and analyze information which would be of value to U.S. forces when they made their eventual advance into Canton and other ports in the Kwantung Province. In addition to the information gathered, these agents were expected to act as "ambassadors" to set up working relationships with the Chinese governmental agencies seated there. This project was possible only because the CIC detachment had available agents fluent in Cantonese and Hakka, dialects prevalent in the area. Much assistance in this project was expected from a ranking Chinese general, American educated and with three years of close cooperation with U.S. forces in India and Burma. He was on the staff of Adm Chan Cheuk, recently appointed mayor of Canton, for whom Pardee Lowe had given endorsement as a result of his background investigation the previous month.

When the plan was presented to the Chief of the X-2 Branch of OSS, it met with instant approval and the suggestion that the project be a joint OSS-CIC enterprise. Advantages of joining forces were evident: OSS already had certain units in the area, had set up transportation and communication facilities and had accumulated a considerable volume of information which would be placed at CIC's disposal.

The plan was approved on 25 June 1945, with the change that the project should cover the entire Southeast China coast instead of Kwantung Province alone, and Lieutenant Puryear, Lieutenant Kendall, George Mah, Sum M. Seto, George L. Lyau, and Wah Foo Quon were assigned to the detachment. Part of the detachment proceeded into Kwantung to set up an office at Hsingning on 14 July, while the rest remained at theater headquarters to study information which OSS had gathered but had been unable to analyze because of lack of personnel.

190. U.S. Forces, CT, 412th CIC Det Summary Rpt, Subj: "Adm Chan Cheuk and Gen Li Fu-lin," 1-21 Apr 45, s/Pardee Lowe, S/A, CIC, (SECRET) (Folder Nr 00001812) (Central Records Facility).

The end of the war closed out this project before its real value could be determined, and the detachment members moved on into Canton with the Chinese Municipal Government.[191]

CIC Resident Agencies Contribute to Liaison

The operation of CIC's resident agencies was rated as one of the most valuable activities of the Corps in the China Theater. As previously mentioned, early in April, residencies were set up in seven different locations throughout the area held by the Allies. These agents not only handled espionage and sabotage suspects, arranged security clearances for civilian employees, and collected counterintelligence information, but also performed many "diplomatic-type" missions. They were credited with ironing out numerous difficulties and disputes involving American personnel, improving the caliber of the Chinese guard personnel assigned to American installations, reducing misunderstandings in the numerous business transactions between Chinese and American organizations in widely scattered areas, and collecting much information, not of a strictly counterintelligence interest, that was sufficiently important to reach the theater commander's desk. Their work was considered of such great value that, by 1 August 1945, CIC agents were assigned to operate in 17 different locations, in addition to theater and Theater Air Force Headquarters.

CIC operated from theater headquarters in Chunking with Major Hardin as CO, assisted by Captain Gelwicks, Leo R. Wisniewski, Joseph Fuchs, Edward S. Withrow, and Alexander H. Westfried. Apart from theater headquarters a resident agency in Chunking was manned by Lawrence H. Ballou, Francis W. Barnhart, and Arthur J. Jong. Donald B. Bernston and P.C. Southworth were with AAF Headquarters,[192] and Andrew P. Lee and Alan D. Jung were with the Yenan Observer Group.[193]

Other agents were distributed as follows throughout the theater:

Kunming: Alexander J. Munro, John R. McDonnell, Young Y. Chinn, Alfred I. Zipprian, Thomas B. Whelley, Bart R. Hynes and Lawrence F. Hughes

War's End Brings Personnel Reshuffle

Some of these resident agents had scarcely set up in their new locations when the Japanese surrender caused a complete reshuffle of personnel. Theater CIC headquarters were established at Shanghai, with branch offices at Nanking and Peiping, and a group of agents under William Tyng were assigned to move forward with the Chinese Combat Command.

Along with the rapid shuffle of personnel also came a complete change in CIC's mission. It had been anticipated that with the end of hostilities, emphasis would shift from the security of military information to the tracking down and apprehension of collaborationists, the tracing of enemy investments and industrial enterprises in China, and the prevention of sabotage. CIC agents did have all these to contend with, and in addition found one of their chief functions to be that of political reporting. The determination of the Communists to continue the war until their own objectives were won had long been known by Americans in China,

194 Memorandum Nr 13, Ibid.

3121

but the flood of Soviet agents directing their efforts at learning everything possible about U.S. Forces and U.S. intentions in China had scarcely been anticipated. Investigation of employees infiltrated into U.S. installations ranked in importance with the hunt for war criminals and collaborationists.[195]

First Group Moves to Shanghai

Capt Philip F. Shapiro, newly arrived in the theater, took the first 10 agents into Shanghai by plane, arriving about one month before Chinese troops were flown in. Writing of his experiences after his return to the United States, he described this month as one in which CIC operated in much the same manner as in other occupied areas, in Italy, France, and Germany. They set up headquarters in the Park Hotel, the most prominent building in Shanghai, advertised their existence and mission, invited the submission of information, visited the nine prisoner of war camps in the area, and gathered a vast amount of information concerning the Japanese, German, Italian, and Soviet intelligence organization which had been operating there throughout the war. They froze bank accounts of suspected persons and organizations, arrested war crimes suspects, and set up excellent liaison with the myriad other British and U.S. intelligence units.

Shapiro continued with the comment that their operations were made more difficult when the Chinese troops came in. Investigations of Chinese personnel could be made only after a request had been sent through the proper channels. More often than not, the investigation would be blocked, especially if it concerned anyone other than an insignificant laborer, Shapiro stated.[196]

By early in October 1945, rotation of troops to the United States was in full swing and soon practically the entire detachment had been replaced by persons new to the theater. A few persons were added from the India-Burma Theater, whose experience with the Chinese in Burma was a distinct asset to their work in China. Among these was Pardee Lowe, Chinese-American, who was able to perform liaison work, sometimes at high level. In general, however, the work of the detachment suffered through loss of the liaison which had been built up so painstakingly while the war was on.

In an official comment on the situation, prepared in May 1946, Col Ivan D. Yeaton, AC of S, G-2, for U.S. Army Forces in China, stated, "Features of the existing situation during the entire period of CIC operations and activities in China have no real parallel...in any theater of operations. Prior to the cessation of

hostilities, the broad general mission of U.S. Forces, China Theater, was to assist and advise appropriate Chinese Central Government agencies in the prosecution of the war against the Japanese. During this period, the CIC in China was dependent in large measure for assistance from Chinese investigative and police agencies in the implementation of the mission directed by the War Department...

"Because of the complexity of developments during the period following the surrender, highlighted by a rapidly deteriorating Central Government political position, and with the war-time necessity...much less a factor, the CIC experienced greater difficulties than before. Rapid redeployment, with a consequent loss of experienced personnel, worked against the effectiveness of activities undertaken by CIC during the period..."[197]

Communism Becomes Real Menace

A study of investigations made by CIC during this period indicates that the "complexity of developments" mentioned by Colonel Yeaton in his May 1946 report actually referred principally to the determination of Russia to communize China at all costs. Well before the end of 1945, CIC agents in China were daily encountering incidents and reliable information to prove that the Soviet Union was playing for big stakes in China. Agents were constantly deluged with reports disclosing that the undermining of U.S. interests and prestige was high on the priority list of Russian plans.

197 1st Ind to Report of General Board, USFET, Study Nr 13, Hq U.S. Forces, China, dated 26 May 1946, (SECRET) (Central Records Facility).

198 Hqs U.S. Forces, CT, CIC, Memo for OIC, Subj: "Soviet Intelligence in Shanghai," dtd 27 Dec 45, s/Harold G. Dora, (SECRET) (Folder Nr 06501658) (Central Records Facility).

Soviets Accelerate Espionage Activities

This was not the last CIC agents heard of Soviet espionage plans; in fact, they continued at accelerated pace as long as U.S. Forces remained in China, according to information received by CIC agents. One such report revealed that a Mr A. M. Abineff, Soviet Representative of the Trade Mission in China and head of the Shanghai G.P.U.[199] met with a number of Soviet agents on 20 August 1946 to discuss future espionage objectives.

According to the report, greater emphasis was to be placed on the gathering of information concerning troops, with specific targets to include: the arrival of U.S. warships at Woosung; departure of U.S. Naval units and their destinations; movements of Marine personnel in Shanghai; lists of all U.S. officers in Shanghai; names of all persons in U.S. intelligence units; departure and arrival of U.S. troops in Shanghai; and the exact location of all armor, heavy equipment, and artillery of the U.S. Army, Navy, or Marines in China. Especially recommended as a means of obtaining this information was the questioning of U.S. personnel in bars and other places of recreation.[200]

Communists in the U.S. Army

Because of the avowed Russian desire to cultivate Communist followers and contacts among U.S. military personnel, CIC agents in China were sensitive to anything which remotely resembled Red rumblings in the U.S. military. Typical of the efforts expended by CIC against Communist penetration tactics was the assignment given Agent Jim Becker in June of 1946 to check on the a potentially subversive organization known to include Red-sympathizing American servicemen as members.

One of the principals in the investigation was a , an avowed Communist. This first expressed his Communistic political views to staff members of the Stars and Stripes. Investigation revealed that he had associated with a member of the U.S. Air Force who had been involved in January 1945, in the "Go Home" demonstration, Communist-inspired disturbances aimed at sending U.S. military men in China back to the States.

This Air Force soldier had attempted to sign a waiver so that he might remain in China, presumably to aid the Red cause, but he had been sent back to the U.S. Another of the associates in China was an organization whose headquarters in Shanghai had been a favorite

199 G.P.U.--believed to be Chinese Communist counterpart of Soviet NKVD

200 Hqs, Security Control Section, SOI, Subj: "Soviet Activities," 18 Oct 46, (Folder Nr 00001658), (SECRET) (Central Records Facility).

hangout for Reds in the U.S. armed forces, but had lost much of its business through rotation of pro-Red American servicemen to the States. However, many of these men had written expressing a desire to return to China.

In hopes of obtaining more particulars on how the functioned and how it obtained its members, Agent Becker planned to make casual visits to the offices. However, Agent Becker did not feel that there was great immediate danger from this quarter, because "...most of the Communist and leftists in the armed forces have been returned to the States." Becker was worried, however, about the fact that several of these men had been "...angling for civilian jobs which will permit their return to China."[201]

Was Korean War Brewing in 1946?

When the Chinese Communists poured into South Korea in June of 1950, they may have startled a few people, but CIC agents who had been in China from 1944 to 1949 were probably not surprised. They knew that this Red attack was shaping up as far back as 1946.

One summary of information, evaluated on "Soviet intelligence activities," in November of 1946, disclosed that a Major Uss, Soviet Military Attache in Tietsin and head of the Soviet Intelligence in North China, was reportedly attempting to recruit and infiltrate agents into South Korea. One Soviet resident of Tietsin, a disclosed that Major Uss had requested him to supply two or three persons, not over middle age and in good health, for a possible mission. Similar requests had been made of Dobrovolsky by Serebennikoff, one of the most influential Soviets in Tietsin, who frankly told Dobrovolsky that such personnel were needed to carry out a survey in the zone of Korea occupied by the Americans. Serebennikoff indicated that the purpose of this survey would be to determine the attitude of the Korean people toward American occupation troops and to gather any intelligence information possible.

The Soviets, according to the report, believed that this survey could be carried out more easily from Tietsin because Americans in China were much more friendly to the Russians, making it easier for the Soviets to gain their confidence and infiltrate agents through them. This survey, it was thought, was being carried out because agents infiltrated into South Korea from North Korea were not obtaining satisfactory results. The Korean Communist Party, which was reportedly doing intelligence work for the Soviets, was said not to have been able to establish proper liaison, and since almost all Koreans had come to be regarded as double agents, the Korean Communists had not been able to gain the confidence of the Americans.

201 CIC, SOI, Subj: "Army Communists," 5 Jun 46, s/Jim Becker, S/A, CIC, (Unclassified) (Folder Nr 00091655) (Central Records Facility).

These facts tended to hinder Soviet intelligence work, especially operations from Manchuria and North Korea. And since relations with the United States at that time were regarded as tense by the Russians, the Soviets were determined to obtain only prompt and reliable information.[202]

A Meeting of the Minds

In their unremitting efforts to eradicate any traces of American influence in China, the Russians were leaving few stones unturned, and few possibilities undeveloped. No means which could be used to further the Party cause escaped their scrutiny, and the public press, long recognized by Communists as a necessary force in the moulding of public opinion, came in for a great deal of their attention.

As reported to the 415th CIC Detachment, a group of pro-Russian journalists and reporters had met at the Soviet Club, 805 Avenue Foch, Shanghai, on 8 July 1946 to discuss means by which political news could be obtained or suppressed. The meeting, called by the Tass News Agency, reportedly was attended by a Mr Chebikin, Soviet expert in the control of the press and reporters. He, along with other Soviet officials, was charged with the mission of seeing that a centralized procedure was set up for the control of all news.

Several objectives were listed as items to be pointed up in future releases from the Soviet-controlled press. The fact that the Americans had failed to show their friendship to the Chinese people by taking up for them in Indo-China was to be stressed. The amount of anti-American feeling in China was to be exaggerated by "blowing up" all incidents of friction between Americans and Chinese. The Soviet press was to dwell on the idea of a coalition of all democratic parties in China. The hands-off policy which Russia was pretending to follow regarding the civil war then raging in China was to come in for repeated treatment, and emphasis was to be given to the number of dead and wounded as a result of American aid to the Nationalists.[203]

Pilferers, Kouimintang, or Soviet Agents?

The Communists could not always be blamed for disturbances and acts of sabotage, as CIC learned while trying to find those guilty of the sabotage of the

202 Security Control Section, Shanghai Det, AAG, SOI, subj: "Soviet Intelligence Activities," Re: Korea, 21 Nov 46, s/Frew W. Eggers, Maj FA, CIC, (SECRET) (Folder Nr 00001658), (Central Records Facility).

203 Hqs, 415th CIC Det, China Service Command, SOI, subj: "Soviet Activities," 26 Jul 46, Folder Nr 00001658, (CONFIDENTIAL) (Central Records Facility).

radio receiving station of the U.S. Army Advisory Group in Nanking in November 1946, a case in which the best CIC could do was reach a conclusion as to probability.

One of the rhombic antenna towers of the receiving station had been brought down by unscrewing the nuts and bolts in the base of the turnbuckle of the rear guy wire. The aerial was also broken about 70 feet from the other tower and disconnected from the broken tower. Several insulators were broken and the aerial and some resistors were missing, presumably stolen.

The task of isolating the most likely suspects was an exacting one because several suspects or suspect groups possessed opportunity, motive and means to perpetrate the act. However, CIC finally surmised that both pilferers and Kuomintang (Chinese Nationalist Government) agents possessed opportunity and motive to a greater extent than any other suspects.

In analyzing the probability that the act was committed by Kuomintang agents, CIC examined every facet of the case which might serve to support or refute these suspicions. The agents reasoned that because of the close relationship between the Americans and the Chinese Government and the consequent absence of suspicion on the part of the Americans, Kuomintang agents would have a better opportunity to commit the act than any of the other suspects, with the exceptions of pilferers or thieves.

Kuomintang agents had a strong motive to sabotage the station. Any sabotage of American property which could be charged to the Communists would obviously tend to discredit the Communists in American eyes and to increase American support of the Central Chinese Government, the Kuomintang.[204]

CIC agents in China at the time of the incident could well appreciate the subtleties of the Oriental mind. It was well known in intelligence circles that the Bureau of Information and Statistics of the National Military Council, the intelligence arm of the Kuomintang, popularly called BIS, had been giving "tips" to the American intelligence units that the Communists were to "stage a demonstration;" "attack U.S. Army installations;" "smash the airfields;" and in this case, "break into the receiver station." These "tips" had come to be labelled as meaning mis-information or "smoke" and were used either to gauge the reaction of U.S. forces or to trace intelligence channels.

---

204 Army Advisor Group, Office of the Chief, Memo TO: Chief of Staff, Office of the Chief, AAG, subj: "Sabotage at the Radio Receiving Station, AAG," 2 Dec 46, s/Earl Mottice, Col, GSC, Director of Intelligence, Folder Nr 00001642, (SECRET) (Central Records Facility).

As was the case in Shanghai, this "smoke" was used to make the CIC and the Office of Strategic Services incorrectly evaluate reports, lean heavily on the BIS, and mainly draw attention to anti-American feelings and activities of the Communists. It was an example of "smoke" being used in a propaganda campaign. But because few if any of these incidents ever materialized, suspicion of this Chinese method of action was aroused, and it was eventually circumstantially proved that most of the "tips" were completely without basis.[205]

In the instance of the sabotage of the Nanking receiving station, CIC noted that the report of the intention of the Communists to sabotage the receiving station came from Kuomintang sources. "It may well be, therefore, that the actual sabotage...was at least connived...by the Kuomintang in order to give credence to these reports," one CIC report from the desk of Col Earl Mottice, GSC, Director of Intelligence, noted.[206]

However, since CIC agents investigating the case were not satisfied with suppositions and a copious quantity of conjecturings, they next examined the Communist motives and means.

It was common knowledge that an unknown number of Soviet agents were installed in Nanking. Therefore, it was logical for CIC to presume that Soviet agents, possibly with "inside" connections, would have better facilities to acquire requisite knowledge of the Nanking installation, and access thereto, than the Chinese Communists.

The Soviets had a motive too. Since the two principal, ultimate aims of Soviet policy toward China at that time were, according to top-level foreign policy officials in Washington, to end the present American sphere of influence in China, and to replace it with its own, the Soviets had a reason for committing the act. Moreover, there was plenty of documentary evidence to prove that recent Soviet activities, principally in the Shanghai area and not to a great extent, as yet, in the Nanking area, had been directed against Americans in the following ways: acquiring, by all means, information of American activities; using propaganda, sometimes a little too obvious, to discredit Americans with the Chinese and encourage American withdrawal from China; and using "strong arm" methods (killing and injuring American soldiers and sailors, mainly through the employment of Chinese thugs) to drive Americans out of China.

---

205 C-27, Memo Nr 3, Sabotage of Receiver Station in Nanking, 26 Nov 46, s/Russel D. Tyler, S/A, CIC, AAG, Folder Nr 000016-12, (SECRET). (Central Records Facility).

206 Army Advisor Group, Office of the Chief, Memo TO: Chief of Staff, Office of the Chief, AAG, subj: "Sabotage at the Radio Receiving Station, AAG," 2 Dec 46, s/Earl Mottice, Col, GSC, Director of Intelligence, Folder Nr 000016-12, (SECRET) (Central Records Facility).

However, CIC agreed that at the time of the sabotage incident, the Soviet espionage and sabotage ring in the Shanghai-Nanking area was undergoing a reorganization, and its anti-American activities were virtually at a standstill.[207] Moreover, the incident was of such small importance and the reaction against the Communists, and therefore Russian interests, would have been so great as to rule out the possibility of Soviet participation. Then, too, the Communists did not have the strength, nor was it their policy, CIC reasoned, to risk American reaction in Nanking. Instead, the Communists limited their activities to anti-American propaganda.[208]

It was possible that pilferers were guilty because approximately 700 feet of pure copper wire was taken from the station area; however, the fact that other more valuable items were unmolested tended to rule out the possibility that thieves sabotaged the station.

Agents finally listed the suspects in the following order:

1. Pilferers, with the possible connivance of Kuomintang authorities.
2. The Communists.
3. Soviet agents.

Because of the lack of counterintelligence facilities, it was virtually impossible for CIC to build up a case of definite proof against any of the three suspect groups. CIC agents did plan to be alert for future acts of sabotage in the hope that they could link them with the Nanking sabotage act, thereby establishing a firmer case. The Metropolitan Police (Nanking) had been asked to see if they could recover the stolen wire.

To protect the receiving station towers from future such acts, CIC recommended that a system of mechanical alarms be installed which would alert those on duty at the receiving station when tampering occurred, and that flood lights be installed to illuminate the most critical parts of the field. Special guards, if and when they were posted, were to be instructed in the rudimentary principles of security. Agents did not deem it wise or practical to enclose the field in which

the towers were located with a barbed wire fence unless a sufficient number of sentries could be found and hired to guard the fence.[209]

CIC Plagued by Incidents

Throughout 1946 CIC was plagued by a succession of incidents in which U.S. personnel were attacked by Chinese coolies, all of these requiring investigation since it was known that a major portion of them were caused by Soviet-inspired hoodlum gangs. These gangs had actually received training, with graduation exercises at the end of the course. The Merchant Marine sailors were particular targets for such attacks until they began arming themselves and always assigning one of their number to remain sober. By continued agitation the Communists were able to arouse among the Chinese coolies considerable resentment against Americans, resentment which even showed itself in insolence of employees in billets and post exchanges. At one time it was learned that the waiters at the Race Course Post Exchange Restaurant, where most civilians ate their noon meal, were working a vicious racket. Unless the waiter received a tip at the time the order was taken, the customer never received his order.

One such "ticklist" incident concerned two Russian citizens living in Shanghai and an American Army corporal. The incident was touched off when a U.S. Army jeep, driven by a Corporal Carson, ran into the rear of a civilian car which had stopped suddenly on the Rue Des Soeurs in Shanghai. The occupants of the civilian car, afterward identified as V. D. Marthoff and Nicolai Chuzo, both Russians, jumped out of their car and assaulted Corporal Carson. In the ensuing melee, Corporal Carson was mauled and the ignition wires in his jeep were torn out.

Carson was saved from further beatings when American military police and their Officer of the Day arrived on the scene. In attempting to break up the fight, the military police were forced to subdue the belligerent Russians, who were intoxicated, and take them to the Chinese Whangpoo Police Station.

After they reached the police station, an agent from the 415th CIC Detachment was called to handle the situation. The agent was questioning the participants in the fray when a Mr Shumsky, Russian detective of the Shanghai Municipal Police, arrived and, after a lengthy discussion, persuaded the CIC agent not to prefer charges against the two Russians for assaulting the corporal. The two Russians were then released from the custody of the Chinese police and turned over to Mr Shumsky.

---

209 Army Advisory Group, Office of the Chief, Memo TO: Chief of Staff, Office of the Chief, AAG, subj: "Sabotage at the Radio Receiving Station, AAG," 2 Dec 46, s/Earl Miottice, Col, GSC, Director of Intelligence, Folder Nr 00001042, (SECRET) (Central Records Facility).

Before departing, however, the intoxicated Russians vowed that they would report the incident to the Russian consul in the morning, and that they, with the aid of friends, would, in the future, beat up every American soldier they saw. Mr Shumsky, being the only sober Russian present, endeavored to restore peace by admonishing the two Russians and asking them to quit talking foolishly.[210]

The Russians kept their promise because the next day the Russian Consul General lodged a complaint with the Honorable Monnett B. Davis, American Consul General in Shanghai, alleging that the Russians had been badly mauled in the fight. Mr Davis, anxious to gain all the true particulars of the case, dispatched a letter to Lt Gen Alvan C. Gillem, Jr., theater commander, asking that a detailed report of the incident be sent to the American consul. General Gillem complied with the request and sent to American Consul General Davis a complete report of the occurrence, as prepared by 1st Lt Charlton T. Howard, CIC agent.[211]

Lieutenant Howard's report completely exonerated jeep driver Carson and the American military police. As Howard pointed out, the Russians were obviously under the influence of liquor, a point which was brought to the attention of Lieutenant Howard by Mr Shumsky in an attempt to soothe over the matter. As cited in the report, Mr Martinoff, one of the Russians in the car, when asked if he had been drinking vodka, replied: "We Russians don't drink vodka... Only you ignorant Americans drink Vodka. I've been drinking good whiskey."

Despite reports in the anti-American press to the contrary, a check of the hospital files by CIC disclosed that on 3 September 1946, V. D. Martinoff and N. Chuzo were given first aid only for superficial lacerations and bruises, and departed immediately. As Lieutenant Howard wrote in his report: "This agent's examination of Martinoff, when his injuries were exhibited for the policeman's gaze, determined that he had a cut on his head, a cut on his leg, and a few minor cuts and bruises."

Other mitigating factors were included in Agent Howard's report. Nicolai Chuzo was identified as a prominent member of the Soviet intelligence network in Shanghai and the NKVD, "...which is second to none in influence in Russian politics." Martinoff was described as a trouble-maker who was well known to veteran American military and shore police in Shanghai as a ringleader of a gang of hoodlums who specialized in beating up Americans when they found them alone in a deserted street or alley.

210 Hqs 415th CIC Det Rpt, Subj: "Incident Involving Russian Civilians and MPs," 23 Sep 46, Folder Nr 00001610, (Unclassified) (Central Records Facility).

211 Hqs, China Service Command, Shanghai, China, ltr TO: Honorable Monnett B. Davis, American Consul General, Shanghai, China, FROM: Alvan C. Gillem, Jr., Lt Gen U.S.A., 27 Sep 46, Folder Nr 00001610, (Unclassified) (Central Records Facility).

Furthermore, it was mentioned that the military police investigating the incident were pushed around by the two Russians and had no other alternative but to defend themselves and subdue the Russians. The concluding paragraph in the report read: "It is well known that the police station covering the area has always adopted an anti-American attitude. It would be amiss not to mention that there were Chinese police at the scene of the incident who refused to restrain the two Russians at the request of the MP's, thereby allowing the incident to develop."[212]

The final note in the case was sounded by Lt Gen Alvan C. Gillem, Jr., when, in his reply to American Consul General Mr Davis, he remarked: "Possibly our personnel erred in not pressing charges against the two Russians concerned. However, the incident was not considered exceptional at the time of the occurrence and upon recommendation of a Russian member of the Municipal Police Force, the charges were not pressed."[213]

415th Deactivated

On 30 September 1946, the 415th CIC Detachment was officially deactivated and the remaining personnel were designated as the Security Control Section of the Army Advisory Group, with Maj Fred W. Eggers commanding. Headquarters for the section remained in Shanghai, with three agents; and field offices operated in Nanking with three agents and in Peiping with four.[214]

Explanation of the above change was made by Major Eggers in a report to Director of Intelligence, WDGS, on 2 January 1947: "...Due to the requirement of General Marshall that no intelligence work could be done within the American forces in China, the identification of the CIC was changed to Security Control Section. Under this title the personnel are now operating. To further comply with the requirement of General Marshall, no positive intelligence nor counter-intelligence work is done where the Chinese forces are concerned."[215]

Throughout 1947 CIC's duties were officially limited to protection of security of U.S. installations, background checks on civilian employees and investigation of cases of suspected disaffection and sabotage. An interesting commentary on this situation is contained in an indorsement to a CIC Monthly Information Report, written by the Chief of Staff of the Army Advisory Group on 1 March 1947: "The above report has been edited so as to delete certain items of information concerning general conditions in China. Future reports of this nature will not contain such informational items. The reason for this action is that, should the Chinese or others suspect personnel connected with the Army Advisory Group of engaging in operational intelligence activities, not only would the effectiveness of the group be weakened but also unfavorable publicity might result. It is therefore felt that Counter Intelligence Corps personnel connected with the Army Advisory Group must limit their activities to such matters as loyalty checks, clearances of civilian personnel for employment, security inspections and the like.[216]

Two Russian interpreters, employed by the Criminal Investigation Detachment, were recruited and briefed to pose as the supposed aliens in an attempt to trap the crew member on the transport. No further information concerning the case was found in available records.[217]

The Case of the Disappearing Engraved Plates

Also typical of the many nonsecurity cases reported by CIC was one which occurred in Shanghai in June 1948, and had to do with engraved plates for the counterfeiting of U.S. currency. As told by a "very reliable informant" to a CIC agent of the Shanghai Port Facility, Security Control Section, the story was that a group of U.S. investigators had appeared in Shanghai, searching for counterfeit U.S. money. While combing the city for any traces or clues which might ultimately lead them to the money, the investigators were approached by an unscrupulous character named (forger in his own right), who offered to guide the U.S. authorities in their search.

The search continued for several weeks. Meanwhile, contacted an artist-engraver named and arranged for to engrave some counterfeit $10.00 and $20.00 U.S. plates. While continued to serve as guide for the U.S. investigators, completed the plates but was forced to flee when the Chinese underworld passed him the rumor that the Chinese police (Wusung Garrison) were wise to his activities and were closing in on him. In a desperate attempt to hide the evidence, placed the plates in a small hand bag and went in search of a hiding place. The search was futile and he was apprehended.

When came up for trial, the only evidence that found its way into court was an old, half-finished plate of a U.S. $10.00. , who received a one year sentence, knew that he had been double-crossed and swore vengeance. The informant believed that if the proper approach were made to he would reveal the entire story of the missing plates. However, the informant urged the CIC agent to act quickly because ". . may be in danger after release." Reports do not disclose what use, if any, CIC made of this information, evaluated F-6.[218]

One case, typical of the kind that formerly would have called for a full investigation, in February 1948 was reported briefly with no evidence of a follow-up investigation. This brief case, called to the attention of CIC agents with the Security Control Section by an intelligence liaison officer in Shanghai, involved a comely blond woman and her adroit card trick method of obtaining information from guilible U.S. servicemen, mostly seamen.

The shapely blonde's procedure, as outlined by the liaison officer, was briefly this: among the various vendors and trades people who boarded U.S.

218 Security Control Section, Shanghai Port Facility, Army Advisory Group, Agent Rpt, Subj: "The Disappearing Engraved Plates for the Counterfeiting of 'US' Currency," 5 Jun 48, Folder Nr 00001570, (Unclassified) (Central Records Facility).

vessels upon their arrival at Tsingtao was the blond girl, apparently of Russian extraction, who made a specialty of approaching newly-arrived Army and Navy officers.

Observers reported that the blond would talk with the officers and request their patronage at the Jade Store, informing them that she could obtain a ten percent discount on curios and merchandise for them there. In order to effect this, the officer was given a card and asked to fill in his name, rank and service. The blonde would jot down similar data, explaining to the officer that when he presented his card at the shop, it would be checked against the blonde's list for authenticity so that she could receive credit for any patronage.

Later, the blonde would ask to be introduced to shipmates and friends of the officer, thereby increasing the number of officers contacted and cards compiled. When some of the officers contacted by the blonde later showed up at the Jade Shop, discreet inquiries were made as to destination and duty station.

The intelligence liaison officer conceded in his report that: "It is possible that this is simply a sales promotion device. However, it has all the elements of typical Soviet espionage. It is not known whether the girl is a Soviet citizen or not, but it would make little difference in view of the known Soviet policy of using non-Soviets for foreign espionage."

United States intelligence agencies knew what the standard Soviet espionage targets in China were. They included: an up-to-date roster of military personnel in China, with dates of entry, departure and destination; evidence of increased or decreased personnel in any specific corps or branch; and dates of arrival and lists of personnel belonging to a corps or organization not previously in China, particularly personnel with specialized skills or training.

With this knowledge, American intelligence men were wary of any procedure which required U.S. military personnel to give name, rank, and other data. Therefore, the shapely blonde and her card signing device appeared to be a most useful way to obtain intelligence information in a form which would be acceptable to Razuedupr (Soviet Military Intelligence Service) Headquarters as reliable. As the report concluded: "It is believed that if the scheme was not originally devised by them (Russians) or is not presently being taken advantage of, it will not be overlooked for long."[219]

Espionage, Possible Activity in Tsingtao," 14 Feb 48, s/T. W. Joyce, Folder Nr 00001658, (CONFIDENTIAL) (Central Records Facility).

In April 1947 the Peiping office was closed and the remaining personnel transferred to Shanghai. At that time the detachment in Shanghai consisted of Major Eggers, Capt C. T. Howard, Capt John G. Taylor, and Agents Morris J. Grossman, William Green, and Howard Tarrant, while Capt V. H. Herald operated the field office at Nanking. Within the next year, Captain Howard departed for the United States; 2d Lt Howard W. Eng and Agents Victor Watkins, Albert T. Wong, Walfrido Z. Concepcion, Allen D. Jung and Robert Lee arrived from the United States, and 1st Lt John Haley transferred into CIC from the Office of the Director of Intelligence, Army Advisory Group.[220]

The CIC detachment assisted in the orderly evacuation of American civilians from troubled areas as the Communists continued their advance and, in January 1949, when it became evident that all of the Chinese mainland would soon fall to the Communists, left with the remainder of the Army Advisory Group.[221]

Part II: CIC in the Central Pacific Theater

Section 1

CIC's MISSION IN HAWAII

At 7:55 A.M. Hawaiian Time (1:25 P.M. EST) on 7 December 1941, elements of the Japanese Air Force, in an unprecedented sneak attack, bombed units of the U.S. fleet at anchor in Pearl Harbor. Other key military installations in the Hawaiian Islands were hit simultaneously.

During the first minutes of the raid, agents of the Corps of Intelligence Police (CIP), scattered throughout the island of Oahu, raced to CIP headquarters in the Dillingham Building in downtown Honolulu. A hurried 10-minute conference and the agents were out on their first assignment of the war. Following a previously arranged plan, they dispersed in teams. Their mission was to apprehend all pro-Japanese sympathizers.

Operation "Pickup"

For many months prior to the Pearl Harbor attack, the CIP had quietly compiled what they referred to as a "Pickup" list. On it were the names and addresses of individuals who would be of potential danger to the United States should war occur. Suspects classified as "1-A" were to be apprehended immediately; others listed as "1-B" were to be put under surveillance and their activities curtailed. There were approximately 300 persons in each group, the vast majority being Japanese.

The bulk of information about the Japanese population in the Islands came from United States citizens of Japanese ancestry, commonly called Niseis, although the term Nisei actually applies only to those of first generation citizenship. The FBI alone had 750 Niseis acting as listeners. The CIP also had many among their informants.[222]

CIP agents, together with the FBI, Office of Naval Intelligence, and Honolulu Police Department worked untiringly that fateful Sunday. By 1100 hours, while the raids still continued, the first suspect was taken into custody.[223] By the end of that first day, some 200 strongly pro-Japanese persons were in temporary detention compounds.[224]

CONFIDENTIAL

Arrests Mount

During the 72 hours following the attack, the CIP pressed Operation "Pickup." By 10 December, more than 400 persons were under arrest and in confinement at the Honolulu immigration station. Approximately three-fourths were Japanese.[230]

Although the CIP devoted a limited amount of time to other activities, apprehension of subversives was given top priority during those first frantic days. The few agents that could be spared were directed to trace the origin of the numerous wild rumors which were rampant on Oahu. Others made inspections and surveys of installations at the urgent requests of suddenly "security conscious" commanders. Thus, from a position of almost total oblivion, the CIP in Hawaii was suddenly thrust into the lime light.

Where Were the Spies and Saboteurs

Where were the Japanese spies and saboteurs who at the signal of attack were supposed to rise up and aid their racial brothers from within?

They simply did not exist. Not one of the flamboyant stories of road-blocking, disguised machine gun nests and other penny-thriller paraphernalia was true. FBI agent, Robert L. Shivers, later had this to say:

> "In spite of what Admiral Kimmel or anyone else may have said about the fifth column activity in Hawaii, I want to emphasize that there was no such activity in Hawaii before, during, or after the attack on Pearl Harbor. Consequently there was no confusion in Hawaii as a result of fifth column activities.
>
> "I was in a position to know this fact, and I speak with authority when I say that the confusion in Hawaii was in the minds of the confused and not because of fifth column activities.
>
> "It was not the civilian population who was confused. Nowhere under the sun could there have been a more intelligent response to the needs of the hour than was given by the entire population of these islands.
>
> "As a matter of fact had it not been for the lack of hysteria in the civilian community and the orderly manner in which they responded as a result of the preparation the civilian community had made for war, especially the doctors, the law enforcement agencies and the Office of

230 The CIC in the Central Pacific Area, A Brief History, p. 3 (J-23).

Civilian Defense, there would have been confusion with which the community would not have been able to cope."[231]

Shivers' statement was supported by similar ones from the Honolulu Chief of Police and Lt Gen Delos C. Emmons, who replaced Lt Gen Walter C. Short as commander of the Hawaiian department. Yet many Americans believed for months, even years, that there was sabotage at Pearl Harbor. As late as February 1943 Colliers Magazine printed as fact the story about a milk wagon dropping its sides and machine-gunning personnel at Hickam Field.[232]

Hawaiian CIP Prior to the Attack

Until 1941, the Hawaiian CIP unit had consisted of a meager four-man staff. During those lean years operations were considerably restricted. With the limited personnel available and no definite mission to perform, agents devoted most of their time to a fact-gathering campaign. Practically unnoticed, they went about the islands observing persons and events of intelligence interest. Subsequent reports were filed for future reference.

On 5 April 1941, with the threat of war increasing, the Hawaiian department was strengthened by the arrival of several agents from the United States. Succeeding shipments increased the unit to 12 officers and 18 special agents by the time of the Pearl Harbor attack.[233] Shortly thereafter, additional agents were flown in from the West Coast to aid in the questioning and processing of the many hundreds of suspects.[234]

Martial Law and the Delimitations Agreement

During the first months of the war, two events took place which were to affect seriously counterintelligence operations in the Hawaiian Islands throughout the war. The first was the declaration of martial law in Hawaii by the civil governor immediately after the Pearl Harbor attack.[235] This decree, in effect until October 1944,[236] was to give the Counter Intelligence Corps unusually broad powers, nowhere else delegated to CIC in American territory for so long a time.

235 The CIC in the Central Pacific Area, A Brief History, p. 3, (J-23).
236 Ibid., p. 5.

The second event which greatly influenced operations was the Delimitations Agreement which was formally reached by the CIC, FBI, and ONI in February 1942. Under the terms of this agreement, CIC was given responsibility for the internal security of the Territory of Hawaii. All cases of espionage, treason, sabotage, and other subversive activities were under CIC jurisdiction with the exception of those cases taking place on naval reservations or in which naval personnel were involved.[237]

The change from the Corps of Intelligence Police to the Counter Intelligence Corps did not affect operations in Hawaii. CIP agents were absorbed by the new group, issued a table of organization and assigned to G2, Headquarters, Hawaiian Department.[238]

Initially, the CIC unit in Hawaii, was known as the Contact Office. Later, it operated as the Counter Intelligence Division (CID). The Contact Office first worked for the Hawaiian Department G2, and then successively for the Central Pacific Area (CPA), Central Pacific Base Command (CPBC), and the Middle Pacific Area (MIDPAC) G2's. While assigned to CPBC, the CID was considered the theater CIC detachment since the commanding officer, Col Joseph J. Twitty,[239] was also the Chief, CIC, in the Territory of Hawaii. Colonel Twitty succeeded Col George W. Bicknell who was reassigned on 3 April 1943. On 20 August 1943, Colonel Twitty left and his position was taken by Lt Col Frank O. Blake. On 1 October 1943, Lt Col Byron Meurlott became the commanding officer and remained in that position until 18 August 1945 when he was relieved by Lt Col Kirby M. Gillette.[240]

Not until the closing months of the war was the Counter Intelligence Division given a numbered designation. Then it was split into four detachments and most of the officers and agents sent to forward combat areas.[241] However, there were other CIC detachments in Hawaii during the war. They were either stationed there permanently, as in the case of the 607th CIC Detachment, or paused briefly for further training before pushing on towards the fighting in the Southwest Pacific.[242]

The Japanese Problem

Of the major problems that faced the CIC in Hawaii shortly after the Pearl Harbor attack, the most important was the maintainence of close supervision over likely and potential subversives. Operation "Pickup," which lasted but a few weeks, was successful in that it led to the apprehension of a few hundred suspects. However, still at large on the islands were 160,000 Japanese or persons with Japanese ancestry. Each one was a potential saboteur and espionage agent. The majority of these people were loyal Americans, but the knowledge that in their midst were a few fanatically pro-Japanese individuals was alarming to even the most complacent U.S. military commanders.

The only feasible method of sifting out these fanatics was through an extensive screening program. The enormity of such a program was reflected by the fact that almost one-third of the population of the Hawaiian Islands had some Japanese ancestry. The extent to which these people still held allegiance to Japan was of vital concern to the United States.

Several years before the war, the Japanese Government had established one of its most important and active consulates in Honolulu. Although it was never proven, U.S. counterintelligence agencies suspected that the consulate served as a clearing house for espionage data collected by Japanese agents. Members of the consulate readily admitted that they had been sent with the purpose of reminding the Japanese in Hawaii of their devout adherence to the emperor.

Under the supervision of the consulate, every major sect of the nationalistic Shinto and Buddhist religions was in existence in the islands. Schools taught Japanese children the Japanese language and ideologies. The people were organized into various societies with such purposes as contributing to Japanese war relief, purchasing Japanese patriotic bonds, and entertaining visiting Japanese naval training squadrons. They maintained their own chamber of commerce and other business organizations.

The consulate was able to keep in close touch with the Japanese population through a network of unofficial "consular agents" or "Toritsuginin." Among the duties assumed by these so-called "ambassadors of good-will" were registering the births of Japanese children with the consulate, conducting official censuses for the Japanese Government, applying for military deferment with the Japanese Government for Hawaiian residents, and arranging tours to Japan. More often than not, they also functioned as informants or low-level espionage agents for the consulate. It was not difficult for them to pick up important bits of information during their frequent trips about Oahu.

The registering of births with the consulate caused a peculiar situation. Children whose births were so registered came under an "extra-legal" concept.[243] They were considered dual citizens of the United States and Japan. To become separated from Japanese citizenship was a long and somewhat complicated process and was handled through the consular agents.

When a Japanese had accumulated enough money and vacation time, after years of working, he was urged to take a two or three months vacation in Japan. With the aliens, the desire to make this journey was understandable. Japan was their native land--perhaps their parents were still alive there. But the same attitude often was found among the Nisei. In many cases they had been sent or taken to Japan by their parents when they were quite young, and as a result, a great many of them spent their formative years and received most of their education there. Such persons were known as "Kibeis," and, in general, they formed the most dangerous class of Japanese in Hawaii. They had the youth, the strength, and the training to be potential threats to the internal security of the islands. The majority were trained in Japan during the decade immediately preceeding the war when the Japanese war lords were becoming the dominant powers in the country and intense nationalism was the keynote of all education.

Throughout the war, constant observation of all persons of Japanese blood, both aliens and citizens, was maintained by the CIC. Most of the consular agents and many of the Kibeis were on the initial "Pickup" list. As investigations proceeded during the following months, hundreds of other Japanese and a few Germans and Italians were taken into custody by the CIC. All of these people had shown signs of dubious loyalty to the United States.[244]

During the first year the internment program required the largest amount of CIC concern. There were approximately 5,000 Kibeis living in Hawaii and nearly all of them were eventually processed. The large and active Japanese fishing fleet in operation before the war was composed of a nationalistic alien group totaling several hundred, and they too were processed. Other Japanese that CIC screened included Buddhist and Shinto priests as well as language school officials.

In January 1942, only a month after the war had started, internees were removed from the Honolulu immigration station and sent to a newly constructed internment camp on Sand Island, located in Honolulu Harbor. Most of the aliens interned there eventually were sent to mainland internment camps in the United States, but a few citizens were kept on Sand Island in custodial detention. By the

243 "The Counter Intelligence Corps in the Central Pacific Area, A Brief History," dtd 21 May 1945, taken from Counter Intelligence Corps Operational History of Theaters, (CONFIDENTIAL) (Staff and Faculty Library).

244 War-Time History of CIC, AFMIOPAC, (CONFIDENTIAL), p. 19, (Staff and Faculty Library).

spring of 1943, a prisoner of war camp was completed in Honolulu, and internees still at Sand Island were transferred to the new site. For the remainder of the war, all persons under detention were kept at Honolulu.[245]

Hearing Boards--Martial Law Challenged

In order to insure fairness to the Japanese, hearing boards were established to review the cases of interned persons. Each subject was brought first before what was known as the Preliminary Hearing Board. It consisted of a CIC officer or agent and one representative each from the Federal Bureau of Investigation and the Office of Naval Intelligence. If the board decided a subject should be interned, his case then was presented by CIC to the Civilian Hearing Board which was composed of two Army officers and three Honolulu civilians. At this conclave, the subject was allowed to bring in witnesses and have an attorney with him. Irrespective of the recommendation rendered by the Civilian Hearing Board, the case next was sent before the Intelligence Reviewing Board. This board was composed of the heads of the three counterintelligence agencies--CIC, Federal Bureau of Investigation, and Office of Naval Intelligence. The officials could either concur in the decision of the Civilian Hearing Board, or make an opposite recommendation. Ultimately, each case was sent to the Military Governor's Review Board where the final recommendation was made. That recommendation, when signed by the Military Governor (later Military Commander), closed the procedure: the subject was interned or released.[246]

These hearing boards, established under martial law, met with considerable objection from citizens and aliens alike, who argued that martial law in the Hawaiian Islands was not necessary. They argued that it was evident that the Japanese could not launch any sizeable attack against the Islands after their stunning defeat at the Battle of Midway in June 1942. However, Lt Gen Delos C. Emmons, Commander of the Hawaiian Department, saw fit to continue martial law, as did Lt Gen Robert C. Richardson, Jr., when he assumed command of the Hawaiian Islands in June 1943.[247]

On 30 July 1943, two internees-
citizens of German extraction--petitioned for writs of habeas corpus, a right suspended by martial law. Their petition was a direct challenge to martial law, and by inference, to activities of CIC where the right to make arrests was exercised. Although were evacuated to the mainland and released there, thus achieving their purpose, their attack on martial law was not successful.

3147

Nine months later, a war worker sentenced by a provost court petitioned for a writ of habeas corpus also. He was upheld in his petition by a Federal judge who declared martial law in Hawaii nonexistent.

On 25 October 1944, the controversy ended when the President of the United States abolished martial law in the Territory of Hawaii by proclamation. Immediately, the provost courts were dissolved--the only substantial change resulting from the order. But other changes occurred in form, however. The area was designated the Territory of Hawaii Military Area, with the former Military Governor becoming Military Commander, and the Office of the Military Governor was redesignated the Office of Internal Security. From the Military Commander, Lieutenant General Richardson, and the Federal Bureau of Investigation and Office of Naval Intelligence in Washington and Hawaii concurring, CIC received the green light to continue its investigative jurisdiction over all cases of espionage, sabotage, and related activities.

Although apprehensions continued to be made even after the abolishment of martial law, citizens were no longer placed in custodial detention. They instead were excluded from Hawaii and evacuated to the mainland. The cases of all citizens in Honolulu previously placed in detention were reviewed; some of these individuals were paroled and the rest evacuated. Sixty-seven departed in the first group.

By September 1945, 1,579 persons had been apprehended in Hawaii. Of these, 1,466 were Japanese; the remainder included 114 Germans, 17 Italians, and 2 French. Of the 1,579, 617 had been released or paroled, 67 excluded, 313 relocated on the mainland, 79 repatriated and 13 died. Still in custody in Hawaii and the United States were 494 persons.[248]

Travel Control, Security Program and CIC School

From the beginning of the war, it was obvious that espionage was a potent danger. There was no guarantee that a completely tight counterespionage fence could be drawn around Hawaii, but every possible attempt had to be made. Investigating potential suspects accomplished a large share of the task, but many loopholes remained.

To plug one of these gaps, a system of travel control was organized. By the summer of 1943, every person leaving Hawaii had to be cleared first by an organization which was known as the Trans-Pacific Travel Control Bureau. It was activated by a General Order of the Military Governor, and continued after 25

248 War-Time History of CIC, AFMIOPAC, (CONFIDENTIAL), pp. 25-26 (J-23), (Staff and Faculty Library).

October 1944 under the Office of Internal Security.[249] The office in Honolulu was staffed by the Navy, but recommendations governing travel were made jointly by CIC, the Federal Bureau of Investigation, and the Office of Naval Intelligence.

During March 1944, a large branch office was opened in San Francisco under the direction of travel control officers from Honolulu and headed by an officer from the Honolulu CIC office. Another branch office was activated in Seattle in April 1945. It was also manned by a CIC officer and agents from the Counter Intelligence Division. Altogether, there were two officers and six agents on detached service at these two offices.

Virtually every civilian entering or leaving Hawaii was given prior clearance by these offices. As the war in the Pacific increased in scope, the system became even more valuable. More and more civilian workers were going to forward areas, and it became increasingly important to have them pass through a screening system before being sent to critical areas. Between 2,000 and 3,500 persons were processed monthly in Honolulu, approximately 1,500 in San Francisco and from 500 to 1,000 in Seattle.

A further function of the Trans-Pacific Travel Control Bureau was the supervision of baggage searches and the furnishing of representatives to meet each ship or aircraft carrying passengers to insure that no one went aboard or left who had not been validated.

Inter-Hawaiian Island travel also was under continuous supervision, a task handled solely by CIC. Every citizen traveling from one island to any of the others had to appear before a CIC representative for a brief interview and file clerk. From 600 to 900 persons were processed weekly in Honolulu with 100 to 200 screened on Hawaii, Maui, Molokai, Lanai, and Kauai.

Security Program Important

As Hawaii developed into a huge supply base and staging area for troops, the need for a security program became increasingly apparent. This program was incorporated into CIC's sphere of activities in Hawaii by 1943. Army posts, airfields, ammunition dumps, power plants, the waterfront and all other vital installations were continually surveyed. A special department of the Contact Office--the Security Subsection--was charged with carrying out this program. So vast did the work become that at one time or another, almost all of the agents in the office took their turn surveying various installations.

249 This was in accordance with the Presidential Proclamation abolishing Martial Law in the Territory.

Agents used various disguises in covert attempts to enter restricted areas or to gain access to classified material. They showed on occasion how a saboteur could destroy an ammunition tunnel or wreck a hangar full of planes or interfere with gasoline distribution. They followed up each test with a complete survey. The commanding officer concerned was given a copy of the findings and recommendations. Later, following the original tests, the submissions of recommendations and the establishment of preventive measures, another test was made. In this way, constant vigilance was maintained.

Another function of the subsection was an educational project that was instituted to teach Army personnel security measures. The procedure was to present hour-long lectures to the troops and to headquarters units as they arrived in Hawaii. Civilians, including War Department employees, Red Cross workers, and USO entertainers, heard these lectures. A new series was given to each group of alerted troops, emphasizing their special security problems and how to handle them.[250] More than 100,000 persons were reached by this program which produced positive results.[251]

Agents Recruited Locally

As was the case in some of the other theaters, many of the CIC agents assigned in Hawaii lacked any formal investigative training. They were recruited from other units stationed in the islands during the first months of the war when there was an urgent need for agents. Although this weakness was recognized almost at once, it was impossible to take positive action to correct it for some time.

As early as August 1941, two CIP agents were sent back to the States to attend the CIP school in Washington and it was planned to send two every month. As it turned out, they were the only two agents to leave for training. Pearl Harbor and the critical situation which followed made further shipments impossible.

When CIC was activated in Hawaii in January 1942, it was planned that all officers and agents would eventually attend the CIC Training School in Chicago. Not until a year later, however, was the Contact Office able to spare even one agent to attend the school. From then on, other agents and officers, in small numbers, were sent by the Contact Office to attend mainland schools. This arrangement could not accommodate all the new CIC personnel arriving on Oahu. In April 1943 a preliminary CIC school, along the lines of the CIC Chicago school, was organized near Honolulu. Half the agents who had no formal investigative

250 War-Time History of CIC, AFMIDPAC, (CONFIDENTIAL), p. 27-29, (Staff and Faculty Library).

251 Ibid., p. 20.

training attended one month, the remainder the following month. During the next year and a half two more similar schools were conducted in Hawaii for the benefit of new agents.[252]

Command Changes

At the time of the attack on Pearl Harbor, the CIC, then the Corps of Intelligence Police, was an agency of the Hawaiian Department. Just one week after the war began, Lt Gen Delos C. Emmons assumed command of the Islands. Although the Hawaiian Department was reorganized and expanded several times during the next year and a half, the mission of the command remained the same:

"Hold Oahu at all costs against attacks by sea, land, and air forces . . . and against all hostile sympathizers."[253]

In May 1943, Lt Gen Robert C. Richardson, Jr., replaced General Emmons as commander of the Hawaiian Department. Three months later, on 14 August 1943, the Hawaiian Department was superseded by the newly activated United States Army Forces, Central Pacific Area (USAFCPA). The Hawaiian Department continued a "paper" existence until formally terminated on 15 November 1947.

As commanding general of USAFCPA, General Richardson was responsible for the administration and training of all U.S. Army ground and air troops within the area and was subject to the direction of Adm Chester Nimitz, the Commander-in-Chief, Pacific Ocean Areas (CINCPAC), in the preparation and execution of plans for the employment of Army forces in the area.[254]

The second major organization change in the theater took place on 1 August 1944. On that date, USAFCPA was superseded by United States Army Forces, Pacific Ocean Areas (USAFPOA). General Richardson was designated commander of this new organization also. Incorporated into it were all troops formerly assigned to United States Armed Forces in South Pacific Area (USAFISPA).[255] The Central Pacific Base Command (CPBC) was also established as a subordinate administrative command to USAFPOA.

CIC was assigned to CPBC, an arrangement which from the first proved satisfactory. The commanding general of USAFPOA, General Richardson, under Presidential Executive Order Nr 9489, was charged with the internal security of the Hawaiian Islands. Immediately, he organized the Office of Internal Security

252 War-Time History of CIC, AFMIDPAC, (CONFIDENTIAL), p. 35, (Staff and Faculty Library).
253 The Army Almanac, U.S. Government Printing Office 1950, p. 610.
254 Ibid.
255 Ibid., p. 611.

and designated CIC as the special investigative agency to pursue all Security Order violations and supervise the internment of both aliens and citizens.[256] However, since it was assigned to CPBC, CIC had no official jurisdiction over the internal security of the islands.

Considerable difficulty arose because of this divided jurisdiction, the security responsibility being charged to the Commanding General, USAFPOA and not redelegated to lower echelons, while the means or activities to effect security were under the control of the Commanding General, CPBC.

In addition to this discrepancy, by 1944 the theater G2 had the responsibility of requisitioning and providing CIC detachments for attachment to Army ground forces in the Western Pacific. With no personnel on hand, personnel had to be requisitioned from CPBC.

In June 1945, action was initiated to have CIC raised to theater level. CIC officials requested that all CIC detachments in the theater be assigned to USAFPOA.[257]

At about this same time, all the Pacific areas were coordinated under Gen Douglas MacArthur. The new command was designated as United States Army Forces in the Pacific (AFPAC). USAFPOA was redesignated United States Army Forces, Middle Pacific (USAF, MIDPAC) on 1 July 1945 with General Richardson again commander.[258] Orders were issued assigning all CIC detachments in the theater to the new command. In addition a circular was published covering the mission of CIC and the responsibilities of the commanding officers of organizations to which detachments might be assigned. With this command change, G2, MIDPAC had control of all CIC units and was better able to carry out the local and forward area duties assigned to CIC.[259]

Section 2

DETACHMENT ORGANIZATION

The Contact Office, later the Counter Intelligence Division, was organized to carry out its own particular mission of maintaining internal security within Hawaii in the most efficient manner possible. The unit was "departmentalized with the view of gathering information, providing a constant sounding board of public opinion, and detecting any subversive feeling or action."[260]

Headquarters was maintained on the second floor of an office building in downtown Honolulu. A fleet of 33 vehicles, 30 of them civilian style automobiles, was used to cover Oahu, an area of approximately 600 square miles. Agents were on duty 24 hours a day.

Expansion of the Contact Office was rapid following the outbreak of hostilities. By 27 January 1942 there were 27 agents in the area and by February, 33. One year later there were 81 agents and two years later 97 agents, the greatest total reached.[261] The T/O for the Territory of Hawaii Military Area provided for 36 officers and 107 EM agents.[262]

Personnel for the CIC Contact Office came from three sources: local residents inducted into the Army, given military training and brought into CIC; troops sent to the Territory of Hawaii as casuals or assigned to Army units; and CIC replacements shipped from the United States. Because of new personnel assignments, old agents going out to forward units, and other agents going to officer candidate school, the turn-over in the CIC in Hawaii by May 1945 was approximately 80 percent.[263]

In addition to headquarters on Oahu, CIC had branch offices on the other three major islands in the Territory--Hawaii, Maui, and Kauai. Each had its own preliminary hearing board, and most of the cases which arose on these islands were handled by the two to four resident agents stationed there.

The scope of activities of the Personnel Subsection included loyalty investigations of military personnel and employees of the War Department.[267]

The General Subsection functioned as an auxiliary for the other three subsections. When called upon, it furnished additional agents for large or important investigations. It also received general complaint cases and followed through on investigations of military personnel with regard to disaffection, subversive activity and possible sabotage or espionage.

Technical Section

Although the strength of the Technical Section varied from time to time, it usually numbered seven agents. The section's main duties consisted of exercising technical surveillance over various types of electrical communication systems throughout Hawaii and handling investigations of aircraft accidents in which sabotage was suspected. The vast majority of these accidents were found to be the result of carelessness. In fact, no known act of Axis-inspired sabotage was committed in Hawaii after the beginning of hostilities.[268]

The assignments given the Technical Section fell into three general categories: "outside," "inside," and "laboratory." The outside assignments included investigations of aliens possessing or suspected of possessing shortwave receivers and all pre-war amateur radio operators, microphone surveillances, and cooperation with the Federal Communication Commission (FCC) in surveillance and investigation of possible contraband transmitters. Personnel from the section also accompanied agents from other departments within the detachment on searches to determine violations of General Orders pertaining to radio.

The General Orders, issued by the Military Governor, prohibited enemy aliens from listening to shortwave broadcasts other than those originating in the United States. Inasmuch as the alien population was predominately Japanese and the signal from Radio Tokyo extremely strong, CIC was constantly on the alert for violators.

The inside work of the Technical Section consisted mainly of monitoring the two-way police radio and installing and maintaining various audio and inter office communication systems in the Contact Office. Many times throughout each day, the Honolulu Police Department was called on cases the nature of which in some way, large or small, had a bearing on CIC operations. Therefore, the Technical

268 History of the CIC in Hawaiian Islands (Processing Japanese-Americans and Japanese Nationals in Hawaiian Islands), (Unclassified) (Staff and Faculty Library).

The three main echelons in the Honolulu office were the Officer in Charge (sometimes referred to as the Chief, CIC, U.S. Territory of Hawaii), the Executive Officer and the Chief of the Investigative Section. The remainder of the office was split into various sections and subsections.[264]

Administrative Section

The Administrative Section consisted of one officer, 1st Lt Andrew S. Wong, five administrative assistants and 12 clerk-typists. It was charged with the planning, coordination, and execution of the detailed administrative functions of the organization.

All incoming and outgoing correspondence passed through the section. With few exceptions, all papers, reports, and letters received by and copies sent out by the office were filed.

The section performed other miscellaneous functions as well, including mimeographing, personnel administration and fiscal accounting.[265]

Investigative Section

The Investigative Section, largest in the office, was broken down into four subsections--Espionage, Sabotage, Personnel, and General.

The Espionage Subsection dealt mainly with investigating Japanese residents. Of the many hundreds of subjects processed, only one was ever convicted of espionage--and he was a German. The man was taken into custody shortly after the war began and sentenced to a term in a federal penitentiary.

The primary responsibility of the Sabotage Subsection was to investigate actual cases of sabotage, but the institution of countersabotage measures was an additional key mission. The two-man subsection of Agents Donald Fenton and Elbert Turner made numerous surveys of vital installations and public utilities following suspected sabotage incidents. Close liaison was maintained with other agencies to try to ascertain if a series or pattern of incidents was developing. Their investigations revealed that the vast majority of sabotage complaints were cases of destruction or damage caused by carelessness or negligence.[266]

266 Proposed Table of Organization--CIC Branch, Hawaii, dtd March 1943, p. 5, (CONFIDENTIAL) (Staff and Faculty Library).

Section maintained a 24-hour monitor on the police calls. When a dispatch appeared to be of interest to the Contact Office, the agent on duty notified the duty officer who evaluated the call. When deemed advisable, an agent was sent out to determine the true nature of the case.

Most of the laboratory work dealt with photography. Two specially-trained agents spent their time developing crime-scene pictures and examining confiscated films and documents.[269]

Japanese Section

Organized to handle classes of Japanese deemed potentially dangerous by virtue of their past activity, the Japanese Section was one of the most active in the detachment. By March 1943, only nine months after it was organized, the section had located and processed well over 1,000 individuals.

When information was compiled indicating that a subject might be an enemy sympathizer, the case was usually turned over to the Investigative Section. It was the mission of the Japanese Section merely to screen Japanese whose loyalty was questioned, but not necessarily to pursue an investigation to a conclusion if derogatory information was uncovered. During the peak of operations, the section was staffed by six agents under Lt Kanemi Kanazawi.[270]

"All Other Enemies" Section

The "All Other Enemies" Section was charged with the responsibility of investigating all Military Intelligence Division (MID) cases of espionage and disaffection involving persons not of Oriental blood. Because of the CIP groundwork in this field prior to 7 December 1941, most of the pro-Axis sympathizers were known, and it was a simple matter to take them into custody.

Many subjects were later released, but kept under constant scrutiny by means of confidential informants, mail clerks, and surveillances. Through these means the section remained constantly abreast of the activities of former members of groups which were considered subversive.

The effectiveness of the informant net established on Oahu was well illustrated by an incident which took place during the summer of 1943. An impromtu party was given by several members of a group considered to be subversive. Even before

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Preface

CIC's LOST DETACHMENT

On 9 April 1942, the first CIC-trained officers arrived in Australia to form the nucleus of the detachment that was to accompany combat troops into nearly every phase of the bitter fighting on the road to Tokyo. At the same time the Philippine CIC Detachment was nearing the end of its last-ditch fight along with the remnants of other United States units who had escaped to Corregidor. With the surrender of Corregidor to the Japanese on 6 May, this became CIC's "Lost Detachment." Only one member of the detachment escaped - Arthur Komori, who was taken to Australia just before the fall of Corregidor to act as an interpreter at GHQ.

Little is known of this detachment. There is no certain list of its members. Only one official document has been found to verify even its existence; but part of the story has been pieced together from interviews with a few who escaped from the enemy or were released from prison camps at the end of the war.

The one official document is a cable, dated 23 January 1945, from the Director of Intelligence to the "Commander in Chief SWPA," listing twenty-four names that the "records indicate" were on duty in the Philippines with the CIC at the time of the Japanese invasion.[1] Nine of these men are known to have died while in the hands of the enemy.[2]

---

1 SPINT 322.999 CIC, 24 Jan 45, Subj: "Corps of Intelligence Police Personnel in the Philippines," TO: Commander in Chief SWPA; ATTN: AC of S, G2, signed, Roamer, Director of Intelligence, (Kansas City Records Center). The following names were listed: Lorenzo Alvarado, John A. Anderson, William R. Connor, Bernabe M. Datuin, James E. Delanty, Joseph A. Delia Malva, Grenfell D. Drisko, Stewart L. Garrison, Ahmad Gaspar, Jr., Harry B. Glass, Will Scott Gordon, Charles W. Henderson, Leon H. Jay, Raymond W. Kujawski, John T. Lynch, Paul A. Marinas, Ralph W. Montgomery, James J. Rubarb, Richard M. Sakakida, Paul Sebestyen, Guadencio Sillona, Antonio Tabaniag, Clyde L. Teske and Robert F. Wallbaum.

NOTE: Arthur Komori said that Palone (fnu) was also a member of the Detachment. He said that Sillona, Marinas, Tabaniag and Alvarado were Filipinos and Gaspar was a Moro.

2 Information obtained by the CIC Board from returnees indicated that Anderson died of diptheria and Glass of malaria in Cabantuan Prison, and that Gordon, Jay, Wallbaum and Henderson went down on sinking prison ships. There is no information on the deaths of Datuin, Drisko and Gaspar. Information obtained from returnees also indicated that Henderson had been commissioned a First Lieutenant before his capture.

[redacted]

Although the list of twenty-four did not contain any officers, since officers were not yet "detailed" to CIC, it is known that at least five officers who were working as a part of the CIC Detachment, as well as the former commanding officer, who had become G2 of the Philippine command after General Willoughby left for Australia, were captured. Of these, three died while in captivity and one, wounded critically on Bataan, died soon after his release from the enemy.[3]

There are no records to indicate the work of the Philippine Detachment during those last days on Bataan and Corregidor, but a partial story has been culled from the memories of two Nisei agents, Arthur S. Komori and Richard M. Sakakida, the first Japanese-Americans taken into CIP.[4]

First Nisei Agents go to Philippines

Nine months prior to the fall of Corregidor, on 13 March 1941, Sakakida and Komori were sworn in as sergeants of the CIP in Hawaii. The first Niseis taken into CIP, they were told to prepare to go on a secret mission, the nature of which would be revealed later. Their destination was Manila, but even that could be revealed only to their immediate families.

Less than a month later they were on their way to Manila on the U.S. Army Transport Republic, signed on as crew members to protect their identity. Their only instructions were that they would be given instructions upon arrival. When the ship was about three miles out from Manila on 21 April, the purser brought word that they were to report to the Captain on the bridge. There they were met by Captain Nelson Raymond (later Major and Commanding Officer of the Detachment) who arranged to meet them later. At the next meeting Captain Raymond, accompanied by Agent Grenfell D. Drisko, drove them on a short tour of the city and gave them their instructions. Captain Raymond, a long-time agent, gave them

3 Those known to have been captured were: Lt Col Stuart Wood, former CO; Maj Nelson Raymond, who became CO after Colonel Wood became G2; Capt Raymond E. Bibee, 1st Lt Jack Erwin, Capt Ralph Keeler and Capt (fnu) Rosveare. According to CIC Board records, Major Raymond and Captain Keeler were drowned on sinking prison ships; and Lieutenant Erwin died of malaria in a Japanese prison camp. The cause of Captain Bibee's death has not been established; according to some reports he died on a prison ship, but according to others, in Fujuska prison camp in Japan. According to Capt Richard Sakakida, Captain Keeler was recovered from the enemy, but died a short time later.

4 The remainder of this Preface is taken from a document prepared after the war by Arthur Komori, who at the time of this writing was serving as an instructor at the AIC School, Fort Holabird; and from an interview with Capt Richard Sakakida, OSI, Air Force, at OSI Headquarters, Washington, D.C., 18 March 1955.

[redacted] 3221

implicit instructions and encouragement and, as time went on, according to Komori, "gradually instilled in us the techniques of subtle investigations and subterfuges in the best traditions of the CIP." Until after the outbreak of war only Captain Raymond and Agent Drisko knew of the two Nisei agents.

The agents were given a mail box at the Central Post Office in Manila under the name "Sixto Borja"--Sixto, since Sakakida's code was B-16, and Borja, a common Filipino name--which they were to check twice daily for instructions as to rendezvous points. Captain Raymond--sometimes Agent Drisko--would pick them up at the named spot someplace in the city and take them by a roundabout route to the G-2 office in Fort Santiago to submit their reports or receive briefings.

At the meeting with Captain Raymond the day of their arrival, the magnitude of their task dawned on them, for it was then that they were told they were to investigate the Japanese community of Manila. Sakakida was instructed to go to the Nishikawa Hotel and Komori to the Toyo Hotel. Both were to use the cover of having tired of their sea duties and having "jumped ship," a convenient cover since a freighter had unexpectedly put into port that day. Komori added the fact that he was a "draft dodger," which, he said, "was favorably received by the pro-Emperor sons of Japan."

Komori

During the eight months before Pearl Harbor, Komori managed to insinuate himself into the good graces of the Japanese Consul General, the Chief of the Japan Tourist Bureau, the Chief of the Japan Cultural Hall, the Chief of the Domei News Agency, and other leading Japanese residents of Manila. Komori found many of the Japanese "arrogant and expansionist minded," and becoming increasingly impatient with the "weak-kneed" policies of the Konoye Cabinet. They were so sure of their future role in the Orient that a reporter, who was a student at an English class which Komori taught at the Japan Cultural Hall wrote, for a newspaper in Osaka, Japan, the probable route of Japanese troops if they should invade Singapore.

Komori found his connections with the Japanese too close for comfort when, after the outbreak of war, he was caught by Filipino Constabularymen in the Domei News Agency office drinking a toast to the Emperor. To the Constabularymen he was just as Japanese as the others. They surrounded the captives with fixed bayonets and herded them into buses which took them to "the hell-hole of Manila, stinking old Bilidid Prison." With complete faith that Captain Raymond would somehow manage to learn his whereabouts and rescue him, Komori began trying to find out if any of the other internees had been implicated in plans for the attack. Although it seemed that none of them had known in advance of the Pearl Harbor attack, Komori "learned much of the arrogant and warlike mentality of the supposedly peaceful businessmen from Japan in that first week of war."

After a week Captain Raymond sent Agent Drisko to obtain Komori's release from Bilidid on a pretext, and Komori was able for the first time to get acquainted with the other members of the detachment.

Sakakida

In the meantime, Sakakida was also busy making contacts in the spots where information could be obtained. Fortunately the Nishikawa Hotel was operated by a childless couple named Fujii, who took an instant liking to Sakakida and soon wanted to adopt him; they even wrote to his mother in Hawaii asking her permission. During his first days there, Sakakida was asked hundreds of questions by the Fujii's, the hotel's permanent residents, and the many frequenters of the hotel. He maintained that he had been born and reared in Hawaii, but growing tired of life there, had gone to sea. His freighter had unexpectedly stopped off in Manila, and he had jumped ship, deciding that the city looked like a nice place to live for a while.

His past accounted for, it was necessary for the new agent to establish some kind of cover for his present activities. He let it be known to his new Japanese friends that he had obtained a job with the Marsman Trading Company, sole agents for Sears Roebuck in the Philippines. Captain Raymond arranged for Sakakida's name to be placed on the Marsman employee list. To keep up pretenses, he wandered into the trading company every morning at 0800, loitered for a while, and then spent the rest of the morning at the Lyric Theater. His Japanese acquaintances, told he worked only in the morning, had the pleasure of his company for the rest of the day. He soon began working as a clerk in Mr. Fujii's hotel in exchange for room and board. The important thing, however, was that this job gave him an opportunity to inspect passports and to assist many persons in making out requests for passport entries as required by the Philippine Commonwealth government.

A little later, when the United States government froze all Japanese assets in the Philippines, Japanese nationals were required to file declarations of all bank accounts and other assets. Since many Japanese required assistance in filling out the numerous forms, Sakakida performed this service at a nominal fee, and thus was able to interview a good portion of the Japanese population of Manila and subtly obtain much information that did not go on the forms. The most pertinent question was one concerning prior military service. Often the Japanese would ask Sakakida if they should admit their military service on the forms; sometimes he would advise them not to, but of course would report the information to G2. In this way he was able to report to G2 the complete military backgrounds of a large portion of the Japanese population in Manila.

Soon after his arrival in Manila, Sakakida was directed by Captain Raymond to establish friendship with Clarence Yamagata, a Hawaiian-born Nisei who was practicing law in Manila and also acting as part-time legal adviser to the Japanese

Consulate. Through Yamagata he became acquainted with persons in the Consulate from whom he obtained general information. Late in November, Mr. Yamagata told Sakakida he had arranged employment for him at the Japanese Vice-Consulate at Davao, on Mindanao. Captain Raymond approved this move, but before it materialized it was cancelled by the outbreak of war.

The outbreak of war found Sakakida, like Komori, to all outward appearances a Japanese among a hostile people. For his own protection he went to the Japanese Club House on Taft Boulevard which had been designated an evacuation center for Japanese Nationals. As he presented himself he was met by Paul Marinas, who, as he learned later, was an agent of the Philippine CIC Detachment. In searching Sakakida's belongings, Marinas found his passport which, although fictitious, did reveal Sakakida's American citizenship. Marinas at first told Sakakida that since he was a United States citizen, he could not enter the evacuation center, but when Sakakida explained that his Japanese features would place him in physical danger from the Filipinos, Marinas consented to let him stay but said he should feel free to leave at any time. A few days later, Sakakida was sent out with another internee to Manila City to obtain milk for the children and other foods of which the camp was in short supply. After obtaining the food, Sakakida went to the Nishikawa hotel to pick up his belongings. While he was packing his things, three Constabulary secret

They took him to Bilidid where, like Komori, he was rescued by Agent Drisko a few days later, and for the first time met the other members of the CIP Detachment.

Detachment Busy During Last Days

A couple of days before Manila was declared an "open city" on 26 December, the detachment, along with the G-2 Section with which they were working, packed up all its documents and left Manila on a tiny steamer, bound for Bataan via Corregidor. They set up headquarters in a spot hidden by tall timber and jungle growth, near Little Baguio. With little precedent to guide them, these agents plunged into a frenzy of activity, performing a variety of tasks simply because there was noone else to do them. They collected enemy information, interrogated prisoners of war, checked the security of communications and documents, went on patrols and scouting expeditions through the lines, interned collaborators, and translated captured enemy documents and the inscriptions on captured enemy materials. So great was the quantity and variety of captured materials that one day among a pile of equipment dumped in the headquarters were found a land mine and a "Molotov Cocktail."

For a while Komori was attached to General Wainwright's Headquarters on the Western Front, specifically for help in identifying Japanese units. In the meantime several members of the detachment had been sent over to Corregidor. Sakakida was among these, with the specific duty of deciphering the Japanese code.

3224

Early in April he was joined by Komori and Yamagata, Sakakida's contact in Manila, whom Captain Raymond had brought out of Manila with the detachment to assist in translating documents.

During those days when capture by the enemy was imminent and few could escape, there was concern both in General MacArthur's headquarters in Australia and General Wainwright's headquarters on Corregidor over the two Nisei agents. They would no doubt fare worse under captivity than would the Caucasians, since the Japanese refused to recognize the right of anyone of Japanese blood to bear loyalty to another country. Then too, there was the danger that their nine months of undercover activity in the Philippines would be revealed.

Early in April Komori and Sakakida were informed by Lt Col Stuart Wood, former Commanding Officer of the detachment, who had become G2 after General Willoughby's departure, that orders had been received from General MacArthur's headquarters that they were to leave via the "bamboo fleet."

Sakakida Gives His Place to Another

It was at this moment that Sakakida had to make his most difficult decision. He realized that Yamagata's situation under capture would be worse than his own. Yamagata would not even have the protection due a member of the Armed Forces. He was a civilian, had worked openly for the Japanese in a position of trust, and had willingly come over to the Americans. Besides, his wife and two children were then in Japan. Sakakida persuaded Colonel Wood that Yamagata should take his place. Colonel Wood obtained General Wainwright's permission, who in turn obtained permission from General MacArthur in Australia.

So, in the early morning of 13 April, Komori and Yamagata, along with an emissary from Chiang Kai-shek and a correspondent named Hewlett, left for the tiny airstrip in what was considered a "fifty-fifty attempt" to get out in two Army training planes. Komori rode as co-pilot in one, due to his previous C.A.A. flight training in Hawaii, to Iloilo, Panay. As recorded by Komori, "Captain 'P.I.' Gunn rescued us from Panay with his B-25 in a flight in broad daylight through enemy territory in a hedge-hopping, canyon-shooting, wave-skipping trip, which were Gunn's specialties. He kept our morale up by telling us that enemy planes could not see us since we were flying only a few feet above our shadow." At Mindanao, they were picked up by "General Boyce's raiding squadron" and were flown on to Melbourne, where Komori joined the little handful of CIC agents who had arrived on 6 April. Among his duties was helping to set up the Allied Translator and Interpreter Service (ATIS) to which so many Niseis were to give their ability and loyalty throughout the war. Komori was one of the first CIC agents to enter Japan after the surrender - but that is another story.

Sakakida set about preparing for the inevitable surrender. Other than the destruction of records, there was little to do but wait. On 6 May, the day of the final surrender, Sakakida accompanied General Wainwright's party to Bataan to act as interpreter at the surrender conference, but at Cabacabana Port, he was informed by the Japanese that they would use their own interpreters.

For the next several months he was under constant interrogation by either the Japanese Military Police or officers of the Judge Advocate General's section of 14th Japanese Army Headquarters, interrogation that eventually degenerated into severe torture. They told him he was on trial for treason--although he was never brought into court--since anyone of Japanese ancestry was of necessity a Japanese citizen. Finally, 14th Army Headquarters received word from the Japanese Ministry in Tokyo that, although Sakakida had been registered with the Japanese Consul in Hawaii at birth, as was the custom of Japanese residents there, his citizenship had been officially voided in August 1941. His mother had had the forethought to take this action after Sakakida had left for the Philippines as a CIP agent, an action which even the Japanese recognized made the charge of treason illegal. They then changed the charge to one of disturbing the peace and order of the Japanese Imperial Forces in the Philippines, and the interrogation continued.

Through it all Sakakida stuck to his original story. He was a victim of circumstances. The Americans had taken him to Bataan and Corregidor as an interpreter. He was an American citizen (which was true)--and a civilian (which was not true). Finally, in February 1943, he was taken from Bilidid Prison to the office of a Colonel Nishiharu, Chief Judge Advocate of 14th Army Headquarters. He was told that he was to work in the office, run the mimeograph machine, make tea, and help out generally where he was needed, and that on his off-duty time he would serve as a houseboy at the Colonel's home.

The Japanese continued in devious ways to attempt to gain an admission that he was in the U.S. Army. He was thrown a .45 and curtly ordered to clean it. Realizing that if he properly disassembled the weapon, it would be an indication of military service, Sakakida merely wiped the .45 with an oily rag. He explained that if someone would take the weapon apart he would be only too glad to clean the rest of it. Once the officer in charge of counterespionage with the 14th Army suddenly accused him of being a sergeant in the United States Army. Although alarmed, Sakakida was able to deny the statement convincingly enough that the officer turned to other matters. Another officer, who happened to be a graduate of Harvard, seemingly in a sympathetic mood one day asked Sakakida how much the U.S. Army paid him for his work as an interpreter. Recognizing this as a ruse he had used himself to learn the rank of prisoners, he claimed that he had received no money, inasmuch as under the circumstances he had had no need for any.

Sakakida Contacts Guerillas

The dual job of office work and houseboy continued for a time until one day the Colonel discovered that Sakakida was dipping into his stock of American cigarettes and banished him from the houseboy job; as it turned out this was a fortunate change. He was sent to live in a civilian barracks, the former English Club in Manila City. The barracks was under the strict discipline of a warrant officer who took roll call at 0600 and 2230 and a bed check at midnight, but overlooked the hours between midnight and the morning roll call. This gave Sakakida about five hours in which to contact persons to whom he could give information gained at headquarters during the day.

He had already made one fortunate contact at headquarters. One day the wife of Ernest Tupas, who had formerly worked with CIP and since the war began had been working with guerillas, came to the JAG office and asked Sakakida to interpret for her a request to visit her husband who had been captured and was confined on a fifteen year sentence in Muntinglupa Prison. Sakakida made himself known to her, and filled out passes for her and many of the other guerillas' wives with forms he had stolen from the office. He assurred her she need have no fear in using the passes at the prison since the Filipino guards couldn't read English anyway.

Prison Break Engineered

Sakakida began making plans to free Tupas and about 500 other guerillas who were confined in the prison. Through guerillas he was able to contact during his 'free hours" and through others that Mrs. Tupas was able to contact, the plans were made. It was arranged for Tupas to get a job with the prison electrical department so at a designated time he could short-circuit electrical facilities. Guerillas sent to case the prison came up with the information that officers from the Japanese garrison made a tour, something of a security check, nightly between 2400 and 0200.

On the big night, Sakakida left his barracks as soon as bed-check was over and, with four of the local guerillas, all dressed as Japanese officers, approached the prison's main gate. Certain these officers were making the nightly security inspection, the guards bowed low in respect for their superiors. To their amazement, they found .45's stuck in their ribs. Out went the prison lights. Approximately 25 guerilla members overpowered the rest of the guards, and nearly 500 Filipino prisoners were released.

Sakakida hustled back to his quarters to make 0630 roll call. The next morning he was at work in the Colonel's office when the superintendent of Muntinglupa Prison came dashing in to report the break. The Colonel hit the ceiling. When the furore died away, the superintendent was dismissed for his unfortunate mistakes.

[redacted]

Shortly after the break, Sakakida was able to contact Tupas, who had fled to the mountains of Rizal with the guerillas. Tupas had established wireless contact with General MacArthur's headquarters. At last, Sakakida had a means of relaying to the Americans the vast amount of information he picked up around the Colonel's office, particularly data on Japanese troop movements and shipping activities. Probably his single most important contribution was a portion of the plans for a Japanese Expeditionary Force to Australia. Some months later Sakakida learned what happended to this task force. An officer assigned to the JAG office had been aboard one of the fifteen vessels that had left the Philippines with ideas of landing at Port Darwin. He was also aboard the only ship that got back to the Philippines. U.S. submarines had taken care of the rest.

At one time in 1943 Sakakida's hopes were raised when he was approached by a stranger who told him that another person had requested he inquire whether Sakakida would like to escape to Australia. Cautiously Sakakida said he would like to talk to the original inquirer. He heard nothing of it again until after the war, when he learned that the Anderson guerillas were trying to get him out at the direction of General MacArthur's headquarters, but that the message had been garbled by passing through several emissaries and the word had got back that he preferred to remain in the Philippines.

In December 1944, the Japanese 14th Army Headquarters had to move to Northern Luzon because of heavy air attacks on the city, and in April 1945 it moved further inland. In the early part of June, Sakakida made his escape into the hills. About a week later, he met a small band of guerillas in the vicinity of Farmschol and joined forces with them. Ten days later the guerillas took a severe shelling. Sakakida was wounded and left behind. He existed alone in the hills until September 1945.

"Lost" Agent Returns

In September he found himself in close proximity to the Asing River. Sakakida, still unaware the war was over, decided to follow the river, figuring he would reach some semblance of civilization sooner or later. Racked by malaria, dysentery and beri-beri, his progress was extremely slow. Finally he spotted seven or eight soldiers. At first he thought they were Germans, because they wore uniforms and equipment which were strange to him. Getting closer and hearing the soldiers' conversation, Sakakida realized they were Americans. He turned himself in and was taken to the soldiers' battalion headquarters. The outfit turned out to be a medical evacuation unit posted in the forward areas to collect stragglers. Sakakida was taken to the major commanding the unit and identified himself as an intelligence agent captured by the Japanese at the outbreak of the war. He gave the major his serial number and other pertinent data. The major was suspicious but put through

3230

[redacted]

a telephone call to the CIC Field Office. Two hours later two CIC lieutenants arrived in a jeep, identified the weary agent and transported him to the Bagabec Field Office of the First CIC Region, 441st CIC Detachment.

The happiness with which Sakakida was received by CIC was summed up simply by his friend Komori: "His successful duping of the Japs is the finest story of Counter Intelligence within enemy lines. His recovery was considered more important than the capture of General Yamashita...."

The agents gave him a warm welcome and a festive banquet. Sakakida had lived for six months on wild foods and grass, and the rich food consumed at the banquet reacted immediately. It took him a week to recover from the effects of the meal but that was the only recuperation he had the opportunity to enjoy. There were War Crimes suspects to round up, identify, interrogate and try, and Sakakida was a key figure in this activity. Until the War Crimes trials were completed, there was no time for hospitalization or sick leave for Sakakida; by this time he had recovered from the ills which had plagued him during captivity.

There were Bronze Stars for both Arthur Komori and Richard Sakakida for their work in the Philippines during 1941 which "they performed. . .with complete disregard of the personal danger in which they found themselves." But more important to these men, the first Americans of Japanese ancestry to be taken into CIC, was this sentence in their commendation:

> "These two Nisei noncommissioned officers are a credit to their people and to the United States Army."

While Richard Sakakida had been fighting his private war against the Japanese, other CIC agents, after getting off to a slow start, had been moving forward, island by island, along with the South West Pacific Area combat troops, from their starting point in Australia.

[redacted]

Chapter 1

PREPARATION FOR COUNTERATTACK

The organization, operations and mission of the Counter Intelligence Corps, which varied widely among the Theaters of War and Base Commands during World War II, found even wider divergence in the Southwest Pacific Area (SWPA). In order to understand the reasons behind these marked divergences, it is necessary first to recount briefly the numerous changes in organization and the seeming welter of alphabetical designations that made up the Theater's command structure.

The Outbreak of War

On 7 December 1941, Major General Julian F. Barnes, commander of a convoy of nine ships carrying 4,700 troops, fifty A-20 light bombers, and other materiel, which had set out from Honolulu eight days before to reinforce General MacArthur's Philippine contingent, received this message from the Commander-in-Chief, Asiatic Fleet:

"JAPAN STARTED HOSTILITIES GOVERN YOURSELVES ACCORDINGLY."

General Barnes turned his convoy toward the Fiji Islands, and, on 12 December, one day before reaching his destination, named his force "Task Force, South Pacific." New orders sent the convoy to Australia where it was redesignated United States Forces in Australia. Two weeks later, on 5 January 1942, a new designation, United States Army Forces in Australia (USAFIA) was given.[5]

---

5 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 1948, (p. 1), (Unclassified) (Central Records Facility).
NOTE: This document must be actually considered as two separate documents, since the text is based upon another document, "A History of Counter Intelligence Operations in the Southwest Pacific and United States Army Forces, Pacific Theater, During World War II," prepared by the Office of the Chief Counter-intelligence Officer, General Headquarters, Army Forces, Pacific, 1946. In addition to the text of the original document, reference has been expanded by the addition of documentary sources and added explanations and comments, many of which are bitterly critical of the text. Reference was prepared under the editorship of Major General C. A. Willoughby, G2, GHQ, AFHQ, while the basic document presumably was prepared under Brigadier General Elliot R. Thorpe, USAFFE G2. (Both documents are on file at the Central Records Facility)

3233

[redacted]

There were few organized counterintelligence activities during this period when the Australian headquarters was interested primarily in getting established, a process that was hampered by the uncertainty as to whether they might still be sent to the Philippines. Planning was further hampered by changes in personnel: the G2, in whom counterintelligence responsibilities were vested, was changed seven times between December 1941 and April 1942, and there were nine changes in Commanding Generals between December 1941 and July 1942. To add to the difficulties, the headquarters moved, in January 1942, from Brisbane to Melbourne, a distance of 1,500 miles.

Handicapped by a shortage of personnel, the G2 staff had only four officers. Intelligence work was confined to a tightening of security measures, the imposition of censorship and attempting to keep a situation map of Japan's rapid thrusts in the Pacific, using a map from an old copy of the National Geographic Magazine.[6]

Following the arrival of General MacArthur from the Philippines, General Headquarters, Southwest Pacific Area (GHQ, SWPA) was established in Melbourne, with USAFIA and United States Forces in the Philippines (USFIP) as subordinate commands. For all practical purposes, the latter ceased to exist after the fall of Corregidor the following month.

With a major reorganization of staff sections and their missions, USAFIA, although technically the United States Army Command in the Southwest Pacific, became essentially the administrative headquarters, with the responsibility of administration, procurement, training and supply of United States troops in the area.[7]

On 20 July 1942, USAFIA was renamed United States Army Services of Supply (USASOS), but no change in personnel, organization or functions was involved. On the same day GHQ, SWPA moved 1,500 miles forward, to Brisbane, and, a few weeks later, USASOS moved, about half that distance to Sydney.[8]

In February 1943 another major organizational change took place with the reconstitution of General Headquarters, United States Army Forces of the Far East (USAFFE). This was a "reconstitution," since, having come into being as a consolidation of United States Forces and Philippine Forces on 26 July 1941, the unit had never been deactivated after the fall of the Philippines, although its continuance had been only nominal. Strategic and tactical operations were under the direction of GHQ, SWPA (Forward Echelon); administrative matters were delegated

7 Ibid, p. 3.

8 Ibid, p. 8.

to GHQ, USAFFE (Rear Echelon); and the major functions of supply and evacuation remained with USASOS. This structure remained until the formation of the United States Army Forces, Pacific, in 1945.[9]

These structural changes are important in a history of the Counter Intelligence Corps in this area, since operational intelligence activities were assigned to the G2, GHQ, SWPA, and counterintelligence to the G2, USAFIA, then to USASOS and later, after the reorganization in February 1943, to the G2, GHQ, USAFFE.

In the beginning, CIC agents were assigned directly to the Base Command or combat unit with which they were to operate, but by War Department order on 18 May 1943, all CIC personnel in the Theater were relieved from their units and assigned to Headquarters USAFFE.[10]

The final Theater-wide change which affected CIC came on 6 April 1945 when, in preparation for the invasion of Japan, code-named Operation OLYMPIC, General Headquarters, United States Forces, Pacific (AFPAC) was established, bringing under one command nearly all units then in the Pacific Theater. The G2, GHQ, SWPA, became the G2 of the new AFPAC, but the G-2 Office of USAFFE became a special staff section charged with the continued responsibility for counterintelligence.[11]

Praise and Criticism

The separation of counterintelligence from operational intelligence throughout the war was explained as being "in accordance with this command structure," but was criticized severely in a history of the Counter Intelligence Corps in the SWPA, prepared under the editorship of Major General Charles A. Willoughby, who served as G2, GHQ, SWPA, throughout the war: "This division was completely unwarranted; it is contrary to existing Staff Manuals...[12] The continuance of two G2's, one for SWPA and one for USAFFE was an administrative absurdity."[13] Of the continuance of the G2 USAFFE office as a special staff section under AFPAC this criticism was leveled: "This must be considered as a conspiracy to continue the unhealthy division of intelligence operations."[14]

3235
CONFIDENTIAL

In the history prepared by the Office of the Chief Counterintelligence Officer, GHQ, AFPAC, the assignment of all CIC agents to Headquarters USAFFE in May 1943, was hailed as a "corrective move." Prior to this change, this history stated, "the administration of CIC personnel depended upon the judgement of the commander of units to which they were assigned. At this time not many unit commanders had a clear conception of the function of CIC."[15] Immediate steps were taken to activate a theater CIC detachment, but "lack of precedents, as well as uncertainty regarding other changes to be ordered by the War Department, did not make this immediately possible." It was not until April 1944 that the 5227th CIC Detachment (Provisional) was authorized. In the meantime, the Office of the Chief, CIC, continued to function as Theater CIC Headquarters. At a conference held on 26 June 1943, the revised "chain of command," necessitated by the reassignment of CIC personnel, was explained to representatives of Sixth Army, Fifth Air Force and USASOS. All personnel on duty in units other than Headquarters USAFFE were placed on temporary duty status with those units. At the conclusion of the conference a letter was issued stipulating, in part: "The Counter Intelligence Corps, SWPA, is the direct responsibility of the Chief, CIC. The Sixth Army, Fifth Air Force, and USASOS will each have a CIC detachment on detached service for which they will be responsible, but in order that CIC activities may be coordinated efficiently general supervision is exercised by the Chief, CIC."[16]

In the history prepared in the office of the G2, SWPA, this move also was bitterly criticized; "there was never the slightest reason, tactical or functional, why CIC within the command area of a tactical unit should not operate under its G2."[17] Further criticism was given: "In evaluating these conspiratorial measures, the theater as a whole must be considered; the combat zone, at this time, was deeper in New Guinea, over 2,000 miles from a purely administrative headquarters (USAFFE), then located at Sydney and Brisbane, Australia; the proposal was to establish a 'central administration,' at that point; as a matter of fact, what the Theater CIC really arrived at (and almost obtained) was not 'administrative' supervision only but absolute operational control."[18]

This division of intelligence responsibility "ultimately led to friction, overlap, duplication and general inefficiency," according to the history prepared in General Willoughby's office,[19] while the history prepared in General Thorpe's headquarters stated, "There was to be close cooperation between G-2 Section, USAFIA and the G-2 Section, GHQ, SWPA.[20]

From the documents available it is impossible to assess objectively the relative validity of these widely divergent views. Documents do indicate, however, that CIC agents, operating in detachments and as individuals, were generally able to overcome whatever handicaps the peculiar command structure of the Theater may have imposed.

Counterintelligence operations got off to a slow start in the Theater. It was not until 9 April 1942, the day the United States Forces surrendered on Bataan, that the first trained Counter Intelligence Corps officers arrived in Australia to join the slowly-assembling Allied units preparing to start the long struggle toward Tokyo.[21]

Variety of Duties Assigned

Working under Colonel (later Brigadier General) Thorpe, USAFIA G2, these first CIC officers were given a variety of duties, not entirely within the scope of the CIC mission. The responsibility for establishing CIC operations was delegated to First Lieutenant John N. Irwin, II, who was also designated assistant executive officer of the G-2 Section. Another of the CIC officers, Second Lieutenant Leo J. Nielsen, Jr., was appointed assistant military censor; Second Lieutenant Harold G. Gelwicks was assigned to Base Section 4 at Melbourne as Intelligence Officer in addition to duties as a G2 investigative officer; Second Lieutenant Blair P. Labatt also worked as a G2 investigative officer.[22]

These officers, along with five other officers and five enlisted men added locally, formed the nucleus of the counterintelligence agency that eventually was to become the 441st CIC Detachment.[23]

The first enlisted CIC agent in the theater was Sergeant Lars Skattebol, a United States citizen who operated a credit investigation system in Australia before the war began. Skattebol enlisted in the Army shortly after the start of hostilities and was placed on duty with the Counter Intelligence Corps because of his investigative experience in Australia.

23 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 1948, p. 1, (Unclassified) (Central Records Facility).

By April 1942, the G-2 office at Headquarters, USAFIA, was operating primarily as a counterintelligence agency, despite a dearth of trained counter-intelligence officers and agents. There was no clear distinction between CIC work and other routine counterintelligence measures performed by the G-2 section.[24]

Early Growth of Counter Intelligence

This confusion was understandable in the light of the military situation in early 1942. Japanese forces had met virtually no resistance as they jumped hopscotch-like from island to island in the Southwest Pacific, and a Japanese invasion of Australia seemed possible. Allied prospects in the battle against Japan were desperate. The new headquarters in Australia found itself under tremendous pressure to build up and organize Allied forces to meet and repel the invaders. Speed was essential; expediency dictated policy.

The great build-up was launched in April 1942 with the arrival of the 41st Infantry Division in Australia. Troops of the 32d Division landed a month later, and intense training for jungle warfare was inaugurated immediately. The 1st Replacement Depot was organized at Melbourne in May. By 10 June 1942, United States Forces in SWPA numbered 88,550.[25]

At the time of the inception of GHQ, SWPA, United States military activity in Australia was centered in seven principal base sections: Base Section 1 at Birdun (later Darwin), Base Section 2 at Townsville, Base Section 3 at Brisbane, Base Section 4 at Melbourne, Base Section 5 at Adelaide (later Cairns), Base Section 6 at Perth, and Base Section 7 at Sydney.

A foundation for counterintelligence work in these base sections had been laid by July 1942 with the assignment of intelligence officers to five of the base sections. Although the intelligence officers were administratively responsible to the base commanders, G2, USAFIA, prescribed and controlled counterintelligence responsibilities. These counterintelligence duties included control of civilian employment by Army agencies and security lectures to fresh troops arriving from the United States.[26]

An acute shortage of CIC personnel made adequate counterintelligence coverage of the base sections virtually impossible. Realizing this, Colonel Thorpe asked the

24 A History of Counter Intelligence Corps in the Southwest Pacific and United States Army Forces, Pacific Theaters During World War II, prepared by the Office of the Chief CI Officer, GHQ, Army Forces, Pacific, 1946, p. 16, (Unclassified) (Central Records Facility).

War Department for a CIC Table of Organization and any other information available on the unpublicized counterintelligence agency. He also requested an advance shipment of 40 CIC officers and agents. Neither request was given immediate attention. Most CIC Training School graduates were being channeled into the European Theater and stateside detachments; moreover, the role of CIC in a combat zone still was not clear.[27]

Troop Indoctrination Assigned to CIC

In the absence of directives clarifying the work of the Counter Intelligence Corps, Colonel Thorpe utilized his first CIC agents primarily for security indoctrination of troops. However, as early as May 1942, CIC agents investigated the possibility of sabotage in connection with a series of mysterious accidents along Australian transportation lines at Adelaide, Alice Springs, Brisbane, Darwin, and Sydney. Major Blair P. Labatt, chief of an investigative subsection of the G-2 office, continued to give high priorities to investigations of other questionable accidents.

By July 1942, the Counter Subversive System had been installed in most American units within the theater, and Agent Skattebol was assigned to assist the officer who directed this G-2 activity.[28] Until 28 December 1943, when the Counter Subversive System was abandoned in the SWPA, CIC was charged with considerable supervisory work in connection with the plan. Agents assisted in the preparation of monthly reports on morale, disaffection, and subversive activities.[29]

At the same time, cooperation with Australian Intelligence authorities became more pronounced. The Commonwealth Army joined the stepped-up program of securing the continent against the enemy.

In May, arrangements were made with Brigadier John D. Rogers, Director of Australian Military Intelligence, to send American intelligence personnel, including CIC agents, to Australian intelligence schools. Captain James Pros, intelligence officer at the Adelaide Base Section, was ordered to take a six-week course in combat intelligence at a Military Intelligence School near Melbourne. Americans attended similar schools throughout the war.[30]

When USAFIA was redesignated USASOS on 20 July 1942, its G-2 section included 12 officers, 16 enlisted men and 19 civilians. Only four of the enlisted men were CIC agents.

In July, Major Labatt opened a field office in Brisbane to conduct liaison between G2, USASOS and GHQ, SWPA. Later the same month, two CIC agents were placed on duty with the intelligence officer of the Motor Transport Command at Mout Isa.[31]

Theater CIC Training School Established

No enlisted CIC agents had arrived from the United States by the end of July. To meet the pressing need for trained investigators, Colonel Thorpe received permission to recruit a group of men from the 1st Replacement Depot at Camp Darley for CIC duty.

He set high standards for the potential agents. Men who had scored less than the minimum requirement for Officers' Candidate Schools on the Army General Classification Test were not considered. Preference was given to men with backgrounds as lawyers, investigators, and newspapermen. Emphasis was on youth. Of 1,500 men considered for CIC, only fourteen were selected after interviews with Colonel Thorpe and other officers of the G-2 section.

This group, augmented by one man who had been transferred from the 32d Division, embarked on 3 August on a three-week CIC course at Melbourne. This first CIC Training School in the theater, patterned after the Advanced CIC School in Chicago, was the forerunner of a permanent school established in 1943. In addition to instructors from the G-2 section, experts from Australian Intelligence Agencies lectured the class on their specialties.

While the class was in progress, six CIC agents who had received both training and operational experience in the United States arrived in Melbourne. These agents, John O. Platt, Jr., Grahame T. Smallwood, James R. Morris, Jr., James S. Latham, Jr., Ray W. Hodgson, and Maurice H. Towne, joined the classes at the CIC school.

Major General Richard J. Marshall, Commanding General, USASOS, presented diplomas to this first group of graduates on 22 August 1942. After graduation, the agents were known officially as G2 investigators. They served under Base Section intelligence officers and were assigned to Australia's principal cities.[32]

CIC Stresses Security

CIC attempted early to make United States troops security-conscious. A program coordinating security indoctrination began taking shape in August 1942, under the direction of Lieutenant William Shelton, a Naval Intelligence officer serving with G2, USASOS.

Many devices were employed in the security campaign. Posters warned of the danger of loose talk and stressed field security measures. Thousands of menu folders and small table cards inscribed with security phrases were printed and distributed throughout areas of great troop concentrations. Australian businessmen cooperated enthusiastically in displaying the posters and cards in their establishments.

On military installations, training films with security themes were shown to troops whenever possible to supplement security lectures by CIC agents. Some of these films, particularly those of the animated cartoon type, became quite popular among the men. To implement AR 380-5, local regulations for safeguarding classified information were written and published in directive form.[33]

Work of the Counter Intelligence Corps in Australia was widely publicized in a "Bi-weekly Intelligence Summary" published by Headquarters, USASOS, beginning 15 November 1942. Edited by Lieutenant Shelton, the bulletin contained lists of civilians considered undesirable for work in U.S. Army agencies, articles on Japanese intelligence, reports of losses of intelligence credentials, lists of outstanding suspects sought by Allied intelligence, and discussions of Australian political and social groups. A unique feature of the summary was the tabulation of the latest rumors circulating in military units with illustrations of the danger of repeating unfounded rumors.

The summary, later retitled "Counter Intelligence Bulletin," was classified "CONFIDENTIAL" and was designed for use by unit commanders. In addition to other information, the publication stressed the ways in which commanders could receive assistance from CIC agents.[34]

All these security measures were continued and augmented through the succeeding months, and were adapted to field conditions as Allied troops began the gradual movement northward into New Guinea and the islands of the Southwest Pacific.

34 Operations of CIC in the SWPA, Vol. VIII, Intelligence Series, p. 10., GHQ, FEC, dtd 29 Jul 48, (Unclassified) (Central Records Facility).

Agents Move Closer to Combat

The real push northward, through combat, was still almost a year away for CIC.

As the summer of 1942 waned, Australian and American forces initiated the Papuan campaign against the Japanese in New Guinea. By 12 September the Allies had halted the Japanese in the Owen Stanley Mountains, a mere twenty airline miles from Port Moresby.[35] A month later, CIC Agents Walter C. Wagner and Frank J. Leahy were sent to Port Moresby to provide counterintelligence coverage for the advance base there. In December, Captain Pros and Agents Dean H. Cazian and Arthur W. Linde began similar duties at Milne Bay, where a sub-advance base had been created after the expulsion of the Japanese. Two additional officers and four agents were assigned to the Port Moresby office in January 1943.[36]

Although CIC still had not entered combat in the Southwest Pacific, the proximity of enemy lines to Advance Base offices alerted agents to the immediate threat of espionage and sabotage by enemy agents and collaborators at work within the Allied lines.

Sabotage Incidents Investigated

During December 1942, three cases of apparent sabotage were reported at a single airfield, the Jackson Airdrome at Port Moresby. Fire extinguishers were found filled with alcohol; washers had been slipped over the noses of machine gun ammunition, and the machine gun feed belts had been jammed with solder. Agents were placed on a 24-hour alert so that investigators would be available whenever such an incident might develop. Available records do not indicate results of the sabotage investigations.

CIC also conducted disaffection investigations, air and ship panelling, including the movement of native craft along the New Guinea coast, and studied relations between white and negro troops. Troops entering battle zones were thoroughly indoctrinated by CIC agents in various aspects of combat security, such as safeguarding military documents, preventing unit identification, and conduct in case of capture.[37]

3242

Meanwhile, most CIC activity in the Southwest Pacific still was concentrated in Australia, where the situation was relatively static.

Field Offices Opened

By the end of 1942, CIC field offices had been opened in Melbourne, Brisbane, Sydney, and Rockhampton, with agents in those cities operating in addition to and independent of the Base Section intelligence offices. However, the field offices always maintained close contact with the S2's of the Base Sections and established good liaison with other military commands.

Considerable progress in constructing a satisfactory counterintelligence program was achieved by the end of the first full year of the war. Yet the period must be considered as only a beginning, when confusion and uncertainty gradually gave way to coordination and positive results. The entire counterintelligence program was at the outset severely hampered by personnel and material inadequacies and lack of policy precedents. The frequent reorganization of headquarters, policies, and directives testified to the uncertainty as well as the urgency of the times.[38]

The Allies spent 1943 largely in building up their strength in the Southwest Pacific. On 26 February, USAFFE was reconstituted at Brisbane as the administrative echelon for all U.S. Army Forces in the Southwest Pacific, including the Sixth Army (activated earlier in February), the Fifth Air Force, (activated in October 1942 as the air echelon), and Headquarters, USASOS (retained principally as a supply and base administration headquarters). USAFFE assumed the counterintelligence functions previously exercised by USASOS.[39]

Build-up of Intelligence Sections Planned

With the reactivation of USAFFE, steps were taken to build up the intelligence sections of the lower echelons, USASOS, Sixth Army, and Fifth Air Force.

Seven enlisted men who had been carefully selected and trained in counterintelligence procedures were assigned to the A-2 Section of the Fifth Air Forces in January 1943. In March, Lieutenant Colonel James M. Jones left his temporary assignment at G2 USAFFE to take over the counterintelligence sub-section of the A-2 office.

---

38 A History of CIC in the Southwest Pacific and U.S. Army Forces, Pacific Theaters During WW II, prepared by the Office of the Chief CI Officer, GHQ, Army Forces, Pacific, 1946, p. 48, (Unclassified) (Central Records Facility).

39 Operations of CIC in the SWPA, Vol. VIII, pp. 16, 17, Intelligence Series, GHQ, FEC, dtd 29 July 48, (Unclassified) (Central Records Facility).

On 16 March 1943, the top policy-making officers of the various commands met to formulate plans for delegating counterintelligence responsibilities. The lower echelons were made responsible for counterintelligence operations within their organizations, subject to supervision by G2, USAFFE.[40]

A second conference was held on 12 June to discuss further the establishment of counterintelligence organizations within each command. Counterintelligence responsibilities were defined and published in letter form.[41]

With this accomplishment, the remainder of 1943 was spent in acquiring the necessary personnel and in organizing the various intelligence agencies in accord with the policies set forth in the two conferences.

CIC's Role in Combat Studied

The year 1943 saw the Counter Intelligence Corps come into its own as an integral element of Southwest Pacific operations. At the beginning of the year, CIC was still something of an unknown quantity, lacking recognition, precedence, reputation and a clearly-defined mission. Agents operating out of the USAFFE G-2 office in Australia's base sections checked port and coast security, examined suspect individuals and organizations, investigated accidents involving Allied personnel and equipment, and traced unfounded rumors and loose talk to their sources. All this was accomplished with the lack of an integral CIC organization and an extreme personnel shortage.

Only 23 CIC officers and agents had reached the Theater by February 1943. Even counting supervisory personnel in the G-2 office and base intelligence officers, the total was barely 50, including those procured locally.

For several months in late 1942 and early 1943, Colonel Thorpe had requested the War Department to send a field grade officer trained in CIC procedure to Australia. Finally, on 30 March 1943, the need was filled with the arrival of Major Albert L. Vreeland from Washington. With him came one other CIC officer, 2d Lieutenant James A. Bledsoe, and 20 agents.[42]

---

40 Operations of CIC in the SWPA, Vol. VIII, p. 17, Intelligence Series, GHQ, FEC, dtd 29 July 48, (Unclassified) (Central Records Facility).

41 Counter Intelligence Conference, Policy File 322.999 G2 USAFFE, 26 June 1943, as cited in Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, p. 18, (Unclassified) (Central Records Facility).

42 Ibid, p. 19. NOTE: Roster of CIC Agents in SWPA attached as Appendix 1.

The arrival of Major Vreeland made possible the physical separation of G-2 and CIC offices. A separate CIC headquarters, responsible for the entire intelligence investigative function, was officially established on 7 April 1943, at 144 Bowen Terrace in Brisbane. Major Vreeland became Chief of CIC in the Theater, and Major Labatt, one of the original CIC officers in the Southwest Pacific was named executive officer.[43]

CIC operated substantially as an independent unit. Later, when a Theater CIC Detachment was formed, the CIC office became almost entirely divorced from G2, both operationally and administratively. From the CIC headquarters set up in the Southwest Pacific at this time emerged the theater-wide 5227th CIC Detachment (Provisional) and its successor, the 441st CIC Detachment. Despite the physical separation of CIC and G-2 offices, there was always close cooperation between the two sections.

In early 1943, there was still some uncertainty as how best to employ CIC in combat in the Southwest Pacific. CIC had been recognized in the United States as a competent military investigative agency, working against espionage, sabotage, and subversive activity, and observers were convinced that the combat intelligence mission was too limited in scope to embrace such activities as field security and the thwarting of enemy intelligence operations.[44]

Thus the need for CIC agents to accompany combat units in the Southwest Pacific was recognized as early as August 1942, when G2, USASOS, recommended such disposition. Lieutenant Irwin, then chief of the G-2 section, proposed to the Commanding General, SWPA, that "Combat Counter Intelligence Sections" be formed within divisions and combat units. He suggested that these sections would "make a continuous check of the battle area for civilians and enemy personnel; insure internal security; interrogate refugees; combat fifth column activities; and secure and guard vital installations, such as public utilities."[45]

45 G2, USASOS ltr to CG, GHQ, SWPA, dtd 3 Aug 43, Subject: Formation of Combat Counterintelligence Sections, as cited on p. 20 of Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 Jul 48, (Unclassified) (Central Records Facility).

Personnel shortages and a lack of policy precedents prevented formation of combat counterintelligence units at that time, however.

First Combat CIC Personnel Arrive

After the brilliant work of CIC units in the North African campaigns, combat training facilities for CIC agents were expanded in the United States. First CIC personnel with combat training to reach the Southwest Pacific were five officers and 39 agents, who arrived in Australia on 17 April 1943. Destined for the Sixth Army, the detachment was commanded by Captain Richard G. Earle.

Thus began an influx of combat-trained CIC agents into the Southwestern Pacific. Captain William J. Koenigsdorf commanded a group of two officers and 11 agents assigned to I Corps Headquarters at Rockhampton, Australia. To Headquarters Fifth Air Force went two officers and 11 agents led by Captain Charles H. Albertson. First Lieutenant Harold F. Frederick and five agents arrived for duty with the First Cavalry Division, and Second Lieutenant Philip Q. Roach commanded five agents assigned to the 32d Division at Camp Columbia, Australia. To Oro Bay, New Guinea, where the 41st Division was located, went Second Lieutenant Victor I. Cook and five agents.[46]

CIC personnel assigned to combat units were both administratively and operationally controlled by the commanding officer of their tactical unit until the reorganization which assigned them first to Headquarters USAFFE. They later were assigned to CIC, Military Intelligence Service, War Department, and "attached to USAFFE, a change which was, in effect, only technical."[47]

To clarify CIC's role in combat, G2, USAFFE called another conference of intelligence officers of subordinate echelons. Meeting at Brisbane on 8 September 1943, the planners decided to make the Chief, CIC, and the Commanding General, Sixth Army, jointly responsible for forming detachments to accompany Sixth Army Task Forces into combat. The CIC officer in charge was to have actual control of operations, under the supervision of the task force commander and his intelligence officer.

Receipt of Training Manual 30-215, "Counter Intelligence Corps," dated 22 September 1943, the first official directive concerning the use of CIC agents received in the Theater, further clarified the role that CIC was to play in the Southwest Pacific. Long awaited by the growing CIC organization in the Theater, the new training manual listed detailed operating procedures.[48]

47 Ibid, p. 22.

48 Ibid, p. 22.

Troop Shipment Increases

The influx of American troops into the Southwest Pacific increased considerably during 1943, although not enough to fulfill every command's requirements. The total strength of the United States forces in the theater when USAFFE was reconstituted was 137,363. Of these, 88,823 were in Australia and 48,304 in New Guinea. The high point of troop shipments to the theater was not reached until July 1944, when 116,571 men arrived.[49]

Unfortunately, shipments of CIC personnel did not parallel the movement of other troops into the theater. The shortage of qualified personnel to man the expanding CIC organization threatened to hamper plans to send CIC agents into combat.

Increased CIC Training in Australia

The result was a new emphasis on recruitment and training of CIC agents within the theater--an emphasis which culminated in the establishment of a permanent CIC Training School at Brisbane on 28 June 1943.

Under Major Vreeland's guidance, the curriculum was geared to combat conditions. Rugged classes in jungle warfare, physical conditioning, combat counter-intelligence, field security, and map reading were included. Field problems simulated battle conditions in the island jungles. The principal native language of the Dutch East Indies, Malayan, was taught. Other instruction included military organization, enemy intelligence organization, investigative procedures, and the handling of prisoners of war and captured documents. Each course lasted from two to four weeks, depending on the type of training required and the time allowed by the tactical situation.[50]

The school was first installed in the cramped quarters of CIC headquarters at Brisbane. With the increased flow of troops into the theater and the corresponding increase of CIC activity, the quarters at Bowen Terrace soon proved inadequate for both CIC headquarters and the school. With the cooperation of Australian authorities, a mansion in Brisbane was requisitioned. The building reputedly was 100 years old and had once been the residence of the Premier of Queensland, but had long since been evacuated and was in a deteriorated condition. Suitably rebuilt, the mansion remained in use as the CIC School until Headquarters USAFFE and the school moved to Hollandia, New Guinea, in September 1944.

50 Ibid, p. 23.

All CIC personnel in the theater were required to attend the school, but its enrollment was not restricted to CIC agents. Dutch and Australian military personnel and members of all branches of American armed forces attended the classes at Brisbane.[51]

To further prepare CIC agents for jungle warfare, some were sent into the field with patrols of the Australia-New Guinea Administrative Unit, the Australian agency which administrated Papua, New Guinea. Teams from the agency patrolled areas of New Guinea which had been retaken from the Japanese. In June 1943, ten agents from the Sixth Army Detachment were placed on duty with an Australia-New Guinea Administrative Unit team for training purposes. For three months the agents patrolled the jungles, gaining a wealth of experience in dealing with the natives and learning to adapt themselves to field conditions. The work, both dangerous and arduous, was to prove invaluable in the months ahead.

The agents also studied Japanese methods of administration of conquered territories. In doing so, they learned that firm but intelligent handling could win the allegiance of the natives, who had detested the cruel, crude methods of the Japanese. Findings of these agents were relayed to all detachments in the area and formed the basis for additional CIC training.

Other CIC agents completed training for combat by attending classes at the Australian School of Military Intelligence, Field Security Wing. In addition, the Australian Jungle Warfare School at Canungra was made available to the Americans. During 1943 and 1944 many CIC agents trained in this school, well-known in the theater for its rigorous program of combat and jungle warfare problems.[52]

At last CIC agents in the Southwest Pacific had a concept of their role in combat. They knew something of what to expect from the enemy and from the natives of the tiny Pacific islands. They had learned to live and fight in the steaming jungles.

They were ready to begin the long march to Tokyo.

Chapter 2

THE ISLAND CAMPAIGNS

It was mid-1943 before the Counter Intelligence Corps tasted combat in the Southwest Pacific. By then, the Japanese onslaught had been checked and the Allies had assumed a tactical offensive.

Allied Naval units had already inflicted heavy blows to Japanese expansion ambitions in the memorable battles of the Coral Sea and Midway. In New Guinea, Australian and American troops had checked the enemy advance and had begun the two-year task of driving the Japanese from the island. The Papuan campaign had ended in a decisive Allied victory. American soldiers and marines were firmly entrenched on Guadalcanal, in the Solomon Islands.[53] The northward movement was now under way.

CIC Enters Combat

For CIC's first combat test in the Southwest Pacific, two temporary detachments were formed to accompany the Sixth Army's Alamo Task Force in the seizure of Kiriwina and Woodlark Islands.

These tiny islands, located about halfway between Alamo Task Force Headquarters at Milne Bay, New Guinea, and the main islands of the Solomon group, were occupied by small pockets of Japanese troops. Little resistance was expected. But the campaign was important, since it was the first test of the Alamo Task Force as well as CIC's initial combat action.

Twelve agents, led by Second Lieutenants Thomas M. Applegate and Thomas H. Major, were selected for the operation. Another CIC officer, First Lieutenant Louis Kohn, and two agents remained at Milne Bay to coordinate activities of the detachments in the field.

The mission assigned CIC by the task force commander was primarily a positive intelligence function. Agents were instructed to accompany the assault troops in the landings, then make a political and economic survey of the islands. Emphasis in the surveys was to be placed on the Army's relations with the natives.

The landing was scheduled for 22 July 1943. In the early morning, elements of the task force landed simultaneously on both islands. They met virtually no resistance.

53 The Army Almanac, pp. 444-445.

Lieutenant Applegate and six agents waded ashore with the first troops at Kiriwina; Lieutenant Major led the other agents in the Woodlark landing. CIC action was similar on both islands.

Agents quickly fanned out over the islands, searching for abandoned enemy command posts which would possibly yield important documents. Others checked security at American command posts. Agents accompanied patrols that searched the island for pockets of Japanese troops. Throughout the campaign, which lasted until 19 August, the detachments gathered information for the surveys requested by the task force commander. Close liaison was established with the Australia-New Guinea Administrative Unit Teams which arrived shortly after the landings.[54]

CIC gathered a wealth of information in the Kiriwina-Woodlark landings--information that was to prove helpful in the months ahead as tactical detachments hopped from island to island with the combat troops. But the operations also revealed a serious weakness: while CIC agents were being trained for combat in the Australian schools, no adequate effort had been made to acquaint tactical commanders with the role of the detachments in battle.

The result was that tactical commanders in the Kiriwina-Woodlark operation were caught unprepared and were reluctant to cooperate fully with CIC. Some commanders confused agents with operatives of the Criminal Investigation Division, the FBI, or the Office of Strategic Service. CIC men were considered everything from "spies for our side" to special orderlies of some kind, and at times received treatment as if they were the latter. Several agents were required to participate in menial work details, a task specifically prohibited.

But as a result of operations on Kiriwina and Woodlark Islands, CIC became better known to the combat commanders. An intensive education program followed, and by the time the movement northward gained momentum, most commanders were well aware of the specialized role of CIC in combat.

Kiriwina and Woodlark was a dry run in preparation for bigger tasks ahead.[55]

One of the next steps ahead was Bougainville, in the Solomon Islands. Marines launched an invasion at Empress Augusta Bay on Bougainville on 1 November 1943. Seven days later, CIC agents accompanied the 37th Infantry Division when it arrived

54 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 1948, Appendix 14, pp. 1-2, (Unclassified) (Central Records Facility).

55 Ibid, pp. 44-46.

to relieve Marine units. In December, the America Division and its CIC detachment landed on Bougainville.[56]

CIC in the Admiralties

Continuing the push to the north, American forces spotted the Admiralty Islands north of New Guinea as one of the next major targets. The 1st Cavalry Division, which had arrived in Australia in July 1943, was ordered to drive the Japanese from the tiny archipelago.

The CIC detachment attached to the 1st Cavalry Division was composed of five agents under the command of First Lieutenant Harold F. Frederick. The entire detachment had completed training at the CIC School in Brisbane and at the Australian Jungle School.

On 17 December 1943, two agents were sent in advance to Oro Bay, New Guinea, where the division was to stage for the invasion of the Admiralties. Lieutenant Frederick and the remainder of the detachment arrived in New Guinea on 22 February, just seven days before the division entered battle. For a week agents checked equipment, received instructions on their role in combat, and briefed troops on field security measures.

Then, on 29 February, one agent landed on Los Negros Island in the Admiralties group with advance reconnaissance elements of the 1st Cavalry Division. Working with a member of the Allied Translator and Interpreter Section, he gathered several hundred pounds of captured enemy documents and dispatched the first significant report on CIC combat activities with assault troops. Japanese documents taken by this agent contained data which made it possible for a later landing in strength on Manus Island.

Other members of the detachment landed in the Admiralties from 1-10 March 1944.

The Japanese fought fanatically, inflicting heavy casualties on the American forces. CIC was pinned down temporarily, but the entire detachment came through the fierce fighting unscathed and went ahead to make an excellent record as the first CIC detachment in the Theater to participate in a complete operation.

56 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 1948, Appendix 14, p. 1, (Unclassified) (Central Records Facility).
The Army Almanac, pp. 539 and 572.
Records of the work of the 37th Division and America Division CIC Detachments on Bougainville are not available.

By the end of March, when the Japanese on Los Negros were routed, CIC patrols had captured many valuable enemy documents, including Japanese espionage manuals, and a considerable amount of enemy equipment. In April and May, agents advanced with troops of the 1st Cavalry Division as surrounding islands in the Admiralties group were captured.[57]

A Prisoner for CIC

The first prisoner captured by the 1st Cavalry Division's CIC detachment was a Japanese soldier found alone in an abandoned shack.

Starved and emaciated, the enemy soldier did not resist when a CIC agent put him in a wheelbarrow and hauled him back to a first aid tent. Medics gave the prisoner an injection in an attempt to save his life, but he died shortly afterward, to the chagrin of his CIC captor.[58]

When the fighting had ended the detachment established a museum to exhibit enemy equipment captured by CIC. Between 200 and 300 visitors viewed the exhibit daily, and the display eventually was transported throughout the area for training purposes.[59]

Investigation of cases which had been suspended during combat was resumed. A panelling system was established, and agents screened passengers of ships and airplanes landing in their areas. Working with the Australia-New Guinea Administrative Unit, the 1st Cavalry CIC Detachment studied the problems of the natives and learned how to secure their cooperation in the continuing search for enemy documents.

Agents established a souvenir "grab bag" to persuade troops to turn in any enemy equipment they had captured. Items of no intelligence value such as Japanese post cards, stationery, pictures, and clothing, were placed in a container. When souvenirs turned in by a soldier were kept for intelligence analysis, he was permitted to take an item out of the "grab bag." Combat troops were much more willing to relinquish their war trophies after establishment of the CIC "grab bag."[60]

CIC Goes to Church

CIC agents found chaplains and missionaries particularly helpful in dealings with natives in the Admiralties. Prior to the coming of the Japanese, many natives in the islands had been converted to Christianity. Deeply religious, the natives continued to worship regularly. Native drums relayed the announcement of church services from village to village, and the natives responded by gathering in a central location to hear the missionary's sermon. With them came pigs, goats, other domestic animals, and CIC agents.

After church services the agents mingled with the natives and cultivated their friendship. Often they persuaded the natives to lead them to Japanese stragglers.[61]

The 1st Cavalry Division CIC Detachment remained in the Admiralties conducting an extensive program of security indoctrination for troops until October 1944, when they embarked for the Philippines.[62]

Hollandia-Aitape Campaign

After the Admiralty Islands were occupied by Allied forces, the next major move, to Hollandia and Aitape on 22 April 1944, involved a leapfrog advance westward of more than 400 miles. Air support was provided by Navy carriers since the landing was beyond the effective range of U.S. Air Force fighters. Three excellent Japanese airfields were located near Hollandia, and Humboldt Bay provided a suitable advanced naval and supply base. Three main landings were made by troops of Lieutenant General Robert L. Eichelberger's I Corps; the 32d Infantry Division landed just east of Aitape, the 24th Division in Tanahmerah Bay and the 41st Infantry Division in Humboldt Bay, the latter two in the Hollandia area. The enemy was taken by surprise. Fewer than 5,000 Japanese troops were in the entire Hollandia area. By the end of April the Hollandia airfields were in American hands. The Hollandia-Aitape operation cut off more than 50,000 Japanese troops to the east. The advance westward was continued in mid-May 1944, when elements of the 41st Infantry Division accomplished an unopposed landing near Arara in Dutch New Guinea.

General Krueger's Sixth Army headquarters moved to Hollandia on 6 July 1944, and on 8 September 1944 General MacArthur's headquarters was advanced to Hollandia from Brisbane. On the same date General Eichelberger was assigned to command the newly-activated Eighth Army with headquarters also at Hollandia.[63]

---

61 Interview with Harold F. Frederick, National CIC Convention, Chicago, August 1954, (Unclassified) (Central Records Facility).

62 Operations of CIC in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, Appendix 14, p. 2, (Unclassified) (Central Records Facility).

63 The War Reports of Marshall, p. 225.

The participation of CIC in the Hollandia campaign increased proportionately to the size of the operation itself. Involved in the task force which hit the enemy at Hollandia were CIC combat detachments with I Corps (the highest echelon tactical unit involved) and with the 24th and 41st Infantry Divisions. Another CIC combat detachment accompanied the 32d Infantry Division at Aitape.

The campaign had been in the planning phase for two months prior to the actual assault. Each CIC detachment received additional special training for the Hollandia operation. During that period security was of the utmost importance, and CIC agents successfully carried out positive security steps, thus preserving the element of surprise when the attack was eventually launched.

In addition to a prodigious number of security-leak investigations and normal counterintelligence duties, the CIC agents were put through a rigorous physical conditioning program, more weapons training, many lectures on searching for documents, material and booby traps, and other subjects pertinent to their forthcoming jungle mission. They were also briefed on the Malayan language, the tongue of the natives of the area to be taken. To assist in this instruction and later to act as guides and interpreters, 26 members of the Netherlands East Indies Army were assigned to the task force CIC section. All of these men spoke English well and all were highly-trained soldiers who had, besides combat experience, some training in the CIC schools operating in Australia. These men were assigned to routine CIC combat duties.

Advance elements of the CIC combat detachment with I Corps and the 24th and 41st Infantry Divisions landed in the Hollandia area on D-Day, 22 April 1944, shortly after assault troops hit the beaches. CIC Detachment "D" with I Corps, commanded by Lieutenant Victor I. Cook, and the combat Detachment "B", 24th Division, under Lieutenant Thomas H. Major, landed on one side of Hollandia at Tanahmerah Bay. The 41st Division Combat CIC Detachment "E" under Lieutenant Jack Y. Canon debarked at the other side of Hollandia at Humboldt Bay. The problem of coordinating the activities of the three CIC detachments fell to the I Corps detachment, CIC Combat Detachment "D".

A day after the landings, Detachment "D" moved to the Humboldt Bay side of Hollandia and set up its headquarters at Brinkman's Plantation. By D-plus-4 the 41st Division had penetrated 25 miles inland, seizing the important Cyclops and Sentani Airdromes. CIC agents followed the infantry troops closely. At Hollandia Airdrome contact was made between CIC agents of the 24th and 41st Divisions. Innumerable enemy documents and huge stores of abandoned Japanese equipment were collected at the airstrips by the CIC teams of "E" and "B" Detachments.

At Ifaar in the Lake Sentani region, personnel of the "E" Detachment recovered important files of the Dutch Administrative Assistant. Agents of the 162d Regiment of the 41st Division entered the town of Hollandia, where the subsequent search of

key buildings yielded many records of intelligence interest. More enemy documents were collected by CIC and assisting troops during the Hollandia campaign than during any prior operation in the theater. After such documents were collected, they were sent to the Allied Translator and Interpreter Section and higher echelons. The close relationship between CIC and the Allied Translator and Interpreter Section was exemplified by the identification by D-plus-9 of all but one of the enemy units operating in the area. A great deal of valuable information was unearthed on the various Japanese intelligence organizations active in the area prior to the landings.

For the interrogation of individuals either under suspicion of collaboration or those believed to have information of intelligence interest, teams of one CIC agent and one Netherland East Indies Forces trooper were utilized. Scores of interrogations of leading native suspects and of many friendly peoples who had been freed from Japanese prison camps were conducted. Subjects of the Dutch and other Allied foreign governments were turned over to Netherland Indies Civil Administration and other agencies for disposition.[64]

CIC at Aitape

On 22 April 1944, CIC landed with elements of the Persecution Task Force at Aitape. The assault was not heavily contested, and CIC agents attached to battalions were on the beach as early as H-plus-10. Within a few days, 5,000 pounds of enemy documents were recovered. Close liaison was maintained throughout the campaign with battalion S2's. CIC agents searched all combat and reconnaissance patrols for letters and personal papers which might fall into enemy hands in the event of capture or casualty.

CIC Combat Detachment "A", led by Second Lieutenant Jack A. Richards, landed with the 32d Division on 3 May. The following month, ten CIC agents, commanded by Captain Ralph Simms, joined XI Corps at Aitape and assisted CIC personnel of the Persecution Task Force and 32d Division in counterintelligence coverage of the area.[65]

Working night and day during the first two weeks of the operation, agents gathered more than five tons of documents, which were turned over to the proper agencies. CIC's concerted efforts to indoctrinate troops in the importance of captured documents had paid dividends. CIC agents also accumulated great quantities of Japanese equipment. Abandoned enemy supply dumps were pinpointed on overlays for use by intelligence technicians. Items especially vulnerable to looting and destruction, such as airplanes captured intact, were placed under armed guard.

64 Hq I Corps, Operations Report, G-2 Section, Hollandia Campaign (10 Mar and 9 May 1944), (Unclassified) (Central Records Facility).

65 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48 (Unclassified) (Central Records Facility).

Of a less routine nature, an unidentified CIC agent took to the air in an observation plane searching for a missing patrol boat. He also flew over an area where a pocket of armed Japanese reportedly were isolated and dropped surrender pamphlets.

From D-plus-2 to D-plus-8 the area was divided and systematically searched and all documents were given to the Allied Translator and Interpreter Section for classification. On D-plus-8 two large truckloads of documents and materiel were sent to Army headquarters via landing ship tank under armed CIC guard. Netherlands East Indies CIC personnel were used in collecting documents and in locating friendly tribes to obtain information regarding all natives who had willingly worked for the Japanese.

Valuable cooperation was also received from other sections and units, especially the Allied Translator and Interpreter Section, which aided in determining the possible location of unidentified enemy units. Important documents recovered by CIC included four Japanese code books, the first time that such were obtained; and documents indicating the location of the 36th Japanese Division in addition to the structure, type of soil, capacity, and condition of all Japanese airfields in Dutch New Guinea, as well as many in the Philippines.

Transportation proved to be one of the greatest problems for CIC personnel. Many documents were located and crated. However, it was physically impossible to transport these documents to the Allied Translator and Interpreter Section immediately, and much of the tactical value of the captured documents was lost.

A critique prepared by the G-2 Section in the aftermath of the Hollandia-Aitape landings revealed several weaknesses in the way CIC was employed in those campaigns.

The critique noted that the Corps CIC detachment was unable to determine which areas and what information division teams had secured, or what their plans might be from one day to the next. This resulted in much duplication of effort and the neglect of some work that should have been done. The probable cause of this difficulty was the impossibility of a meeting with the division detachment commanders prior to the operation.

It was suggested that a conference attended by representatives of CIC, G1, G2, and the Provost Marshal should be held prior to an operation to discuss the native situation. It was recommended that all natives upon contact with Allied Forces, be put immediately into a stockade under the control of the Provost Marshal. G2 would then determine which individuals would be released and which would be prisoners of war. G2 would have first priority on the services of all peoples in an occupied area because of their intelligence value as scouts, informants,

d interpreters. At the time of the Hollandia campaign, it was foreseen that the forthcoming operations would take place in thickly populated areas and that the security and success of the tactical mission would outweigh the fact that some loyal and trustworthy people would inevitably be put into a stockade and subjected to some rough treatment.

In the Hollandia landings, the critique pointed out the work of the CIC was valuable during both the planning phase and the operation itself. It was determined, however, that the Corps detachment was not large enough for best results. Security and combat training during the planning phase and the searching of captured areas and security checks on natives during combat were tasks which would have employed to good advantage a detachment of three officers and 30 enlisted men.[66]

Post Operational Phase

With the combat phase completed and the hunt for documents and equipment settling into routine, the I Corps CIC Combat Detachment operating in the Hollandia area turned most of its attention in May 1944, to native policing and control.[67]

Acting in close liaison with the Netherlands Indies Civil Administration, which had civil jurisdiction over the area, the detachment launched an investigation into the activities of Kempei Tai, Japanese-directed native espionage organization. Evidence indicated that Kempei Tai had been carefully organized in the region.

Investigation revealed that the group was headed by one officer and 14 men, all members of the Japanese army, who maintained headquarters in Hollandia. Numerous subordinate branches were formed throughout the area. Patrols were conducted, and several natives who worked for Kempei Tai were apprehended and questioned about the organization's operations and membership.

CIC was concerned only with the natives who had helped the Japanese army and took only such steps as would lead to their arrest. Netherlands Indies Civil Administration handled the native problem from the economic and political standpoint. Efforts were made not only to capture collaborationists, but to seek native help in ferreting out enemy soldiers and collaborators. The natives were offered a half guilder (26 cents) for every Japanese soldier turned in, more if the soldiers were officers. More than 100 Japanese were turned in during May.[68]

66 Hq I Corps, Operations Report G-2 Section, Hollandia Campaign, 10 Mar to 9 May 1944, (CONFIDENTIAL) (Central Records Facility).

67 5227th CIC Det (Prov) Situation Rpt SWPA for the month of May 44; Activities and Training, dtd 29 Jun 44, (SECRET) (Central Records Facility).

68 Ibid, p. 3.

CONFIDENTIAL

The natives invented their own methods for capturing enemy prisoners. On 9 May 1944, a native patrol at Jefase learned that seven Japanese soldiers armed only with swords were en route to the village. When the Japanese arrived and demanded food and shelter, one of the native police boys advised the village chief to promise to escort the Japanese back to their lines the next morning.

On the morning of 10 May, the seven Japanese soldiers were instructed to board a large canoe. The native then covered the soldiers with a sail, telling them it would keep them from being observed by American planes.

When the Japanese were covered with the sail, the leader of the CIC-recruited patrol entered the canoe and covered the Japanese with his carbine. Meanwhile the native chief had sent a runner ahead to alert the nearest American Military Police. When the canoe arrived at Depapre, Military Police were waiting to receive the prisoners.

Numerous similar incidents were reported.

On 7 May, another police-boy patrol contacted 13 isolated Japanese soldiers and promised to lead them to food. Instead, the Japanese were taken to American troops. One of the prisoners, realizing the group had been betrayed, hurled a grenade which killed himself and one of his companions and injured two natives, but the others were taken prisoner by American Military Police.[69]

CIC Smashes a Collaborationist Ring

Acting on information received from a confidential informant, CIC agents in the Hollandia area arrested a Dutch schoolteacher who had directed activities of six native tribes for the Japanese. Arrest of the agent was believed to have smashed a collaborationist ring which conceivably could have disrupted Allied war efforts in Western New Guinea. The suspect was turned over to Dutch authorities to be tried for treason.

CIC investigation disclosed that the teacher offered his full cooperation to the Japanese when they occupied Hollandia on 6 May 1942. The Japanese permitted him to remain in his position, using him to control the activities of 750 natives over whom he had considerable influence. Japanese Army officers had awarded the man a certificate of appreciation for his work with the natives.[70]

70 "CI Bulletin" Nr 40, dtd 30 Jan 44, Published by USAFFE G2, (CONFIDENTIAL), (Central Records Facility).

I Corps CIC Captures First Prisoner

I Corps Detachment claimed the first unassisted capture of a Japanese prisoner by the CIC with the apprehension of one Keiichie Hashiguchi, of the Japanese 8th Naval Construction Company. This man, who claimed civilian status despite his army uniform, was taken during a search of a native village after inhabitants reported that 20 to 30 Japanese were sleeping in their huts every night. Hashiguchi told his CIC interrogators that he was in charge of developing airfields and farming projects and securing native labor.

The report concerning the other Japanese in the village proved to be an exaggeration, but not until after careful plans had been laid for their capture. The occasion was to be a test for the persuasiveness of surrender pamphlets. One of the natives was given several pamphlets to hand to the Japanese when they came into the village at night. A patrol was on hand before daylight the following morning, but no Japanese were found.

In another instance, CIC agents questioned Simon Sibi, a native electrician who had returned to the Hollandia area from Mankowari after working for the Japanese for more than a year. The native revealed a huge store of information regarding enemy fortifications in the Mankowari region.

An I Corps team also interrogated a native named Apitoleh, who was considered to be a leading collaborationist in the area. He was head of all natives in the area under the Japanese 8th Naval Construction Company, an organization for the development of Japanese military projects by native means. Reportedly, he constantly mistreated and abused those serving under him. He was held for trial by Netherlands Indies Civil Administration.

Tips were received on two other important collaborationists. They were Dr. Mohhamet, in charge of native health during the Japanese occupation, and Hoetomoe, post commandant of the police boys under Apitoleh. Hoetomoe reportedly was the first to fire when a Japanese native patrol encountered Allied troops.

CIC maintained a card file of all important natives and results of the interrogations conducted.

More than 100 boxes of documents were collected and shipped to appropriate agencies by the I Corps team before the end of May. Large amounts of new and undamaged Japanese equipment were similarly handled.

Colonel Carl J. Docker, I Corps G2, recommended three members of I Corps Detachment for the Bronze Medal for exceptionally meritorious service while actively engaged in combat: M/Sgt Alexander S. Duncan, T/Sgt John G. Tomlin and Cpl Charles T. Mayfield. At the end of May the detachment's strength was one officer, ten enlisted men and ten men from the Netherlands East Indies Force CIC.

24th Division CIC on Post-Operational Mission

Meanwhile, CIC Combat Detachment "B" with the 24th Infantry Division spent most of May 1944 launching and rounding out its post-operational mission at Hollandia.

Much of this concerned controlling the native population and determining which natives had actively cooperated with the enemy. An extensive search for documents and equipment continued. Here again natives were used as police boys. These natives were paid a definite scale of wages in Dutch currency. Routine patrol duty paid 20 cents a day and clerks earned 30 cents daily. For special achievement, such as bringing in valuable documents, information, or a Japanese prisoner, the natives were rewarded with bonuses up to 26 cents.

By the end of May native patrols supervised by the 24th Division CIC had killed 15 Japanese and were directly responsible for the liquidation of numbers of others. In addition they captured 163 enemy soldiers and secured vital information used later in Allied operations.

For several weeks, the 24th Division CIC Detachment was baffled by reports of a mysterious Japanese known to the natives only as the "Controller of Hollandia." This man, who had told natives he was a vice admiral of the Japanese Navy, awed them with his distinguished appearance and persuaded many natives to assist him and other Japanese. Reports conflicted; informants alternately stated that the "Controller" was still alive, and that he had been killed by American troops. Special patrols were dispatched to search for the "Controller of Hollandia," but he was never found.

Shrewd native traders quickly learned the value of Japanese equipment as souvenirs, and set their prices at exorbitant levels. To prevent this primitive form of war profiteering, CIC suggested to Netherlands Indies Civil Administration that centralized markets be set up where natives could sell their merchandise at stabilized and controlled prices.

A prize CIC discovery during May was a complete Japanese aviation camera, an item which had been unsuccessfully sought by Air Corps Intelligence for two years. An estimated 7,500 pounds of enemy documents were processed by "B" Detachment from the start of the Hollandia operation through May.

One officer and ten men made up the detachment during May. Also attached were two U.S. Navy men, three Netherlands East Indies CIC men and two Chemical Warfare Specialists.[71]

71 5227th CIC Det (Prov) Situation Rpt SWPA for May 1944; Activities and Training, dtd 29 Jun 44, (SECRET) (Central Records Facility).

During June the 24th Division Detachment continued checking and rechecking areas for more documents and equipment. The native police-boy system, with about 30 members representing most of the important villages of the area, continued to function ably, and an effective informant system was instituted to combat Japanese espionage.[72]

"B" Detachment was still located at Weversdorp near Hollandia airdrome during July carrying out routine counterintelligence duties. More than 1,500 pounds of documents were recovered and forwarded to Allied Translator and Interpreter Service for evaluation.[73]

32d Division CIC Operates at Aitape

At Aitape, Combat Detachment "A" with the 32d Infantry Division spent most of May 1944 carefully searching the area just seized from the Japanese. About 500 pounds of documents and a large assortment of equipment were collected and processed in addition to that already taken during the fighting.

Much time was also devoted to inspecting hundreds of souvenirs submitted by troops for clearance. This work yielded a profit as definite as patrol operations. Among the items submitted for clearance which were removed for intelligence analysts were Japanese code-books and maps, a radio set, a compass, film, machine guns and sights, and a parachute.

One member of the detachment became the one-man staff for a regimental newspaper. Issued in mimeographed form, the newspaper consisted of news bulletins summarized from radio broadcasts.

The strength of the detachment during most of May was two officers and nine enlisted men.[74]

During June, "A" Detachment expanded and continued the activities initiated in the Aitape area when Persecution Task Force landed there. Patrols with native police boys produced much of intelligence interest.[75]

72 5227th CIC Det (Prov) Situation Rpt SWPA for Jun 44, dtd 2 Aug 44, (SECRET) (Central Records Facility).

73 CIC Det (Formerly 5227th CIC Det (Prov)) Situation Rpt SWPA, Jul 44, Activities and Training, Rdtd 29 Aug 44, (SECRET) (Central Records Facility).

74 5227th CIC Det (Prov) Situation Rpt SWPA for the month of May 1944; Activities and Training, dtd 29 Jun 44, (SECRET) (Central Records Facility).

75 5227th CIC Det (Prov) Situation Rpt SWPA for month of Jun 44, dtd 2 Aug 44, (SECRET) (Central Records Facility).

July 1944 opened with members of "A" Detachment at Aitape engaged in a program of security surveys. In addition, numerous security lectures emphasized the taking of prisoners and enemy equipment. Small CIC patrols made the rounds of the outer combat posts in delivering these lectures. During July the detachment cleared and returned to the troops over 800 souvenir items. Upwards of 600 pounds of materiel of intelligence interest were forwarded to the Allied Captured Enemy Equipment Board in July.[76]

CIC in the Wakde-Sarmi Area

While fighting continued in the Hollandia-Aitape areas, the Sixth Army's Tornado Task Force prepared to seize the offshore islands in the Wakde group. On 17 May 1944, the Task Force struck at Arara Village in the Wakde-Sarmi sector of Dutch New Guinea. The next day troops landed on Insoemoar Island in the Wakde group.

Hitting the beach with assault troops at Insoemoar Island, the Tornado Task Force CIC Combat Detachment "G" encountered the most difficult conditions under which any CIC detachment in the Southwest Pacific had yet worked.

For two days, the unit operated under intermittent sniper fire after landing in the face of heavy enemy resistance. Although the situation improved on the third day, snipers were still encountered and single enemy soldiers were met on several occasions as the search for documents and equipment was pressed.

The landing cost CIC its first fatality in the Southwest Pacific. Sergeant Woodrow G. Hunter was killed in action on the Insoemoar Island beach on the morning of 18 May 1944, D-plus-1.[77]

Moving inland, two CIC agents began a search of a Japanese supply dump 150 yards off the beach. Suddenly a small band of enemy soldiers emerged from a camouflaged trench nearby. One agent quickly hurled a grenade, killing a Japanese officer. The other agent and an American infantryman who was with him killed two other enemy soldiers. Other agents had equally close brushes with the enemy.

As the Japanese were driven back, CIC men launched intensive searches of the innumerable caves on the island. More than two tons of Japanese documents were collected during these searches, many marked "Vital Military Secret,"

76 CIC Det (Formerly 5227th CIC Det (Prov)), Situation Rpt SWPA for month of July 1944: Activities and Training, dtd 29 Aug 44 (SECRET) (Central Records Facility).

77 5227th CIC Det (Prov), Situation Rpt SWPA for the month of May 1944; Activities and Training, dtd 29 June 1944, (SECRET) (Central Records Facility). NOTE: Hunter Hall at Fort Holabird was named for Sergeant Hunter.

"Most Secret," and "Secret." Large quantities of enemy ammunition and equipment were captured. Throughout the first days of the operation, the detachment was forced to confine its operations to Insoemoar Island because of the difficult tactical situation on the mainland. But on D-plus-7, 24 May 1944, agents moved up behind the front lines on the mainland and canvassed headquarters and dumps from which the enemy had just been driven. Japanese snipers were still infiltrating the area.[78]

Early in June the Tornado Task Force was relieved by the 6th Infantry Division. When members of the division's CIC Combat Detachment "F" moved into the Wakde sector from Milne Bay, agents with the Task Force detachment instructed the newcomers in combat counterintelligence techniques. The two detachments functioned as one until the veteran unit finally was relieved.

As action continued, CIC personnel attached to each of the three regiments of the 6th Division advanced with their respective command posts as they pushed toward the airdrome in the Maffin Bay area. Searches and patrols were extremely hazardous because of enemy small arms, artillery, and mortar fire.

During the drive for Maffin Airdrome, several agents, separated from their forces, were pinned down. However, caves, dugouts, installations, and enemy dead were carefully searched. All vehicles enroute to rear areas were examined for souvenirs of possible intelligence value. Passes controlling visitors to operational zones were issued by CIC.[79]

During the first two weeks they were in combat, agents operating with the 6th Division seized more than a thousand pounds of Japanese documents.

One agent, with an advanced battalion moving towards the Maffin Airdrome, reported that heavy shelling forced the unit to withdraw. Later the battalion moved forward again, and the agent found many valuable documents.

Another agent, advancing with a tactical unit, was pinned to the beach for a day and a night by Japanese artillery and small arms fire. When the firing subsided, the agent found more than 20 bullet holes in his jeep. Two tires had been punctured. Unable to carry out his CIC duties because of the bitter fighting, the agent turned his jeep over to the medics and assisted them in carrying litters and evacuating wounded.

[redacted]

As the fighting turned in American favor, the Japanese took refuge in numerous caves, with interconnecting tunnels and side passages. Unit commanders were dynamiting the caves, sealing entrances. In most instances, however, CIC agents were allowed to search the caves before the blasting.

In the Maffin Bay sector of the Wakde-Sarmi front, agents took to the air in "cub" planes to search for abandoned enemy command posts. On the ground the detachment encountered sniper fire and booby traps. But agents continued to press the search for enemy documents and prisoners, and more than 100 cubic feet of documents taken in the Maffin Bay area were forwarded to the Allied Translator and Interpreter Service.[80]

Early in July, the 31st Division relieved the 6th Division in the Wakde-Sarmi area, and agents of Combat Detachment "K", attached to the 31st Division, took over counterintelligence responsibilities from the 6th Division detachment.[81]

The Fight for Biak Island

After its first tactical operation in the Hollandia area, Combat Detachment "E", with the 41st Infantry Division, moved back to Holtekang Bay to rest and await further operations. The wait was short.

On 27 May 1944, the detachment landed at Bosnek Village, Biak Island, with the advance elements of the 41st Division, a part of Sixth Army's Alamo Task Force. Action was heavy, and CIC labored under extreme difficulties.

While tactical troops pushed forward to seize Mokmer and Sorido Airdromes, CIC teams under Lieutenant Canon's command searched abandoned installations and enemy dead. Despite intermittent artillery, mortar, and small arms fire, agents combed the east and west caves in the escarpments above Bosnek for enemy records.[82]

Early in the campaign six native Indonesians were interrogated by Detachment "E", and the names of three natives suspected of disloyalty were discovered. Two of the suspects were Dutch soldiers; the third, a Navy Wireless operator.

[redacted]

The detachment's combat experience at Hollandia paid dividends. By the end of the first week of fighting, 26 boxes of enemy documents had been seized. Among them were detailed diaries of the activities of the Japanese 36th Division up to the day of the American landings on Biak and reports of action after the invasion. Other prize discoveries were records showing the strength, disposition, and fortification of enemy units on Biak and other Japanese-held islands in the Pacific. Maps showing enemy unit locations, code-books, and casualty reports also were seized by CIC agents with the 41st Division.

After the tactical situation had crystallized, the detachment turned its attention to interrogation of natives, who revealed information on Japanese methods and training, atrocities, collaborationists, and movements of Japanese units and their prisoners of war.

Personnel assigned to the 41st Division detachment at the time of the Biak operation included one officer and 12 enlisted men. In addition, two United States Navy men, three Netherlands East Indies counterintelligence representatives, and an American ordnance officer were attached.[83]

On 18 June 1944, I Corps landed at Bosnek Village, and agents of I Corps CIC Combat Detachment "D" assumed some of the counterintelligence duties previously exercised by the 41st Division Detachment.[84]

I Corps CIC, led by Lieutenant Cook, established headquarters near Bosnek Village and at Mokmer Airdrome. Liaison was maintained with the 41st Division detachment, and areas of jurisdiction were defined.

Activities of I Corps included interrogation of a number of Javanese soldiers who had escaped from the Japanese. CIC patrols also investigated reports of booby traps, but only one crude explosive device was found.

In order to obtain tactical information, a CIC officer, two agents, two Netherlands East Indies interpreters attached to CIC, and a native guide accompanied a seaborne patrol to a small island in the vicinity of Noemfoor. Two natives familiar with the Japanese-occupied islands in Geelvink Bay were brought back to Biak for questioning. The mission was completed just eight days before the Allied invasion of Noemfoor.[85]

84 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, Appendix 14, p. 4., (Unclassified) (Central Records Facility).

85 5227th CIC Det (Prov), Situation Rpt for SWPA for month of May 1944; Activities and Training, dtd 29 Jun 44, (SECRET) (Central Records Facility).

On 2 July, I Corps returned to its original location at Joka, Lake Sentani, Hollandia, to begin preparations for the impending Philippine campaign. The 41st Division detachment remained on Biak, continuing searches of former enemy caves and bunkers throughout the area west of Bosnek Village and Mokmer Airdrome.[86]

CIC Lands on Noemfoor Island

Making its fourth landing in as many months, "G" Detachment went ashore with troops of the Cyclone Task Force at Noemfoor Island in Geelvink Bay on 2 July 1944.

Three infantry assault battalions landed on the beach near Kamiri Drome at 0800, while six CIC agents under the command of Second Lieutenant Dean H. Caziarc waited in small landing craft about 400 yards off shore. An hour later, CIC agents left their boats and waded across coral reefs to the beach. Once ashore, agents separated and joined each of the infantry battalions.

Sniper fire peppered the beach, and artillery shells dropped within sixty yards of CIC agents searching enemy dead. But by H-plus-3, the first batch of captured documents and materiel had been relayed back to G2 for interpretation. As the assault battalions pushed inland toward Kamiri Drome, the detachment continued in close support, searching all caves and enemy dead.

Night brought little rest. CIC personnel concluded their first day's work on Noemfoor Island conscious that infiltrating Japanese had been killed twenty yards to the detachment's rear, and within 100 yards in all directions.[87]

To guard against enemy infiltration, CIC supervised the establishment of a counterreconnaissance screen, in effect from dusk until dawn. Sentries at perimeter outposts watched for and reported enemy observation, reconnaissance, and infiltration. The screen was not manned by CIC agents, but was checked daily for its effectiveness.

With the detachment was one agent who spoke Malayan. As Javanese and Dutch subjects were liberated by American troops, this agent questioned them to obtain both positive and counterintelligence information.[88]

87 Memorandum, 2d Lt Frank L. Barbee and 1st Lt Dean H. Caziarc to CO, 441st CIC Det, dtd 9 Sep 1944, Subject: Counter Intelligence in U.S. Task Forces, April 1944, through July 1944, (CONFIDENTIAL) (CCIC Files).

88 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, Appendix 14, p. 5, (Unclassified) (Central Records Facility).

Large quantities of Japanese equipment were seized by CIC agents, and much of the captured materiel was later used by American troops. At one ammunition dump, three agents found toxic smoke shells, which were of considerable interest to chemical warfare experts.[89]

As the American forces pushed through Jemanoe and Pieforri villages to the Kornasoren Drome, the detachment searched enemy installations concentrated in the area. Regimental headquarters had ordered troops not to disturb Japanese buildings until after completion of the CIC searches.[90]

At the end of July, Combat Detachment "G" was disbanded, its work with Cyclone Task Force completed. When combat on Noemfoor Island was over, the 158th Regimental Combat Team was assigned to garrison duty. In September 1944, the 904th CIC Detachment under Second Lieutenant Loren Recor was placed on duty with the garrisoning troops. The 904th stayed on Noemfoor until the Luzon campaign.[91]

6th Division CIC with Typhoon Task Force

By mid-summer of 1944, the Japanese had been driven from most of New Guinea and the islands offshore. In Dutch New Guinea, only the Vogelkop Peninsula, jutting to the northwest, remained in enemy control.

For the final thrust against the Japanese forces on the mainland, a special task force was organized in the Maffin Bay area on 10 July 1944. Designated Typhoon Task Force, the force was created for a special amphibious operation. Its mission was to establish a beachhead between the Wewe River and Cape Opmarai, then follow up by seizing the Sansapor area on the northwest tip of Vogelkop Peninsula. Finally, it was to assume control of adjacent areas, including Middelburg and Amsterdam Islands.[92]

89 Memo, 2d Lt Frank L. Barbee and 1st Lt Dean H. Caziarc to CO, 441st CIC Det, dtd 9 September 1944, Subject: Counter Intelligence in U.S. Task Forces, April 44 through July 44, (CONFIDENTIAL) (Central Records Facility).

91 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 1948, Appendix 14, pp. 5-6, (Unclassified) (Central Records Facility).

92 A History of the 6th CIC Detachment, with the Typhoon Task Force, Dutch New Guinea, 30 July to 31 August 1944, dtd 11 November 1944, (SECRET), (Central Records Facility).

The 6th Infantry Division was the core of Typhoon Task Force, and its CIC Combat Detachment "F" was given counterintelligence responsibility for the operation. The mission assigned Captain James R. Webster and his agents was the usual CIC combat mission in the Theater: search for enemy documents and equipment of intelligence value; promote security; investigate rumors and complaint cases; and maintain liaison with the Netherlands Indies Civil Administration for control of the native population.

Detailed planning preceded the operation. Intelligence reports indicated that there were only two large Japanese strongholds on the peninsula: Manokwari and Sorong. However, it was believed possible that enemy staging areas and barge hideouts were located at 25-mile intervals between these points. Little opposition was anticipated for at least two days after the landing. Located within the area to be seized were three small villages composed entirely of natives: Sansapor, with a population of 400; Mar, 200; and Kor, 100.[93]

Plans called for one CIC agent to accompany each of the two infantry regiments participating in the initial landing. Captain Webster and another agent were also to land on D-Day and establish CIC headquarters near the division command post to receive reports of enemy locations and arrange for search of those areas after their capture. Agents with the regiments were to channel captured documents and materiel through Captain Webster's makeshift headquarters to expedite their delivery to the Task Force G2. Four agents were scheduled to arrive two days after the landing to begin a thorough search of former enemy positions; the remaining three agents were to arrive on D-plus-12 with the bulk of the detachment's equipment.[94]

Typhoon Task Force struck at dawn on 30 July 1944. The 1st Infantry Regiment landed at Red Beach near Mar and quickly secured a beachhead. There was virtually no opposition; neither naval nor air support was necessary.

A diary taken from a dead Japanese soldier by a CIC agent indicated the haste with which the enemy fled the American invaders:

> "July 30, at daybreak, sighted enemy convoy of 50 ships between Amsterdam Island, Middelburg Island, and the mainland. Convoy consisted of several warships and aircraft carriers. It seems that they entered the bay last evening. Kept observing them while breakfasting. Enemy aircraft first sighted at 0800 hours headed toward Sorong. At approximately 0830, Lockheeds and Consolidateds flew over bay. Cruisers circling at distance of 1,500 to 2,000 meters

93 A History of the 6th CIC Detachment, with the Typhoon Task Force, Dutch New Guinea, 30 July to 31 August 1944, dtd 11 November 1944, pp. 3-5, (SECRET) (Central Records Facility).

94 Ibid, p. 6.

off shore while landings were made between Middelburg and the Cape. Left seashore for Chicado (Mtn) at 0900 hours. Informed by native of village of Mar. Plan to have breakfast, lunch, and dinner there. Desire to observe enemy activity more closely, but due to anxiety, must leave in hurry."[95]

On D-plus-1, 31 July 1944, the 3d Battalion of the 1st Infantry embarked from its assembly area at Mar near the Wewe River and moved westward to land on the north side of Cape Sansapor, designated Green Beach. Again, no opposition was encountered. Troops seized an enemy bivouac area and ration dump at Sansapor. The next day a CIC patrol searched the Sansapor area.

Patrols killed and captured small parties of the enemy daily. CIC agents helped regimental S2's process documents and equipment taken from enemy dead and prisoners.

Twelve days after the initial landing, the 2d Battalion of the 63d Infantry, along with the 6th Reconnaissance Troop and the 53d Field Artillery Battalion, pushed eastward to Kor Village. For the next three days, CIC-supervised salvage patrols combed the area for items of intelligence interest. A company of men from 2d Battalion, 63d Infantry, was used to carry captured materiel over rough terrain to the 6th Reconnaissance Troop, which in turn transported the materiel across the mouth of the treacherously swift Kir River. More than 2,500 pounds of documents and 10,000 pounds of equipment were captured and transported to CIC headquarters.

One agent of Combat Detachment "F" accompanied a patrol from the 63d Infantry on a small landing six miles east of the Kor River on 16 August. Japanese documents classified "Secret" were taken from five enemy soldiers killed in the skirmish. Among them were code books which were flown to Sixth Army Headquarters the following day by CIC officer couriers.[96]

Interrogation of a prisoner of war by CIC agents led to the discovery on 19 August of a Japanese transmitter and receiver. The prisoner led the CIC patrol to the place where the radio equipment had been buried two days earlier by a Japanese party enroute from Manokwari to Sorong.

By the end of August most of the Japanese forces had been ferreted out of their hiding places, and the Sansapor campaign was officially terminated on 31 August. During the month, Captain Webster reported three disaffection cases and two censorship violations investigated by his detachment. There were no espionage or sabotage cases.

---

95 A History of the 6th CIC Detachment, with the Typhoon Task Force, Dutch New Guinea, 30 July to 31 August 1944, dtd 11 November 1944, p. 8, (SECRET) (Central Records Facility).

96 Ibid, pp. 9-10.

After the operation was concluded, one agent of the 6th Division worked with the Netherlands Indies Civil Administration in the supervision of natives of the liberated areas. Another was detailed as Port Security Agent to panel all cargo and troop ships entering the area.[97]

During the height of the Sansapor campaign, the 6th Division CIC Detachment lost its designation as Combat Detachment "F" and was formally activated as the 6th CIC Detachment, assigned to USAFFE and attached to the 6th Division. USAFFE announced the change on 17 August, while detachment headquarters were located at Sansapor.[98]

The 6th CIC Detachment remained in the Cape Opmari-Sansapor sector to stage for the invasion of the Philippines. It departed under I Corps in December 1944 for the Luzon campaign.[99]

Morotai--Last Step Before the Philippines

With Allied forces firmly entrenched on the Vogelkop Peninsula of Dutch New Guinea, the little island of Morotai in the Molucca group remained the last major stepping-stone to the Philippines.

In mid-August 1944, the 31st Division and its CIC detachment began to stage for the assault on Morotai. During the staging period at Aitape and at Maffin Bay, 1st Lieutenant Clarence W. Trout and the ten agents of the 31st CIC Detachment inaugurated a vigorous security training program for the Division's combat troops.[100]

On 15 September, the division made an assault landing on Morotai, meeting little opposition.[101] On 19 September, Sgt William R. Morse of the 31st CIC landed at Kekaibabao, on the northwest portion of Cape Sopi, Morotai Island, with a small assault force of infantrymen, engineers, and radar technicians whose mission was to establish and guard a radar station.

Between 19 September and 2 October, Sergeant Morse, working with two native guides and a representative of the Netherlands Indies Civil Administration,

97 A History of the 6th CIC Detachment, with the Typhoon Task Force, Dutch New Guinea, 30 July to 31 August 1944, dtd 11 November 1944, pp. 10-11, (SECRET) (Central Records Facility).

98 Ibid, p. 2.

100 Ibid, p. 7.

101 The Army Almanac, p. 534.

led patrols of infantrymen to former Japanese bivouac areas and native villages in the region. In the abandoned Japanese areas, the patrol found enemy documents, ordnance, and radar equipment of considerable intelligence value. The captured documents and equipment were returned by barge to 31st CIC Detachment headquarters, then relayed to the XI Corps Detachment, which arrived in Morotai after the initial landings by the 31st Division. Radar technicians estimated the value of the captured equipment at $500,000.

Sergeant Morse also gained considerable information about the Japanese in his visits to the native villages. He spoke the Malay language, and readily gained the respect and cooperation of the natives.

On 17 September, four agents of the 31st CIC began a three-week patrol of Morotai and Naoe Islands to check the security of radar installations on the islands and to question natives about operations of the Japanese Kempei Tai in the area.

During their visits to the native villages, the agents contacted representatives of the Netherlands Indies Civil Administration, village chiefs and native informants. From the scores of stories told by the natives the agents pieced together a clear picture of Kempei Tai operations.

Kempei Tai members had been stationed in each village visited except one, and natives named dozens of members of the Japanese organization. Most had fled to Halmahera by barge when the Americans landed on Morotai.

Kempei Tai personnel established similar controls in each native village. Natives told of being forced to provide fish, vegetables, and clothing for the Japanese invaders. In return, they were given a daily ration of six ounces of rice. Those who hesitated to obey the Japanese edict were severely beaten; infractions of rules often resulted in imprisonment on Halmahera Island.

Informants in the native villages were eager to tell CIC agents which islanders had befriended the Japanese, and scores of natives were branded by their neighbors as collaborators and spies. In most instances, the tales proved to be fabrications designed to win Allied favor for the informant, or to cause trouble for personal enemies. CIC agents, working with the Netherlands Indies Civil Administration, found no evidence that natives were channeling information about Allied forces to the Japanese on nearby Halmahera.

While four CIC agents were visiting the native villages on Morotai, other members of the 31st Division detachment were busy with security surveys and lectures. One never-ending job was the counteracting of rumors which spread rapidly among combat-weary troops.

One rumor which alarmed soldiers of the 167th Infantry Regiment of the 31st Division concerned a "new" Japanese hand grenade which was reported to be many times more powerful than any American grenade. CIC agents were asked to trace the rumor to its source. They discovered that a member of the regiment had been killed, his body badly mangled, during an early morning Japanese attack on 22 September. The Japanese were known to have thrown grenades during the attack, and it was assumed that a powerful new grenade had caused the extreme damage to the dead soldier's body. Investigating agents learned that the grenade which had killed the soldier had struck a live mortar shell near him. The combined force of the mortar shell and the grenade gave rise to the rumor that the Japanese had developed a "super grenade" the size of a coconut. Agents explained the incident to the troops and showed them actual Japanese grenades, which immediately quelled the rumor.[102]

At the end of September there were three CIC officers and 25 agents on Morotai. In addition to members of the 31st and 211th (XI Corps) Detachments, two agents of the 449th CIC Area Detachment arrived to assist in the interrogation of natives.[103]

On 18 December the 33d Infantry Division landed on the west coast of Morotai, meeting only token resistance from isolated pockets of Japanese troops.[104] With the division came the 33d CIC Detachment, commanded by Second Lieutenant Bernard Donohue.

Counterintelligence measures in the native villages already had been enforced by the 31st, 211th, and 449th CIC Detachments. On its arrival, the 33d CIC began preparations for the Luzon campaign.[105]

CIC Stages for the Big Battle

With the intense fighting in New Guinea and its offshore islands ended, CIC detachments attached to combat units in the SWPA turned their sights toward the Philippines. Area detachments moved in to assume counterintelligence coverage of liberated areas, and the combat units began intensive security training programs among troops.

In addition to the CIC combat detachments which had already entered battle, several other tactical CIC units were in the Southwest Pacific staging for the next big push to the north.

40th CIC Detachment

On New Britain, the 40th CIC Detachment attached to the 40th Division had been busy since its activation in May[106] with security lectures, inspections, and anti-rumor campaigns among the troops of the division. Although the detachment arrived on New Britain after combat had ceased, agents made occasional patrols to small islands nearby to search for Japanese documents and equipment. Enemy mines and booby traps often hampered their work.

To cover all elements of the division, four agents were attached to a regiment at Talasea and two to a regiment at Arawe. The remainder of First Lieutenant Earl Klein's ten-man detachment worked out of division headquarters in the Gloucester Bay area.[107]

The detachment worked closely with the Australia-New Guinea Administrative Unit in dealing with natives. Agents also participated in "rumor boards," at which they discussed rumors circulating among the troops. Before departing for the Philippines, the detachment compiled a complete security and intelligence index for unit commanders and intelligence officers to assist them in indoctrinating troops in greater detail with the importance of maintaining security precautions during and after operations. This index was to become the basic reference material for lectures and discussion held by units while at sea steaming toward Lingayen Gulf.[108]

---

106 The 40th CIC Detachment was designated Combat Detachment "H" at the time of its organization in May. It officially became the 40th CIC Det in August.

CIC Paratroopers Stage for Philippines

Meanwhile, the Theater's first Airborne CIC Detachment staged at Oro Bay with the 11th Airborne Division.

The detachment, commanded by First Lieutenant George B. Spencer, arrived at Oro Bay in March 1944, but was immediately ordered to Brisbane for further training at the CIC School there. On 1 October 1944, the detachment was reorganized and its complement filled by agents who had volunteered for work as paratroopers.

Returning to New Guinea in October, the detachment went through jump school. The commanding officer and nine agents qualified for paratrooper's wings before the detachment sailed for Leyte in November.[109]

Meanwhile two other detachments also were in New Guinea training for their first combat assignments in the Philippines.

At Oro Bay, First Lieutenant George A. Baldwin commanded the CIC detachment attached to the 38th Division. The detachment arrived in New Guinea in July 1944 and was then ordered to Brisbane for training. It returned to Oro Bay to stage for the Leyte campaign.

The other detachment staging in New Guinea was the X Corps (210th) Detachment at Finschhafen. Activated in early fall of 1944, the detachment, under Captain Joseph P. Hurley, attended the Jungle Warfare School at Canungra, Australia, before staging for Leyte at Finschhafen.

Acquisition of South Pacific Combat Detachment

Transfer of units from the South Pacific Area to SWPA in June 1944 brought several other CIC combat detachments under the administrative control of the 5227th CIC Detachment (Provisional), the theater detachment for USAFFE. CIC personnel thus coming into the SWPA included those attached to XIV Corps and the 37th and America Divisions located in the Empress Augusta Bay perimeter on Bougainville in the Solomon Islands. During July and August these detachments attended the CIC Training School in Brisbane, returning to their tactical units in September to stage for the Philippine campaigns.

One officer and three agents attached to the 93d Division (Colored) also were affected in the change of CIC theater command. Personnel of this detachment had been scattered throughout the Solomons, working out of their headquarters on Treasure Island.

---

109 5227th CIC Det (Prov) Situation Rpt SWPA for month of June 44; dtd 2 Aug 44, p. 7, (SECRET) (Central Records Facility).

Four CIC agents left New Zealand with the 43d Division in June 1944, and later landed at Aitape. From Aitape they went to Brisbane for training. In September 1944, the 43d CIC Detachment was activated and attached to the 43d Division. First Lieutenant Ray W. Hodgson and ten agents returned to Aitape to carry out a full CIC program with the division until it embarked for the Luzon campaign.

Finally, the 25th CIC Detachment was formed in October 1944 and attached to the 25th Division at Noumea, New Caledonia. Second Lieutenant Natt B. Holman and the agents under his command trained at Brisbane during October and November. Upon their return to New Caledonia, 25th CIC personnel devoted weeks to indoctrinating division troops in counterintelligence and security measures prior to sailing for Luzon.[110]

110 5227th CIC Det (Prov) Situation Rpt SWPA for month of June 44; dtd 2 Aug 44, p. 8, (SECRET) (Central Records Facility).

Chapter 3

CIC IN THE REAR AREAS

While combat CIC detachments pushed through New Guinea jungles and hopped from island to island, there was a constant reshuffling of the administrative structure in rear echelon offices to keep pace with the changing tactical situation.

The increased flow of troops to the north in late 1943 and early 1944 necessitated revision of the theater's administrative machinery. A new advance section headquarters was set up at Lae, New Guinea, to control the Lae and Finschhafen bases. The USASOS advance base, previously located at Milne Bay, was replaced by a new Intermediate Section Headquarters, USASOS, which also controlled the Port Moresby and Oro Bay Bases.[111]

Changes in assignment of CIC and base intelligence officers followed the revision of the administrative structure. Lt Col Jennis R. Galloway left the Advance Base Intelligence Office he had directed at Brisbane for more than a year and became executive officer to Colonel Vreeland, Chief of the Theater CIC organization. Lt Col John W. Schermerhorn was transferred from the Brisbane base to supervise the Oro Bay section. Major Labatt, the former CIC executive officer, became Base Intelligence Officer at Port Moresby.

Because of personnel shortages, CIC officers frequently were detailed as base intelligence officers, and intelligence officers who had no CIC experience were often required to supervise the work of CIC enlisted agents in the various base sections.[112]

CIC headquarters at Brisbane was organized in six subsections at the end of 1943. Lieutenant James W. McColl directed the evaluations and investigations subsection; Special Agent Eldon A. Gray, the ship panelling section; Lieutenant Robert M. Hollings, the countersubversive section; Lieutenant Thomas W. Applegate, the CIC School; Special Agent Daniel T. Malone, the CIC laboratory, and T/3 Lloyd R. Everson, the administrative section.[113]

Troop Build-up Brings Growth for CIC

The tremendous flow of troops into the Southwest Pacific and the corresponding increase in CIC personnel during 1944 were to make further revisions essential.

For the first time since the outbreak of the war, personnel shortages in the theater were not acute. Although the Sixth Army was usually between 4,000 and 6,000 men short of its required strength and the Fifth Air Force and USASOS suffered similar deficiencies, the gap was being narrowed in 1944. In July alone, more than 116,000 troops reached the theater. Personnel problems did not become acute again until the invasion of the Philippines.

An increase in CIC strength paralleled the growth of the combat units in the Theater. Six officers and 38 agents from the United States reported to CIC headquarters at Brisbane during the first two months of 1944. Another officer and 136 agents arrived in March. New agents were recruited locally. CIC strength more than doubled in the first nine months of the year. By the end of September, CIC rosters listed 73 officers and 381 enlisted men. Still, the Theater CIC was under its authorized strength of 122 officers and 420 enlisted men.

The War Department published Table of Organization and Equipment 30-500 on 24 January 1944, authorizing the establishment of CIC detachments and teams. On 14 March 1944, all CIC personnel were relieved from assignment to the War Department and assigned to the theater with which they were on duty. This order allowed the organization of provisional detachments only, but the way was now open for establishing a SWPA theater CIC detachment.

On 20 April 1944, the 5227th CIC Detachment (Provisional) was created. It operated under the AC of S, G2, USAFFE, and was assigned all CIC personnel in the SWPA, although they remained on a temporary duty status with the units with which they had been working. The Chief, CIC, became the commanding officer of the new 5227th CIC Detachment (Provisional).

It was under the provisions of Table of Organization and Equipment 30-500 that the combat detachments which participated in the island campaigns around New Guinea were organized and assigned to USAFFE, under the supervision of the 5227th CIC Detachment (Provisional) and G2, USAFFE.

Two other types of detachments subordinate to the 5227th were organized: regional and area detachments. Regional detachments, administrative in nature, were created to control CIC activities in large regions. Area detachments were similar to the regional organizations, but were responsible only for specific small areas.

CONFIDENTIAL

All CIC operations in New Guinea were first placed under control of the newly activated I Region CIC Detachment (Provisional) at Oro Bay. Later, when II Region Detachment was organized at Hollandia and given jurisdiction over Dutch New Guinea, I Region retained control over British New Guinea. Area detachments were organized in CIC offices at Base Sections in both Australia and New Guinea. As Allied forces drove the Japanese back, area detachments moved in to take over counterintelligence responsibilities from the combat detachments, which in many instances had primarily gathered combat and technical intelligence.[114]

Activation of the 441st CIC Detachment

The provisional status of the detachments was short-lived. On 17 August 1944, the 5227th designation for the Theater command detachment was abandoned with the activation of the 441st CIC Detachment as the Theater command detachment, under G2, USAFFE. At the same time, the 39 combat, regional, and area detachments active in the Theater were given numerical designations and were made subordinate to the 441st CIC Detachment.[115] Throughout the remainder of the war and during the occupation of Japan, the 441st directed CIC operations in the Far East. Colonel Vreeland remained commanding officer of the 441st until January 1945, when Colonel Galloway assumed command.[116]

Move to Hollandia

With most of New Guinea and the offshore islands in Allied hands, the move of USAFFE Headquarters from Brisbane to Hollandia was begun in September 1944.

After advance headquarters had been established at Hollandia, personnel and equipment of G-2 and other offices were moved forward piecemeal. CIC participated in the move. Both the 441st CIC Detachment and the CIC Training School were moved from Brisbane to Hollandia in November. By the end of 1944, Brisbane had been designated "Rear Echelon Headquarters" and Hollandia, "Headquarters."[117]

Increase in Investigative Activity

The investigative activity of CIC in the Southwest Pacific kept pace with the growing numbers of American troops in the area. The number of cases handled between May and December 1943 more than doubled, jumping from 530 to 1,322.[118] By the end of 1944, these totals again doubled.

In September 1944, when the CIC workload was the heaviest of any time prior to the Philippine operations, the detachments within USAFFE handled 2,511 cases.[119]

Most of the investigations were routine loyalty checks; espionage and sabotage cases were extremely rare. A breakdown of all cases handled within the Theater between May 1943 and February 1944 revealed that more than two-thirds of all investigations were of the personnel type. Approximately 11.5 percent involved disaffection, and another 10.8 percent concerned violations of AR 380-5. Subversive activities, incident cases, espionage, and sabotage investigations combined were barely 10 percent of the total.[120]

These figures do not give a complete picture of CIC operations, however. Many man-hours went into security lectures, ship and aircraft panelling, security surveys, and tracing of rumors--not glamorous assignments, but a vital part of CIC's work.

Security Campaign in Australia

In Australia, the Australian Army and Commonwealth government assumed responsibility for the nation's security. The country was divided into districts by the Commonwealth Security Service and the Military Intelligence Field Security Wing. A Coast Watch Patrol system was begun and observers were placed at strategic points along all except the southern Australian coasts.[121]

However, documents captured from the Japanese in the battles of 1943 indicated that serious leaks of information were coming out of Australia. On several occasions, papers taken from the enemy showed that the Japanese knew strengths of American units and had advance knowledge of plans for Allied attacks.[122]

3279

CIC joined Australian authorities in an intensive campaign to tighten security measures and to trace the source of the security leaks.

Little was known at that time of the methods of the Japanese intelligence agencies; however, intelligence reports in May 1943 indicated that the Japanese were recruiting Chinese residents of Hong Kong who had once lived in Australia. It was feared that the enemy would attempt to land some of the agents in Australia.[123]

CIC's main concern with this report was to impress upon the thousands of American troops in Australia the danger of revealing even the slightest bit of information to friends or strangers.

By nature the American soldier liked to talk. He made friends quickly among the Australians and he could see little harm in answering their casual questions about his unit, his training, or his job. The troops had received security indoctrination before leaving the United States. But as the threat of a Japanese invasion of Australia waned, the soldiers--and Australian civilians--relaxed their security guards.

Beginning in March 1943, Lt William C. Shelton of G22 USAFFE's security subsection led CIC agents in Australia in a concerted security campaign. Cooperating with Australian authorities, CIC appealed to the public through radio, motion pictures, and posters. Security poster contests were conducted among the troops.

CIC stepped up its program of security surveys. Military installations, debarkation points, post offices, and even small unit command posts in the field were checked.

Special efforts were made to dramatize security lectures and to eliminate the boredom which troops had associated with such talks. At Rockhampton, for example, troops mingling in the crowd at a railway depot were suddenly brought to attention when a loudspeaker blared:

> "Attention all troops! Attention all troops! This is Military Intelligence speaking. This is Military Intelligence speaking. Enemy agents are operating in this area. They operate in every role from bright young newsboys to kindly old ladies. They may be wearing GIs', officers' uniforms, or Australian Army issue. Not all spies are blonde and beautiful nor will they ask you the details of secret plans. Enemy agents piece together their information just as we do a jigsaw puzzle. Here are some of the things they want to know. Remember...this is what the enemy wants to know: The name of your boat...

123 Opns of CIC in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 Jul 48, p. 32, (Unclassified) (Central Records Facility).

The number of ships in your convoy...The type and amount of protection... The number of men in your unit...The type and amount of equipment...The type and length of your training...and any other information that may give him a clue as to the type of fighting you are trained for and where you may fight. Remember, the enemy will try to gather this all-important information piece-meal because you are all too smart and too loyal to give it to him whole The enemy only one [illegible] giving aid and information to the enemy. And that way is: Don't Talk! No matter who starts discussing military information, from officers down to shoeshine boys, from motherly welfare workers to cute little country girls. Be smart! Dummy up! Change the subject. Don't be ashamed to say, 'I don't know'."

At the request of the USAFFE Chief of Staff, CIC agents staged security raids in the offices of Headquarters, USAFFE. Agents prowled the offices at night, rummaging through desk drawers and filing cabinets and seizing every classified document not properly stored. Other commands received similar treatment to dramatize at higher levels the pressing importance of security.

The security program did not stop at merely denying information to the enemy. CIC fought rumors, sounded out sources of friction between Americans and Australians, attacked racial problems which grew out of the arrival of American Negro troops, and checked possible subversive groups by which troops might be influenced. Allied unity was stressed. "Divide and Conquer," a film depicting the Axis scheme for undermining Allied efforts, received widespread showing.[124]

"The Jungle Network"

Radio spot announcements were used effectively in the security campaign. Agent George Yakobian was recruited into CIC to write and produce radio shows with security themes, and for two years he worked on the radio project at USAFFE Headquarters. The security programs were beamed to the troops over what was popularly called the "Jungle Network."[125]

CIC Lecture Teams

In keeping with the new emphasis on security was the organization of special CIC lecture teams. CIC agents had presented security talks to troops from the first; often, however, the press of other duties resulted in haphazard preparation for the lectures, and the talks were seldom effective. With the pace of the Allied

125 Interview with George Yakobian, at NCICA Convention, Philadelphia, Pa., 7 Aug 53, (Unclassified) (Central Records Facility).

3281

offensive constantly increasing, the CIC Operations Section decided to devote more attention to the security indoctrination of troops.[126]

After experimenting at the CIC Training School in Brisbane, G2, USAFFE, decided in March 1944 to send CIC agents who were qualified speakers into the field as lecture teams. Operations Section organized two such three-man teams, made up a schedule for each, and the teams commenced touring bases and units in Australia. Upon arriving at a base, arrangements were made to have as many troops as possible gather at a suitable speaking platform, often nothing more than the hood of a jeep. Then each of the three agents presented a brief security talk.

The topic of the first speaker, "How the Enemy Gets Information From and About Us," stressed the danger of not maintaining security defenses. The second speaker warned against "Loose Talk." The third attempted to demonstrate the value of getting "Information From the Enemy," by taking prisoners and searching for and turning in enemy documents and equipment. Since a team visited a unit only once, the lectures were always the same. The lecturers quickly became skillful.

Just prior to the Philippine invasion in October 1944, the lectures were revised with the theme being the Philippines. And after the Allies had reestablished themselves in the Islands, a new series of lectures, known as "The Philippines Show," was prepared for presentation to troops in the Philippines. These lectures remained the same until July 1945, when a new set was prepared, designed for the invasion of Japan.

Lectures were not written in military form, but were organized to be effective and stimulating to the troops. They were designed to impress and convince with hard-hitting, dramatic statements of fact. The success of the style was reflected by the results of evaluation sheets distributed among the audiences. In June 1944 the results were 96 percent favorable.[127] The estimated attendance for twenty lectures given during May 1944 approached 10,000.[128]

In June two new CIC lecture teams were formed for operations at advanced bases. One three-man team, trained especially for New Guinea operations, left late in the month for Base 2.[129]

The lecturers worked under Lieutenant Shelton in the Operations Section when they were not in the field, but the area covered by the teams continued to grow. By the end of 1944 ten teams were operating in the theater. More than 100,000 troops had listened to the talks by the time Leyte was invaded in October. Special lectures were delivered to personnel of the Australian Army, the Royal Australian Air Force, the American Red Cross, and the U.S. Navy. In September 1, 200 officers and men at Headquarters, USAFFE in Brisbane heard the security talks; and at the request of Brig Gen Bonner Fellers, G1, who had heard and been impressed by the lectures, they were given to fifty members of GHQ, SWPA.[130]

CIC and Mrs Roosevelt

CIC drew a new security assignment in September 1943 with the announcement that Mrs Franklin D. Roosevelt would visit American troops in Australia and New Guinea. Although the Provost Marshal provided uniformed military police to guard the President's wife, CIC was asked to assign undercover agents to accompany Mrs Roosevelt. Major Labatt and two enlisted CIC agents were selected for the security surveillance. The entire trip was completed without incident, although Mrs Roosevelt spent several days in forward areas of New Guinea.[131]

Ship and Aircraft Panelling

One phase of the security program which assumed enormous proportions during 1944 was the panelling of ship and aircraft crews and passengers.

Started in 1943 as a control over merchant seamen and a method of cutting off possible avenues of entry for enemy agents, ship panelling activities increased rapidly. In 1944, CIC agents boarded and checked 4,621 ships in Australia and New Guinea ports. Papers and effects of 47,553 seamen were examined during the year.

Aircraft panelling, begun in July 1944, was supervised by CIC, although military police made the actual checks of passengers and crews. Control points were established at Milne Bay, Hollandia, Biak Island, and other air traffic centers in New Guinea, as well as at Australian airports. By the end of the year 12,649 planes had been checked and more than 1,002,000 persons examined.[132]

CIC Agents Interview Former Japanese Prisoners

As combat troops surged forward in the summer of 1944, large numbers of Allied citizens interned by the Japanese were liberated and rushed to Australia for medical attention.

Recognizing the possibility of obtaining valuable information from these evacuees, CIC established special interrogation teams to interview the new arrivals from liberated areas. The first such team was organized at Brisbane in May 1944.

Agents spent long hours at an Army hospital in Brisbane, questioning the evacuees and advising them of security regulations. Interrogation teams obtained information of both tactical and counterintelligence value.[133]

This CIC function, valuable at the time, was criticized after the war in the history of CIC in the SWPA prepared under the direction of General Willoughby. This history pointed out that the evacuees first passed through the combat echelon, G2, SWPA, where personnel of the Allied Translator and Interpreter Service and the Allied Intelligence Bureau could--and should--have questioned them.[134]

CIC's "Counter Intelligence Area Studies"

Another CIC project which later brought the censure of writers of the history prepared under General Willoughby was the compilation in July and August 1944 of a series of "Counter Intelligence Area Studies."

Prepared by area study teams in the CIC Operations Section, these reports contained information on each of several provinces, islands, and areas which were marked for reconquest. Black Lists and White Lists, names and descriptions of persons known to be either disloyal or loyal, were included along with information about the areas and their inhabitants. Studies on Leyte, Samar, Panay, Negros, and Luzon were completed and distributed to intelligence personnel throughout the Theater.[135]

The Willoughby history complained about the "competitive, duplicatory character" of the area studies:

> "A particularly flagrant example (of duplication of effort) can be found in the publication, by CIC, of so-called "area studies." Hastily assembled,

133 Operations of CIC in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 Jul 48, p. 47, (Unclassified) (Central Records Facility).
134 Ibid, footnote 20, p. 47.
135 Ibid, p. 53.

mimeograph issues, with old or inadequate map material, these "area studies" were developed by CIC in Sydney or Brisbane within a stone's throw of the AGS (Allied Geographical Section) Headquarters, then successfully engaged in the publication of literally thousands of copies of terrain studies and handbooks that reached staffs and troops well in advance of operations. CIC, as elsewhere, was aware of these publications, which is stupid, or they preferred their own "trade-mark" which is wasteful and inefficient."[136]

CIC's Technical Facilities

In August 1944 the growing need for specialized, technical investigations resulted in the establishment of the first CIC chemical laboratory in the Theater.

The laboratory was opened at Brisbane in conjunction with Headquarters of the 441st CIC Detachment. Agent David W. Walters, a qualified technician, was placed in charge of the laboratory, which in time acquired facilities for many types of chemical analyses. Other investigative agencies frequently requested the assistance of the CIC laboratory. When CIC Headquarters were moved to Hollandia in November, laboratory equipment was moved--into an air-conditioned development laboratory especially constructed for CIC.

Throughout the remainder of the war, the chemical laboratory remained a valuable adjunct to the photographic laboratory which had been established in 1943. Activities of the laboratory technicians ranged from ballistics tests to restoring charred documents and deciphering secret writing. In one instance, laboratory personnel identified by typewriter type the disaffected writer of a letter to General MacArthur; in another, they determined the presence of human blood in connection with a murder case.[137]

CIC in the Rear Areas: A Summation

Such was the work of CIC in the rear areas--a host of duties all revolving around the single word "security." Security lectures, security surveys, travel security--routine duties broken by an occasional interview which netted tactical information of value to the men in combat. There were no glamorous spies to catch, no large segments of the civilian population to control.

In September 1944, while combat troops were poised for the jump to the Philippines, the 441st CIC Detachment's Situation Report listed twelve area detachments which were performing these rear-echelon counterintelligence duties. In Australia there were Base Detachment 2 at Townsville, Base 3 at Brisbane, and

136 Operations of CIC in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 Jul 48, footnote 36, p. 53, (Unclassified) (Central Records Facility).

137 Ibid, pp. 43-44.

3285

Base 7 at Sydney. In New Guinea, area CIC detachments were the 440th, commanded by 2d Lt James J. Lynch, with the VI Island Command; the 442d, under Maj Ermall P. Geiss in British New Guinea; the 448th, commanded by Capt Philip O. Roach, at Hollandia; the 449th at Biak, under Capt James A. Bledsoe; the 451st, commanded by 1st Lt Alan S. Geisman, at Milne Bay; the 452d at Oro Bay, under 2d Lt Andrew DeLuca; the 453d at Port Moresby with Maj Charles F. Chenery commanding; 2d Lt [illegible] Wood's 454th at Lae, and the 455th at Finschhafen, with 1st Lt Leonard J. Emmert in command.[138]

CIC's Role in the SWPA

The role of the Counter Intelligence Corps in the early campaigns in the SWPA was unique, dictated by expediency and by the strange circumstances under which agents worked.

In combat the detachments were used extensively to gather information of immediate tactical value to commanders. Emphasis which was placed on the capture of enemy documents and equipment and the search of enemy dead attests to this fact. A second function, that of security indoctrination of combat troops, was equally stressed. In New Guinea and the islands nearby, arrest of collaborationists and establishment of controls over civilians in liberated areas was of secondary interest to the combat detachments. This was true because liberated areas were territories of other Allied powers. Functions which might have belonged to CIC in a different situation went to units such as the Australia-New Guinea Administrative Unit and the Netherlands Indies Civil Administration.

In the rear areas, where the Australian government was responsible for security measures, CIC confined its activities to security measures among American troops and the gathering of information of value to CIC combat detachments.

But most of CIC's work in the Southwest Pacific was still ahead; in the months to come, drastic revisions would be made in the manner in which CIC agents would be employed. In the Philippines, the American forces were to be faced for the first time with the task of driving an enemy invader from United States territory. There, for the first time, CIC would have to investigate persons who had forsaken their allegiance to the United States to collaborate with the Japanese. There, for the first time in the Pacific, CIC agents would have to assist in clearance of natives who could be trusted to restore home government to the islands.

It was a task eagerly awaited by CIC personnel throughout the Theater in the waning months of 1944.

3286

Part II: The Fight for the Philippines

Part II: THE FIGHT FOR THE PHILIPPINES

Chapter 1

THE LEYTE CAMPAIGN

Even before fighting in the islands to the south ended, the Counter Intelligence Corps was busy preparing for the invasion of the Philippines.

In the months preceding the first landings on Leyte on 20 October 1944, CIC detachments in the Pacific laid a firm counterintelligence foundation for the impending campaign. CIC agents delivered hundreds of lectures to orient the troops on their security responsibilities before, during, and after combat. Individual agents and special lecture teams with each division, corps, and army detachment maintained constant speaking schedules. The lectures were well received, with troops appearing to welcome the opportunity for a clearer view of their part in the counterintelligence mission.

As the date of the operation neared, the lecture programs were stepped up. An effort was made to refresh the minds of troops with concise summations of the material they had received previously. In many instances, brief lectures were given by CIC personnel on shipboard enroute to the actual landing.

Other media also were used to contact troops in the pre-combat stage. CIC detachments frequently submitted security and counterintelligence material for publication in unit newspapers. Several detachments published weekly "Counter Intelligence Digests," aimed at keeping unit Intelligence Officers abreast of current counterintelligence developments and aiding them in their periodic orientation talks to personnel. Bulletin board notices and posters were prepared to keep constant reminders before the troops.

Immediately prior to actual embarkation of troops, CIC agents directed or assisted in last-minute checks to determine whether any troops were carrying personal items which would disclose their unit identity in the event of capture. Commanding officers and unit Intelligence Officers assisted in making certain that troops turned in diaries, letters, pictures, or any other papers which might prove valuable to the enemy. Spot checks were made to insure that code markings of clothing and equipment had been properly obliterated.

A highly important responsibility of CIC as troops evacuated their quarters to board ships for the Leyte invasion was the survey of bivouac areas. During each move CIC agents were left behind to make thorough searches of the various headquarters and surroundings. In most instances the previous emphasis by CIC on the necessity for complying with AR 380-5 showed results. Bivouac areas had been carefully combed for classified material as the various groups moved out.

3288

In the few instances where information had been left behind carelessly by the departing units, CIC reports and recommendations brought the matter to the attention of higher headquarters and assured more strict compliance with regulations in the future.

Security surveys were made of those plants or buildings where advance planning was being carried out, and detachments frequently added extra guards and other precautions. Constant checks of cryptographic personnel were maintained. Unit commanding officers were cautioned against revealing too-detailed information in their troop briefings.

To prevent loose talk by personnel departing on furlough or rotation from areas in which they may have learned of an impending operation, CIC detachments established a system of personally warning all such individuals against revealing military information. Before anyone received departure orders, he was required to read and sign a statement summing up his responsibilities under AR 380-5.

CIC Trains for the Philippines

All material necessary to CIC detachments in the Philippines was supplied to detachments as far in advance as possible by the Plans and Training Section of CIC Headquarters in SWPA. Such material included terrain studies, language guides, detailed reports on enemy espionage systems, black and white lists, pertinent reports of previous experiences in action by other CIC detachments, and all area and geographical reports available.

Some detachments organized self-training courses, with agents instructing other detachment members. In addition detachment commanders kept their teams fully informed of the development of operational plans and the CIC mission. Detachment members kept physically fit with calisthenics and periodic patrols and hikes. All detachments maintained regular schedules of practice firing with weapons, including the .45 pistol, .38 revolver, carbine, and Thompson submachine gun.[139]

CIC Organization for the Leyte Campaign

As in the island campaigns to the south, four types of CIC detachments were to be employed in the Leyte operations and throughout the Philippines.

Plans called for a combat detachment with each army, corps, division, or other tactical unit acting as a separate task force. Normal strength of a division

139 Documentary Appendixes to Operations of the Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FED, (Unclassified) (Central Records Facility).

detachment was set at two officers and ten enlisted men, supplemented by five qualified Filipino soldiers trained in counterintelligence procedures.

Area detachments, consisting of a minimum of two officers and ten enlisted men, plus five Filipino soldiers, were to be established in territory occupied or [illegible] forces. Initially area detachments were to operate under the direction of the Task Force CIC Commander, with control reverting to the Commanding General, USAFFE, after the combat phase. Flexibility was to characterize the organization of these area detachments; they could be divided into two units if necessary, or the personnel of a single detachment could be doubled or tripled.

After the combat phase, regional detachments consisting normally of three officers and twelve enlisted men were to move into liberated territory to direct the activities of the area detachment.

Finally, the theater detachment, the 441st CIC Detachment, was to coordinate and supervise all CIC activities in the Theater.[140]

New Duties for CIC

Plans for the Leyte operation enumerated the duties of the Counter Intelligence Corps. In addition to the security and document-collecting duties which had been the bulk of CIC's work in the previous island campaigns, agents were assigned far-reaching responsibilities in connection with the civilian population of the Philippines.

Chief among these was the responsibility of "arrest and interrogation of all known enemy agents and collaborationists for detention by Provost Marshal, who will immediately notify Civil Affairs officers or PCAU (Philippines Civil Affairs Unit)."[141]

Punishment of collaborators was to be left with the Philippine Commonwealth government; however, the Army was to assist the government in determining which citizens had collaborated with the Japanese. This principle of having CIC arrest and intern collaborators for punishment by the Commonwealth was in keeping with the announced intention of the United States to grant the Philippines full independence as soon as possible.[142]

Presence of large centers of population, heretofore unencountered by CIC in the Southwest Pacific, resulted in other new duty assignments for CIC detachments in the Philippines. Among these additional tasks was collaboration with Civil Affairs in maintenance of order, control of civilian movement, communications, and publications; operation in conjunction with the Provost Marshal of reception and interrogation centers for non-Japanese personnel; security of governmental office[illegible] public utilities, report and investigation of atrocities, establishment of pass-systems for the civilian population, and supervision of newspaper censorship.[143]

As the day for the invasion of the Philippines neared, CIC detachments throughout the Theater were told of their new responsibilities and rehearsed their role in the coming operation.

Leyte Invasion: A Tactical Surprise

The invasion of Leyte on 20 October 1944 produced one of the most sensational tactical surprises of the war--thanks in part to indefatigable CIC lecturers who had burned into the minds of American troops the necessity for strict preservation of security.[144]

Original plans to strike first at Mindanao were abruptly scuttled only a month before the invasion. On 13 September Adm William F. Halsey, Jr., recommended to his chief, Adm Chester C. Nimitz, that three projected intermediate operations against Yap, Mindanao, and Talaud and Sangihe Islands be cancelled and that the Allies attack Leyte in the Central Philippines instead.[145]

Leyte was picked because of its potential airstrip sites and extensive harbor facilities. It had a free undefended approach from the east, sufficient anchorage area, and good access to the remainder of the central islands in that it commanded the approaches to Surigao Strait.

Gen Walter Krueger's Sixth Army Task Force, composed of two corps and four divisions, was transported and protected by the Central Philippine Attack Force.

145 The War Reports of General Marshall, pp. 227-228.

The 6th Ranger Battalion made pre-invasion landings on Dinagat, Suluan, and Honohol Islands at the entrance to Leyte Gulf on 17-18 October to feel out Japanese defenses in the area and provide a safe approach for the invading forces.

On 19 October the huge convoy approached Leyte's east coast. The next morning troops under General Krueger went ashore as scheduled. X Corps, with the 1st Cavalry Division and the 24th Infantry Division, hit the beaches in the San Ricardo-Palo area near Tacloban, the Leyte provincial capital. Tacloban Airdrome was seized by the 1st Cavalry Division the same day. About 20 miles south at Dulag, the 7th and 96th Divisions landed under XXIV Corps.[146]

CIC Detachments in Initial Leyte Action

Eight CIC detachments were attached to the original Sixth Army Task Force which smashed into the Leyte beachhead between A-Day, 20 October, and A-Day plus four. More than 70 CIC officers and agents, in addition to attached Filipinos, participated in the initial action.

Maj Blair P. Labatt, commander of Sixth Army's 306th CIC Detachment, directed CIC activities during the Leyte landings. Subordinate to the Sixth Army detachment were six other combat detachments and the 459th Area Detachment, commanded by Capt James W. McColl.

Under X Corps 210th CIC Detachment, led by Capt Joseph P. Hurley, were the 801st CIC Detachment of the 1st Cavalry Division, commanded by Capt Thomas D. Smith, and the 24th Division's 24th CIC Detachment, commanded by 1st Lt David I. Connelly.

Entering the Leyte campaign from the Central Pacific Theater, XXIV Corps brought with it the 224th CIC Detachment, commanded by Capt Harold F. Frederick. With the 7th Division was Capt George A. Hanna's 7th CIC Detachment. The 96th CIC Detachment, commanded by Capt Federico L. Fernandez, Jr., was attached to the 96th Division.[147]

On the same day, 22 October, Lt Col John N. Irwin arrived as coordinator of all counterintelligence for G2. And in one of the war's most dramatic episodes,

CONFIDENTIAL

The Battle in the North

To the north X Corps, with its 210th CIC Detachment, landed at San Pedro Bay near Tacloban. The 801st CIC Detachment made its A-Day landing at Cataisan Point, just south of Tacloban, and the 24th CIC Detachment went ashore in the area just south of the territory covered by the 801st.[148]

While American troops were still on the beaches more than 2,000 natives who had fled Tacloban began returning to their homes. Realizing that espionage and sabotage agents might be mingling with the civilians, the 210th CIC Detachment arranged with the Engineers and Military Police for a temporary compound where natives could be interned until screened.[149]

On 21 October, four members of the 801st CIC entered Tacloban on the heels of 1st Cavalry Division assault troops. Under sniper fire, agents quickly searched the Provincial Capital Building, Kempei Tai Headquarters, Kali Bapi Headquarters, the Post Office, the Municipal Building, and the deserted headquarters of the Japanese 16th Division. However a tactical reverse the following day forced all American troops to leave the city and CIC agents found it impossible to post guards at any of the key targets reduced on 21 October.

Troops moved back into Tacloban on 22 October. At the same time advance elements of the 459th CIC Area Detachment landed at Cataisan Point and moved in to aid the 801st and five agents of the 210th in searching numerous government buildings in Tacloban.

One of the first persons arrested by CIC agents in the provincial capital was Pastor Salazar, the puppet governor of Leyte. Under questioning by CIC agents Salazar admitted he had held secret conferences with Japanese military commanders even after the arrival of United States troops in the capital city.

Vincent Quintero, mayor of Tacloban under Japanese occupation, was removed from office and restricted to his home pending a CIC investigation of his association with the enemy. Arturo O. Reyes, the city's police chief, was arrested and questioned by agents of the 210th and 459th CIC Detachments, but was released temporarily to quell disorders which followed the fighting in Tacloban.[150]

Six civilians of unquestioned loyalty and integrity, each with a broad knowledge of civilian activities during the Japanese occupation, were selected to constitute a civilian panelling board. As CIC agents made investigations and recommendations they consulted with board members, who were frequently able to supply sources for verification of information or for further checks.

152

CIC Recruits Chinese Labor

Shortly after the invasion of Leyte Agent Charles C. Deubel of the 801st CIC Detachment found himself near a unit assigned the task of rebuilding a damaged airstrip--a project hampered by a shortage of native labor.

Noting a large number of Chinese in the area, Deubel sent Humphrey W. Leynse, a Mandarin-speaking agent of the 801st, to try to recruit laborers for the project. Leynse, son of missionaries of Dutch extraction, had spent much of his life in China. Fortunately for the project, he knew how to bargain with the Chinese.

The Chinese were willing to work, but wages alone were not enough inducement; their national pride was at stake. They insisted that their work in rebuilding the airstrip be considered a "representation"--a contribution of the Chinese government. Leynse agreed, promising a colorful ceremony at which the Chinese efforts would be officially recognized. He then set about his recruiting campaign.

The response was tremendous. More than 150 Chinese reported at 0330 one morning for the recognition ceremonies at an Army warehouse. Deubel made a speech. So did Leynse. Several Chinese made impromptu talks. They climaxed the display of patriotism with a colorful parade to the labor office. Marching in a column of twos, the Chinese waved American and Chinese flags and appropriate banners as they made their way to sign up for work.

Before the procession reached the labor office, it was interrupted by a colonel who was in charge of the construction project. In their haste to recruit laborers, Deubel and Leynse had forgotten to tell him of their plans. Deubel quickly explained the situation. Delighted, the colonel himself made a speech of welcome. Then the parade to the labor office continued, and the Chinese were soon at work on the airstrip.

3295

A Collaborator Waitress

High on the 801st CIC Detachment's blacklist was the name of _who was accused of causing the death of an American captain.

had been very friendly with the American captain before the Japanese invasion. After the Japanese struck at Leyte, the captain gave a letter to smuggle out in preparation for his plan of escape. Instead, gave the to a Japanese sergeant who found the captain, tied him to a gate, and bayoneted him to death. became the sergeant's girl friend.

At a Leyte village liberated by the 1st Cavalry Division, the chief of police gave a dinner for town officials and three 801st CIC agents who were in the area. turned up as one of the waitresses at the dinner.

Arrested by CIC agents denied giving the letter to the Japanese sergeant. She claimed she had flirted with him only to save the life of her brother, a guerilla. CIC released her to the custody of Philippine authorities.[153]

CIC Agent Killed During Air Raid

CIC suffered its first casualties in the Philippines on 25 October. During an air raid, a Japanese bomb struck an LST with agents of the 306th CIC Detachment aboard waiting to disembark. Cpl Elvin C. Jensen was killed, and Sgt Daniel J. Coakley was seriously wounded by shrapnel.

Initially the 306th operated in the vicinity of San Jose, about four miles south of Tacloban. Five miles farther south, two agents set up an office for screening civilians against their lists of suspected collaborators. When beachheads were firmly established, the 306th moved to San Roque, near the Sixth Army command post about 16 miles south of Tacloban. The detachment's headquarters then was established at a point midway between XXIV and X Corps' areas of operations.[154]

24th CIC Repels Japanese Attack

After landing on A-Day, the 24th CIC Detachment moved inland and established temporary headquarters at Palo. On 25 October all but one agent of the detachment were trapped inside the headquarters building when a Japanese suicide party made a surprise assault on the village.

---

153 Interview with Charles C. Deubel at NCICA Convention, Philadelphia, 7 August 1953, (Unclassified) (Central Records Facility).

154 Appendix 10, Documentary Appendixes to Operations of the Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, (Unclassified) (Central Records Facility).

The Japanese, 80 fanatical soldiers who had infiltrated American lines, rushed into Palo at 1400 and attempted to storm the CIC office. Completely surprised, the small band of CIC agents hastily set up a defense and thwarted the enemy raid. The Japanese were repulsed with heavy losses.[155]

As 24th Division troops hammered into the Leyte interior the 24th CIC Detachment advanced to the villages of Santa Fe, Jaro, and Tungo, collecting more than 500 pounds of enemy documents in less than a week.

Enemy infiltration continued to plague 24th CIC agents. Japanese soldiers often remained behind in the guise of natives of the little towns and barrios. Others passed through American lines dressed in women's clothing. Special CIC patrols were formed to guard against such infiltration techniques.

X Corps Drives Toward North Coast

The X Corps campaign toward Leyte's north coast resulted in the capture of the key coastal towns of Carigara and Barugo, where the 210th CIC Detachment quickly set up sub-offices, assisted by agents of the 24th and 801st Detachments. Agents of the 210th also worked in Alangalang, Jaro, San Miguel, Pastrana, and Palo. Close scrutiny was maintained on all fishing vessels along Carigara Bay coast to prevent clandestine landing of enemy agents. Native Volunteer Guards, recruited and supervised by CIC, performed the actual surveillance of the coastline.

Mission to Samar

Early in the Leyte campaign, the 801st CIC Detachment was instructed to gather as much information as possible about the adjacent island of Samar. Particular emphasis was placed on obtaining information about guerilla leaders and activities on the neighboring island.

Four days after the invasion of Leyte several agents of the 801st CIC landed on Samar with elements of the 1st Cavalry Division. Agents quickly contacted Capt Pedro Talbo, leader of the guerilla forces around Basey on Samar. Captain Talbo and other guerilla officers turned over to CIC a detailed report of guerilla units on Samar, including names of officers and locations of command posts, message centers, and Japanese troops. Guerillas in Samar's west-coast towns of Basey, Calbiga, Villareal, Wright, and Catbalogan also gave CIC agents considerable valuable counterintelligence information.

155 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 1948, p. 64, (Unclassified) (Central Records Facility).

Those agents of the 801st who remained on Leyte operated jointly with the 24th and 210th CIC Detachments in Jaro, San Miguel, and Santa Rosa.

32d CIC Detachment Lands in Leyte

Japanese resistance stiffened as American forces pushed west towards Limon, the northern anchor of the corridor leading to the enemy stronghold at Ormoc. In mid-November the Japanese rushed crack troops of their 1st Division into the fight to defend Ormoc, but the Americans brought in reinforcements, too.

On 14 November the 32d Division landed on Leyte and went into action along the Pinamopoan-Ormoc highway, relieving the 24th Division for duty elsewhere. With the new division came the 32d CIC Detachment commanded by 1st Lt Mark G. Lynch.

Agents of the 210th CIC Detachment contacted the 32d CIC and oriented its personnel on the tactical situation. Then, while 32d Division troops fought for Limon, the 32d CIC Detachment became increasingly active in the Pinamopoan-Carigara sector. Agents kept busy screening civilians and maintaining security of military movements, although the fluid tactical situation made their work difficult.

On 24 November Limon was finally taken, and the Yamashita Line blocking the northern approach to Ormoc was smashed in bitter hand-to-hand combat. The 32d Division's union with the 1st Cavalry Division near Lonoy on 22 December marked the collapse of enemy resistance in the upper Ormoc valley.

The Battle in the South

Meanwhile, XXIV Corps was pushing toward Ormoc from the south. On A-Day, 20 October, the 224th CIC Detachment attached to XXIV Corps landed near Dulag, about 20 miles south of Tacloban. The 96th CIC Detachment went ashore with the 96th Division near Tanauan, north of Dulag. The 7th Division and its 7th CIC Detachment landed on a beach between Dulag and Tanauan. Liaison between the three detachments was quickly established, but in the first days after the invasion the tactical situation made it impossible to effect adequate counterintelligence measures.

In Dulag the civilian problem was critical, and agents of the 224th CIC Detachment spent their first days there interrogating scores of persons in the civilian enclosure. The detachment also searched the Dulag office of Kempei Tai.

As the fighting moved inland the 224th opened sub-offices at San Jose, Barauen, and Abuyog, expanding its coverage to the north, west, and south. Its agents spent considerable time contacting guerillas for information and making numerous surveys of the various towns under the 224th's jurisdiction.

At Tanauan three public officials were interned by agents of the 96th CIC Detachment, who also seized the puppet mayor of Dulag and his family. The 96th fanned out to operate in the towns of San Roque, San Jose, Dulag, Tolosa, and Dagami. From native informants they obtained much information on pro-Japanese organizations and individuals in those localities.

It was the job of the 7th Division to push across Leyte, cutting the island in half in a southwesterly direction from Dulag. Thus the drive toward Ormoc on the west coast was from three directions--north, south, and east. Agents of the 7th Detachment soon established offices at La Paz and Abuyog to the south, and, after reaching the west coast on 26 November, at Baybay, Bato, and Inopacan. CIC organized a comprehensive port security system composed of guerilla Volunteer Guards on the west coast. Evacuees from neighboring islands were interrogated, and infiltration of enemy agents from those islands was reduced to a minimum.

Two New Divisions Arrive

Meanwhile, two other divisions had been committed to the Leyte battle under XXIV Corps.

On 18 November the 11th Airborne landed amphibiously between Abuyog and Tarragona, 40 miles south of Tacloban. From there the 11th pushed inland and cleared the Ormoc-Burauen supply trail, an important lifeline of the Japanese. After being oriented by the 224th and 7th Detachments, the 11th CIC Detachment began to function at Burauen, with other offices at La Paz and Abuyog. The 11th CIC Detachment was composed entirely of paratroopers.

On 6 December the paratroopers of the 11th Division suddenly found themselves defending against a surprise Japanese airborne attack near the San Pablo airstrip. After five days of battle the enemy parachutists were wiped out. During the fighting, 1st Lt Dean H. Caziarc, Commanding Officer of the 11th CIC Detachment, and T/Sgt David Finn, agent-in-charge, were wounded. Lieutenant Caziarc was evacuated, but Sergeant Finn returned to duty.

The 77th Infantry Division, on its way to New Caledonia after capturing Guam in the Central Pacific Theater, had its orders changed and landed on Leyte 23 November. For about two weeks the division underwent training and routine patrol duty in XXIV Corps' rear area.

On 6 December, with the 77th's surprise assault at Ipil, a few miles below Ormoc, the fate of Japanese resistance on Leyte was all but sealed. Ormoc was taken four days later. The 77th CIC Detachment initiated counterintelligence measures there. The next day the 7th Division moved into the city, and the 7th CIC Detachment established its headquarters at Ormoc, replacing the 77th Detachment. The attack continued north along Highway 2 until Valencia was captured on 25 December, and all that remained for American troops on Leyte were mopping-up operations. The 77th Detachment set up its office in Valencia where it continued to operate throughout the month.

At the end of November the 38th Infantry Division reached Leyte. Its 149th Infantry Regiment helped defend airstrips at Buri, Bayug, and San Pablo against Japanese paratroop drops early in December. The 38th CIC Detachment worked under the 210th Detachment, operating around Jaro and opening a sub-office in Alangalang.[156]

Regional and Area Detachments Move In

The 492d Regional Detachment, commanded by Lt Col Paul Hurst, arrived at Tacloban near the end of November to assume jurisdiction over counterintelligence activities on Leyte and Samar. Under this higher echelon served five Area Detachments: the 459th (Tacloban); Capt Gerald E. Gilmore's 480th (Ormoc); the 458th, commanded by 1st Lt William H. Sayers; the 482d under Capt John T. Stapleton; and the 483d, commanded by 1st Lt Denver F. Cook. Effective 26 December 1944, tactical units on Leyte were relieved of assignment from Sixth Army and transferred to Eighth Army, and CIC supervision of the combat detachments was transferred from the 306th Detachment to the 308th, commanded by Lt Col Chapman Turner.[157]

CIC Problems in Leyte

Throughout Leyte CIC detachments faced hosts of problems they had not encountered in earlier landings in the Southwest Pacific.

3300

In contrast to the comparatively primitive and scattered peoples previously encountered, Leyte's population of approximately one million intelligent and civilized inhabitants, influenced by several years of Japanese administration and propaganda, offered real problems of collaboration and potential subversive activity. To cope with this situation was in itself a full-time task for CIC detachments; in addition there was greater need than ever before to assist G2's through the interrogation of guerillas and civilians for tactical information.

In earlier landings CIC interest in securing documents was chiefly to assist in the expenditious collection of tactical information. On Leyte, however, there was urgent need to search for and secure documents of counterintelligence importance. Records of the Japanese-dominated Bureau of Constabulary, of the local police, of Japanese "trading" organizations used as fronts for espionage and "pacification," and of the Kempei Tai, were potential sources of information about enemy agents.

The guarding of key buildings was difficult, since troops were not available for that purpose; Filipinos pressed into service required constant supervision to see that they held their posts and prevented the entrance of looters. Although coverage could not be complete, it enabled the acquisition of many documents of both tactical and counterintelligence value.

On entering towns, CIC detachments invariably were met with a disorganized and bewildered populace. In cases where a Philippine Civil Affairs Unit had not yet arrived CIC had to establish immediate contact with responsible local citizens and do whatever was possible to assist in the reestablishment of order.

Guerillas, some bona fide and some self-styled, were usually on hand with elaborate lists of "spies" and "collaborators." In several cases, the unfortunate suspects themselves, ranging in ages from 15 to 50, were brought in by zealous vigilantes at rifle's point. Previously compiled lists of personalities were naturally insufficient to provide immediate confirmation or denial of the allegations made by these volunteer peace officers, who were themselves the sole available witnesses and were of unknown reliability.

In the initial and most confused phases, decisions could be based only on common sense evaluation and close interrogation of the informant. It was soon found that most Filipinos had to be pressed for specific details of when, where, how, and against whom the alleged offense was committed. Later CIC interrogators learned that by requesting sworn affidavits, they could discourage many extravagant accusations.

Filipinos were detained by CIC only when believed dangerous to the security of the Allied forces; that is, willing and able to be of active assistance to the enemy through espionage, sabotage, or other subversive activity. The tactical

situation was an important factor in determining the degree of risk presented by a suspect. In forward areas it was often necessary to detain persons on meager evidence, subject to a later investigation. As operations progressed and conditions in an area became more stable, the necessity for physical detention diminished and more complete investigations could be made. Persons who, although whole-hearted collaborators, were physically incapable, indisposed, or otherwise unlikely to act as agents for the enemy could be released under restrictions after the critical phase had passed. Generally these were ordered to remain in their own barrios and to report periodically to the local police or CIC.

"Kangaroo Courts" Pose Problem

There was also, however, the problem of unofficial justice and "kangaroo courts" to be met. After the long Japanese occupation it was natural that those who had been fighting the Japanese in the hills should be bitter towards those who worked with the Japanese in the barrios. As an illustration, several armed guerillas once reported to a CIC office, saluting smartly. Asked their business, they produced a letter which began: "You are hereby directed to liquidate the following traitors."

On another occasion a CIC agent, the sole representative of CIC in a small municipality, was presented with an unexpected emergency when a local guerilla leader with a band of eager and well-armed followers arrived in town and commenced loading more than 50 terrified civilians aboard two captured trucks. Considerable diplomacy, much argument, and several bottles of "tuba" were necessary before the guerilla officer's demands could be revised downwards to three arch-collaborators, these to be delivered to the nearest Military Police stockade and not whisked off to the hills.

Until law and order could be firmly reestablished and the local police reorganized, quite a few civilians with guilty consciences presented themselves to CIC and asked to be locked up for their own protection.

Personal Jealousies Complicate CIC Work

It proved a complex task to establish sufficient evidence to detain or release a suspect. Political and personal jealousies colored the opinions and even the sworn statements of many informants. Those who had suffered under the Japanese occupation suspected the worst of those who had not. Townspeople were suspicious of the farmers, and vice versa, for during Japanese rule, movement between Japanese and guerilla zones of influence was generally difficult and sometimes dangerous. The town dweller who wandered out into the country ran the risk of being picked up and closely interrogated by the guerillas as a potential agent of the Japanese, while the farmer straggling into town had a good chance of being beaten up by the Kempei Tai as a guerilla spy.

Few people knew a great deal of what went on in other localities, except through rumor. From the guerilla point of view, those who had not actively aided them, or those who had somehow offended them, were often considered collaborationists. Opinions and hearsay evidence were as plentiful as facts were elusive.

Informant Systems Established

For this reason, the early establishment of an informant system was an obvious essential. The most reliable and reasonable representatives of the loyal factions, town and guerilla, were sought. Wherever possible, contact was established with a responsible guerilla officer familiar with the locality and capable of separating spiteful allegations from serious ones.

In the towns, likely informants included priests, town officials prior to the surrender, schoolteachers, businessmen, and others with intelligence, a sense of civic responsibility, and close contact with local affairs. Once this preliminary groundwork had been accomplished, names of suspects could be submitted to the members of this informal "panel." If they had personal knowledge of a suspect's activities during the occupation and cleared him of the charges, the need for an exhaustive investigation was removed.

"Collaborators" and "Pro-Japanese" were terms applied so indiscriminately by informants to those whom they distrusted or disliked that they had little counter-intelligence meaning. A member of the Bureau of Constabulary who had betrayed and tortured guerillas was a collaborator, but so was the woman who cooked for the Kempei Tai, the man appointed by the Japanese to a minor position, the girl who lived with a Japanese officer.

Many cases reported to CIC consisted of petty crimes committed without interference from the military, such as stealing from the house of a guerilla. Many persons were suspect ex-officio: the Bureau of Constabulary, the mayor, the city official. Many were opportunists, working with the Japanese for money or position. CIC was concerned only when the degree and character of the association, together with collateral information, suggested that persons might continue to serve the enemy if given the opportunity. The investigation and disposition of collaborationists, as such, was left to the appropriate agencies of the Philippine Commonwealth Government.

CIC Agents Screen Refugees

CIC with forward elements screened refugees entering American lines as thoroughly as the situation would permit. Persons with tactical information of value to the immediate command were interrogated on the spot, and the results were forwarded at once to the G2. Those whose knowledge concerned areas

farther advanced were passed back wherever possible to the headquarters concerned. In this manner much valuable information about immediate and future operational areas were obtained. At the same time suspicious individuals discovered coming into U.S.-controlled areas were detained pending investigation. Guerilla representatives greatly facilitated the interrogation and classification of suspects.

As a result of CIC's close contact with civilians and guerillas, the function of liaison with guerilla units was delegated by many division G2's to their CIC detachments. In all cases CIC worked closely with those who coordinated guerilla affairs, a cooperation which proved mutually beneficial. As previously noted, guerilla blacklists could not be taken at face value; personal conversation with guerilla leaders, however, produced much definite information concerning enemy and collaborationist personalities and organizations.

Japanese intelligence agencies existing on Leyte at the time of the invasion appeared to have been principally concerned with anti-guerilla measures. Japanese trading firms were used for this purpose, as were the Bureau of Constabulary detachments throughout the island. In addition to these, the Kempei Tai established its own informer system, known locally as the Ju Tai. Composed largely of boys too young to realize the seriousness of their actions, this organization acted as the eyes and ears of the Japanese Military Police, informing them when guerillas came into the towns and acting as guides on mopping-up operations.

Among the more interesting cases handled by CIC on Leyte was that of a prominent police officer of pre-war days who was continued in office by the Japanese. To the guerillas and other loyal factions he explained that he kept his job to act as a buffer between them and the military administration. Throughout the occupation he managed to please both sides, gaining the confidence of the guerillas as well as a promotion from the Japanese. After the American landing he was selected to retain his office, including his Japanese-conferred promotion. His energy, military bearing, and organizational ability marked him as an efficient leader and executive.

While keeping him under close but unobtrusive observation, CIC agents uncovered considerable confirmation of these qualities, if not of the officer's loyalty. The division CIC detachment which first entered the town had prudently secured all records from the police headquarters. Censorship uncovered further correspondence of his department. These records disclosed the existence of an elaborate organization of "secret agents," each of whom reported by number on guerilla and pro-American activities. This was not in itself conclusive, for if the officer had expurgated the reports of his agents he would have been keeping his promise to assist the guerillas.

3304

CONFIDENTIAL

The discovery of further documents, however, enabled a comparison of reports received from agents and those submitted by the officer to the Japanese; nothing had been omitted. With the reports as a basis, interrogation of his agents themselves added further evidence of his duplicity. Before the investigation was completed, it was found that he had dismissed operatives for failure to apprehend a high guerilla leader who had personally vouched for the officer's loyalty. So confident was the officer of his position that when he suddenly found himself incarcerated in his own jail he had neglected to destroy further damaging evidence in the form of diaries and personal records.

All these activities emphasized the need for CIC detachments to be mobile and flexible. Whereas in earlier operations CIC personnel were allocated to regimental, divisional, and corps command posts, on Leyte the innumerable problems connected with the civilian population required that sub-offices be established in principal towns. Messing arrangements were improvised to enable the bulk of CIC personnel to operate where the need was greatest.

When division detachments had to displace forward on short notice as the command itself advanced, corps detachment commanders had to be ready to take over and continue to operate the offices established by divisions. Similarly, the army detachment, using its own personnel or the area personnel attached to it, relieved corps detachments of responsibility in rear areas. Experience in keeping up-to-date files of reports, suspects, and informants made it possible to make these transfers without interrupting the flow of activity. Leyte gave CIC its biggest job to that date in the Southwest Pacific Theater, but it was perhaps fortunate that the initial landing in the Philippines was made there rather than on Mindanao or Luzon with their greater populations and their large numbers of Japanese civilians. The experience gained by CIC on Leyte greatly enhanced its subsequent, even more complex operations in the rest of the Philippines.[158]

Chapter 2

LUZON: CIC's BIGGEST TEST

Leyte and the subsequent landings on Mindoro were only preludes to Luzon, where the Counter Intelligence Corps faced its most formidable challenge of the war in the Pacific.

Luzon was the center of the Japanese occupation of the Philippines. With some eight million inhabitants, the island was the most thickly populated of all the Philippines; moreover, these people were more educationally and culturally advanced than any group previously encountered in the Theater. Manila, the Philippine capital, was located on Luzon and represented the major target as the Allies geared for battle.

Luzon was Leyte greatly magnified. Here, for the first time in the Southwest Pacific, the Counter Intelligence Corps was to discharge both its combat and post-combat missions on a tremendous scale.

The greatest number of CIC agents ever used in a single campaign in the Pacific were assembled for the Luzon operation. Twenty-nine CIC detachments, including 16 combat units, were used during the combat phase and the days which immediately followed.

As in the Leyte campaign, the 441st CIC Detachment at Theater headquarters in Hollandia exercised administrative control over all subordinate detachments in Luzon. Combat operations were again directed by Sixth Army's 306th CIC Detachment, still commanded by Major Labatt. As combat troops passed through Luzon villages and cities, a dozen area detachments moved in to assume counterintelligence jurisdiction over the liberated areas. The area detachments were supervised by the 493d Regional Detachment.[159]

CIC Lands With Assault Troops

As 1945 began, a new Sixth Army assault force was gathering east of Leyte for the invasion of Luzon. The Luzon Attack Force, composed of more than 850 ships of the Seventh Fleet, steamed through Surigao Strait toward Lingayen Gulf.

On 9 January 1945, elements of the Sixth Army invaded Luzon at Lingayen Gulf--at precisely the spot where the Japanese had landed three years previously.

---

159 Documentary Appendixes to Operations of the Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, Appendix 19, (Unclassified) (Central Records Facility).

Although superior in numbers, the enemy was taken by almost complete tactical surprise; the Sixth Army landing caught nearly every major hostile combat unit in motion.[160]

The first CIC operatives ashore in Luzon landed at Lingayen Gulf within an hour after assault troops hit the beaches. One of the first detachments to land was the 201st, which went ashore with I Corps in the Damortis area on the northeast rim of the gulf. Also landing on S-Day, and under the I Corps Detachment, were the 6th CIC Detachment of Capt James Webster, and the 43d CIC Detachment under 1st Lt Ray W. Hodgson. The 6th Division pursued the Japanese eastward into the Cabanatuan Hills and toward the east coast, while the 43d Division fought its way to Lingayen Plain.

Meanwhile, elements of the XIV Corps made S-Day landings on the south shore of Lingayen Gulf. The 37th CIC Detachment, commanded by 1st Lt James E. Stilwell, accompanied 37th Division troops inland and south. And as the 40th Division fanned out to occupy the Bolinao Peninsula, Capt Earl A. Klein and his 40th CIC Detachment were close behind.[161]

On S plus 1, the advance echelon of the 306th CIC Detachment landed near San Fabian and was pinned to the beach for two days and nights, first by Japanese mortar fire and later by U.S. Navy bombardments. Later, Major Labatt told of digging a foxhole to water level, using only his helmet for an entrenching tool.[162]

The day after the initial landings, Maj M. C. Goff, Jr., and agents of the 214th CIC Detachment attached to XIV Corps opened an office in Tarlac Province. On S plus 2, agents of the 25th CIC Detachment landed with their commanding officer, 2d Lt N. B. Holman. A few days later, Maj E. F. Geiss brought his 442d CIC Area Detachment ashore.[163]

Subsequent landings at Lingayen were made by the 32d CIC Detachment, under 1st Lt George A. Baldwin; the 1st Cavalry Division's 801st CIC Detachment, commanded by 2d Lt Jerome A. Inwood; the 33d CIC Detachment, led by 1st Lt Bernard M. Donahoe; the 904th CIC Detachment, commanded by 2d Lt Loren E. Recor and attached to the 158th Regimental Combat Team; and the 902d CIC Detachment with the 112th Regimental Combat Team.

3307

On 29 January CIC detachments landed at Subic Bay with XI Corps and the 24th and 38th Divisions, which moved out to cut off the Bataan Peninsula. Two days later the 11th CIC Detachment made an amphibious landing with the 11th Airborne Division at Nasubgu Bay.[164]

Initially Lt Col John N. Irwin, as field representative of G2 USAFFE, supervised and coordinated counterintelligence work in Luzon, while Major Labatt, as commander of the 306th CIC Detachment, was responsible for CIC operations.[165]

As soon as possible after landing, CIC teams began screening civilians for tactical and counterintelligence information. Early establishment of liaison with guerillas was a "first" on every CIC agenda. CIC agents followed close behind infantry assault troops as new towns were seized. Once in a town, agents sought reliable citizens to aid in formulating black and white lists. Pre-war officials, when cleared, were reinstated in municipal positions. As in the past, search teams were organized to seize documents and materiel left behind by the enemy in his hasty retreat.[166]

CIC Enters Dagupan

The first important Luzon city entered by American forces was Dagupan, on Lingayen Gulf.

Agents of the 37th CIC Detachment entered Dagupan early in the afternoon of S-Day. They found the city virtually deserted. Most of the population had fled to the hills, where caves offered protection from heavy pre-invasion bombardments. When the town's residents returned the 37th CIC Detachment took immediate steps to curtail movements of possible enemy agents. Curfew and blackout regulations were strictly enforced.

From informants the detachment obtained an extensive list of persons suspected of aiding the enemy. By nightfall of S plus 2, suspects already interned by CIC included an accused spy, a Kempei Tai member, and an arms dealer who allegedly had given the Japanese the names of Filipinos who owned guns.

3308

Agents of the 37th CIC Detachment soon were joined by members of the 306th CIC, who had opened offices at Dagupan, Calasiao, and Alaminos in addition to the command detachment's headquarters at the Sixth Army command post.

On S plus 2 agents of the 214th CIC Detachment moved into Dagupan with the mission of securing an area for General MacArthur's initial headquarters on Luzon. After a careful study of the city, the detachment designated a Dagupan building as the site of the headquarters. Before it could be occupied, CIC made a security survey of the building and entire area. Agents conducted thorough loyalty investigations on all persons residing within the area.

From its offices in Dagupan the 214th Detachment began publication of a "Counter Intelligence Summary" which was sent periodically to subordinate detachments within XIV Corps. The bulletin contained information on individuals and organizations known to have aided the Japanese, plus a general situation summary.[167]

CIC in Dagupan: A Critique

Lt Col J. N. Irwin, General Thorpe's counterintelligence representative, arrived in Dagupan on 13 January, four days after the Luzon invasion. In an informal note to General Thorpe, Colonel Irwin commented on the effectiveness of CIC's operations in the city.

Although he praised the 37th CIC Detachment for the manner in which it restored order and reestablished civil government, Colonel Irwin was not satisfied with other aspects of the operation. He wrote:

> "One thing that the 37th and 214th Detachments failed to accomplish satisfactorily in Dagupan was the seizing of constabulary, municipal, etc., records. I talked the problem over with Labatt, and he is putting out some instructions. The most positive proof of collaboration is in documents...Papers and records are just now beginning to turn up in Dagupan and mostly from officers or soldiers who find them in their offices or desks; e.g., Gen Marshall handed me a file of the Governor's reports to the Jap Military Police, which Gen Akin found. The reports are by far the most damning evidence vs. the Governor. That is the sort of thing CIC must pick up immediately. Three of the first things a division detachment should do (simultaneously, if possible),

167 441st CIC Detachment Monthly Report of Activities in SWPA, Jan 45, as cited in Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, pp. 72-73, (Unclassified) (Central Records Facility).

are: pick up any known collaborators; seize all municipal and Jap records, newspapers, post offices, and establish municipal government and order."[168]

When the 442d CIC Detachment landed on Luzon in mid-January it established its initial headquarters in Dagupan and relieved the combat units of their counterintelligence responsibilities there. The combat detachments then joined their tactical units in the race for Manila.[169]

Other area detachments which subsequently arrived to assume rear echelon counterintelligence duties were the 440th; the 457th, under Maj Carl H. Goodrick; the 478th; the 481st, commanded by 1st Lt Charles M. Bingham; the 484th, with 1st Lt Beecher N. Clafin in command; the 490th, under 1st Lt Arthur R. Douglass; the 491st, commanded by 2d Lt Robert E. Friedrich; the 953d, 954th, and 956th CIC Detachments. During combat phases, personnel from these units were often placed on detached service with the combat detachments.[170]

CIC in Lingayen and Mangalden

While the first CIC agents were entering Dagupan on 9 January, the 40th CIC Detachment was busy reducing counterintelligence targets in Lingayen, capital of Pangasinan Province.

After searches of key buildings, agents formed a panel of pre-war civil officials to serve as a temporary government for the city. Blackout and curfew regulations were posted, along with copies of General MacArthur's proclamation ordering internment of collaborators.

During its first week in Lingayen, the 40th CIC Detachment conducted more than 700 interrogations.

At Mangalden, in Pangasinan Province, the 6th CIC Detachment took similar steps to restore order and began the long process of weeding out those persons who had collaborated with the enemy.

168 Informal Note from Lt Col J. N. Irwin to Brig Gen Elliott R. Thorpe, included in Appendix 21 to Operations of the Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, (Unclassified) (Central Records Facility).

William C. Hartnett

On S plus 2, 1st Lt ~~James J. Ripley, Jr.~~, junior officer of the 6th CIC Detachment, took 11 agents from Dagupan to Mangalden to begin counterintelligence operations there.

The mayor, police, and other civil officials were summoned to a CIC-conducted meeting after agents had completed loyalty checks of the officials. The detachment and municipal officers worked together to establish a small defense force at City Hall to ward off any Japanese counterattack. Doctors were located to treat civilians who had been wounded during the pre-invasion bombardment.

Acting under Lieutenant ~~Ripley's~~ Hartnett's instructions, the mayor then called a meeting of past and present city officials, policemen, former Philippine Army personnel, and guerillas. The CIC officer assured the townspeople that the Americans would provide supplies, asked their help in locating enemy agents and collaborators, and told them of their rights and obligations.

Moving south through the little villages in the northern portion of Pangasinan Province, the 43d and 904th CIC Detachments were subjected to combat hazards far greater than those encountered by most detachments. Agents frequently clashed with small bands of the enemy and at times were pinned down by heavy Japanese artillery fire. Despite these obstacles, the detachments instituted security measures in several of the smaller villages.[171]

In Tarlac CIC agents arrested Tarlac Province's three leading collaborators when the city fell to the American troops on 21 January.

were apprehended and interrogated by CIC agents.

The 201st CIC Detachment, commanded by Capt Victor Cook, opened its headquarters at Tomana, in Tarlac Province, and quickly established sub-offices at San Fabian, Alacan, San Jacinto, Bosales, Manaoag, and Urdaneta.

Interrogation teams of the 201st unveiled several pro-Japanese organizations in Tarlac Province. One such organization, whose Filipino members had been carefully trained to gather intelligence for the Japanese, cloaked its true nature under the name "Kikushai Shioji Kaisha, Ltd.," translated to mean "Association for the Growth of Virginia Tobacco." Other leads developed by 201st agents resulted in exposure of the New Philippines Cultural Institute as a propaganda organization and the Ganaps as a pro-Japanese guerilla band.

171 441st CIC Detachment Monthly Information Reports of Activities in SWPA, Jan 45, cited in Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, p. 73, (Unclassified) (Central Records Facility).

* - Letter correction - 24 April 1972 - Emp

At the end of January--three days before the first American troops entered Manila--CIC strength on Luzon totalled 34 officers and more than 170 agents, members of 14 combat and two area detachments. In addition, members of the 2d Filipino Battalion had been trained in counterintelligence procedures and were attached to all CIC detachments.

The second area detachment participating in the campaign was the 450th CIC Detachment, commanded by 1st Lt Kenneth L. Swanson. Originally it did not function as a unit; agents of the 450th were distributed among the combat detachments active during the tactical phase.

On 20 January, Brig Gen Elliott R. Thorpe and his small G2, USAFFE staff, arrived on Luzon to assume overall direction of counterintelligence activities. General Thorpe and other officers in his section frequently visited forward areas to check new developments which might affect CIC operations.[172]

American Troops Race Toward Manila

In mid-January, Colonel Irwin estimated in a report to General Thorpe that it would take 30 to 40 days for American troops to reach Manila. Japanese forces were expected to fight bitterly to retain control of the capital.[173]

The drive on Manila became a sprint in late January, with the 1st Cavalry Division and the 37th Infantry Division racing toward the capital from the north and the 11th Airborne Division advancing rapidly from the south. When it became evident that Manila would be taken sooner than anticipated, Colonel Irwin recommended to General Thorpe that more area detachments be rushed to Luzon from staging areas near Hollandia. The 493d CIC Regional Detachment, commanded by Lt Col Lowell J. Bradford, stepped up its plans to enter Manila to assume control of other detachments in the area and to begin investigations of top-level puppet officials and collaborators.

CIC agents followed infantry units closely in the rapid push across the Central Luzon Plain toward Manila. At each little town along the way, CIC placed prominent and reliable citizens in municipal offices, gathered information on collaborators and enemy agents, and established liaison with guerilla leaders. Special search

173 Report, CIC Landings on Luzon, Colonel Irwin to General Thorpe, quoted as Appendix 21 to Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, (Unclassified) (Central Records Facility).

and seizure teams were detailed to enter all public buildings and former Japanese garrisons to seize documents and equipment of intelligence or counterintelligence value.[174]

Invariably CIC detachments reached the villages well ahead of the Civil Affairs units. By the time the Civil Affairs representatives reached a town, they usually found posted notices which stated that a CIC-appointed mayor was duly constituted by the U.S. Army. Municipal government already would be running smoothly.

CIC occasionally ran into trouble with guerilla bands over appointment of municipal officials. On three separate occasions the 801st CIC Detachment appointed village mayors only to be confronted with heavily-armed guerilla leaders who insisted that they be installed as mayor. One of these guerillas, dissatisfied with CIC's refusal to place him in power, lingered on the outskirts of the village and peppered it with pistol shots throughout the night.[175]

Allies Enter Manila

The 1st Cavalry and 37th Divisions entered Manila almost simultaneously on 3 February, and 11th Airborne troops arrived shortly thereafter. CIC agents attached to those divisions were in the thick of the action when the first American infantrymen penetrated the city.

Colonel Irwin and Major Labatt accompanied agents of the 801st CIC Detachment into Manila as soon as American troops seized a foothold there. At Santo Tomas University, where the 1st Cavalry Division liberated 3,766 Allied internees, the 801st set up its initial operations in Manila. Agents interviewed the former prisoners for information on Japanese atrocities. General Thorpe also moved his G2 USAFFE staff into Santo Tomas temporarily. Two days later, on 5 February, the 214th CIC Detachment established Manila headquarters at Bilibid Prison.[176]

Fighting raged in the city for another month as the Japanese clung tenaciously to their positions. Manila was in shambles. Japanese fire and dynamite brigades and bitter house-to-house fighting reduced the once-proud "Pearl of the Orient" to rubble.[177]

177 Ibid, p. 76.

The majority of early cases investigated by 214th CIC agents in Manila involved sabotage suspects. The Japanese used persons of both sexes and all ages to wreak destruction upon the city. CIC agents questioned one seven-year-old boy who admitted to being one of a gang of youthful firebugs employed by the enemy. The Japanese had paid the boy 350 pesos for tossing grenades into deserted buildings.[178]

Throughout February the 306th CIC Detachment retained control over the several corps and division detachments that entered the city, and personnel of the 493d CIC Regional Detachment and the various area detachments served with the combat units.[179]

Combat detachments, operating with their divisions, concentrated on two phases of CIC activity while the battle raged: searches and seizures, and the screening of countless civilians who were displaced from their homes or freed from Japanese internment. By agreement of all detachments in the city, the 37th CIC Detachment was assigned the task of conducting all interrogations of civilians who crossed from the north side of the Pasig River to the south to seek the shelter of American lines. Between 2,000 and 3,000 persons daily passed through the screening point established by the 37th CIC Detachment.

Search teams from the division detachments made a big haul in combing abandoned Japanese buildings for documents. A wealth of information concerning the activities of pro-Japanese agencies and other national groups was obtained.[180] The amount of documents collected by CIC agents during this phase of the Luzon campaign was measured in tons.

Meanwhile the 306th and the various corps detachments began the investigation of outstanding collaborators. If sufficient evidence could not be found, collaborators often were temporarily cleared and released until the 493d and the area detachments could conduct more extensive investigations after the battle for Manila ended during the first week in March.[181]

Securing Manila

Establishment of adequate counterintelligence controls in Manila proved a more complicated task than anyone had anticipated. New problems cropped up daily as CIC agents set about the tremendous task.

An early problem was to find, among the incredible ruin and rubble of Manila, buildings sufficiently intact to serve as offices. The Commonwealth and provincial capital buildings were either levelled or were burned-out shells, as were most of the other buildings in the city. Late in February three buildings suitable for CIC offices were located. A physician's residence was set aside for the G2 USAFFE staff. Two large buildings a block away became headquarters of the 493d and the 457th CIC Detachments. A short time later the three-story Uy Su Bin Building in the heart of Manila was claimed for headquarters of the 441st CIC Detachment and other sections.[182] The Theater CIC Headquarters and the CIC Training School moved to Manila in March.[183]

But the housing problem was minor compared to some of the operational difficulties agents faced.

Manila's wartime population had reached an all-time high of 1,400,000 persons of heterogeneous races and nationalities. The Chinese colony alone numbered 18,000, and large blocks of citizens of India, Korea, Formosa, the Netherlands East Indies, the Soviet Union, and practically every European country inhabited other sections of the city.[184]

The security problem was further complicated by the presence of many German, Italian, and Spanish agents. The Spanish Falangist movement had acquired many followers among the Filipinos, and an active Nazi Party and a Nazi Women's League functioned in Manila. CIC agents of the 493d Regional Detachment conducted exhaustive investigations to determine which of the enemy nationals had been active Axis agents or party members. Agents interned more than 200 Germans alone in special compounds at Holy Ghost College and Bilibid Prison. Eventually, panels composed of cleared and trusted fellow nationals of

the internees screened the suspects. Only those known to be guilty of overt pro-Axis activities were held.[185]

Many Japanese agents were present. Enemy agents remained in Manila in the guise of Filipino or Chinese citizens. Scores of disloyal Filipinos were employed by the Japanese intelligence agencies.

The presence of large numbers of Chinese added to CIC's headaches because their resemblance to Japanese resulted in many embarrassing cases of mistaken identity. When guerillas learned that CIC had captured Japanese agents disguised as Chinese, they roamed Manila streets and captured every Chinese they could find. To protect the Chinese--and to lighten its own workload--CIC issued special identification cards to Chinese residents of Manila. Through liaison with guerilla leaders CIC persuaded the Filipino warriors to honor the identification cards which harassed Chinese showed their would-be captors.[186]

Still another vexing problem was the work of screening about 8,500 civilians, mostly Americans, who had been interned by the Japanese. Each of these persons had to be cleared before he could be repatriated. CIC organized panels to screen the internees.

The Counter Intelligence Corps drew bitter--and unjust--criticism from many liberated Americans. After many years of internment, they demanded to be sent home immediately and resented the delay caused by the necessity for clearance. Actually, CIC agents were acting on the request of the American consul in Manila, who refused to issue visas to the former Japanese prisoners until they had been cleared by CIC. Agents were often unjustly blamed when the scarcity of space aboard ships bound for the United States caused further delays.[187]

Destruction of roads, bridges and buildings by the retreating Japanese necessitated the use of large numbers of civilian laborers to assist Army Engineers in reconstruction projects. CIC often was asked to help regulate the hiring of native personnel.[188]

CIC Treasure Hunt

Agents of the 801st CIC Detachment went on a treasure hunt after the fighting in Manila had stopped.

During the early days of the war, when Japanese forces threatened to drive the Americans from the Philippines, General MacArthur ordered monies for the payment of American troops placed in bags and sunk in the bay. Certain American soldiers who reentered Manila knew the approximate location of the sunken silver and secretly planned to recover it for themselves.

The plot was discovered by a CIC agent of the 801st Detachment when he overheard a conversation about the treasure hunt in a Manila bar. The agent arranged to join the group of soldiers, who had secured the aid of Navy divers for the search.

When the divers recovered the money, the CIC agent removed his shirt--a signal to other agents waiting nearby. They closed in immediately and recovered the entire treasure. The coins, silver pesos, filled a box six feet long, two feet high, and four feet wide.[189]

The Guerilla Problem

From the time of the first American landings in the Philippines until the cessation of hostilities, the scores of guerilla organizations in the island proved invaluable to the Counter Intelligence Corps as sources of information about enemy agents and collaborators. Liaison with guerilla leaders was one of the most important responsibilities of every detachment.

In Manila, however, especially during the days following the battle for the city, guerilla organizations became an ever-increasing problem to CIC detachments.

During the Japanese occupation many bands of guerillas, motivated by desire for personal gain rather than by opposition to the Japanese, emerged. Some of these bands were bent on looting. In the chaotic days following combat, their search for plunder only intensified the civil disorders which CIC was trying desperately to quiet. Other guerillas dealt extensively in black market activities; a few resorted to extortion of wealthy Chinese.

Another difficulty stemmed from the divergent political views of various guerilla groups. Those who adhered to opposing political doctrines spent almost as much time fighting among themselves as they did fighting the enemy.

---

189 Interview with Harold F. Frederick at the NCICA Convention, Chicago, August 1954, (Unclassified) (Central Records Facility).

[redacted]

[redacted]

Generally Luzon guerilla forces were divided into two principal camps. On one side were those known as USAFFE Guerillas, well-organized into various geographical commands and generally supported by General MacArthur. Some USAFFE Guerilla groups bore the names of their leaders--Hunter, Ramsey, Boone, Thorpe, Lapham, Straughn. They usually adhered to the political goals of the Nacionalista or Quezon Party.

Sharing the USAFFE groups' hatred for the Japanese, but diametrically opposed to them politically, was the rival guerilla camp, the Hukbalahap, more commonly known as the "Huks." This group was related to the Communist-inspired Popular Front or United Front Movement. Claiming to be "pledged to free the laborer and farmer from the bonds of the near-feudal system under which they had existed for generations," the Huks were determined to accomplish this so-called "reform" by armed revolution if necessary. Originally the Huks were formed as the military arm of the United Front Movement. Later, for purely political reasons, it was ostensibly divorced from its parent organization and presented to the public as a patriotic "people's army" pledged to fight the Japanese invaders. Leaders of the Huks were Luis Taruc, Moscow-trained Communist, and Louis Alejandrino, former mayor of San Fernando.

Adding to the confusion was the difficulty CIC faced in differentiating between the bona fide members of legitimate groups, and those flocks of opportunists who found it expedient to become guerillas once American forces became established in the Philippines. In Manila particularly, the guerilla situation approached farcical proportions. A report of the 306th CIC Detachment concluded "it appeared that anyone who could scrape up an army shirt was, ipso facto, a guerilla captain. If he also had shoes, he became a major." One report stated that a group of pick-pockets organized a "guerilla unit" because it proved more lucrative than their former trade. Such groups seriously hampered the CIC mission; witnesses were intimidated, valuable evidence was destroyed, collaborators were concealed, and priceless time was lost.

Composed of all types, from misguided patriots to outright bandits, these pseudo-guerilla organizations went so far as to make arrests, conduct searches, make seizures, set up courts, and operate jails. CIC agents found it necessary to examine with suspicion statements of guerillas to detect attempts to discredit rivals.

One feature of guerilla activities following the return of American forces was their zeal for revenge. Hunted by Kempei Tai agents for years, by Japanese Army troops operating on large-scale missions, by the Bureau of Constabulary, and by other quisling Filipino forces, the guerillas usually felt no mercy for their now-beaten enemy. Many of their comrades had died. The guerillas often reasoned that the vanquished Japanese should be submitted to the same atrocities which

[redacted]

captured guerillas had faced. American troops entering a barrio often found the bodies of enemy soldiers and collaborators piled high in the streets.[190]

CIC detachments resorted to numerous devices to gain cooperation of the guerillas. For example, the 37th CIC Detachment disseminated a directive signed by a well-known guerilla leader to all guerilla groups in the area. It urged their cooperation with CIC:

> "Guerilla forces, on entering a town, may apprehend suspected Japanese spies, collaborators, or sympathizers. If this is done, these suspects must not be maltreated or tortured but should be held in custody until the arrival of CIC men in the town. Spies, collaborators, and sympathizers must be turned over only to CIC and no one else. In the event said arrests are made by guerillas, the guerilla force involved must prepare in writing a summary of the charges against the suspect, setting forth suspect's activities; for example, if Filipinos were tortured or killed pursuant to information a suspected spy transmitted to the Japanese."[191]

Disposition of Puppet Officials

Another problem CIC faced on Luzon was the disposition of members of the puppet government, including the Japanese-sponsored Bureau of Constabulary. This concerned a relatively small number of persons, but their treatment involved delicate questions of diplomacy and political expediency.

After the Philippines fell in 1942, rule of the islands was given to a special Philippines Commission, headed by Jorge B. Vargas. A persistent though unconfirmed story at the time was that President Quezon had instructed a number of his followers, including Vargas, to remain behind and take part in the government under the Japanese. The idea was that even though a certain amount of cooperation was unavoidable, they could do more for the Filipino people than by staying out of the government altogether.

The commission was replaced on 14 October 1943 in a ceremony in which the Japanese "granted the Philippines independence." A puppet Philippine Commonwealth Government under President Jose Laurel was formed. A new constitution

3319

provided for important economic and political concessions to the Japanese Government. Throughout the islands puppet officials were installed in governmental posts down to municipal level.[192]

On 23 January 1945 a memorandum defining CIC policy toward puppet officials was issued by the 441st CIC Detachment, as follows:

> "It will be presumed that all persons of the rank of Governor or higher, or mayors of larger cities, who have held office under the puppet government fall in the classification of active collaborationists and as such will be interned. If, after investigation, sufficient evidence is available to warrant their release, recommendation to this effect will be made to this Headquarters. In no case will release be made without written authority of this Headquarters."

The memorandum was changed on 17 March directing CIC detachments not to intern puppet government officials unless investigation disclosed evidence of voluntary collaboration with the enemy. This meant, in effect, they were to be treated no differently than other Filipino civilians.

On 10 May this was again amended to read as originally directed. A clarifying note was added stating that members of the Philippine National Assembly during the occupation were considered below the rank of governor from a political viewpoint.

By 30 June more than 30 key puppet officials had been apprehended by CIC agents. But some of the more important ones, including Laurel and Vargas, had reportedly fled to Japan.[193]

When the puppet government was set up, the formerly efficient Philippine Constabulary was also reorganized and succeeded by the Bureau of Constabulary. Its carefully selected membership totalled about 15,000, with an estimated 7,000 members on Luzon.[194]

3320

Actually the Bureau of Constabulary offered little of a challenge either to U.S. combat troops or to CIC. Its officers were accorded military rank, the commander being Maj Gen Paulino Santos. In the government structure, the Bureau of Constabulary came under the Department of Home Affairs. About [illegible] percent of its officers were believed to be pre-war Philippine Constabulary officers. The remainder were impressed prisoners of war or men recruited after the Bureau's formation. The Bureau was only lukewarm to the Japanese and participated half-heartedly in its attempts to combat guerillas. There were, of course, some Bureau members who hunted guerillas zealously and treated them brutally, but these were in the minority. Many cases of desertions from the Bureau were reported as early as March 1944, and there was so much dissension in the ranks that the Japanese were forced in many cases to disarm the officers and in some instances intern them.

CIC was directed to investigate all Bureau of Constabulary members to determine the degree of their collaboration, before they could be reinstated in the new national police force being organized by the Commonwealth Government.[195]

195 Documentary Appendixes to Operations of the Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, Appendix 19, (Unclassified) (Central Records Facility).

Post-Manila Operations

During the weeks after the liberation of Manila, the major share of CIC activity on Luzon was shifted from combat detachments to area detachments, which assumed the responsibility of tracking down and interning collaborators, enemy agents, puppet officials, and uncooperative guerilla leaders.

The work of the combat detachments in the assault on the Shimbu Line and the annihilation of the Japanese east of Manila, the investment and fall of Baguio, the protracted Balete Pass and Villa Verde Trail operations, and the final drive up the Cagayan Valley followed the same pattern as the original march on Manila. Searches and seizures, apprehension of immediate security threats, screening of evacuees and establishment of order in liberated areas were the principal concerns of the combat detachments.[197]

CIC Frees a Future President

Before the Americans liberated Baguio, CIC agents learned that Emanuel Roxas, a Filipino general, was there. Conflicting reports stated alternately that the general was a prisoner of the Japanese and that he was a collaborator with the enemy.

Two agents of the 306th CIC Detachment contacted natives in the Baguio area and with their help smuggled Roxas out of Baguio and back to the American lines. The general was taken to San Fernando, where the 306th CIC Detachment had set up headquarters.

General Thorpe had issued instructions that Roxas was to be sent to his headquarters; however, the Filipino general demanded to see General Willoughby instead. Roxas feared that General Thorpe would order his internment on charges of collaboration.

---

196 CIC in the Luzon Operation, published by the 306th CIC Detachment, APO 442 (CONFIDENTIAL) (Central Records Facility).

197 Documentary Appendixes to Operations of the Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, Appendix 19, (Unclassified) (Central Records Facility).

At a CIC dinner, General Roxas casually remarked that his collaboration with the Japanese was in the best interests of his people and predicted that he would some day be elected president of the Philippines.

His prediction was well founded. Both General Willoughby and General MacArthur cleared Roxas of the collaboration charges, and the Filipino subsequently was elected to the presidency of the Philippines.[198]

CIC Screens Evacuees

The importance of screening evacuees from enemy-held territory was increasingly evident during the last weeks of the campaign as Japanese agents stepped up attempts to infiltrate American lines. Strict CIC controls on travel and the establishment of screening points resulted in the detention of many of these agents.[199]

CIC detachments limited movement of guerillas as a part of travel control. Guerillas entering American lines were required to surrender their arms at the nearest CIC headquarters. Upon conclusion of their official business they presented receipts, reclaimed their weapons, and moved back into forward areas.

Several detachments noted an increasing tendency on the part of American military personnel to pick up hitch-hiking Filipinos. At CIC's request, unit commanders and provost marshals enforced regulations prohibiting presence of unauthorized civilians in military vehicles.[200]

Key Collaborator Surrenders

On 4 July, Pio Duran, sought by CIC as a leader of the pro-Japanese Makapili, surrendered to 38th Division troops near Sibul in Bulacan Province.

For several weeks previously, reports of his presence with the retreating Japanese had been trickling in to various CIC detachments. Agents from one team induced a captured companion of Duran's to write him a message in Tagalog, describing the good treatment he was receiving from the Americans. The message was reproduced in leaflet form and dropped from a plane in the area where Duran was last reported. This apparently led to Duran's surrender.

Showdown With the Huks

One of CIC's most troublesome problems during the campaign's last phase was posed by the Hukbalahap group. Soon after the fall of Manila it was evident that Huk activities were interfering with American efforts to restore order, often constituting a grave security threat to both American and Philippine Commonwealth Government interests. The Communist-inspired Huks constantly interfered with local governments. They frequently forced out of office Commonwealth appointees and replaced them with their own. The continual feuding with the rival USAFFE Guerillas resulted in frequent atrocities, raids, and kidnapings. The Huks terrorized the countryside, attempting through violence and force of arms to establish minor Communist communities in many localities. Law, order, and justice meant little to the Huks. Their one aim was power.[201]

Agents Leslie R. Harrison and Charles D. Lindsay of the 40th CIC Detachment were sent to San Fernando in Pampanga Province to assist the 485th Area Detachment in working out some answer to the Huk situation. The agents held many meetings with Huk leaders, including both Taruc and Alejandrino.

At a dinner meeting attended by the CIC agents, Taruc, Alejandrino, and several priests, the Huk leaders criticized the United States Army bitterly for recognizing the USAFFE Guerillas instead of the Huks. Taruc boasted 7,000 followers and insisted that the United States should commission him as a general officer. As the evening progressed, the anti-American comments became so pronounced that Agent Harrison threatened to arrest the Huk leaders. Taruc and Alejandrino stalked out of the meeting.

Later that night 40 American soldiers, including several CIC agents, raided the Huk headquarters. There was a gun fight, and two Huks were killed.

The raid netted a number of important documents. One of the papers seized by CIC agents revealed that Pablo Angeles David, a local judge who had been CIC's main contact in the town, was actually an informant for the Huks. But more interesting to CIC was a Huk list of "wanted persons." CIC Agents Lindsay and Harrison were numbers two and three on the list. Both Taruc and Alejandrino were interned by CIC.[202]

CIC Investigates Black Market

Black market activities also occupied CIC's attention near the end of the Luzon campaign. The scarcity of goods and the unrestricted issuance of Japanese invasion currency resulted in a flourishing black market during the enemy occupation. When American forces landed, the already-strained economic situation was further aggravated, and relief was slow in arriving. As a result, the huge supplies of food, clothing, and equipment which the American Army brought opened a new and tempting source to black market operators.

At first CIC was not concerned with the black market activities. However, an acute shortage of fuel for civilians led to sabotage of fuel pipelines in Central Luzon and the removal of thousands of gallons of aviation gasoline destined for Army air bases. When the gasoline thefts reached alarming proportions and constituted a definite threat to the security of American forces, CIC agents were asked to clamp down on black market operations.

Other cases handled by CIC during the last stages of the campaign ranged from teen-aged opportunists who worked for Japanese intelligence agencies for the prestige it afforded them, to vicious murderers who killed and tortured persons who had expressed anti-Japanese sentiments.

Less glamorous was the routine task of the area detachments of clearing civilians employed by U.S. Army units. The procedure usually was limited to a search of CIC files for derogatory information.

In Manila, the 493d CIC Regional Detachment continued to check all new officials of the Commonwealth Government. During the first 45 days after the 493d assumed control of CIC activities, more than 5,000 such checks were completed. CIC was also responsible for cryptographic and loyalty checks of Army personnel--work performed regularly, despite the press of other business.

As combat activity diminished, agents stressed security. Security surveys were made, and security education programs were inaugurated.

Throughout the Luzon campaign, members of the 2d Filipino Battalion contributed greatly to the accomplishment of the CIC mission. Filipinos from the battalion were attached to every detachment. In addition to duties as linguists, they often were used on dangerous patrols. On many occasions they investigated causes of unrest in municipalities.[203]

Eighth Army Takes Over

On 1 July 1945, jurisdiction over Luzon operations passed from Sixth Army to Eighth Army. With the change, the 308th CIC Detachment assumed the supervision of the combat detachments in Luzon for the mopping-up operations.

Locations of the combat detachments which were transferred to Eighth Army operational control on 1 July were as follows: 201st CIC Detachment, Tumana, Pangasinan Province; 211th, Manila; 214th, Solano, Nueva Viczaya; 11th, Mataasnakahoi, Batangas Province; 25th, Santo Tomas, Nueva Ecija; 32d, Bauang, La Union; 33d, Baguio, Mountain; 37th, Ilagan, Isabella; 38th, Bayanbayanan, Rizal; 43d, Santa Maria, Bulacan; 801st, Lucena, Tayabas; and 904th, Iriga, Camarines Sur.

In addition three area detachments were supervised by the 308th: the 478th and 954th Area Detachments at Baguio and the 956th at Luna, La Union.

Area detachments operating under the 493d Regional Detachment as of 1 July were the 457th at Manila, the 442d at Dagupan, 481st at Binalonan, 484th at Angeles, 485th at Cabanatuan, 490th at Binan, 491st at Legaspi, 952d at San Pablo City, 953d at Batangas, and the 440th at Bacolar.[204]

Chapter 3

OTHER PHILIPPINE OPERATIONS

While Sixth Army was making headlines with its drive to Manila, Eighth Army was far from idle in the islands to the south.

A Western Visayan Task Force of two regiments was organized on Leyte in December 1944, even before that island was fully secure. On 15 December 1944, prior to the main assault on Luzon, this force struck at Mindoro Island's chief southern city, San Jose, 300 miles northwest of Leyte. The city was captured the same day, and within 24 hours American planes and PT boats were operating off Luzon's southern coast.[205]

The 479th CIC Detachment, organized on Leyte for the offensive against Mindoro, landed with troops on U-Day. By nightfall, 2d Lt Charles S. Camp and agents under his command had established offices in San Jose. Agents immediately contacted guerillas and municipal officials, and five suspected collaborators were behind bars before the day ended.

Through interrogations and capture of enemy documents, the 479th gathered a considerable amount of tactical intelligence on its first day in San Jose. Strength and location of Japanese forces on the island were discovered. One agent recovered an enemy estimate of American capabilities dated only a week prior to the invasion of Mindoro. The document revealed that the Japanese had expected the American attack within the week.[206]

Swift action by the 479th in interning suspected collaborators prevented guerillas bent on revenge from taking justice into their own hands. When angry guerilla bands came down from the hills to seize collaborators, they found the suspects they sought already in American custody.[207]

January brought new small-scale invasions on Mindoro and nearby islands for members of the 479th operating with the Western Visayan Task Force.

In a thrust at Boagabong, on the east coast of Mindoro, one CIC agent acted as S2 for the operation in the absence of an intelligence officer. Working with an interpreter, he also handled counterintelligence duties. Through contacts with guerillas he learned the enemy strength and disposition in the sector. Maps showing the course followed by enemy planes flying to Mindoro were found during a search of a crashed Japanese plane near Boagabong.

Another agent of the 479th landed with troops at Paluan, on Mindoro's northwest coast. With the enemy garrison still offering faint resistance, the agent accompanied infantrymen in a raid on the garrison commander's quarters. Among the papers seized was a copy of a Japanese plan, dated less than a week earlier, to rush reinforcements to Mindoro from Luzon.[208]

When elements of the task force struck at Marinduque Island on 4 January and at Ambulong Island on 6 January, agents of the 479th went along to enforce the usual counterintelligence measures. In March members of the detachment participated in patrols of Romblon, Cuyo, and Luband Islands.

Meanwhile the intense fighting on Luzon had caused an influx of refugees from Luzon to Mindoro. These refugees posed a serious security problem for 479th agents operating at Mindoro's capital city, Calapan, on the north coast. To counter it, CIC authorized civilian travel only in daylight hours and issued passes permitting travel only when it was absolutely necessary and when applicants had been carefully checked.

By the summer of 1945 the 479th CIC Detachment was operating sub-offices at Puerto Princesa, Palawan, and Boac, Marinduque, in addition to its headquarters at San Jose.[209]

Palawan, Samar, Masbate, and Lesser Islands

The beginning of March 1945 found American forces controlling all of Leyte and Mindoro, most of Samar, Central Luzon, and certain smaller islands in the southern Philippines. Substantial areas of Mindanao and the Visayas were held by guerillas.

209 History of Counter Intelligence Corps in the Southwest Pacific, 8 April 1942 through 1 July 1945, dtd 1 July 45 (SECRET) (Central Records Facility).

On the last day of February, elements of the U.S. Seventh Fleet bombarded Puerto Princesa on the east coast of Palawan in preparation for an assault landing by the 41st Division. When infantry troops went ashore they met no opposition. Puerto Princesa and its two adjacent airfields were quickly occupied, and the Allies were assured virtual control of the westernmost part of the Philippines.[210]

CIC agents attached to the 41st Division and one agent of the 308th CIC Detachment entered Puerto Princesa and opened the only CIC office on Palawan. In March, counterintelligence jurisdiction on the island reverted to the 479th CIC Detachment.[211]

Meanwhile counterintelligence jurisdiction on Samar passed from division to corps to area detachment control.

Originally, the 801st CIC Detachment had sent agents with elements of the 1st Cavalry Division to establish CIC work in certain sections of Samar. When the 1st Cavalry Division embarked for Luzon in January 1945, the 210th (X Corps) CIC Detachment took over the counterintelligence mission.

On 27 February, a special task force landed at Allen, Samar, to supplement mopping-up operations on the island. Two agents and one CIC-trained Filipino participated in the landing as an advance echelon of the 480th CIC Area Detachment. Later the 480th assumed jurisdiction of Samar and the neighboring Masbate Islands to the west. Headquarters was established at Catbalogan and sub-offices at Allen and Calbayog on Samar, and at Masbate on Masbate Island.[212]

Mindanao

The next major objective of the Allies in the Philippines was Mindanao, second largest island of the archipelago.

Scattered areas of the island, particularly in the north, already were in the hands of pro-American guerillas. But the subsequent invasion of Mindanao still proved third only to the Leyte and Luzon campaigns in magnitude and in special difficulties faced. Aside from its vast size and rugged terrain, Mindanao presented at least one new and more perplexing problem: the large Japanese civilian

210 The War Reports of General Marshall, pp. 236-237, 612, and 671-676.

212 Ibid; and Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, p. 78, (Unclassified) (Central Records Facility).

population. Before the war, Japanese commercial firms had invested heavily in hemp industries, mines, and other business on the island, and a large colony of Japanese lived there.[213]

After two days of naval bombardment by Adm Thomas C. Kincaid's Seventh Fleet, the 41st Division pushed ashore under moderate enemy artillery and mortar fire near Zamboanga, at the southwestern tip of the island, on 10 March 1945. Troops quickly overran Zamboanga City, meeting only slight opposition there and at two airfields near the city.[214]

Agents of the 41st CIC Detachment landed on the beach immediately after the assault elements and at once began a search for enemy dumps, material, and documents. On D plus 1, the detachment's six-man security squad entered the city along with infantry troops. Key buildings, including City Hall, the Customs House, Kempei Tai headquarters, and other Japanese billets were searched and secured.

Capt Lawrence Gluckin led the remainder of the detachment into Zamboanga on D plus 2 and opened CIC offices in the Maritime Building. Long before the landing, the detachment had been organized into five sections. In addition to the security squad, an investigation squad was detailed to detain, interrogate, and investigate alleged collaborators included on a 300-name blacklist prepared before the operation. Actually, most arrests were made by a group of agents known as the "special squad." One section was charged with establishment of an informant net, and another performed administrative duties.

Immediately after the detachment arrived in Zamboanga liaison was established with the 41st Division G2, the Provost Marshal, Military Police, Philippine Civil Affairs Units, and guerillas. A site for a Prisoner-of-War compound was selected and secured.

By D plus 4 the 41st CIC Detachment had completed most of its urgent work in Zamboanga. Nineteen enemy food dumps were seized and turned over to the Civil Affairs units. More than 800 persons were interrogated and cleared. Information on atrocities was gathered, and hundreds of enemy maps and documents were taken from the former Japanese headquarters.

In the first four days after the landing, agents rounded up 158 persons named on the original blacklist. Collaborators arrested and interrogated by CIC included

214 The War Reports of General Marshall, pp. 236-237.

provincial secretary; provincial treasurer; a convicted Filipino murderer who had been released from prison and commissioned a captain by the Japanese, and Filipino mistress of General Hojo, commander of Japanese forces on Mindanao.

As a result of interrogations 48 other suspects were added to the CIC blacklist.[215]

By 22 March a CIC-approved panel of citizens was governing Zamboanga while sub-detachments of the 41st CIC followed tactical elements of the 41st Division as they fanned out over Zamboanga Province. Agents searched abandoned enemy command posts and enforced security regulations in populated sectors.[216]

Second Attack on Mindanao

The second major phase of the Mindanao operation began on 17 April 1945 when, after air and naval bombardment, General Eichelberger sent the X Corps of his Eighth Army ashore at Malabang, Polloc Harbor, Cotabato Province. Participating in the landings under X Corps were the 24th Division, which landed on 17 April, and the 31st Division, which followed five days later.[217]

The 31st CIC Detachment accompanied its division in a drive north up Sayre Highway and the Pulangi River Valley to Kibawa, while the 24th CIC Detachment moved southeast toward Davao City on Davao Gulf.[218]

Three days after the landings the 210th CIC Detachment learned that the unpredictable Moro tribesmen of Mindanao were gathering at Dalican, possibly to oppose the American forces. The task force commander dispatched a message to leader of more than 100,000 Moros, with the demand that the Moro chieftain come immediately to task force headquarters. Three days

215 USAFFE Board Report Nr 156, Operation of the Counter Intelligence Corps Detachment, 41st Infantry Division, at Zamboanga, Mindanao, P.I., dtd 16 April 1945, included as Appendix 24 in Documentary Appendixes to Operations of the Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, (Unclassified) (Central Records Facility).

passed before the appeared with eleven of his followers. After a conference with the commander, the Moro chief agreed to surrender the 400 weapons carried by his tribesmen "as soon as the area was cleared of Japanese."

But reports from informants led CIC to doubt the sincerity. As a result of preliminary information obtained by the 24th CIC Detachment, the 210th CIC Detachment under Capt Joseph P. Hurley conducted an extensive investigation of activities during the Japanese occupation. When evidence indicated that the Moro leader had been an ardent collaborator with the enemy he was arrested and interned at Cotabato. His son, considered by CIC to be more reliable, was appointed temporary leader of the clan.[219]

As the 31st Division pushed north and west, Capt C. W. Trout and agents of the 31st CIC Detachment opened offices at Malabang, Cotabato, Pikit, and other towns in Cotabato and Lanao Provinces.

Capt David I. Connelly and his 24th CIC Detachment expected to encounter an unusually tense situation when they entered Davao City early in May. Known as "Little Tokyo, "Davao City wasthe home of most of the Japanese nationals who resided in Mindanao. However, most of the Japanese civilians had followed the Army into the hills. The few remaining in the city were interned and interrogated by the 24th CIC Detachment. The detachment's work was soon resolved to routine security measures. Personnel of the 476th CIC Area Detachment moved into Davao City during the first week in May to reestablish civil government and continue the investigations of collaborators.[220]

Guerillas Prove Helpful

All elements under X Corps reported excellent cooperation from the well-organized guerilla groups on Mindanao.

On 9 May the 108th Regimental Combat Team landed near the north coast town of Agusan on Macajalar Bay. Advancing from the north, the 108th received considerable assistance from the 109th and 110th USFIP Guerillas under the command of Col W. W. Fertig.

---

219 441st CIC Detachment Monthly Information Report of Activities in SWPA, April 1945, cited in Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, p. 79, (Unclassified) (Central Records Facility).

220 History of Counter Intelligence Corps in the Southwest Pacific, 8 April 1942 through 1 July 1945, dtd 1 July 45, (SECRET) (Central Records Facility).

The guerillas provided CIC with long lists of enemy collaborators. Some guerilla units interned large numbers of pro-Japanese natives and turned their prisoners over to the first CIC agents in the area. At Cagayan, Agusan, and other places, guerillas led CIC agents to former Japanese headquarters where many valuable documents were found.[221]

By June 1945 four area detachments were operating on Mindanao in addition to the four combat detachments. Location of the various detachments was as follows: 210th, Del Monte, Bukidnon Province; 24th, Talomo, Davao; 31st, Malabalay, Bukidnon; 41st, Panubignan, Zamboanga; 475th Area Detachment, Cotabato; 476th Area Detachment, Santa Cruz, Davao; 477th Area Detachment, Cagayan, Misamis Oriental; and 489th Area Detachment, led by 1st Lt Frank J. Wathen, Zamboanga.[222]

Panay and Negros Islands

Shortly after the initial Mindanao landings, the 40th Infantry Division, which had been fighting on Luzon, was diverted to invade two of the main Visayan Islands, Panay and Negros.

Five agents of the 40th CIC Detachment splashed ashore in the initial assault on Panay on 18 March. When troops entered Tigbauan the same day CIC seized many Japanese documents of tactical value. Two days later CIC agents accompanied combat troops into Iloilo City, Panay's largest city. They searched and secured public buildings, radio stations, Kempai Tai Headquarters, and former residences of Japanese military personnel. Guards were posted at public buildings to prevent looting and to protect the hundreds of documents left behind as the Japanese made a frantic retreat from the city.

Records discovered in CIC searches at Iloilo City included lists of Filipino collaborators and spies, complete rosters of the Philippine Constabulary, and a file of incriminating letters written by the puppet governor of Panay.

The speed with which the 40th Detachment moved during March was almost incredible. Eleven days after the first landing on Panay the detachment made a second landing at Pulupandan, Negros Island. The next day the entire detachment entered Bacolod, the island's key city, which was quickly secured.

221 441st CIC Detachment Monthly Information Report of Activities in SWPA, May 1945, cited in Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, (Unclassified) (Central Records Facility).

222 History of Counter Intelligence Corps in the Southwest Pacific, 8 April 1942 through 1 July 1945, dtd 1 July 45, (SECRET) (Central Records Facility).

Both the Panay and Negros CIC operations were carried out by the 40th CIC Detachment in conjunction with two area detachments which assumed post-combat counterintelligence jurisdiction. On Panay, the 486th CIC Area Detachment, under Capt Howard L. Cuddeback, accompanied the combat detachment and took over when the territory was secured and the situation stabilized. The 486th established its headquarters at La Paz, Panay. On Negros Island, Capt Dudley G. Skinker's 487th CIC Area Detachment opened offices at Bacolod and La Carlota.[223]

Panay and Negros were virtually free of organized enemy resistance by early April 1945.[224]

Cebu and Bohol

Cebu and Bohol were the last remaining major islands of the Philippine archipelago to be invaded by American forces.[225]

On 26 March, troops of the Americal Division stormed the beaches of Cebu near Cebu City. The 182d CIC Detachment followed quickly and established temporary headquarters at Basak by H plus 6. Agents of the 182d, under the command of Capt Albert F. Keenan, were used primarily to gether tactical information during the Cebu operation. As the 182d moved inland, the 488th CIC Area Detachment under Capt Daniel F. McGillicuddy, Jr., followed to handle most of the collaboration cases.

Interrogation teams of the 488th, stationed at civilian internment compounds at Talisay, were given responsibility for complete investigations of suspected collaborationists. Evacuees were screened for counterintelligence data and checked against the detachment's blacklists. Several Japanese undercover agents were detected.

After covering Basak and Mabeling on the southern outskirts of Cebu City, the 182d CIC Detachment entered the city proper. Agents seized and searched the Japanese consulate, the Bureau of Constabulary, Kempei Tai Headquarters, and other important buildings. Like Manila, Cebu City had been burned and sacked by the fleeing Japanese.

225 Ibid, p. 80.

The 488th CIC Detachment discovered early in its investigation of the provincial government that a high degree of collaboration with the enemy had existed. The 488th's initial report stated that half of the collaborator suspects on its lists surrendered voluntarily in fear of retaliation by loyal elements. In the first two days following the invasion CIC agents arrested 156 suspects. Some were later released for lack of sufficient evidence.[226]

Bohol Invaded

On 10 April 1945, one officer and four agents of the 182d CIC Detachment joined elements of the Americal Division in the invasion of Bohol Island. There they found that guerillas of the Bohol Area Command had already interned more than 250 suspected collaborators. Agents interrogated, then investigated, each suspect.

After the invasion of Bohol, the 488th Area Detachment set up a sub-office at Tagbilaran and another at Dumaguete, Negros Oriental. Headquarters of both the 488th and 182d CIC Detachments remained at Cebu City.[227]

Chapter 4

THE PHILIPPINES: FINAL PHASE

By the summer of 1945 combat operations in the Philippines had ended, except for skirmishes with small pockets of fanatical Japanese troops who were still hiding in mountain caves. Some combat detachments already had pushed on to Okinawa; those that remained in the Philippines were training for campaigns to come.

After the 441st CIC Detachment headquarters moved to Manila in March, an extensive system of regional and area detachments was instituted throughout the Theater to provide an adequate organization for the static situation.

Regional detachments lost their former numerical designations and were renamed simply Region 1, Region 2, and Region 3. Area detachments underwent a similar change in nomenclature.

The Philippines were divided into three major sectors. Luzon and its offshore islands became Regional, and the detachment formerly known as the 493d CIC Regional Detachment retained jurisdiction. In July 1945 Areas 1 through 16 were located on Luzon, with the area detachments subordinate to Region 1. Leyte, Samar, Masbate, Cebu, Panay, Negros, Bohol, Mindoro, and Palawan were the most important islands in Region 2, which was administered by the detachment previously designated the 492d. Areas 20 through 28 were located in these islands. Mindanao, with Areas 30 through 34, was Region 3.

At the same time area detachments were operating in rear areas at Brisbane, Finschhafen, Hollandia, Tarakan Island, Brunei, Borneo, Balikpapan, [redacted], and Morotai.[228]

Another administrative change was the creation on 6 April 1945 of GHQ, Army Forces, Pacific (AFPAC). G2, USAFFE was left intact, however, and maintained the responsibility for counterintelligence. Creation of the new GHQ had little effect on CIC operations.[229]

CIC at Work

Agents remaining in the Philippines were concerned with both the continuing investigations of collaborators and training for Operation OLYMPIC, the proposed invasion of Japan.

---

228 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, p. 100 and Plate 41, (Unclassified) (Central Records Facility).

229 Ibid, p. 88.

Region 1 and the subordinate area detachments conducted most of the collaboration investigations. By V-J Day, when CIC files on collaborators were transferred to the Commonwealth's Department of Justice, CIC agents had investigated more than 6,000 persons suspected of aiding the enemy. About half were still interned when the war ended.[230]

In Region 2, composed of scattered islands, CIC agents had to continue landings at the tiny native villages bypassed by combat troops. Although troops had landed only on those islands where Japanese resistance was expected, there were collaborators on every island, and only CIC was authorized to arrest and investigate them.

CIC's "Navy"

Transportation for the island-hopping agents was a problem, since boats were not authorized in the CIC table of equipment. To facilitate access to the relatively isolated islands, Lt Col Paul A. Hurst, Region 2 CIC commander, first obtained the use of three "J" boats for the screening process. Teams of agents were dispatched through detachment headquarters and remained at a given location until the boat returned to pick them up.

In July 1945, with the assistance of General Thorpe, Colonel Hurst obtained a 105-foot Air-Sea Rescue Boat for CIC use. The Transportation Corps provided a crew for the vessel, and Colonel Hurst organized an 11-man "floating detachment" under the command of 1st Lt Jack Y. Canon. The team moved from island to island as a unit, speeding the process of screening the collaborators.[231]

The boats served many other CIC purposes. They transferred agents on short notice, delivered supplies, controlled unauthorized shipping, carried communications, and made contact with guerillas in remote areas. Agents aboard the boats occasionally patrolled inland waterways in search of isolated Japanese.[232]

Meanwhile the combat detachments in the Philippines were training for operation OLYMPIC, the invasion of Japan. An alternate plan, "Blacklist," was prepared for use in the event that Japan capitulated before the invasion.[233]

In the Ryukyus Islands to the north, there was little thought of an invasion of Japan. CIC detachments there were facing still another bitter combat test.

233 Operations of Counter Intelligence Corps in the SWPA, Vol. VIII, Intelligence Series, GHQ, FEC, dtd 29 July 48, p. 102, (Unclassified) (Central Records Facility). Both OLYMPIC and "Blacklist" counterintelligence plans are discussed in the chapter on CIC in the Occupation of Japan.

Part III: CIC in the Ryukyus

Part III

CIC IN THE RYUKYUS

Long before the guns were silenced in the Philippines, CIC agents were aboard ships steaming north toward the Ryukyus Islands to participate in landings almost within the shadow of the Japanese mainland.

What lay ahead they could only guess. That the remnants of the Japanese Army would fight bitterly as the American onslaught moved nearer Japan was certain. But the civilians on the little islands posed countless questions for CIC. What would be their attitude toward the Americans? To what extent would they resort to sabotage and espionage to aid the Japanese who had occupied their lands since 1916?

Most of the questions would not be answered until soldiers and marines had seized the islands. Only after combat troops were ashore would CIC's role in the operations be fully determined.

A part of the uncertainty was answered by field orders for the Ryukyus operations. The orders specified that all the islands' inhabitants were to be considered loyal subjects of Japan and were to be interned in military government stockades throughout the tactical phase of the operations. CIC was instructed to assist in internment and interrogation of these civilians.[234]

Okinawa, largest of the Ryukyus, was the main target. But the Allied offensive in the Ryukyus began on 26 March 1945 with a pre-invasion landing on Kerama Retto west of Okinawa.

77th CIC Detachment First Ashore

For the assault on Kerama Retto and minor islands in the Kerama chain, the 77th Division was ordered into action. Within three days, the division made 15 landings and secured all the islands of the Kerama chain and Keise Shima--all within artillery range of Okinawa.

The 77th CIC Detachment, landing on Kerama Retto with the 77th Division, was the first detachment to see action in the Ryukyus. Augmented by four enlisted men from a reconnaissance troop, 1st Lt Phil H. Mast and the five agents under his command landed on the islands of Hokaji, Geruma, Tokashiki, and Keise Shima between 26 March and 1 April. The detachment's initial assignment could

234 "CIC Experiences World War II, Pacific," prepared in Training Division CIC Center, (Unclassified) (Central Records Facility).

3340

hardly be considered a counterintelligence mission. Agents interrogated Prisoners of War and combed abandoned Japanese positions for documents of tactical value.

The Invasion of Okinawa

On Easter Sunday, 1 April, Lt Gen Simon Bolivar Buckner's Tenth Army launched the assault on Okinawa. Following an intense air and naval barrage, troops of XXIV Corps and the III Marine Amphibious Corps quickly grabbed the Hagushi beaches of southwestern Okinawa.

CIC units participating in the initial landings were the Tenth Army's 310th CIC Detachment, commanded by Lt Col Henry S. Boone; the 224th CIC Detachment, commanded by Capt William R. Gordon; the 7th CIC Detachment under 1st Lt William H. Attwood; and Capt Federico L. Fernandez, Jr.'s 96th CIC Detachment.[235] In addition, agents from the 310th CIC Detachment were placed on detached service with the 1st and 6th Marine Divisions for the operations.[236]

Some CIC agents went ashore on Okinawa a few minutes after the first assault troops landed at 0800 on Easter Sunday. By mid-afternoon, all agents assigned to tactical units subordinate to the 310th CIC Detachment had landed and were at work.[237]

From the beachhead, the Marines and the CIC agents with them moved north. The Army units pushed across the island to the east coast and then moved south, where the Japanese had concentrated their defenses. On 9 April, the 27th Division landed and plunged into fighting on Okinawa, and the 27th CIC Detachment, under 1st Lt Cecil A. Jastram, began operating immediately.

Arrival of the 27th CIC Detachment brought to 69 the number of CIC officers and agents participating in the Ryukyus combat operations.

From the outset of the Okinawa operations, it became apparent that CIC detachments would not function entirely as counterintelligence agencies. Even the 310th worked as a document-collection team around captured airfields, command posts, and other enemy positions for a week after it went ashore on L plus 3. Division and corps detachments did the same.[238]

236 Interview with Mike Murphy, at NCICA Convention, Chicago, Ill., 6 Aug 54, (Unclassified) (Central Records Facility).

237 "CIC Experiences World War II, Pacific," prepared in Training Division CIC Center, (Unclassified) (Central Records Facility).

238 War-Time CIC History, AFMIDPAC, pp. 51, 52, (CONFIDENTIAL) (Central Records Facility).

As troops moved inland, military police and military government personnel rounded up hundreds of civilians for internment in hastily erected stockades. In the initial confusion, CIC agents helped to establish security measures at the stockades and made spot checks to determine whether the civilians were being detained as directed. Later CIC set up interrogation teams within the stockades to begin screening the internees for information of intelligence and counterintelligence value.[239]

Detachment Organizations Flexible

The rapid advance of American troops, along with the ever-increasing need for CIC interrogators at the stockades, necessitated reshuffling of the several detachments in the field.

Members of some detachments not actually participating in the Okinawa operation were placed on detached service with the 310th CIC Detachment to form a Tenth Army CIC pool. These agents, along with others regularly assigned to the 310th, formed teams which augmented the smaller detachments at corps and division levels. All detachments worked together closely. That fact, coupled with the constant juggling of personnel, produced a situation in which smaller detachments virtually lost their identity for operational purposes.

When operating as a separate unit a division detachment normally placed an officer and a clerk at the division command post for administration, liaison, and coordination of activities. Another officer, an agent, and an interpreter were stationed at the civilian stockade for interrogations and liaison with military government representatives. Two agents and an interpreter worked at each regiment to search for documents and gather combat intelligence.[240]

CIC Finds Okinawans Cooperative

Before landing on Okinawa CIC agents had feared that long years of indoctrination by the Japanese would cause Okinawans to be openly hostile to the Americans. Yet the Japanese had considered the island's residents inferior, and the firm but kind treatment which CIC accorded the Okinawans quickly won their support.

Agents soon developed a technique which proved quite effective in most native communities. After entering an area, CIC agents first contacted the Hancho, or village chief, to explain their mission and the screening procedures to which the

239 "CIC Experiences World War II, Pacific," prepared in Training Division CIC Center, (Unclassified) (Central Records Facility).

240 War-Time CIC History, AFMIDPAC, pp. 50-52, (CONFIDENTIAL) (Central Records Facility).

villagers would be subjected. To win respect for CIC, agents often exaggerated their importance or compared CIC to the Japanese Kempei Tai, an organization known and feared by the Okinawans. Next the agents promised the Hancho that the Americans would do much to help the people of Okinawa.

After this preliminary indoctrination, the Hancho then assembled the more prominent and better educated citizens of the community, and the CIC agents repeated the briefing. From this group, agents asked for volunteers to help with the screening program, promising extra rice and "C" rations to those who became "CIC Aides."

Finally, agents directed all residents of the village to report to a central area for screening. The native "CIC Aides" interrogated their neighbors, using questionnaires prepared by CIC. By the middle of May word had passed from village to village that it was "a good thing" to be screened. Agents entering a town for the first time often found natives eagerly awaiting interrogation.

After questionnaires had been completed a Nisei soldier, usually a member of some non-CIC Army organization, reviewed the forms and evaluated their potential intelligence value. Later, agents and interpreters conducted extensive interrogations of persons believed to be sources of additional information.

To identify natives and control their movements, CIC obtained metal identification tags similar to those worn by American troops. Each native was instructed to wear his tag, or "bongo," at all times. In deference to the Oriental concept of masculine superiority, the metal tags were issued to men only. Women received paper or linen tags.[241]

"CIC Aides" Prove Effective

Use of natives as "CIC Aides" during the screening process proved remarkably successful, partly because of the cooperation of the Hanchos and partly because of the competence of the persons selected as aides.

Never before in the Pacific war had CIC relied so heavily upon native help, but a severe shortage of loyal and competent linguists demanded that Okinawans be used whenever possible. Without them, no detachment could have completed the enormous screening task which was the only practical way of identifying individuals. Okinawans were much less reluctant to talk when questioned by their own people.

241 G2, USAFPOA Intelligence Bulletin, "Report on Okinawa CIC Activity," undtd, (Unclassified) (Central Records Facility).

Although it was doubtful whether the native aides were always in sympathy with the Americans, their cooperation was beyond original expectations. The screening process proved a fairly accurate means of establishing the degree of reliability, trustworthiness, and loyalty of an individual. It also revealed the presence of strangers and suspicious characters in a particular community.

Despite the importance which CIC placed on screening, it was never considered a substitute for a security clearance. Natives employed by the Army in restricted areas were usually required to submit to a much more extensive investigation.

As a part of the screening program, teachers, business and professional men, and civic leaders often were asked to write short histories of the aspects of their community life with which they were more familiar. Included in the reports were suggestions for the future and names of persons who could be expected to provide further information for CIC.[242]

Natives Not Security Threat

Few cases of espionage or sabotage by Okinawans themselves occurred. The natives were not concerned with who ruled them, so long as they were not unduly restricted in their way of life. The result of this apathy was that on Okinawa, as in New Guinea, CIC combat detachments were utilized primarily as gatherers of tactical information. A 7th CIC Detachment report stated:

> "Since the civilian population of Okinawa is by and large politically apathetic, counterintelligence has not so far been a problem, and no cases have occurred within the jurisdiction of this detachment. The emphasis has been on gathering information for the Division G2, so that the duties of the detachment have fallen into two categories:
>
> a. Searches of caves, dwellings and abandoned enemy installations for documents and material of intelligence value.
>
> b. Interrogation of civilians both in the internment camps and, in cases where they might have information of immediate value, at the time of capture."

The 7th CIC Detachment found that the areas between battalion and company command posts generally contained more documents of immediate tactical value than any other areas abandoned by the enemy.

---

242 963d CIC Det Weekly CI Rpt Nr 8, dtd 3 Jul 45, p. 2, (CONFIDENTIAL) (Central Records Facility); and G2, USAFPOA Intelligence Bulletin, "Report on Okinawa CIC Activity," undtd, (Unclassified) (Central Records Facility).

Because the search for documents and tactical information carried CIC agents into the front lines, 1st Lt William H. Attwood, commander of the 7th Detachment, recommended that agents be given additional training in combat operations, including map reading.[243]

The 27th CIC Detachment reported similar activities. During May, the detachment and a team from the 310th CIC Detachment screened civilians in compounds at Taira, Jinuza, Soke, and Kanna. A lack of interpreters made the work extremely difficult, however. 1st Lt Cecil A. Jastram, detachment commander, also complained that his detachment was not being properly utilized. "Neither screening of civilians nor gathering of tactical information appear to be CIC functions," he wrote. "Both have been done in an attempt to keep the detachment employed."[244]

77th CIC Lands on Okinawa

Meanwhile, the 77th CIC Detachment landed with its division on 28 April and began similar screening and document-collecting duties.

After its operations on Kerama Retto, the 77th remained at sea from 1 April to 15 April while preparing for an assault on Ie Shima. On Ie Shima from 16 April until the division moved to Okinawa, the 77th CIC Detachment served as a document-collecting team on the little island.

During May, after moving into the thick of the operations on Okinawa, agents of the 77th CIC Detachment worked in teams of two and screened 572 civilians.[245]

CIC Learns Japanese Infiltration Techniques

One of the greatest problems CIC faced on Okinawa was apprehending Japanese soldiers and Boei Tai labor battalion personnel who donned civilian apparel and wandered about behind American lines.

Some such persons were deserters, some members of Japanese Army units bypassed in Northern Okinawa, and others soldiers specifically detailed to slip through the lines to commit acts of sabotage or espionage.

---

243 7th CIC Det Monthly Information Rpt for Apr 45, dtd 5 May 45, (CONFIDENTIAL) (Central Records Facility).

244 27th CIC Det Monthly Information Rpt for May 45, dtd 10 Jun 45, (CONFIDENTIAL) (Central Records Facility).

245 Wartime CIC History, AFMIDPAC, pp. 50-52, (CONFIDENTIAL) (Central Records Facility).

CIC got its first clue of what was happening on 22 April, when 7th CIC Detachment agents discovered a large quantity of discarded enemy uniforms during a routine search of a cave. Numerous similar findings were reported as the campaign progressed.

CIC's suspicions were confirmed on 26 April when a Japanese lieutenant told his CIC captors that soldiers dressed in civilian garb were being sent into American lines as "suicide squads" bent on destruction of equipment and personnel. According to the prisoner, these squads operated only in forward areas and were under orders not to penetrate any great distance behind American lines for large-scale sabotage. After operating in civilian clothing for a day or two, the suicide squads returned to their own units.

An Okinawan woman interrogated the same day confirmed the Japanese officer's story and told CIC agents that the Japanese often obtained the help of natives by giving them money and other inducements.

On 6 May, a small group of civilians was picked up 3,000 yards behind American lines. Under interrogation by CIC agents one member of the group confessed that he was a Japanese soldier.

A week later, on 13 May, another Japanese lieutenant also told of enemy attempts to pass through American lines in civilian clothing.[246] CIC agents working with the 1st Marine Division interrogated a prisoner who claimed that Japanese soldiers were being ordered to surrender to Americans as civilian refugees. He cited one instance of a Japanese corporal who surrendered under similar circumstances and offered to persuade other Japanese to lay down their arms. Americans gave the prisoner extra rations of food and whiskey, then escorted him to the front lines, where he had promised to contact his fellow soldiers. Instead, he escaped to his own unit with information on the number and identities of prisoners in the American stockade.[247]

At the Taira Compound, a CIC interrogation team learned that Okinawans in that area were giving their identification tags to Japanese soldiers disguised as civilians, permitting the enemy troops to wander about unmolested while they gathered food and information.[248]

At another civilian compound at Kushi, a man wearing a kimono and carrying an American Marine Corps jacket was killed as he attempted to scale a fence into the compound. CIC agents who investigated the incident concluded that the man was an enemy soldier attempting to infiltrate the compound.[249] A document captured later lent credence to this belief. It revealed that Japanese troops were surrendering with the idea of organizing resistance within Prisoner of War enclosures and the civilian compounds.[250]

Shortly after the first reports of infiltrating Japanese trickled in to CIC, a series of unexplained incidents indicated that the enemy suicide squads might have been successful in their sabotage attempts. On 17 May, a mysterious explosion wrecked a 40th Naval Construction Battalion fuel dump. CIC agents who investigated determined that an improvised box bomb touched off the blast. A day later, a bridge behind American lines was damaged by explosives, and an attempt to destroy a Seabee power-shovel with dynamite was discovered. Agents were unsuccessful in their attempts to locate the persons responsible for the explosions.[251]

Security Measures Tightened

CIC warnings about the danger of infiltrating Japanese were relayed to combat troops and guards at all the Prisoner of War stockades and civilian compounds. Alerted, the guards demanded positive identification of all civilians found wandering in an area.

On 14 May an American sentry killed a suspicious civilian who failed to answer his challenge. When the victim's body was searched by CIC agents a knapsack containing a Japanese Army uniform and personal effects were found which identified the dead man as a member of the Japanese Army.[252]

It was inevitable, however, that the stricter measures against civilians would result in the death of some innocent person. By as early as 13 May, there were several confirmed instances of the shooting of civilians found wandering about after dark near military installations. Frightened, timid, and uninformed natives were

killed or wounded when they failed to respond properly to challenges from wary American sentries.[253] Once an American guard was also killed, presumably by bullets fired mistakenly by his fellow sentries.[254]

Infiltrators Ambush CIC Officers

More tragic from CIC's standpoint was the fatal ambush of two CIC officers by infiltrating Japanese soldiers.

On 14 June, 1st Lt Raymond L. Cobean of the 310th CIC Detachment and 2d Lt Glenn S. Dunbar of the 27th CIC Detachment were driving across the Motobu Peninsula in Northern Okinawa for a routine meeting with CIC native aides when they were killed.

That enemy infiltrators were responsible was evident from the investigation that followed. Organized enemy resistance on the Motobu Peninsula had officially ended two months earlier, and there was regular traffic by American forces over the highway on which the CIC officers were travelling. Bullet holes in their jeep were made by Japanese 7.6 mm ammunition, which could have been fired by either a rifle or a machine gun. Several empty clips for the same type ammunition were found on a ledge fifteen feet above the road at the point of the ambush.[255]

CIC Arrests Kempei Tai Agents

During the last three weeks of the Okinawa campaign the Japanese frantically increased their attempts to infiltrate American lines. Large numbers of enemy troops donned civilian clothing and posed as Okinawans. To cope with the problem, the 7th CIC Detachment, augmented by personnel from the 224th CIC Detachment, operated with battalions, regiments, and companies and maintained teams at civilian collection points in the division sector.

Vigilance paid. Agents arrested ten Kempei Tai agents who had made their way to the Chinen Peninsula in civilian clothing. Four of the prisoners were officers.

One of the prisoners later led CIC agents to a house where two other suspects were hiding. These also confessed they were Kempei Tai agents, and gave information which led to the capture of the organization's executive officer.

253 310th CIC Det Weekly Counter Intelligence Rpt Nr 1, dtd 13 May 1945, Annex 3, (CONFIDENTIAL) (Central Records Facility).

CONFIDENTIAL

Convinced that Japan was losing the war, the Kempei Tai executive officer furnished CIC considerable tactical information and led them to a cave occupied by the Kempei Tai commander. When 7th CIC agents moved in to arrest the commander, they discovered only his body. He had committed suicide moments earlier.[256]

The problem of Japanese soldiers posing as civilians became increasingly more acute. Out of more than 40,000 persons screened in the nine days following 14 June, 1,285 were Japanese soldiers. During the same period, 87 civilians considered potentially dangerous were taken into custody.[257]

CIC Counters Guerilla Propaganda

Closely related to the problem of infiltrating soldiers disguised as civilians was that of small bands of enemy troops who continued to fight as guerillas long after their larger units had been forced to retreat from the Americans. Particularly in Northern Okinawa, where the rocky, hilly, and wooded terrain was conducive to guerilla warfare, the guerilla problem was serious.

The enemy guerillas did not inflict great damage to the American forces, but they terrorized the natives and tried to intimidate them into fighting the Americans. Often one of CIC's biggest jobs on entering a native village was to counter the anti-American propaganda disseminated by these guerilla bands.

At one native village, ten Japanese guerillas staged a night raid and beheaded the Hancho, who had cooperated with American military government officials and CIC. The leader of the band warned the villagers against cooperation with the Americans and urged them to flee to the south, where Japanese troops were rallying desperately for a final stand against the Allies. When the civilians demonstrated that they wanted to stay in their village, the Japanese lined up approximately 50 of them against a sea wall and hurled hand grenades at them. Thirty-five natives were killed and the rest wounded before the guerillas withdrew.[258]

CIC agents apprehended many Okinawans who had been impressed into service with the Boei Tai labor battalions and had attempted to desert the combat zones for the safer northern areas. Many carried grenades or bamboo spears for self-

256 7th CIC Det Monthly Information Rpt for June 45, dtd 5 Jul 45, (CONFIDENTIAL) (Central Records Facility).

258 310th CIC Det Weekly Counter Intelligence Rpt Nr 2, dtd 21 May 45, Annex 3, p. 2, (CONFIDENTIAL) (Central Records Facility).

destruction because the Japanese had said that Americans cut off the ears and punched out the eyes of all Okinawans they captured.

Unfortunately, CIC efforts to counter such propaganda in meetings with village leaders were often hampered by misconduct of American troops. CIC reported several cases of native women being molested by American soldiers.[259] Looting of the native villages by service troops and troops above regimental level did even more to destroy the good will which CIC was trying to create. On some occasions CIC officers advised unit commanders of the damage by American troops and urged them to stress to troops the importance of good relations with the islanders.[260]

CIC Establishes Informant Nets

In June large numbers of desperate Japanese soldiers were holed up in the scores of hidden caves of the Chinen Mura Peninsula of southeastern Okinawa. Often they were able to conceal themselves indefinitely by donning civilian clothing only long enough to enter native villages to obtain food and water.

To ferret out these enemy troops who refused to surrender, CIC found it necessary to recruit informants among both civilians and Japanese Prisoners of War.

Four cooperative prisoners who were former Kempei Tai agents were chosen for the nucleus of an informant net. They contacted former civil police officers in the area and persuaded them to clear assigned areas of Japanese soldiers. The CIC informants convinced natives that the search for stray Japanese soldiers was being conducted for the protection of the civilians. Soon the natives were willing to volunteer information concerning the location and movement of Japanese troops.

The informant net was actually run by the Japanese prisoners who had volunteered. CIC exercised only general supervision; however, a Nisei interpreter sat in on all meetings of the informants and reported the gist of their conversations to CIC.

Prisoners who served as informants were normally kept in Prisoner of War stockades except when they were asked to accompany CIC agents on some assignment. Because informants often were needed on short notice, military police were ordered not to use them on work details or to transfer them to other camps without CIC approval.

259 310th CIC Det Weekly Counter Intelligence Rpt Nr 4, dtd 3 Jun 45, Annex 2, pp. 1-3, (CONFIDENTIAL) (Central Records Facility).

260 Ltr, Lt Robyn L. Dare, 7th CIC Det, to G2, 7th Division, dtd 8 Apr 45, (Unclassified) (Kansas City Records Center, Box 25094).

When working with CIC teams away from the stockade, informants were encouraged to feel that they were members of the team. Invariably, the informants were more enthusiastic when treated as colleagues of the CIC agents. Agents seldom used more than one informant on a single case. A CIC report on the use of Japanese informants concluded:

> "If two or more informants are being employed simultaneously they should be kept segregated and should not be used on the same case unless they have been accustomed to working together. Many informants have a prima donna complex and like to feel that they are the U.S. Army's only source of information. An exception to this rule can be made in the case of an officer working with enlisted PW's of his own unit. Such a combination can be effective when properly supervised. A Kempei Tai squad captured almost intact by CIC was used in this manner on Okinawa with excellent results."[261]

Near the end of the fighting in Okinawa, one prisoner informant told CIC agents the location of the cave housing the Japanese headquarters on the island. When the information was reported, CIC received orders to raid the cave and to capture General Ushijima, the Japanese commander, and General Cho, the enemy chief of staff. Agents raided the cave on 22 June, only to find that both generals had committed hari-kiri the day before.

CIC agents captured hundreds of other prisoners, though--900 during the Okinawa campaign. By 15 June, six days before the campaign officially ended, one detachment had taken more prisoners than any single infantry regiment on Okinawa.[262]

The informant system was responsible for many of the captures credited to CIC. Agents sent Japanese informants ahead to act as go-betweens for CIC and the enemy soldiers still in hiding. This plan was especially effective when a Japanese officer was used to contact enlisted men. Assured by the officer-informant of good treatment at American hands, the Japanese soldiers surrendered in droves.

Civilian Informants

Agents also recruited many civilians as informants. CIC particularly sought to use "Okinawans who had traveled or lived in the United States or the Territory of Hawaii; persons who had speaking or reading knowledge of the English language; Christian missionaries; and professional men of liberal opinion."

---

261 Wartime CIC History, AFMIDPAC, pp. 46, 47, (CONFIDENTIAL) (Central Records Facility).

262 "CIC Experiences World War II, Pacific," prepared in Training Division CIC Center, (Unclassified) (Central Records Facility).

In practice, however, CIC considered using anyone who was in opposition to the Japanese government and "whose character and intelligence was reputedly satisfactory." Ironically, Communist Party members and sympathizers usually were in this category. There were few Communists on Okinawa, possibly no more than seven or eight. But the Japanese government so bitterly opposed the Communist movement that a party member or sympathizer was considered an enemy per se of the Japanese.[263]

Near the end of the campaign officials of the Okinawan government--including Miss Mehara--fled to a cave to hide from the onrushing American forces. While in the cave, she heard Shimada and Abai talking of killing themselves. Before she could report the information to CIC, however, both officials left the cave for an unknown destination. Neither was heard from again.[264]

CIC's civilian informants could hardly be considered "confidential informants." To satisfy the informants' desire for authority and prestige, they were issued brassards inscribed with the Japanese characters which meant "Advisor to U.S. Forces." Informants received preferential treatment. Clothing, cigarettes, and PX items were exchanged for information. One civilian informant was permitted to visit his family in another area twice each week as a reward for his work for CIC. Knowing that the visits would be terminated when his usefulness was exhausted, the informant supplied CIC with valuable information for more than a month.[265]

Area Detachments Take Over

Even after organized enemy resistance was declared at an end in Okinawa on 21 June, there was no rest for either CIC or combat troops. It took weeks and even months to locate all the enemy soldiers still on Okinawa. And for CIC there remained the task of screening thousands of civilians and conducting more thorough investigations of those who were to be employed by the Army on reconstruction projects.

263 Wartime CIC History, AFMIDPAC, pp. 48, 49, (CONFIDENTIAL) (Central Records Facility).

264 963d CIC Det Weekly Counter Intelligence Rpt Nr 8, dtd 3 Jul 45, Annex 2, pp. 3, 4, (CONFIDENTIAL) (Central Records Facility).

265 Wartime CIC History, AFMIDPAC, p. 47, (CONFIDENTIAL) (Central Records Facility).

Near the end of June the 963d CIC Area Detachment, commanded by Capt Walter L. Pearson, and the 496th Area Detachment landed to assume counter-intelligence jurisdiction as control of the captured islands in the Ryukyus group passed to a newly created Island Command. The combat detachment which had functioned under Tenth Army remained on Okinawa until after the end of the war, but they operated under the supervision of the 963d and 496th Area Detachments.

As the number of Japanese still hiding in hills and caves diminished, agents devoted more time to screening civilians still in compounds and to assisting military government units in restoring order among the populace of the island. By mid-July agents had processed 58,472 civilians and had begun to close some of the civilian compounds.

On 27 June, the 963d CIC Detachment published a list of 77 persons being sought for questioning by CIC. The list, compiled from reports of informants and screening reports, contained names of persons believed to be potentially dangerous, potentially friendly, or of potential value as informants. Agents on Okinawa concentrated on gathering information about various organizations on the Japanese mainland during the waning days of the fighting in Okinawa.[266]

Political Groups Investigated by CIC

[redacted]

Appendix 2

POLITICAL GROUPS INVESTIGATED BY CIC

CIC agents operating in Luzon investigated three major pro-Japanese or anti-American organizations. Digests of information gathered on these organizations follow.[267]

The Sakdal-Ganap Party

In the early 1930's, Benigno R. Ramos organized the Sakdalista movement. Through his newspaper, the Sakdal (meaning "complaint" in Tagalog), he campaigned for the immediate and complete independence of the Philippines and the redistribution of wealth by abolishing the large land grant and tenant farmer systems. He also sponsored a "Back to the Orient" movement, advocating removal of Anglo-Saxon influence from the Philippines and "rejuvenation of Filipino orientalism" under the guidance of Japan. Although the organizers found a fertile field for their doctrine in the masses of the poor and illiterate, the organization did not receive much publicity or consideration from the authorities until 1933. At that time, the movement, which had been functioning as a series of secret societies, came out in the open as a political party. It grew rapidly and in June 1934 succeeded in electing several representatives, governors, and mayors.

Encouraged by this success, Ramos went to Japan with the avowed purpose of enlisting material aid of the Japanese Government in a Sakdalista-sponsored revolt against the Commonwealth Philippine Government. On 1 May 1935 the Sakdalista revolt occurred. The uprising was quickly quelled, but not without some bloodshed. Ramos remained in exile in Japan.

The Sakdalista party was outlawed after the uprising, but its leaders continued to meet clandestinely and in 1938 announced the formation of the Ganap party. "Ganap" is the Tagalog term for "perfection." With few exceptions, the leaders of the Ganap party were the same men who had sponsored the Sakdalista movement. Ramos returned from Japan late in 1938, was arrested with twelve cohorts the following year and imprisoned.

He remained in prison until the Japanese captured the Philippines, after which he was freed and returned to Manila. The party was renamed Sakdal-Ganap and was placed at the disposal of the Japanese. Its membership then was estimated at 400,000 and was used extensively as a "fifth column" by the enemy.

[redacted]

In compliance with the Japanese edict abolishing all political parties, the Sakdal-Ganap party reorganized as a semi-military group patterned along Japanese Army lines. This organization, known as the Morisita Butai, with Ramos as the Supreme Leader, undertook the establishment and recruitment of a labor force for the Japanese and an intelligence net to detect guerilla and pro-American elements. With few exceptions, most of the high-ranking Ganaps were Butai members. Later, a second force, the Matsuyama Butai, was organized, identical in purpose and formation with the first, but subordinate to it. The second Butai was chiefly concerned with waterfront activities. These two organizations functioned principally in Manila, drawing their personnel from the Ganaps in the provinces. To meet the demand of the Japanese garrisons for an informer net and labor force in the province, local chapters formed their own smaller Butais.

Early in 1943 a Ganap-sponsored, Japanese-trained military organization came into being. At first called the "Voluntary Unidos," later it was known as the YOIN or United Nippon Army. In 1944 the entire Ganap set-up reorganized, resulting in the combination of the Butais into the Morisita-Matsuyama Butai with the YOIN and YOIN-Reserve a subordinate part of the Butai. The Japanese Army trained and equipped the YOIN, while the Butai retained administrative control and supervised recruiting. Another function of the Butai was to select candidates to attend the Japanese Intelligence Training School at Ft Santiago, where picked men were trained in espionage and sabotage to operate behind Allied lines.

With this vast "unofficial army" at their disposal, the Japanese and Filipino leaders had little difficulty obtaining personnel when the Makapili was organized to offer resistance to American invasion forces. Most of the trained Butai members fled with the Japanese as part of the Makapili army and fought for some time against the Americans. Toward the end of the Luzon campaign, the influx of these men through American lines greatly increased, the shortage of food and a growing conviction of the imminence of Japanese defeat prompting them to seek the safety of American-held territory. Many Ganaps remained behind from the start rather than retreat with the Japanese. CIC's job was to locate and apprehend these Ganaps during the Luzon campaign and to reduce them as a security threat to American forces and operations.

The Makapili

The Makapili--the "Kalipunang Makabayan ng mga Philipino," or "League of Patriotic Filipinos,"--was publicly formed as an integral part of the Philippine government in a mammoth celebration in Manila on 8 December 1944, the anniversary of the Pearl Harbor attack. Organized with the full support and recognition of the Japanese as an armed force of Filipinos to fight Americans, it originated as an indirect result of puppet president Jose P. Laurel's declaration of war against the Allies in September 1944. It represented a union of the rabidly pro-Japanese elements with Laurel's more moderate policy.

[redacted]

Instrumental in founding the Makapili were General Yamashita, General Artemo Ricarte, Benigno Ramos, and Pio Duran. The latter was believed the most important as indicated by his private papers which CIC had seized. Ramos influenced his Ganap and Butai members to join the organization, while Ricarte and Laurel used their popular appeal to induce their followers into the Makapili.

The preamble to the Makapili Articles of Association stated:

> "We, the citizens of the Philippine Republic, ...anxious to live a national existence closely affiliated and interrelated with the other Asiatic nations; and, actuated by the conviction that our country, the Philippines, is in duty and in honor ...bound to shed the blood and sacrifice the lives of her people in one crucible with the lives of the other East Asians in order to eradicate Anglo-Saxon influence in East Asia, have this day assembled voluntarily in the presence of the hallowed spirits of our ancestors, to form a patriotic and national association to be known as the Patriotic League of Filipinos."

Among the specific aims and purposes of the Makapili, as quoted in the Articles, was the following:

> "To help maintain peace and order within the country and to fight the common enemies side by side with the other Asiatics on any front of the present war.
> "To collaborate unreservedly and unstintedly with the Imperial Japanese Army and Navy in the Philippines in such ways and means as may in the joint judgment of the Imperial Japanese Forces and the Association be deemed necessary and fruitful.
> "To propagate throughout the country the principles for which the Empire of Japan and other Asiatic nations are now fighting this great Pacific war.
> "To explain, propagate, and inculcate the idea that the welfare, happiness and existence of an independent Philippines depend entirely upon the victory of the Asiatic nations and close association and collaboration with them."

Duran's original plan called for an army of 60,000 men fully armed, trained, and equipped by the Japanese Army. To accomplish this goal, Duran planned to use the 2,000 graduates of the New Philippines Cultural Institute, men who already had five months of basic training under the Japanese and were indoctrinated in the aims of the Greater East Asia Co-Prosperity Sphere, as a cadre and shock troops for the army. Effective November 1944, he planned to recruit 20,000 men a month. While Duran fell far short of this goal, his main objectives were accomplished.

Several difficulties beset Makapili leaders. For one thing, there was not enough time to achieve all that was planned. For another thing, the Japanese Army itself offered some opposition, since General Nishimura apparently was reluctant to accept the Makapili as an equal arm. Shortages of supplies, uniforms, and equipment hampered the organizers.

Other difficulties affecting recruiting were met. The followers of Ricarte, already united under the banner of "Bagong Pakakaisa" (New Unity Organization), while agreeing in spirit with the aims and purposes of the Makapili, objected to making a clean-cut break. They eventually withdrew and formed the "Peace Army of the Philippines," a separate and distinct organization pledged to fight the Americans without the aid of the Japanese. Because of this and other troubles, the brunt of the recruiting fell to Ramos.

This was not too difficult a task, for at Ramos' call were his staunch Ganap followers who numbered at the outbreak of the war, approximately 400,000. Although for the most part these were poor illiterates, some 60,000 to 80,000 were fit for combat duty. A good many of these by December 1944 had already received the rudiments of military discipline through employment by Japanese garrisons and from service in the Ganap-sponsored Morisita and Matsuyama Butais. Approximately 10,000 men scattered throughout Central Luzon, Cavite, and Laguna had already received complete basic military training under the Japanese Army in the YOIN and YOIN-Reserve. In late November 1944, prior to the public inauguration of the Makapili, the call to arms had already gone out to the provinces. Key Ganaps were called to Manila, briefed, then sent home to recruit and organize, under the guidance of their local Japanese garrison commanders.

Despite Japanese propaganda claims of Makapili counterthrusts during the actual fighting, the activities of the group were largely limited to sabotage and espionage. Confessions of members definitely established that Makapili members were responsible for burning Tarlac City and Camp O'Donnell and that they carried out espionage activities in Tarlac and Pampanga Provinces.

An estimated 7,000 to 10,000 Makapili were able to organize and retreat with the Japanese from Central Luzon, the largest concentration being in the foothills of the Sierra Madre Mountains. Many cases of the use of Makapili as combat troops and as guards and carriers were reported.

In the final stages of the Luzon campaign, large numbers of Makapili infiltrated into American-occupied territory. A shortage of food and a realization that the cause was lost prompted most of them to sever their connections with the Japanese. Here again CIC was called upon to screen all evacuees from enemy territory and weed out the Makapili. When captured unarmed, most Makapili

adopted a stock story that they were forced by the Japanese to accompany them as carriers. Most evidence, however, indicated that they served the enemy faithfully and well in many ways.

The Hukbalahaps

The "Huks" as they are popularly termed, developed from the United Front Movement, hence an understanding of the latter movement is necessary to evaluate the Huks. When war with Japan broke out, most of the different social, religious, and political groups were at a loss as to how to fight the Japanese.

Nowhere in the Philippines was there any unified resistance movement. Shortly after the war broke out, labor and political leaders began investigating the possibility of forming a United Front against Japanese imperialism. At a meeting on Arayat Mountain, Pampanga Province in February 1942, the United Front was organized. A month later a military branch of the movement was formed. This was called the "Hukbalahap," a contraction of several Tagalog words meaning "The People's Army to Fight the Japanese." Thus the civilian and military aspects of the United Front Movement were seemingly separated, but in actuality the Huks retained control of the entire movement. Luis Taruc and Castro Alejandrino assumed leadership of the Huks. United Front activity was directed by Dr Vicente Lava, Juan Feleo, and Mateo Castillo, plus a representative of the Chinese League of Manila.

At first the Huks were directed by a United Front military committee, of which both Taruc and Alejandrino were members. In October 1944, this committee was reorganized as the Hukbalahap GHQ with the following officers: Taruc, Alejandrino, Dr Adolfo (alias Gasang), Mariano Balgos (alias Tony Collantes), Lazaro Palacio (alias Ely), and the Chinese representative, Mr Lee (alias Justo). It is an interesting reflection on the character of the Philippine people and their love of intrigue to note that nearly all Huks, leaders and soldiers alike, adopted aliases with which to carry on their Huk activity.

The Huk military organization was similar to that of the USAFFE Guerillas. Under Taruc, the supreme commander and his GHQ were Regional Commands, which in turn were organized into squadrons of 90 to 150 men each. A Division of Intelligence was set up headed by Tomas Calma (alias Sol). The function of the Division of Intelligence was to collect information regarding collaborators, puppet officials, enemy spies, and the Japanese-controlled Bureau of Constabulary. This information was put at the disposal of the Huk GHQ which then would issue orders for any action to be taken.

The methods employed by the Hukbalahap in dealing with suspected traitors were brutal and uncompromising, though often effective. Large numbers of Huks would move into towns at night, and under the noses of the Japanese, spirit away

the suspects, most of whom were never heard of again. No accurate estimate of the number of Huk kidnapings and murders that occurred during their reign can be made. Many such acts took place on the initiative of the individual squadrons without waiting for orders from the Hukbalahap GHQ.

The organization was well-armed, largely with American weapons abandoned on Corregidor and Bataan which the Huks collected and transported by small boat across Manila Bay and up the Pasig River to Minalin and Macabebe Pampanga. A military strongpoint where the Huks could retreat, if necessary, and make a powerful defensive stand was created in Pampanga Province. It consisted of two buildings in a remote and nearly inaccessible part of the province, each protected by machine guns in concealed emplacements. The Huks fondly referred to these forts as their "Corregidor" and their "Mariveles."

It was quite probable that the rank and file Huk soldiers were unaware of the revolutionary ambitions of their top leaders. Undoubtedly the greater percentage of its members were recruited because life under the Japanese was unbearable and armed resistance seemed the only course to follow. The average Huk soldier knew little if anything of Communist doctrine. His foremost desire was to rid his homeland of the Japanese invader. Secondly, he wanted all collaborators removed from office and punished. And finally, although less clear to him, he advocated complete independence for the Philippines augmented by a government interested in improving conditions for the masses. They desired guns to achieve their first aim, and possibly the second if the collaborators would not give themselves up; but the average Huk did not contemplate the use of weapons to accomplish the third.

Their principal fault was that they went too far in realizing their aims. In ridding the island of Japanese they took justice in their own hands and conducted a virtual reign of terror in the provinces of Central Luzon where they were strongest--Pampanga, Bulacan, Bataan, Tarlac, and Nueva Ecija. They also went too far in their desire to have a voice in the government. In many instances after the Americans had liberated a city, the Huks would move in and install an entire government of their own choice.

While, in all fairness, it must be conceded that the Huks rendered valuable service during the occupation by ambushing and killing many Japanese, sabotaging enemy installations, and generally harassing the invaders, their irresponsible and terroristic activities after the American occupation fostered unrest and dissension among the people and seriously hampered the efforts of the U.S. Army to restore peace and order. Many Huks were organized into provisional companies and attached to American units to fight the enemy. But the Huk GHQ opposed this policy, since the radical leadership wanted to keep the Huk army intact as an instrument of force in accomplishing United Front political aims. By the end of

the Luzon campaign the Hukbalahap organization was considerably weakened. Certain elements within the organization had made a clean break with the GHQ and pursued a more conservative course of cooperation with the American forces. But there was no change in the master plan fostered by the top United Front, and Hukbalahap leaders and many Filipinos continued to take their orders from them. At the campaign's close Mariano Balgos (Tony Collantes) was the Huk leader, since both Taruc and Alejandrino were interned by CIC.

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Chapter 1

INTRODUCTION

The end of almost five years of war brought important personnel problems to the military. CIC had to meet and face its share of these problems.

The public temperament was inclined toward demobilization and a return to "normal living." This brought pressure to bear on the Congress for the speedy return of troops from overseas areas, a pressure innocent enough in large part, but carefully nurtured and abetted by groups desirous of seeing the United States quickly become a weak and ineffective military power.

Appreciation of the dilemma in which CIC found itself in 1945 demands a short recapitulation of events occurring just before and during the 1945-1950 period. It will be made clear that CIC faced internal problems of the first magnitude which had to be settled before the Corps could function in a truly effective manner and discharge its postwar responsibilities.

It will be recalled that the recommendations of the Inspector General's report relative to his investigation of CIC were adopted and made effective in February 1944. At that time the Office of the Chief, the CIC Center, and the training school were eliminated. CIC functions in the Zone of Interior were relegated to the Security Intelligence Corps under the direction of the Provost Marshal General, and Air Force and overseas detachments were assigned to their respective commands rather than being attached. In short, the Corps was completely decentralized and the strength and effectiveness that had been developed by a close-knit and coordinated structure were in large part sapped.

Primary to discussion of the 1945-1950 period, then, is a study of the redevelopment and recentralization of the CIC as an organization. The study will be undertaken in three parts: the Office of the Chief, the Center, and the School.

The Chief, CIC

Dispersal of CIC by assignment to the commands with which it was serving had eliminated the apparent need for a Chief, CIC. From 5 February 1944 to 13 June 1945 there was no such title. During this period, staff supervision of Zone of Interior CIC had passed from the G2, War Department General Staff to the commanding general, Army Service Forces, and finally to the Director of Intelligence, Army Service Forces. Overseas detachments had staff supervision under theater G2s.

It became apparent in late 1944 and early 1945 that the decentralized scheme of CIC operation was not working out. Col H. R. Kibler, who had been chief at

the time the office was abolished, and was later assigned as Executive Officer to Col J. M. Roamer, Director of Intelligence, still later was assigned to Army Service Forces, and foresaw the need and eventual request to reestablish the office. In fact, he recalled Maj Edward Bennet from Europe and put him to drafting a staff study recommending revitalization of the Office of the Chief. The memorandum was completed in January or February, but was held in obeyance since it was not felt that the proper time for presentation had arrived.

The memorandum pointed out that the anticipated cessation of hostilities in the Pacific Theater and its accompanying rapid redeployment of troops would leave CIC in occupation areas unable to accomplish its added responsibilities unless men could be trained rapidly to take their places. It was stressed that the abbreviated training which had been instituted at the Military Intelligence Training Center at Fort Ritchie, Maryland, in August 1944 to fill the demands of overseas quotas which had arisen after the removal of CIC from G2 control early in 1944, would not be sufficient for agents who would be going into detachments almost completely depleted by redeployment. This training had sufficed for replacements who were integrated into detachments of trained and experienced agents.

Comparing the present situation with the period from May 1943 to February 1944, designated as the second phase of the Counter Intelligence Corps activities in World War II, in which 3,000 CIC agents were procured, trained and assigned to overseas theaters, the memorandum stated: "It is necessary that War Department Memorandum 350-44, 7 September 1944, be rescinded and that authority be granted to conduct such additional training as will properly prepare Counter Intelligence Corps personnel to perform their duties."

The memorandum specifically recommended that the Commanding General, Army Service Forces, be authorized to establish, on or about 1 June 1945, the Office of the Chief, Counter Intelligence Corps, who would be given the responsibility of training and assigning CIC personnel for overseas replacements, and of operating the Counter Intelligence Corps Supply Depot. The Counter Intelligence Corps, Army Service Forces, would include a colonel, with the title of Chief, 38 additional officers and 31 enlisted men, to be utilized "for no other purpose." The Counter Intelligence Corps Training Group would be allotted a total of 788 vacancies to be filled by personnel procured for CIC and undergoing training prior to assignment. Personnel redeployed or rotated from theaters of operation would be assigned to the Training Group for redeployment training prior to reassignment.[1]

---

1 Memo for the Chief of Staff, USA, Subj: Administration, Training and Redeployment Training of the CIC, dtd 18 May 45, from Office of the CG, ASF, /s/ Col J. M. Roamer, Director of Intelligence, (SECRET) contained in Appendix XVIII in "Appendix of Tabs for History of CIC in ASF," on file in Central Records Facility, attached as Appendix 1, this chapter.

About the middle of April, Colonel Kibler learned that the time was approaching when the memorandum would receive favorable consideration and made his plans accordingly.[2] The go-ahead sign was given and the staff study dated 18 May 1945, was started on its rounds in the War Department on 21 May. Concurrences followed rapidly. G2 on 23 May, G1 on 28 May, G3 on 10 June, and Operations Division, War Department General Staff on 18 June.[3]

Colonel Kibler was officially named as Chief on 13 July 1945 and was followed on 15 January 1946 by Col M. C. Noble.[4]

When the Army Service Forces were inactivated on 11 June 1946, Colonel Noble was informed by G2, War Department General Staff, that he was not Chief, CIC, and should not sign his name as such. His official designation was Commanding Officer, CIC. With dissolution of the Army Service Forces, control of CIC passed to the Director of Intelligence, War Department General Staff, and a CIC Branch of the Security Group, Intelligence Division, was established.

The CIC Branch, in effect, took over the functions of the Chief, CIC. The Branch handled records, assignments, correspondence, and transfer movements. When in April 1946, control of SIC, and consequent Zone of Interior responsibility was returned to CIC, the job of the CIC Branch became overwhelming. Particular complications arose since by this time the Center had been reestablished at Fort Holabird, Maryland, and the separation of the Center from its policy-making body in Washington, D.C., caused misunderstandings.

Recognizing the need for centralized control, Col L. R. Forney, Director of the Security Branch, recommended dissolution of the Branch and recreation of the Office of the Chief, where overall control of CIC, less operations, could be put in the hands of one man.

When the request was approved, Special Order No. 77, War Department, 18 April 1947, named Brig Gen George V. Keyser as Commanding General of the CIC Center and Chief of CIC. Successive chiefs through 1950 included Brig Gen E. A. Zundel, who served from 10 January 1948 until 9 June 1949 and Brig Gen J. K. Rice who relieved General Zundel and commanded until 20 August 1951.

4 Ltr from Col H. R. Kibler to Col Henry Newton, dtd 26 Jul 51, Comments in enclosure (Central Records Facility).

The CIC Center

The fortunes of the CIC Center paralleled the fall and rise of the Office of the Chief. It was abolished in February 1944, and its functions were vested in the Director of Intelligence, Army Service Forces. The training functions of the Center were resumed in 1945 at Fort George G. Meade, Maryland, and continued after its move to Camp Holabird, Maryland, in September 1945. Not until 1947 when the Office of the Chief was re-created with powers in excess of a training mission, did the Center begin overall functioning on a basis similar to that it had achieved prior to its abolishment in 1944.

The CIC School

The effect of the Inspector General's report in eliminating a CIC school was not expected to be too serious. Tactical detachments were at full strength for the most part and apparently no plan was formulated to fill the replacement spaces in overseas CIC Detachments. It was contemplated that Zone of Interior SIC would be kept at full strength by processing men through the former CIC School at Chicago under SIC auspices.

In 1944, the month of August saw CIC procurement problems arise. Tactical units being sent overseas needed additional agents and the unavailability of replacements left many detachments in Europe and the Pacific under strength. To meet the demand for agents, a course was set up at the Military Intelligence Training Center, Camp Ritchie, Maryland. This measure temporarily satisfied demands.

When the redeployment of agents to the Pacific after V-E day became necessary, a new CIC School was set up on 11 August 1945 at Fort George G. Meade, under a newly designated Chief, CIC. This school was moved to Camp Holabird in September 1945, and has been in continuous existence ever since.[5]

* * *

With this background, we may approach the more specialized problems of CIC and its Center from 1945 to 1950.

5 History of the CIC Branch, Intelligence Division, Army Service Forces, from August 1941 to 1 September 1945 (Confidential) (Staff and Faculty Library) and CIC History 1945-1948, Section I-The CIC Center (Restricted)(Staff and Faculty Library).

Chapter 2

PERSONNEL

By the end of 1945, most CIC personnel, like soldiers in other branches of the "temporary army," had returned home or were in the process of doing so. Since the counterintelligence workload increased markedly with the change from a combat to an occupation mission, it was necessary to recruit agents from any available source, with the result that the Counter Intelligence Corps found itself with many inexperienced and immature agents, and with even insufficient numbers of these.

It was not until the end of 1949, on the eve of the outbreak of war in Korea, that CIC found itself with sufficient numbers; even then, the problem of quality was far from solved. Voluminous correspondence in CIC's official files attests to this continuing struggle for both quantity and quality of personnel.

Decreases in authorized strength of the Army late in 1945 forced upon CIC a 38 percent decrease, although the nature of CIC's mission had increased its workload greatly.[6] Official concern was expressed continuously during the following year, but perhaps the most succinct evaluation of the situation was made in an interchange of communications between Lt Col C. E. Leydecker, Chief. CIC Branch, and Col Lester R. Forney, Chief of Security Group under which the CIC Branch operated, when it was learned, in April 1947, that another reduction was pending.

Colonel Leydecker pointed out that previous reductions in the troop basis of CIC in overseas theaters and in the Zone of Interior commands had been "made at the expense of security." To avoid the loss and its consequent inadequate maintenance of security, he urged that "...any directive...to commands, for the purpose of personnel reduction studies, include therein sufficient statement to forbid any reduction of CIC personnel," since without such a statement cuts would probably be made on a pro-rata basis when a theater troop ceiling was lowered.

Colonel Forney concurred in the memorandum and added a pertinent comment, the substance of which has been expressed by many military leaders in times of combat, but largely forgotten when war threats became less imminent:[7] "...as our positive power to provide national security...is decreased, the efficiency of

6 Basic History, CIC 1945-1948, Section I, p. 24 (Restricted) (Central Records Facility).

7 Intra-office memo from C.E. Leydecker, Lt Col, GSC Chief CIC Branch to Chief, Security Group, 7 Apr 47, (Confidential) (Kansas City Records Center) and Indorsement, same document.

our intelligence services must be correspondingly increased in order to insure sufficient advance warning of hostile intent and capabilities to allow mobilization of our national resources."

Colonel Leydecker's warning that reductions in troop ceilings should not be permitted to reduce CIC's strength was particularly pertinent to a situation that had just arisen. Late in 1946 the War Department had authorized 169 new CIC spaces to the six Armies and the Military District of Washington to permit the detachments to "catch up" on the formidable backlog of cases accumulated by that time. It soon appeared, however, that several Army areas had decreased CIC detachment strength below authorized Tables of Organization in order to meet reduced overall personnel strength figures. In a letter written on 6 January 1947, Lt Col E. R. Mitchell, Acting Chief, CIC Branch, Security Group, called the authorization for additional personnel "an illogical and empty gesture, when authorized Table of Organization vacancies remained unfilled."[8]

Personnel Changes Create Problems

By June 1946, the exodus of officers from CIC had reached such proportions that steps to attract at least a partial return were deemed necessary. As a first step, 597 circular letters were mailed former CIC officers asking consent for a recall to active duty. By the end of July, only 62 replies had been received, and none of these 62 was recalled.[9]

The shortage of enlisted personnel was equally acute, but the number of men needed was naturally greater. Col L. R. Forney, GSC, Chief Security Group, G2, Department of the Army, proposed that the Director of the Personnel and Administrative Division could help to alleviate this shortage by earmarking for CIC those personnel formerly exempt from Selective Service. This group included FBI investigators, detectives, policemen, sheriffs, lawyers, journalists, and other "crime experts." Nothing came of this proposal.[10]

Promotion of Enlisted Graduates

As a partial solution to the officer problem, the Planning and Liaison Division in May 1946, recommended to the Director of Intelligence that the Commanding Officer at the Center be granted authority to promote all enlisted graduates from

8 Ltr from E. R. Mitchell, Lt Col, Acting Chief, CIC Branch Security Group, dtd 6 Jan 47, (CONFIDENTIAL) (Kansas City Records Center).

9 Ltr from Hq, CIC Center, dtd 28 Jun 46, (CONFIDENTIAL) (Kansas City Records Center).

10 Ltr from Col L. R. Forney, GSC, Chief, Security Group, to Director of Personnel and Liaison Division, WDGS, 26 Jun 46, (CONFIDENTIAL) (Kansas City Records Center).

the Center School to the next higher grade on completion of the course. The plan provided that master sergeants be appointed warrant officer (junior grade) upon graduation. This plan was not adopted, and records do not indicate the basis for rejection.[11]

Revision of Direct CIC Appointments

In 1947 the appointment policy of warrant officers and second lieutenants to CIC was revised to restrict appointments to persons willing to serve eighteen months, or if overseas, a minimum of one year in the theater where appointed. The change was intended to correct the situation whereby officers were returned to the United States shortly after appointment to CIC, preventing their utilization by overseas commanders.[12]

Attrition and Replacements

By February 1947, it was estimated that the annual replacement figure for CIC would be about 37 percent. Based on a total strength figure of about 5,200 officers and men, this meant that approximately 167 officers and men would have to be pushed through the CIC School every month to keep pace with normal attrition. A program geared to meet these figures was to be inaugurated in July 1947.[13]

Efforts Made to Increase Quality

In an attempt to stem the tide of complaints regarding the quality of new personnel, both officer and enlisted, Col J. M. Roamer, Director of Intelligence, on 5 April 1946 established new criteria for the selection of CIC applicants. According to this criteria, warrant and commissioned officers were required to be 22 to 38 years of age; have two years college or equivalent; have signed Category I, II, or III volunteer statements; and be citizens of the United States. Company grade officers were most desirable and some experience in investigative work was deemed helpful.

Enlisted men had to be between 20 and 38 years of age; have an AGCT score of 110 or higher; be a high school graduate and United States citizen; have completed basic training; and have at least a year to serve after 30 June 1946.

11 Annual Report of Activities Planning and Liaison Division, 1946, (SECRET) (Kansas City Records Center).

12 Report of Col Charles C. Blakeney, GSC, Exec Chief, Security, (CONFIDENTIAL) (Kansas City Records Center).

13 Ltr from Director of Intelligence to Director of Personnel and Administration, dtd 21 Feb 47, (SECRET) (Kansas City Records Center).

Regular Army personnel with a background of investigative experience were most desirable. All exceptions and waivers for personnel had to be approved at the CIC Branch level.[14]

The Matter of Quality

The quality of new members of the Corps continued to be a matter of concern. Official recognition of this problem was expressed in a letter sent to all major commands on 7 February 1947 by Colonel Forney in which he acknowledged "...the truth in these reports that the quality of CIC had declined with the end of World War II." He explained that the Corps was receiving the best men available, but that a lowering of standards had been necessitated by the influx of younger men into the Army. He pointed out that most inductees had such a short service tour that their value to CIC was limited. Improvement could only come as the Army itself was stabilized as to strength and functions.

As an immediate solution to experienced personnel shortages, Colonel Forney suggested that detachments limit, so far as possible, participation in noncounter-intelligence functions and profitably employ men as their talents permitted.[15]

Problems at the Center

The Chief, CIC, Brig Gen George V. Keyser, also stressed immediate personnel problems in a letter in July 1947, addressed to Maj Gen Willard S. Paul, War Department General Staff.

General Keyser conceded that complaints by overseas detachment commanders as to the quality of agents had a sound basis in fact. He pointed out, however, that the truly competent agent must be trained and expert in so many skills that to provide the caliber of personnel desired was a virtual impossibility. He said that all steps possible were being taken to improve the general level of CIC officers and men, and that his task would be immeasurably eased if the War Department would make available to him above-average personnel for CIC indoctrination and training.[16]

Col John H. Riepe, answering the letter for General Paul, assured the Chief, CIC, that the War Department was aware of the difficulties which he faced and would cooperate in every way possible to implement and physically man those programs General Keyser deemed best and most necessary for the Corps. This

promise of support was backed up with the forwarding of 450 men to the Center for training in July and August 1947.[17]

CIC Personnel Transfer Procedure

In spite of the acute shortage of CIC personnel, transfers of CIC agents to non-CIC duties continued throughout the Army, contrary to specific rules which had been in effect since November 1944. Maj Gen Edward Witsell, The Adjutant General, in a letter to all commands in January 1947, pointed out that the War Department had a continuing problem in the procurement and training of personnel for CIC and that the practice of transferring trained agents to non-CIC duties "by-passed the control function of the Director of Intelligence and tended to disrupt procurement and training schedules."

He reminded his addressees of the policy established in letter AG 322 CIC (31 Oct 44) OB-S-B-M, 13 Nov 44, Subject: CIC, and affirmed by book message WCL 45849, 31 May 46. By that policy, once War Department approval was given for CIC assignment, release from CIC was prohibited except for a specific reason. Such "specific reason" releases were to be promptly reported, through channels, to the Director of Intelligence, WDGS.

The General continued that when a request was made for transfer of CIC personnel to non-CIC assignments, the Director of Intelligence, WDGS, would determine whether the overall CIC efficiency would be weakened. Approval or disapproval would be given accordingly, after consideration of the justification presented for such transfers.

General Witsell added that the Intelligence Division, WDGS, interpreted the phrase "for a specific reason" to mean inefficiency, including lack of capability or proven lack of desire to perform CIC duties; character deficiencies; undesirable mental attitude; separation from the service, or prolonged hospitalization; and other than minor infractions of discipline and good order.

Transfers out of CIC "for cause" were to be enumerated briefly in the Monthly Administrative Report of Detachments.[18]

It was later noted that administrative elimination from the Corps should not be substituted for disciplinary or punitive action should the circumstances warrant it. Commanders should not be reluctant to adopt punitive measures because

17 Ltr from Col John Riepe, Acting Chief, Manpower Control Group to Brig Gen George Keyser, 8 Aug 47 (Unclassified) (Kansas City Records Center).

CONFIDENTIAL

of the feeling that possible publicity would be detrimental to the Corps. The respect for the Corps held by the rest of the Army would be seriously affected if infractions of good order and discipline went unpunished. [19]

In concluding, the General said that when CIC personnel were considered surplus to the needs of one theater or Army, consideration would be given by the Director of Intelligence, WDGS, to the transfer of such personnel to other theaters or Army Areas where they might be needed. [20]

In the Manner of Lincoln

Although he granted that the Corps was too small and some of its personnel inexperienced, General Keyser, Chief, CIC, was of the firm opinion that proper appreciation and employment of CIC by high echelon officers would provide at least a temporary panacea for current shortages and shortcomings. His feelings are consolidated and cogently stated in a letter to an Assistant Chief of Staff, G2, drafted in October 1947.

Lt. Col. Richard Roe*
AC of S, G2
APO 123 c/o Postmaster
San Francisco, California

My Dear Roe:

I appreciate very much your taking the time to write me a letter concerning Captain Blank and the manner in which the Blank CIC Detachment is now performing.

Prior to my association with the Counter Intelligence Corps, beginning last April, I had been an Army G2 for about fifteen months during which time I gained some knowledge of the mission and operation of CIC. Prior to my becoming G2, I had practically no knowledge of the CIC. You and I apparently were in the same boat. Now that I am associated with it, I find the entire work most fascinating. At the same time, I encounter more frustrations than in any other activity in which I have ever been engaged. In fact, I think we may say that frustrations and disappointments are the fare of any good CIC Agent. I am convinced that the cause for this, to put it bluntly, is the ignorance

19 Commanders Conference, 1950 (Confidential) (Staff & Faculty Library).
20 Ltr from Maj Gen Edward F. Witsell, TAG, to CGs, All Commands, dtd 27 Jan 47 (Secret) (Kansas City Records Center).
* All names have been omitted.

of staff officers and commanders concerning CIC, its operations and its mission. We Americans seem to loathe any kind of organization whose operations savor of snooping. Even when we have an organization of individuals who have been subjected to a background investigation of the highest order, seeking to determine their character, their integrity, their discretion, and their loyalty, we still are reluctant to accord them our confidence. I wish that every G2 and every commander, who has a detachment under him, could have received an orienting course in CIC work. Let me give you some examples of misuse of our agents:

An agent on an undercover assignment seeks to avert suspicion of a probable informant by deliberately indulging in a minor black market deal simply in order to gain confidence. He immediately becomes suspect and is picked up by the CID. In the investigation that follows his cover is destroyed and he becomes useless in the area.

In another case, a sergeant has established contact with a foreign official. Operating in civilian clothes under the alias or title of "Mr.", the Foreign official believes him to be at least a Lieutenant Colonel. One day, through pure carelessness, the G2 allows the foreign official to learn that the man who has been contacting him is a non-commissioned officer. Thereafter, the official will no longer provide information.

Still another case. Agents operate daily in civilian clothing. People at their own headquarters believe they are civilian employees and completely innocuous. Suddenly these agents are caused to be put on as duty officer or duty NCO in the main headquarters. They are required to wear a uniform. The G2 makes no intercession. Thereafter, with their identity made known to all, their usefulness had diminished.

I could name dozens of other instances of poor handling which results in decreased efficiency of the Corps. Although we are bound to make mistakes and at times admit inferior personnel into CIC, it must be realized that we are striving to maintain high standards of education, prior service, AGCT score, discretion, character, and loyalty. For these reasons, I think that every agent should be given the benefit of a doubt and in no case should he be rendered suspect in the eyes of the G2 following a perfunctory consideration of his conduct. A conscientious CIC Agent operating in an area which is the center of espionage and intrigue will, in the course of his work, invariably overstep into activities which are prohibited. This must be accepted as normal. If the agent adopts a cautious attitude, always making sure

that there is no chance of violating some order or principle, he will gain the acclaim of many of a G2, but the work he produces will probably be useless. Therefore, I feel that in every case, an incoming G2 who is familiar with CIC should sit down with his detachment commander and carefully discuss the mission and means available. He should then require the detachment commander to show how the results can be produced. If the G2 at this time, or subsequently, feels that the mission must be reduced in order to assure accomplishment, he can issue such an order. I know of no detachment commander who would disobey such an order or seek to prevent its implementation. In a large majority of cases the trouble has been that G2s, by virtue of their position and authority, have been reluctant to disclose their lack of knowledge of matters pertaining to CIC. The old rule in the Army was, an incoming officer consulted with or took advice from the First Sergeant or Stable Sergeant, etc. In our situation, I can see a definite analogy.

Passing now to the question of a G2 getting rid of ineffectuals, this is accomplished as described in paragraph 32 of TM 30-215, of which I am sending you two copies, one being for your detachment commander. Should cause for reassignment fall under one of the five subparagraphs shown, and should the situation demand immediate relief, the latter can be effected as provided in this regulation, in which case the individual should be returned to the United States. My office should be furnished with a complete statement of the facts and events which gave rise to his relief. The same statement should be sent in case he is reassigned overseas. Where an individual's performance of duty is not up to standard but his relief is not urgent, I would like to receive complete information concerning the individual. If the individual himself is not the detachment commander, the statements of wrong-doing, misconduct, or inefficiency by the detachment commander or other CIC officer should be included with the report. Based on such reports and following a reconsideration of his background investigation and other data available, I can, of course, remove him from CIC completely. I note that Captain Blank was transferred from CIC last June. This is rather hard for me to understand, inasmuch as such transfer is prohibited and I am given cause to wonder why, in order to put him in your office, you felt compelled to transfer him from CIC. When I was Army G2, my action would have been to leave him in CIC and, if necessary, attempt to get an increased T/O to cover the need for his replacement. I have written Blank a letter to the Port of Embarkation in which I point out to him the prospects for continued service in the Corps, particularly in the grade of Warrant Officer. At the present moment, the only solid base for the CIC is for enlisted men, but I have assured him that

we will have a quota for Regular Army warrant officers in the forseeable future.

With reference to Colonel Doe, Major More and the other officer you had reassigned, records here do not dispose me to consider them inefficient or lacking in knowledge of CIC. However, I shall watch with interest the reports that I get from them and from the commanders under whom they are now serving.

I do, indeed, thank you for writing me and I hope that you will consider this letter simply as from one red leg to another, neither of whom has been in this game very long.

With every good wish, I am

Sincerely yours,

GEORGE V KEYSER
Brigadier General USA
Chief, CIC[21]

Investigation of CIC

While CIC was in the middle of its struggle to acquire higher-quality personnel than were available among the average newcomers, an ex-CIC man, Guenther Reinhardt, submitted to the Secretary of the Army a report entitled "Wholesale Irregularities of CIC in the European Theater." The Chief, CIC, in conjunction with the Secretary of the Army, immediately launched a full scale investigation. Results of this investigation with full reports are covered in the chapter on the Occupation of Germany. Suffice to say at this point that the conclusion reached was that Reinhardt's charges were "definitely unfair" and "with only limited foundations."[22]

Officer Stabilization

A proposal of Lt Gen S. J. Chamberlin, Director of Intelligence, on 15 October 1948, was designed to stabilize and bolster the office corps of CIC. He suggested that individual officers who had demonstrated a special aptitude for intelligence work be permanently assigned in that field and specifically

21 Ltr from Brig Gen George V. Keyser, Chief, CIC, to Lt Col D. G. McLennan, AC of S, G2, APO, c/o Postmaster, San Francisco, California, 8 October 47, (Unclassified) (Kansas City Records Center).

22 See Chapter entitled "Occupation of Germany."

recommended that selected field grade officers be assigned Army Security Agency, CIC, and Strategic Intelligence. He felt that the total number of officers so assigned should not exceed five percent of the authorized officer strength of the activity concerned.[23] Maj Gen H. R. Bull, Director of Organization and Training, concurred in the proposal. He suggested modification, however, to the extent that the number of Regular Army officers assigned not be controlled by a straight five percent policy. It was his feeling that the number should be kept to a minimum dictated by requirements at a given time.

General Bull added that some "...officers have been in the Intelligence field for years, and ...specialization...for some officers is an accomplished fact."[24]

In finally indorsing General Chamberlin's plan, General Bull added another comment. General Chamberlin had provided that the Regular Army officers required for the plan be procured by levy on all the Branches. General Bull made clear his preference for a system whereby the levy would be used only when efforts to obtain the officers on a voluntary basis had failed.[25]

The year 1949 brought added personnel procurement problems. Extra agents were needed in Austria for the displaced persons clearance program,[26] and to speed replacements, the 7970th CIC Detachment in Europe requested that personnel be sent directly to them and not via the European Intelligence School in Oberammergau. Additional spaces at the Army Language School were made available to the Center, but complaints were soon received stating that men without any language aptitude were being sent by CIC to fill quotas.[27]

Career Management for Intelligence Personnel

Progress toward a career management program for Intelligence officers moved slowly but steadily forward in 1949. Although a career management branch for all Intelligence officers was not attained, Military Intelligence reservists not on active duty were provided for in an undated memorandum directed to the deputy Chief of Staff, approved and concurred on by the Director of Intelligence. Observations and comments by the Director in granting conditional concurrence clarify the situation.

26 File 337, Staff Conference CIC Center 1949, 15 Nov (Secret) (Staff and Faculty Library).

27 Monthly Status Reports, CIC Center, December 1949 (Secret) (Kansas City Records Center).

The Director first noted that the submitted program did not provide for the most important groups: MI Reserve officers on active duty; Army Security Agency (ASA) reserves on active duty; Regular Army officers specializing in intelligence; and reserve officers of other arms and services on active duty with intelligence. He commented that the career guidance programs of CIC and ASA within the limitations of their own organizations, while steps in the right direction, were largely ineffective because of inherent limitations. He suggested that a career management branch similar to that of the Technical Services be established.

Under this concept, the branch would have three sections--CIC, ASA, and Intelligence. The Chiefs of CIC and ASA would offer career guidance within their respective branches, and act as advisors to the Director of Intelligence. Careering would be handled by each respective section, with changes from section handled by the career management branch. A conference for discussion of this plan was later convened.

At the conference, representatives of the Intelligence Division, Personnel and Assignment Division, and Career Management concluded that an Intelligence Career Management Branch under the Chief, Career Management Group, was feasible and desirable. Several provisos were appended to this decision: Procurement, assignment and career management of CIC, ASA, MI and all other intelligence agencies of the Intelligence Division would be handled by this branch; personnel records or transcripts were to be kept by this branch on all intelligence reserve officers whose mobilization assignments were controlled by the Director of Intelligence, and all Regular Army or Reserve officers on extended active duty currently serving with the Intelligence Division; and personnel needed to set up the Branch would be provided by the Intelligence Division.

The Director of Intelligence concurred in these decisions after making it clear that all assignments to intelligence agencies and the Intelligence Division would require his approval, and the new branch, as proposed, would not control MI and ASA Reserve officers not on extended active duty.

Until the proposed program was implemented, the Director of Intelligence requested "compulsory detailing of a certain number of Regular Army officers for tours in CIC and ASA with a view...to a second non-consecutive tour." This was in accordance with the Director's position that the "proportion of Regular Army officers in each intelligence activity should generally be equal to the proportion of Regular Army officers to the total number of officers in the field units of the Army (currently about 20 percent)."[28]

---

28 Undated Memorandum for Deputy Chief of Staff for Administration CSGID-PS 903.9 (Confidential) (Kansas City Records Center).

First Postwar Stability

In 1949, the Counter Intelligence Corps settled down to its world-wide, post-war status. Emergency requisitions for personnel had been filled and for the first time in its history the Corps faced an approaching saturation point in the number of enlisted agents.[29] Emphasis shifted from quantity to quality.

Most urgent was the problem of retaining capable CIC personnel. Field detachments removed CIC SSN's (MOS's) and personnel were returned to the states and lost to CIC.[30] CIC personnel were not being returned to the Corps after their Officer Candidate courses. Control was being lost of cleared personnel who did not carry a CIC MOS.[31] Later in the year it became evident that cadre for the CIC Center would have to be trained as CIC specialists if they were to be retained.[32] In February, Brig Gen E. A. Zundel, Chief, CIC, ordered a study made "to ascertain what becomes of CIC personnel, creating the situation that requires such large numbers of replacements."[33]

One of the major efforts of the year was directed toward establishment of a nucleus of Regular Army officers for CIC comparable in proportion to the situation in the rest of the Army. A nucleus of career RA officers was desired for development to higher positions of command and staff and faculty positions where background in CIC was needed.[33a]

Maj Gen G. L. Irwin, G2, DA, supported the CIC request to retain RA officers but it was disapproved by the Deputy Chief of Staff, DA, in February. An alternative proposal was submitted to have Regular Army officers made available on recurring and consecutive three year details, normally from field to Center, back to basic branch.[34] No progress was made, but in October information was received that the Chief of Staff was directing career management to ease up on rigid regulations, particularly with regard to CIC. A paper was resubmitted asking a proportionate percentage of RA officers, but the year ended with no action.[35]

In October an attempt was made to exempt from elimination overage reserve officers assigned to CIC.[36] But in December, Brig Gen J. K. Rice, who had

succeeded General Zundel as Chief of CIC on 9 June, was informed that while Department of Army Personnel and Administration Division would not grant blanket authority to retain overage in-grade reserve officers in CIC, a list of key officers the Corps would like to retain could be submitted.[37]

In February, separation of the Air Force from the CIC School was approved and loss of Air Force officers assigned to CIC followed.[38] In the spring it was reported that contrary to the understanding of the CIC Center, it appeared that CIC was sustaining losses through the return of reserve officers to basic branches.[39] Officer losses continued throughout 1949. In September efforts were made to prevent CIC reserve officers from being included in enforced percentage separations.[40] It was hoped that branch losses could be reduced by encouraging transfers to the MI Reserve.[41]

During the year efforts were made to stabilize CIC personnel in overseas assignments. Retention of Niseis in Japan rather than rotating them to the United States where they might not be profitably employed had been requested but not acted upon.[42] In November, General Rice stated that "specialization, particularly in overseas areas, is required for certain selected CIC personnel. No ironclad rule preventing recurring tours should be established as general policy. The Corps, however, must guard against individual 'homesteading' on the part of CIC agents, particularly in the Zone of the Interior...varied duty is desirable, but there is no objection to qualified personnel returning to overseas commands in which they have previously served, provided such a recurring tour has the approval of the overseas commander."[43]

This was an amplification of the basic policy expressed by General Rice in August when he stated, "personnel in CIC must be treated as individuals."[44]

Efforts to improve the quality of CIC personnel encountered many obstacles during 1949. Army recruiting circulars regarding CIC appeared to be contradictory. General Zundel expressed the belief that "CIC is continually being restricted," and stated that he did not desire that "we sit back and be slowly throttled." General Zundel ordered a paper prepared and forwarded to Personnel and Administration Division, Department of Army, indicating "why normal

replacement methods do not apply to CIC. This should include such items as language, continuity of control and operations, etc..."[45]

In March, non-coms arriving at the Center were of such low quality that pre-tests given by Personnel and Administration Division were reinstituted. Deficient personnel were ordered to appear before waiver boards.[46] The policy on waivers was tightened up in August,[47] and in September it was ordered that waivers be granted "only in extreme cases."[48]

In August, a system was organized whereby all CIC School candidates appeared before an evaluation board upon arrival at the Center and those with minimum qualifications were considered on trial for reappearance before a faculty board after the first month in school.[49] Standards had to be raised because "...unless there is a clear-cut reason for reassignment, such as criminality or obvious falsifications, etc, the candidate must go into training in accordance with DA regulations."[50]

It was ordered during 1949 that both examinations and field efficiency be considered in the promotion and selection of enlisted personnel and warrant officers. This decision was precipitated by a report from the European Command that "many of our high level agents were turned down for CIC warrants and were appointed in CID (Criminal Investigation Division of the Provost Marshal)...One field grade officer who made CIC warrant was relieved from duty for inefficiency."[51]

Efforts were made to complete clearances before personnel arrived at the Center. This would facilitate replacement without time loss.[52] Poor quality continued, however, and a survey in July revealed that 21 out of 35 officers in a class at the school were below normal standards.[53]

In September it was reported that enlistment for CIC did not obligate the Center to train a candidate as a 1301. He could be offered 1405 training instead and, if he refused, be reassigned.[54] While this provided a means of solving the 1301 surplus and retaining good men, the next month the Center was informed

that DA was considering the use of master sergeants to fill warrant officer spaces instead of commissioned officers. Since most of these master sergeants were old-time "line" non-coms, their adaptability for CIC work created a new problem.

In March, Chief of Staff J. Lawton Collins approved the establishment of a career management branch of the Intelligence Division for CIC and ASA. Lack of personnel spaces postponed actual establishment until November, when CIC would provide officers for its own section of the branch. The branch was officially scheduled for activation on 1 January 1950.[55]

1949 Commander's Conference

Col B. A. Tormey, Director of the Personnel and Administration Division, reminded those in attendance at the 1949 Commander's Conference that the time had come to eliminate inept and undesirable persons from CIC. The granting of qualification waivers had been eliminated for enlisted men and sharply curtailed for officers. The period when CIC would take whatever was available to fill spaces had ended.

In a review of the present situation of CIC, the procurement program at the Center was discussed in some detail. Concern was expressed over the 45 percent attrition rate incurred during screening, education and background investigation phases.

General approval of the assignment program whereby individuals were given maximum information regarding future duty stations was expressed, but difficulties encountered by granting provisional CIC MOS when agents were locally procured were reported. In these latter cases, it was pointed out that malassignment frequently resulted when these men were evaluated at the Center after return from overseas units. Increased precautions were outlined.

Lt Col S. Gruneck, Chief, Career Management Bureau, clarified the shaky status of the CIC officer contingent. About 92 percent of Corps officers held only reserve commissions, and though this raised no great problem so long as an expanded Army system was maintained, any sharp cutback in strength would result in such loss of officer personnel that continuity and perhaps even operation of the Corps would be impaired. Although strenuous efforts were being made to procure more Regular Army officers, this was not a panacea, for such men were committed only for a three-year tour, and part of that time was lost in processing and training. Lt Col G. T. Adair pointed out that reserve officers could remain on duty with CIC almost indefinitely if a request for such duty was submitted with concurrence of the Chief, CIC. However, stability remained contingent upon a large reserve.

55 File 337 Staff Conferences CIC Center, 4 Oct 49, (Secret) (Staff and Faculty Library).

The Career Management Section advised the conference that the shortage of warrant officers in CIC would eventually be corrected by a new grant of authority for such appointments.

Overseas assignment policy was summarized for the conference with the statement that all persons with less than 36 months overseas duty were eligible for such shipment.

Strength of the Corps in 1949 was set out at length in the report of the conference. There were 1,125 Reserve officers and 100 Regular Army officers on duty; 452 out of 820 authorized warrant officers were on duty; and 1,690 enlisted men were serving with the Corps. The re-enlistment rate was about 65 percent.

Two important personnel innovations were outlined for the conference. A battery of aptitude tests had been formulated for agent personnel and was in the process of validation. The clearance of men scheduled for training at the Center was being arranged in such a manner that investigation would be completed prior to arrival in Baltimore.

Detachment commanders were reminded of the necessity for submitting personnel requisitions through the Adjutant General in Washington before the Center could meet personnel needs. The commanders were also told that agents on assignments not utilizing a language specialty should be kept in training in case of emergency. It was suggested that detachments have daily language sessions to promote practice and training for such personnel as qualified.

The Director of the Security Control Division reported that a Central Personality Index of two and a half million cards had been completed. The index allowed immediate location of an investigative file, involving an individual.

The conference was closed on the same hopeful note on which it began. Maj George C. Sheldon said that since the Corps was no longer plagued by a shortage of personnel, and undesirables could be weeded out, esprit de corps should be developed. Elimination of substandard personnel was expected to materially aid in the achievement of this end.[56]

Personnel at the Beginning of 1950

At the beginning of 1950, it seemed that many of CIC's major personnel problems had been solved. A new testing and aptitude series was planned to help attain the procurement goal of 1,100 men set for the year. Only the Fifth and

56 Report of the Commander's Conference, 1949 (Confidential) (Staff and Faculty Library).

Second Army Areas had reacted unfavorably on the request for the institution of this system.

An overseas rotation file was set up for all CIC personnel, and surveys conducted by the Division established the number of CIC officers who were or soon would be overage in grade as well as the various Career fields of AUS warrant officers on duty with CIC.

Establishment of CIC as a separate ladder in the Military Intelligence Career field was scheduled for implementation in November 1950, and the CIC proposal for establishment of MOS 4301 (CIC specialization) was rejected with the provision that CIC would receive a similar MOS to serve the same purpose from the Personnel and Administration Career field.[57] Most requisitions for CIC personnel which came through the Adjutant General to the Chief, CIC, for action, were being filled. Requisitions from ZI Detachments reflected requirements as anticipated for the third subsequent month, while overseas requests were based on the fifth subsequent month.

To maintain equitable rotation of personnel overseas, the Chief, CIC, in filling requisitions was guided by SR 600-175-1, "Foreign Service." Efforts were made to fill all requisitions, and only in a few instances was it necessary to ship short.

The return of officers and warrant officers from overseas commands was announced to the Adjutant General three months before arrival in the U.S. was due. If CIC or Army language school training was indicated or desired, arrangements were made and upon receipt of assignment instructions for the Chief, CIC, the Adjutant General radioed appropriate authority for orders to return the officer or warrant officer to the Zone of Interior.

Information on the return of enlisted men to the U.S. was given the Chief, CIC, through either the Adjutant General or the port of debarkation. Records were reviewed at the Center as in the case of officer personnel, and authority for shipment orders to the U.S. came from the Adjutant General to the port of embarkation, after advice from the Chief, CIC, to the Adjutant General.

Initial assignment of all CIC personnel was based on four factors: needs of the service, special qualifications, special training, and desires of the individual.

Personnel were notified of impending overseas assignments either by an alert letter from the Chief, CIC, or by shipping instructions direct from the Adjutant General. Movement orders for specified dates were requested from the Adjutant

57 Monthly Status Report, CIC Center, Feb 1950 (Secret) (Kansas City Records Center).

General for officers and warrant officers, and in the case of enlisted men, the Chief, CIC, requested that the Adjutant General direct major commanders to publish shipment orders.[58]

Problems Return With Outbreak of War

But with the outbreak of war in Korea, the problem, both of numbers and quality, again became acute.

At the Detachment Commander's Conference late in 1950, Col Ralph Nemo, AC of S, G1, made it clear that his section recognized the imperative need for higher caliber personnel in CIC. He made it equally clear, however, that sources for such personnel were "practically nil" at that time.

Replacement of the monthly levy system on arms and services because of officer overstrength in 1949, with voluntary individual request transfers as the only method of CIC officer procurement, had given only a "limited and steadily decreasing" source of supply. Although careful screening of transfer requests produced a high caliber of men, source material was limited. Quotas from Reserve officer groups recalled to active duty had to be relied upon to meet CIC needs for officers.

Colonel Nemo explained that the CIC warrant officer requirements for 320 available spaces were not being met under present Department of Army policy. Eventual formation of necessary plans was indicated, but no immediate solution to the shortage problem could be found.

It was felt that current enlisted personnel procurement regulations provided quantity but not quality. AR revisions, Colonel Nemo said, had been submitted to the Department of Army for approval and publication, and it was anticipated that this would correct the situation, in spite of increased needs occasioned by the Korean conflict.

General overstrength in late 1949 had allowed raising of many detachments above authorized strength. Even so, the drain on resources caused by the Far East situation raised replacement problems in 1950. Personnel requisitions, unnecessary in 1949, had to be submitted to the Center far in advance of the date personnel were required, and even then many categories were short-shipped.[59]

CIC Clearances

Clearance procedures for CIC personnel underwent a number of changes during the period 1945-1950. In 1947, through liaison with the FBI, all CIC applicants were fingerprinted and the cards processed quickly through the FBI files.[60]

As time went on, the Commanding General, CIC Center, was given greater responsibility in determining the suitability of an applicant for admission to CIC. Under changes instituted in 1950, he was permitted to waive any requirements for clearances except the one for U.S. citizenship. Granting of waivers was limited, however, to personnel who "demonstrated ability, high mental capacity, or outstanding performance of duty to a degree which compensates for the lack of prerequisites." At the 1950 Commander's Conference, the G2 made it clear that the waiver provision did not represent a lowering of CIC standards, but was designed to facilitate the flow of desirable men.[61]

Investigation and Records Control Section

By June 1948, the Investigations and Records Control Section had processed over 4,000 names for clearance under the Career warrants, CIC, Signal Intelligence, and Military Attache program.

The section was informed by the Director of Intelligence that Intelligence Field files would be maintained only where derogatory information was revealed and that appropriate processing was necessary.[62] In this same period, the Section began the processing of all personnel in MI Reserve (CIC specialization) to compile an accurate listing of all CIC reservists and their eligibility for mobilization duty.

In late June 1948, the Investigation and Records Control Section obtained approval from the Commanding General, CIC, for an SOP decreeing disposition and action on information reflecting upon the eligibility of CIC personnel, and distributed the SOP to all agencies concerned.[63]

On directions from the Chief, CIC, background investigations on officers with more than ten years of continuous active service were discontinued under

63 Ibid, October 1948.

certain conditions.[64] But tightening of other background requirements in 1948 led to a large number of rejections from the increased flow of personnel through the CIC school.[65]

SOP for CIC Panel

A policy on the transfer of personnel disapproved by the CIC Final Review Panel was established on 29 March 1948, in a memorandum from Col M. C. Noble, Acting Chief, CIC, to all personnel concerned.

The CIC Final Review Panel was the disapproving authority of applicants for CIC duty. As described in the memo, it consisted of the Commanding General, Deputy Commander, Executive Officer, and the Chief, Investigations and Records Control Section. Derogatory cases were submitted by the Investigations and Records Control Section for independent review and final decision.

If the Panel decision was "Disapproved for CIC," or "Disapproved for CIC but approved for housekeeping duties if desired," the case was returned to the Chief, Investigation and Records Control Section, for appropriate action.

In a "disapproved for CIC" instance, the procedure included notification of the individual concerned through personal interview with the Chief, Investigations and Records Control Section. If the individual concerned was a field grade officer, his file was forwarded to the Assistant Chief of Staff, G1, for the same action.

After notification, the Chief, Investigations and Record Control Section, initiated an IOM to the G1 requesting that action be taken to effect the transfer of the individual from CIC for noneligibility. The G1 took necessary action to effect the transfer and made appropriate comment on the individual's records. No change in the assignment of the individual was made until transfer orders were published, and no dissemination of information pertaining to the transfer other than to the G1 was authorized except as directed by the Commanding General.

If the Panel decision was "disapproved for CIC but approved for housekeeping duties if desired," the procedure varied.

If operating personnel were affected, no action was taken and the individual remained on assignment. If pipeline personnel were affected, the Chief, Investigations and Records Control Section, notified G1 by IOM of the decision of the

64 Monthly Status Reports, CIC Center, November 1948, (Secret) (Staff and Faculty Library).

65 Monthly Status Reports for 1948, CIC Center, (Secret) (Staff and Faculty Library).

Panel and the G1 then endeavored to secure a suitable assignment for the individual according to his MOS.[66]

Complaint Cases Involving CIC Personnel

Several complaint cases involving CIC personnel were cited at the 1950 Commander's Conference. A few of these cases showed involvement with Communist organizations and Soviet interests. A serious impediment to these investigations was the loose talk which seemed inherent in these "in the family" cases. At least one case was compromised by such talk, and it was found that "the most security-conscious people are sometimes guilty." The necessity for CIC to maintain a reputation for integrity was emphasized at the conference, and the dangers of injury to prestige by even the hint of a scandal were pointed out.

The possibility of penetration of CIC by enemy agents was also discussed. This danger was felt to be greatest in overseas areas, and every commander was warned against the assumption that his group was penetration-proof. It was recommended that any agent with detrimental associations, which could under any possibility lead to penetration, should immediately be discarded.[67]

Changes in Primary MOS

Conflicting interpretations of regulations relative to changes in CIC MOS's made throughout the postwar years were cleared up at the 1950 Commander's Conference. Such MOS's could only be gained by completion of required CIC training, or waiver granted by the Chief, CIC, on the basis of field experience. Once a CIC MOS was secured, it was retained so long as the individual was a member of the Corps and could only be changed for specified "cause" or with approval of the Chief, CIC. This applied to both officer and enlisted personnel.

Change in a warrant officer's CIC MOS required Department of Army approval, since warrant officers were appointed in a career field equivalent to an officer's basic branch. The Adjutant General could act upon presentation of sufficient justification.[68]

Personnel Selected for Special Projects

Several new projects were added during the postwar years, each of which required personnel selection on the basis of specific technical abilities.

---

66 Memo from M. C. Noble, Col, Infantry, Acting Chief, CIC, dated 29 March 1948 (Confidential) (Kansas City Records Center).

67 1950 Commander's Conference (Confidential) (Staff and Faculty Library).

68 1950 Detachment Commander's Conference (Confidential) (Staff and Faculty Library).

For a polygraph technician, minimum requirements were company grade or warrant officer rank and enlisted men of the first three grades; either a 9302 or 1301 MOS; minimum age of 25 years; and a high school education. It was felt that interest in the work was essential and college training, preferably in psychology, was desirable. A practical understanding of human nature was determined helpful in the work, and a pleasant personality gave further qualification.

For the course in defense against methods of entry, a clearance was demanded as mandatory, and background in the handling of small tools, average intelligence, and interest in the work were listed as additional criteria.

Admittance to the sound course offered at the center required a clearance, some background in radio work, electronics, and electricity, and some basic experience with hand tools.

Eligibility for the photography course necessitated a clearance, experience in basic photography and darkroom techniques, experience with at least two camera types, and interest in the work.

Organized Reserve Affairs

The Far East situation in 1950 aroused considerable interest in organized Reserve affairs on the part of CIC commanders, and the status of reserve forces was clarified at the 1950 conference.

By terms of AR 140-305, issued in 1950, the Organized Reserve Corps consisted of the Active, Inactive, and Honorary Reserves. Personnel in the Active Reserve participated in prescribed minimum training and were broken down into two parts: Organized and Volunteer Reserves.

Organized Reserve personnel were assigned to ORC Troop Program units or had received mobilization designations. Volunteer reserves had not been so assigned.

Five groups made up the Inactive Reserve. The first consisted of those men qualified for the ORC, but unable to participate in training, as well as those men who had requested inactive status pending utilization in the event of mobilization or an emergency. The second group consisted of men transferred from the Active Reserve as overage-in-grade. Group three was made up of men who refused or failed to meet training requirements of the Active Reserve. Group four consisted of men with physical defects, remediable within one year. Group five was made up of enlisted personnel retired with over twenty but less than thirty years service.

In general, the same requirements held for ORC units as those imposed for active or Regular Army duty. Reserve officers were being called to duty in the rank they held in ORC.

Reserve Officers

A new category was created for Reserve officers under the Selective Service Extension Act of 1950. This new category was for officers ordered to extended active duty. Non-regular officers on active duty under Category I might apply for a new category III provided age-in-grade requirements were met, but even if those requirements were not met, the men could be retained by major commanders if desired. Such personnel were placed in Category V with an indefinite expiration date.[69]

The WAC and CIC

With the assignment of four WAC officers to the CIC Center to attend school in 1946, the Counter Intelligence Corps opened its door to members of the Women's Army Corps.[70] This group was followed by a group of eleven early in 1947, at which time a letter was sent to all major commands notifying them of the availability of such personnel.[71] Other groups of varying size also were taken into CIC at intervals. In 1949 a WAC detachment was assigned to the Center to assist in CIC administration.[72]

Negro Agents

The subject of the utilization of colored agents in CIC came up for special consideration at intervals beginning as early as 1944. In some areas, the use of Negro agents was a necessity for undercover operations, and those areas made consistent demands for an increase in such personnel. The Caribbean Defense Command desperately needed such agents and relied on local procurement methods.[73]

72 1950 Detachment Commanders' Conference (Confidential) (Staff and Faculty Library).

73 Ltr from Hq Caribbean Defense Command to TAG, dtd 13 Dec 44 (Unclassified) (Kansas City Records Center).

On the other hand, detachments in the ETO found so little use for Negro agents even among colored troops that one commander sought permission to return six agents to the United States in the interest of more efficient use.[74]

The shortage of Negro personnel within detachments available for undercover assignment was presented by the commanders at the 1950 conference as a problem. Assurances that such personnel would be procured were forthcoming. The commander of the 113th CIC Detachment, Lt Col John R. Longshore, pointed out that since such personnel was used in large part for undercover work, additional training at the school would be desirable to eliminate authoritative attitudes that often compromised operations. The school acceded to the request for additional instruction, but added that the training period would have to be lengthened.

Marriage of CIC Agents and Foreign Nationals

The 1950 Conference was given the reasons for the drafting and promulgation of the famous and unpopular "Marriage Letter" of 23 March.

The basic purpose, of course, was to reduce the potential security hazard. Many agents had married foreign nationals by 1950, and although stringent enforcement meant the loss of key agents, many of whom had vitally-needed language qualifications, the letter was felt a necessity for overall security. Exceptions could not be countenanced.

The letter provided that an agent who married prior to 1 June 1950 while an agent in the Corps could retain CIC status if transferred from a country to which the spouse was indigenous. Future assignments to that area were prohibited. Marriages after 1 June 1950 to foreign nationals voided previously granted security clearances and retention in the Corps was contingent on waiver from the Chief, CIC. The policy was deemed fair, for personnel taking such a step would be aware of the consequences.[75]

Sponsored CIC Reserve Units

The sponsoring of CIC units in the voluntary reserve force by civilian businesses and industries was urged in 1947 by General Keyser, Chief, CIC. It was

felt that by arousing the interest of civilian concerns in the program, good will would be promoted and benefits for Reservists obtained.[76]

The program contemplated organization within the framework of a specific concern of a reserve outfit for employees. For example, at a hospital a reserve hospital unit would be organized. With a telephone company, a signal outfit would be organized. With regard to CIC, it was thought that police departments, better business bureau investigative sections, and protective services might form Reserve CIC detachments.

An obvious drawback to the program from a company point of view was that in event of emergency, many employees would be lost at one time. On the other hand, reserve training could produce actual profit to the concern involved and rapport of the employee group was promoted. Cooperating concerns generally allowed employees who participated in the reserve to have time off for summer training which was not counted as against vacation allowances.

Chapter 3

PLANNING

The Planning and Control Division was activated on 31 January 1946 by a Special Order of Headquarters, CIC Center. Three officers were assigned to the Division: Lt Col George R. Eckman, Maj Matthew R. J. Guiffre, and Maj Paul T. Wilson. The Division was redesignated as the Planning and Liaison Division on 12 July 1946.

Mission

The mission of the Division was largely one of assistance to the Commanding Officer of the CIC Center. Specifically, the group was to act as an advisory body to the Commander of the CIC Center on plans for future needs at the Center; determine whether maximum use was being made of existing facilities; collect data for presentation of plans and studies requested; maintain liaison with other comparable civilian and service schools; conduct inspections as directed by the Commanding Officer; and accomplish such surveys as were necessary to perform other phases of the mission.

Consolidation Studies at the Center

A survey was run by the Division in 1946 with an eye to reducing the number of housekeeping personnel at the Center. Increasing individual duties and consolidating jobs allowed considerable reductions. A study was run concurrently on possible relocation of the Center and/or a consolidation of housekeeping activities. As a result of this latter study, mess and billeting facilities were centralized and the extreme physical dispersal of training facilities eliminated.[77]

Relocation of the CIC Center

As the importance of CIC's postwar mission became more and more apparent, the inadequacy of physical facilities for the Center at the Holabird Signal Depot began to raise operational and administrative problems. Overcrowding, interference caused by Second Army and Signal Corps personnel on the post, and inadequate classroom and housing facilities led to consideration of relocation of the Center in 1946.

Facilities at Fort George G. Meade were examined but found undesirable because the size of the installation was greater than that needed for CIC, and classroom and dependent housing was less adequate than at Holabird. Fort Francis E. Warren, Wyoming, was inspected, found generally desirable and

77 Annual Report of Activities, Planning and Liaison Division, 1946 (Secret) (Kansas City Records Center).

recommended as a site for relocation. The recommendation submitted for the move did not receive favorable action, however. One important reason was probably the great distance between the Center and Washington, D.C.[78]

TO&E 30-500

The Director of Intelligence in 1946 requested the Center to continue its study of possible changes in TO&E 30-500. He suggested that the study include recommendations regarding personnel and equipment from individual theaters; current needs for grades and ratings; and general provisions for an overall theater unit. At the same time, the Director requested that recapitulation of CIC needs on the basis of a 4.5 million-man Army for emergency mobilization be considered. He recommended that the study embody a number of points.

Among these points was the fact that the study considered only detachments for Ground Force units, and that a merger of SIC under CIC was contemplated, with maximum SIC strength set at 800 and minimum at 600. This merger plan was not to affect detachments with AGF units or strategic striking units within the Zone of Interior. No study of equipment was to be included in the recommendations and "Theater" would be the highest level considered by the study.

The plan was also to urge unit allotments of CIC, at strength of about 2,500 men, as the troop basis for each major theater. It was desired that an operating team of between eleven and fifteen men be placed with the War Department. It was also deemed necessary to include the information that activities in the China theater were increasing, and that while occupational jobs were continuing, the emergency Army would only be required for offensive or defensive actions in a new area. It was to be further recommended that Manhattan Engineering District, Transportation Corps, and Army Air Force CIC units continue operations on a separate troop basis, and that in determining an authorized troop basis, reference be made to the compilation report of CIC strengths world-wide. The recapitulation was to show total Army units organized or planned for an emergency, and personnel were to be broken down into organizations which would supply the personnel needed, including Regular Army, Organized Reserve, AUS, and National Guard. Only total units were to be shown under the first breakdown.

The data requested by the Director of Intelligence was forwarded for his approval one month later.

Proposed changes to TO&E 30-500 retained cellular features but stepped up enlisted and commissioned grades. The recommended number of personnel

78 Report of Inspection of Fort Francis E. Warren, 21 Aug 46 (Confidential) (Kansas City Records Center).

remained generally the same, and the major equipment changes dealt mainly with weapons and armament.[79]

Strength Figures Recommended

During this same period in 1946, Colonel Forney called the attention of the Director of Intelligence to the fact that no provision had been made for CIC in the listed requirements of the Interim Army. He suggested that CIC be provided a total of 5,925 personnel world-wide, breaking down into 1,860 officers, 991 warrant officers, and 3,074 enlisted men. Attention was further directed to the fact that with reductions in occupational forces, there should be a corresponding percentage increase in the coverage of CIC personnel.[80]

CIC and SIC Consolidation

Security and Intelligence Corps personnel were transferred to CIC by authority of WD Circular 108 on 13 April 1946. This removed all traces of the decentralization of CIC occasioned by the Inspector General's report accepted on 1 January 1944. It will be recalled that this report had far-reaching effects on the Zone of Interior function of CIC. A complete analysis of this problem may be found in the chapter covering the years 1940-45.

Practically speaking, the organizations had been merged in August 1945, when the Security and Intelligence Corps was released from control of the Provost Marshal General to control of the Director of Intelligence. From 1945, CIC and SIC had uniform policies and regulations and SIC agents were trained through Fort Holabird.[81]

FBI Courses Studied

The Planning and Liaison Division in July 1946 recommended adoption by the Center of evidence preservation and handling techniques employed by the FBI. Since the facilities of the FBI Laboratory were available to CIC, the Division advised against creation of a laboratory at the Center, but suggested additional technical training that could be offered on an extracurricular basis as funds for the purchase of equipment became available.[82]

82 Annual Report of Activities, Planning and Liaison Division, 1946 (Secret) (Kansas City Records Center).

Need for Linguists

Occupation duty further emphasized the always present need of CIC for competent linguists. Colonel Forney in a letter in April 1947 suggested that all Regular Army officers with any talent in foreign languages be given a chance to qualify for language training as a part of career management. With distracting foresight, Colonel Forney expressly mentioned "the need for Korean language instruction."[83]

AFPAC Recommendations Studied

Early in 1947, the Planning and Liaison Division considered recommendations contained in a study made by the AFPAC CIC Committee. Comments by CIC and G2 officers were collected and compiled for the Chief, CIC.

The study recommended that the administration of detachments continue to be the responsibility of the detachment commander. Lt Colonel E. R. Mitchell, Acting Chief of the CIC Branch Security Group, concurred. Lt Colonel Mitchell also agreed with the Committee opinion that transfers in and out of CIC, promotions, redeployment, and temporary duty should be handled by the commanding general of the forces concerned and that transfer within a theater should be made through the commander of the theater concerned. He added that the Committee opinion neglected to mention that transfers in and out of CIC had to be approved by the Director of Intelligence.

Where the AFPAC group felt CIC detachments should advise commanders with regard to CIC employment and policy, Lt Colonel Mitchell made it clear that this could only be accomplished through persistent liaison efforts and effective education of the staff concerned.

A suggestion of the Committee with regard to issuance and control of credentials was already in effect when the Division studied the recommendations. A plan whereby linguists would be substituted for agents in TO&E 30-500 was not well-received by CIC. The general feeling within the Corps was that this would result in a lowering of caliber and efficiency within CIC and that the problem would best be solved through extensive linguistic training for agents or the attachment of qualified personnel for specific missions.

General assent was expressed to the Committee proposition that CIC's TO&E should be changed to authorize housekeeping personnel where detachments operated independently of tactical units, but the integration of CIC as part of tactical commands brought sharp protests. Lt Colonel Mitchell voiced the consensus when he

83 Ltr from Col L. R. Forney, GSC, Chief, Security Group, to Chief, Training Group, dtd 3 Apr 47, (Confidential) (Kansas City Records Center).

pointed out that this would relegate CIC personnel to any duty assigned by the commanding officer and perhaps defeat the true mission of the Corps.

Two- and three-year enlistments for direct assignment to CIC were suggested by the Committee, but again this had been accomplished prior to receipt of the report.

The Committee's proposal that CIC applicants be required to have basic training in an arm or the Military Police Corps was considered as unwise in CIC circles on the theory that it would cause otherwise well-qualified men to be lost to the Corps. Suggested additions to the Center school curriculum were put aside of necessity, since serious thought was being given at this time to cutting the course from fourteen weeks to eight.[84]

Proposal to Organize an Autonomous CIC Group

Lt Col C. E. Leydecker, Chief of the CIC Branch, proposed in March 1947 a plan for an autonomous CIC group to be utilized by the War Department. Such a plan had been verbally requested by the Chief, Security Group.

The plan proposed the selection of an elite group from the world-wide CIC organization. Personnel selected were to be returned to the Center for intensive specialized training and then dispersed to theater level in detachments under tight ultimate control by the Director of Intelligence.

Language training was to be emphasized and qualifications demanded at least one year of operational experience and superior efficiency ratings, with a Regular Army background preferred.

Centralized control by the Director of Intelligence was to be effected by submission of all reports direct to the Intelligence Division and restriction of activity to policies defined by that Group.[85] The plan was not implemented, and was abandoned in 1948 in favor of an advanced course plan.

Permanent CIC Considered

Col Harry H. Mole, heading a Board of Officers appointed by the Security Group, in January 1947 recommended that CIC be constituted a permanent branch

84 Study of Recommendations of CIC Committee AFPAC, 18 Dec 46 (Secret) (Kansas City Records Center).

85 Memorandum dtd 21 Mar 47 to Planning Section, CIC Branch, from Chief, CIC BSG (Secret) (Kansas City Records Center).

of the Regular Army. Col Mole pointed to the long and effective period of service of the Corps and urged the obvious vigilance advantages of making it a permanent establishment.[86]

In rejecting the plan, Col Forney cited the development restriction that would be imposed upon officers of such a permanent Corps by the necessarily narrow range of duties. He felt that eventual solution to the permanency problem lay in the creation of a Military Intelligence Corps of which CIC would be only one element.[87]

Internal Improvement of the Corps

General Keyser, Chief, CIC, invited all commands to submit suggestions for improvement of the Corps. Recommendations were summarized in a letter to the commanding generals of various commands in July 1947.

Most recommendations turned on the procurement, caliber, training and use of personnel. Three commands felt that recruitment efforts should be directed at specialized personnel, suited for some facet of CIC employment by previous training. It was submitted that proper publicity and screening by CIC personnel prior to acceptance would act as material aids to accomplishment. Four commands suggested stricter application of current authority for screening out misfits in the Corps as an immediate means for improvement, while eight commands decried the quality of clerical personnel and asked immediate action on this problem from the Center.

Two commands felt a permanent Corps of officers would allow CIC to achieve more professional performance and eight replies listed career management programs for all personnel as essential. At least three commanders felt authority to hold personnel in overseas areas for longer periods was necessary, while eleven commanders described agent training at the Center as inadequate. Four in this latter group felt the proper solution of the problem lay, however, in on-the-job training and refresher courses.

Miscellaneous suggestions included publication of a periodical within the Corps for development of "esprit" and consolidation of all policy directives into a simple, portable volume.[88]

88 Ltr from Brig Gen George V. Keyser, Chief, CIC, to all Commands, dtd 7 Jul 47, and replies (Confidential) (Kansas City Records Center).

1949 Detachment Commander's Conference

Brig Gen John K. Rice, Chief, CIC, speaking at the Detachment Commander's Conference in 1949, voiced the feeling that the time had come to "learn the lessons from the mistakes" that had been made in the last ten years. He felt that many categories of responsibility required immediate attention.

General Rice felt that lessons learned should aid in determination of the degree of centralization or decentralization of CIC control necessary in given conditions; the proper relationship to be developed between G2's, CI officers, and CIC Detachment commanders; and the definition and relationship between positive intelligence and counterintelligence. He added that lessons learned might well be utilized to draft a flexible plan for the handling of confidential funds and informants.

Turning to the matter of a central file facility, General Rice pointed out the possible loss of valuable foreign files in the event of rapid changes in the international situation. The obvious advantages to be gained by central collection of the files extended beyond insurance against possible loss, however. In a single location, the files would allow far more efficient and thorough usage by a larger number of units, and a substantial monetary saving could be effected by having a single staff in custody.

A new table of allowances for CIC expendable supplies was approved in 1949 and provided additional stationery and fingerprint equipment and iodine fumers. At the same time, a letter clarifying TM 30-215 was distributed by G2, Department of Army, covering allowances for special types of clothing needed by agents in the field. The letter was explicit in stating that agents should not be "penalized financially for complying with requirements for civilian clothing." Prior to this time, G2's had been extremely reluctant in supplying funds over the initial allowance for purchase of evening or work clothes.

Government economy was expected from a revision upward of mileage allowances for privately owned vehicles. The need for government cars was expected to decrease when agents were authorized seven instead of three cents a mile, with an additional two cents authorized from intelligence funds.

Vehicle allowances in 1949 provided one vehicle for every two operating agents, and the vehicle was specified as a sedan or personnel carrier except with division type teams where a jeep was provided. When additional vehicles were found necessary, the only possibility for procurement was from the theater or Army administrative allowance.[89]

89 Rpt of 1949 Detachment Commander's Conference (Confidential) (Staff and Faculty Library).

Physical Changes at the Center

Many changes in housing both for CIC facilities and personnel were made in 1949. Storage sheds were converted into classrooms and a service club, and relief from private housing problems was in sight after completion of plans to build a Federal Housing Project, later to become Cummins Apartments.

In July the Center was informed of a 20 percent cut in its funds, but two additional civilian spaces were allotted. Reorganization of the Center was undertaken to cut down on six civilian spaces by increasing individual's workloads, but a request for a band was refused.

During the year, G2, Department of Army, established a Central Personality Index (later Central Records Facility) and the Center began to organize a Central CIC File. Eventual merger of the two files was contemplated after both were well established.

An SOP on methods of shipment for undercover personnel was drafted in 1949 and distributed to all commands concerned. Arrangements to supply polygraphs and experienced operators to Europe and the Far East were made and it was recommended that civilian vehicles be used by theater and Army CIC teams while division and corps teams retained jeeps. Plans for an Advanced Training Course for senior CIC officers went forward and the school adopted the theory that technical subjects in the basic course should accomplish an orientation and familiarization mission rather than a real training mission.

The feasibility of closing the school at the Center for two months a year because of an overstrength in all detachments was given consideration and abortive attempts were made by the Center for permission to establish its own CIC Extension Courses.

Completion of a driver training course was made a mandatory requirement to CIC assignment and work was begun on a course for qualification in all basic CIC weapons.

Five detachments were deactivated in the course of the year and the Corps was authorized production of three training films for use in the basic course.[90]

Readiness at Camp Holabird

On 29 January 1949, the Chief, CIC, sent to the Director of Intelligence a report on "The State of Readiness at Camp Holabird."

90 Monthly Status Rpt, CIC Center, 1949 (Secret) (Staff and Faculty Library).

The Chief pointed out, first of all, that mobilization planning was hampered by a lack of definite authority for allocation of housing and facilities at Camp Holabird in the event of mobilization. The Signal Depot had indicated its own need for facilities being used by CIC, in fact, and proper planning was not possible without determination of available facilities. The selection of alternate facilities had not been made, although an estimate of minimum and maximum requirements had been forwarded to Second Army.

The basic course of study provided at the Center could be condensed from twelve to eight weeks upon mobilization, the memorandum stated. Lack of technical equipment and training aids held readiness at 81 percent satisfactory, 16 percent inadequate, and three percent deficient for the basic course. The two-week refresher course designed for personnel with CIC experience in the event of mobilization, was rated 21 percent inadequate and three percent deficient. An area orientation course, covering the Mediterranean and Middle East, designed for persons completing either the basic or refresher course, had a readiness rating of 45 percent satisfactory and 55 percent deficient, because of a lack of lesson plans, training aids and student texts.

Classroom facilities were such that a total accommodation of 600 students for all three courses could be effected, and rehabilitation of mess facilities would allow a total capacity of 3,900 men, with a wartime emergency capacity of 4,900. Cots and mattresses were available for 3,000 troops, and there was a ten percent standby overage of office equipment. Medical support by a dispensary at Holabird and hospitalization at Fort Meade could meet total mobilization requirements, if service to dependents were discontinued.

Draft requests for necessary funding in the event of mobilization were completed, and other planning and guidance instructions from higher echelons were considered adequate.

A total of 46 percent of the instructors required for the CIC School were on duty at Holabird in 1949. An additional 31 percent had been earmarked for assignment, leaving a 23 percent deficiency in the total requirement.

G4 Activities in 1950

The G4 section at the Center during 1950 was faced with several supply problems unique to CIC.

An all-important task early in the year was to obtain favorable construction and interpretation of a Department of the Army regulation which threatened to compromise undercover CIC operations. The regulation provided, in part, that serviceable equipment could not be replaced "merely for the sake of appearance" by commercial counterparts. Literally, this meant that CIC would be forced to

use equipment clearly marked as government property and identifying the users as Army personnel. In many instances, this would prevent agents from concealing their identity. At the request of the G4, Department of the Army announced that the objectionable paragraph would not apply to CIC insofar as it would interfere with covert activities contemplated as a part of the assigned mission of the Corps.[91]

Training of agents in elements of port security was facilitated by G4 efforts in obtaining a reconditioned T-boat from the Office of the Chief of Transportation, for CIC use. Concealment difficulties with the four-inch barrelled revolver led to G4's replacement of the weapon by one with a two-inch barrel.[92] An information and guidance booklet for use by detachment supply officers was compiled and distributed by G4 in 1950, and action was initiated to obtain new badges and credential cards approved for replacement distribution.

At the end of the year, G4 reported that the Cummins Apartment project, designed for dependent housing at Fort Holabird, was over eighty percent completed.[93]

G3 During 1950

The formulation and implementation of plans for world-wide mobilization took a good part of G3's time in 1950. Training and supervision of CIC Organized Reserve organizations provided another task of major proportions since the closest cooperation and coordination with Army Field Forces was required to prevent conflict of plans and policies.

Miscellaneous activities included a review of the Dictionary of U.S. Military Terms and Joint Usage to determine inclusion and definition of words of CIC interest, the processing of requests for constructive credits in lieu of attendance at the CIC School, studies of mobilization plans of Army branches and the Army training program, the drafting of Army and Special Regulations of CIC interest, compilation and maintenance of all active detachment histories, and the coordination of CIC School activities.[94]

Liaison

A CIC liaison officer was placed in the Office of the Chief, Army Field Forces on 3 April 1950. His dual duty consisted of keeping both CIC and the Field Force

91 Monthly Status Report, CIC Center, April 1950 (Secret) (Staff and Faculty Library).
92 Ibid, July
93 Ibid, December
94 Monthly Status Reports, CIC Center 1950 (Secret) (Staff and Faculty Library) and 1950 Detachment Commander's Conference Report (Confidential), (Staff and Faculty Library).

Chief informed on matters and activities of mutual interest. The officer was also charged with the duty of observing CIC participation in field maneuvers and planning for such participation.[95]

Security Control Division

The clearance of CIC personnel continued throughout 1950 as a major function of the Security Control Division of G2 at the Center. A survey conducted at the request of G1 covered a six-month period and disclosed completion of over 200 such clearance investigations.

Extensive microfilming programs were undertaken by the Division in 1950. Films from Korea were received and indexed. Teams were formed to study and be instructed in the microfilm indexing system utilized by the Central Intelligence Agency. A four-week course of instruction for microfilming was given, and a Standard Operating Procedure for G2 microfilming was drafted.

In June, a basic tabulating plant was acquired by the Division for use in G2 and G3 functions. Training of operators was conducted by representatives of the Remington Rand Company after clearance by the Division was given all candidates for instruction.

Finally, plans were completed by the Division for the recall of old credentials and the issuance of new credentials of an improved design. The process was to be managed through terms of a comprehensive operating procedure.[96]

"The Counter Intelligence Corps Detachment"

Maj Jack B. Cameron, OO&T, set out for the 1950 Detachment Commander's Conference the reasons behind drafting, and the general content of the proposed manual, "The CIC Detachment." The manual was to be composed, in large part, of recommendations and suggestions coming into OO&T from the field. The manual dealt with most phases of detachment organization and operation, and considerable value at field level was anticipated.[97]

New Facilities for Camp Holabird

Contingent upon approval by the Commanding General, Second Army, considerable improvements at Camp Holabird were scheduled for 1950. Allocations

95 Detachment Commander's Conference 1950, (Confidential) (Staff and Faculty Library).

96 Monthly Status Reports, CIC Center, 1950 (Secret) (Kansas City Records Center).

97 1950 Detachment Commander's Conference (Confidential) (Staff and Faculty Library).

included $40,000 for a library; $41,000 for an athletic field; and $6,857 for furnishing the Service Club and Hobby Shop. Plans were made for a swimming pool if funds were allocated by the Department of Army.[98]

The Public Relations Problem

The Chief of CIC, Maj Gen John K. Rice, in his address to the 1950 Conference, stressed the two-fold orientation mission incumbent on the CIC officer corps.

The first part of that task, he said, was acquainting the Army itself with the abilities, needs and mission of CIC. To illustrate his point, he cited the small-scale public relations program he was personally directing, which involved devotion of one day a month to contacting Pentagon officials for as thorough an orientation regarding CIC as he could manage. He suggested that all commanders endeavor to establish favorable liaison contacts with an eye to such orientation.

General Rice defined the second phase of the orientation mission as one involving efforts directed at attracting volunteers to CIC of the caliber and abilities most desired. He pointed out that no one could volunteer for something he didn't know about, and that carefully directed word-of-mouth publicity was best suited to CIC's purpose.

The Chief closed his address with the expressed hope that the Advance Officers Course, initiated at the Center in May 1950, would produce officers for CIC capable of inspiring the confidence necessary to carry out an effective public relations program at high command echelons. He felt that G2s with confidence in the ability of CIC officers and commanders would be far more willing to listen to the ideas and recommendations offered to them. In such a manner, CIC could better discharge its function of command assistance in security and counterintelligence matters.[99]

Public Information

The Center's public information section in 1948 obtained approval of several articles on "Army Life at Camp Holabird," for publication in Baltimore papers. Copy for the magazine Armed Forces Talk was submitted by the section for Department of Army approval, and a publicity campaign directed at clarifying the opportunities for enlistment and reenlistment in CIC was tentatively mapped. The section kept current the History of Camp Holabird and arranged for representation of the Camp in the 1948 Army Day Parade.[100]

98 Monthly Status Report, CIC Center, March 1950, (Secret) (Staff and Faculty Library).

99 1950 Commander's Conference (Confidential) (Staff and Faculty Library).

100 Monthly Status Report, CIC Center, July 1948 (Secret) (Staff and Faculty Library).

The CIC Board

Created under special authorization in March 1947, the CIC Board was first charged with the development and coordination of special investigative equipment and techniques, the operation of the Personnel Evaluation Panel and the dissemination of matters of general CIC interest. Various activities which had been performed by other sections were gradually added to the Board's program.

The development and testing function was carried out in cooperation with the Technical Laboratory of the Department of Operations at the CIC School, as well as with other arms, services and agencies.

The Technical Projects Index was published as an informational service by the Board for field units, to keep them informed on testing and development activities.

The Personnel Evaluation Panel, although created before the Board, was put under the Board for the convenience of the Chief, CIC. The long-range aim of the Panel was the gradual upgrading and refinement of CIC personnel through firm entrance controls. The Panel operated in six major areas: screening of personnel reporting to the Center for initial entry to CIC; screening of applications from military personnel for transfer into CIC; screening of applications for transfer to MI, USAR (CIC specialization); determination of constructive credit for CIC school courses; review of derogatory information cases referred to the Panel by the Deputy Chief of Staff, the Chief of Staff, or the Chief, CIC; and sitting as a board of officers to examine qualifications for retention in CIC for all personnel.

A study was undertaken by the CIC Board in 1948 to provide a basis for formulation of competitive examinations to be given for the position of a Regular Army Warrant Officer having the classification of Warrant Officer (CIC). The testing plan was eventually accepted by the Intelligence Division.

The first CIC Digest was published in July 1948. The publication was originally suggested by the CIC Board as a means of developing esprit and facilitating an interchange of operational data. The Digest was scheduled for monthly publication and was expected to satisfy "request for information" mail.[101]

In November 1948, in Building 23-12 at the CIC Center, a display of documents, photographs and other materials of operational or historical interest was opened. This display area was the culmination of efforts by the CIC Board to establish a Trophy Hall or CIC museum.[102]

101 Monthly Status Report, CIC Center, July 1948 (Secret) (Kansas City Records Center).

102 Ibid, November

Miscellaneous Work of the CIC Board

As technical projects were completed by the CIC Board, a writeup of the project was entered in the Technical Projects Book. Many entries were made in 1949.

The Audograph recording and reproducing device was approved and distributed for field tests. Sent for similar testing were Brush VM-1 Vibromikes, printed circuit hearing aids, and a small sound pickup device called "Hearsay." Most of these products were improvements over equipment in stock, adopted because of increased efficiency and economy.

A request of the Ordnance Technical Committee for standardization of the Colt .380 automatic pistol for CIC and Military Police Corps use was rejected when Colt halted manufacture of the weapon. The .38 caliber Detective Special was selected as the standard weapon for CIC and MPC.

The Apeco copier was adopted by the Board, since it was cheaper than a photostat machine, was portable, and did not require an experienced operator. Also approved was the Fairchild Copy Roll, which reproduced documents and photographs simply and quickly. The Visual Cast, a daylight projector for use in classroom instruction, was adopted for training use by various sections.

A 75-exposure wrist camera, magazine loaded, with a device that transported the film each time the trigger was tipped, was adopted for CIC use. Tests were run on the feasability of using a telephone dial click counter; eventually it was adopted. The use of the Sniperscope for CIC surveillance and investigation was also examined at this same time.

The Board discharged the task of formulating a new diploma for the school, eliminating any security hazard in later use in a sensitive position.

It was recommended by the Board that the Signal Corps produce a short movie for Army-wide distribution showing the organization and function of CIC. In this same public relations vein, articles were disseminated by the Board for publication in Service periodicals and journals. A technical manual was developed to standard maintenance of detachment files, and a study of the British counterintelligence organization was undertaken to "borrow" from that group methods which CIC might utilize. Other studies of the Board were directed at reducing the incidence of loss of credentials and making the Corps a branch of the Regular Army.[103]

Lt Col Wayne Homan, Director of the CIC Board, informed the 1949 Conference that the Board had initiated action to comply with the Joint Chiefs' of Staff request

103 Monthly Status Reports, 1949 (Secret) (Staff and Faculty Library).

that a consolidated CIC file be created. When completed, it would be invaluable for CIC reference and investigation. Extensive microfilming would be involved. He also announced that a pocket-size tape recorder had been perfected and would soon be available for distribution from the Center.[104]

Early in 1950, the first four CIC officers trained in the use of the polygraph at the Keeler Institute in Chicago, began utilizing their training in CIC investigations. Two were sent, with polygraph machines, to FECOM, one to EUCOM, and one to the CIC Center, Fort Holabird.

The Planning Division at the CIC Center had begun studying the possible use of the polygraph in CIC investigations in 1946. Information on the use of the polygraph was obtained from several manufactureres and universities, and various authorities were interviewed concerning its value to CIC. At that time it was planned to send two officers to the Keeler Institute for training, following which the machines would be subjected to a six-month test at the Center. However, although the plan was brought up for consideration upon several occasions, no concrete action was taken until the four officers mentioned above were sent to the Institute in 1949.[105]

During 1950, steps were taken by the Board to create a standard form covering issuance of civilian clothing to CIC enlisted agents. It was anticipated that the forms would remain in a central file at the Center. Staff studies were initiated by the Board relative to personnel procurement and the curriculum at the Center School.

Two microfilming units were tested and ordered for field experiment. Photographic equipment tested and approved by the Board in 1950 included a close focus device, an improved tripod, two telephoto-type cameras, a telephoto lens fitting all 35mm cameras used by CIC, a quick process developer, and a concealed camera device with a wide-angle lens, capable of 24-hour operation.

The orientation booklet for personnel being sent to Japan was revised, and hundreds of pieces of equipment were rejected after testing.

Two briefcase-size radio transmitters were distributed for testing by the Board, and a portable and concealed ultraviolet lamp was adopted for CIC use. Many telephone listening devices were adopted. One recorded the number and phone number of outgoing calls; another device, concealable in the phone base,

105 Monthly Status Reports, CIC Center, 1946 and 1950 (Secret) (Staff and Faculty Library); also, interview with Maj T. E. Witkowski, one of the original four officers, at Fort Holabird, 11 Oct 55.

could channel conversations to either a receiver or recorder; perhaps most remarkable, was a "tap" device designed by M/Sgt Edison M. Cesar, which could be built at the cost of $.29 per unit.

A lock neutralizing device was purchased from the H. C. Miller Co. The Miller Co also submitted for testing a lock that it claimed was tamper proof. An improved telescope was ordered from a Japanese firm, and the Dormiphone, a device which gave language instruction while the student slept, was considered for use by the School.

Close liaison with the Signal Corps Engineering Laboratories at Fort Monmouth, New Jersey, produced valuable results in 1950. An 8mm projector, a rapid color development process, and a new technique for infrared photography all came from that source.[106]

Chapter 4

OPERATIONS

A letter sent to Col J. M. Roamer, GSC, Director of Intelligence, by Lt Col C. E. Leydecker, Chief, Counter Intelligence Corps Branch Office, dated 1 May 1946, set out current CIC operational problems.

After briefly outlining the CIC organizational setup as of that time, Colonel Leydecker moved on to the difficulties CIC was incurring in a static situation. Primary among these troubles was the failure of any attempt to restrict the CIC mission to its defined assignment. The problem was presented through illustration.

In the European theater it was felt that there was no specific understanding of CIC's mission. The 303rd had as its principal task many thousand Jewish infiltration investigations. The 970th was handling criminal cases and the screening of civilians invited to attend social functions. Other non-CIC work being performed in the MTO consisted of screening repatriated personnel, emmigrants, and foreign nationals, as well as procurement of war crime witnesses.

In the Pacific theater, the biggest non-CIC headache facing detachments was the required submission of a weekly domestic intelligence summary. This required the full-time services of three agents in each detachment, and covered everything from reports on school books to the number of feet of fire hose in a local station house. War crime investigations imposed another burden, as did the screening of Japanese officials and educators. Investigation of black market activity, searches for narcotics and liquor, and enforcement of SCAP directives provided further complications.

All theaters faced an insurmountable personnel shortage. This shortage included a lack of linguistic personnel and clerical help.

Relative to the shortage of agent personnel, the Commanding General of the Mediterranean area said, "...for more than three years...there has not been sufficient personnel available at any time to permit attacking the CIC problem in all its various aspects..." The General Board, USFET, reported that shortages "...resulted in an increasingly larger territory of responsibility for the individual agent...often far in excess of his physical capacity."

The shortage of clerical personnel resulted in the placement of agents as typists within detachments to discharge required paper tasks, and the lack of qualified linguists within the Corps presented a continual operational problem that could not be overcome by use of civilian and military intelligence interpreters because of inherent security hazards.

Colonel Leydecker touched briefly on the "...general lack of commensurate rank in proportion to the importance of the work performed by individual agents." He felt this had been partially remedied by promotion to warrant officer of about 20 percent of CIC's enlisted men, but additional study was necessary to determine further action on readjustment of rank based on performance.

Hand in hand with the personnel shortage went the fact that the CIC theater troop basis had been cut 50 percent, and the replacement pool had been reduced to a puddle. It appeared that agent qualifications would drop as a result, for spaces had to be filled. The problem of performing an expanded mission with green replacements below the standards of experienced personnel was obvious.[107]

CIC Duties in the Zone of Interior

General Devers, writing to the commanding generals of the First, Second, Fourth, and Sixth Armies, in April 1946, outlined the duties of CIC with Army Ground Forces in the ZI.

Primarily, CIC was to investigate and prepare reports on personnel and incidents within the investigative jurisdiction of the unit to which agents were assigned. This included the investigation of military and civilian personnel assigned or attached to AGF units, suspected of disaffection, subversive activity, espionage, sabotage, treason, or sedition, as well as incidents in which security violations were suspected or apparent. CIC was charged, too, with maintaining security of classified information, military installations and offices, and movement of troops and materiel. In addition, CIC was to deliver security lectures to troops and participate to some extent in the training program of the parent unit.

Finally, CIC was admonished to afford full cooperation to Service Command investigative activities, and to "perform such other duties as command authority shall determine to be within the CIC mission..."

Jurisdiction of CIC with Army Ground Forces was sharply defined. It meant, "...the unit itself together with such area or buildings as the unit occupies." If leads developed during investigation lead outside this defined area, the Service Force or Command involved would either take over the case or authorize further work by the AGF unit.[108]

Processing Policy

Personnel cutbacks and readjustments effective on 1 July 1947, led the Adjutant General to direct the CIC to set up new investigation priorities.

Cases in which there was a suspicion of treason, espionage, sabotage, subversion, or disaffection were to be assigned "Priority I." In justifying this declaration, the Adjutant General explained, "It appears that a vigorous and positive program of identifying potential subversives is needed."

All background investigations to determine loyalty and fitness fell into "Priority II." Within this category however, were several sub-priorities. They were, in order: CIC personnel; cryptographic and cryptanalytic personnel; personnel with access to atomic energy data; persons with access to TOP SECRET and SECRET data; Regular Army officers; investigation of plants handling classified contracts; investigation of persons in the plants mentioned just above who had substantial access to TOP SECRET and SECRET data; clearance of civilian personnel recruited for overseas duty; Army alien personnel; aliens in any plant handling classified contracts who had access to any classified data; and interrogation of war crimes witnesses.

The Adjutant General explained that the subcatergorization was based largely on the element of timeliness. He pointed out that it was taking three and one half months to clear CIC personnel, and that the delay created serious problems. He predicted that the load of atomic clearances would increase, and added that delay in investigation of plants handling classified material could cause the government embarrassment.

Although impending personnel cutbacks were the motivation of the priority directive, the Adjutant General queried all commands on personnel requirements to keep investigation up to date.[109] Typical of replies from the field, First Army answered that seventy-four investigators and office aids, additional funds, and more vehicles would be needed to handle the current case load expeditiously.[110]

In reply to these personnel requests, the Manpower Board, on 22 July 1947, wrote that since TOE were not being fully utilized because of current understrength of the Army, additional authorization was not needed to meet military space requests. With regard to civilians, it was explained that all available spaces had been allocated to field agencies according to priority needs. Although the total number failed to meet minimum civilian spaces desired, no immediate relief was in sight.

109 TAG Ltr, dtd 2 Jun 47 to all Armies and MDW (Secret) (Kansas City Records Center).

110 1st Ind, First Army, Governors Island, N.Y. to TAG Ltr dtd 2 Jun 47, (Secret) (Kansas City Records Center).

Even though adjustments in personnel accounting under the Appropriations Act might make additional spaces available, it was intended that these spaces be distributed in conformity with policy so that such space allotments to agencies should not be carmarked for specific activities or programs. The Manpower Board added, however, that the War Department could issue guidance to agencies relative to priority to be attached to CIC.[111]

The Mission and CIC

A suggestion by General Keyser, Chief, CIC, in late 1947 raised questions as to the true mission of CIC. General Keyser suggested assignment of limited numbers of CIC agents to advisory groups, military missions, and similar organizations in order to counter operations of foreign powers. Colonel Forney, Chief, Security Group, admitted merits of the plan, but suggested that such activity was outside the investigative purview of the CIC mission.

A writer, identified only by the initials "R. D. L.", appended further comments to the suggestion. It was the writer's feeling that CIC had never confined itself to a strictly investigative mission, even though the War Department statement of CIC's mission indicated such limits. The writer felt that the War Department definition had been altered through field assignments of the Corps and at present amounted to providing security coverage for U.S. Army installations, personnel and operations. He added that the rewriting of the mission was necessary to bring it abreast of current CIC employment, or, as an alternative, that utilization of CIC should be restricted to the limits inherent in the current definition. Finally, he indorsed the Chief's suggestion.[112]

118th CIC Detachment

The 118th CIC Detachment was officially activated on 8 August 1946 by the Commanding Officer of the Center, by General Order #20, Headquarters, CIC Center. The 118th, although geographically within the confines of the Second Army, did not operate under that agency. The detachment performed special assignments for the Director of Intelligence, General Staff, U.S. Army. The detachment was removed from Camp Holabird and relieved of attachment to the Center in July 1950. The 118th was then assigned to G2, Department of the Army and attached to the Military District of Washington.[113]

113 Historical Data Files, 118th CIC Det, (Unclassified) (Central Records Facility) and CIC History 1945-1948, Section IV, (Restricted) (Staff and Faculty Library).

Confidential Funds

The Chief of Staff, Far East Command, in August 1947, ruled that confidential funds could not be used for the purchase of commissary and PX merchandise which was used to pay informants, because of a lack of specific authority for such expenditures of confidential funds.

Because of the operational problems this ruling raised, General Keyser, Chief, CIC, immediately made an appeal to the Executive Officer, Intelligence Division, for a change in applicable regulations. He pointed out that the merchandise was far more useful and valuable to CIC than the actual cash involved.[114]

No action was immediately forthcoming, but sympathy for the predicament of CIC under this ruling led Brig Gen Charles Willoughby, G2, Far East Command, to write General Keyser that his office was preparing a staff study for submission to the Chief of Staff directed at reversal of the August decision.[115] The record does not disclose when the study accomplished the General's purpose, but the ban was eventually lifted.

CIC and the Missile Center

CIC coverage for the Guided Missile Center was first provided by detachments under the operational control of the Fourth Army. It had been provided that additional men for this project would be furnished Fourth Army CIC upon request to the Manpower Board. Some consideration was initially given a plan whereby an entirely separate unit would handle coverage of the project. Although this idea had been rejected, Fourth Army experience in serving the Armed Forces Special Weapons Project brought to light certain difficulties.

First of all, the CIC manpower demands for the project strained Fourth Army resources and created serious personnel shortages. Second, it soon became apparent that the mission of the agents serving with the project was at variance with standardized concepts of CIC's function. This caused thinking on this matter to change. By the end of 1947, Col C. M. Noble, Acting Chief, CIC, pointed out two important problems inherent in the present plan.

First, it worked an "unfair hardship" on the officers and men who had enlisted for CIC with the intention of making the Army a career. The transfer to AFSWP and non-CIC duty cut off the elected career in CIC, contrary to Army commitments.

---

114 Memo from Brig Gen G. V. Keyser, Chief CIC to Exec Off ID, dtd 7 Aug 47, (Secret) (Kansas City Records Center).

115 Ltr from Brig Gen C. A. Willoughby, GSC, ACofS G2 to Gen Keyser, Hq, CIC Center, Ft Holabird, dtd 11 Sep 47 (Secret) (Kansas City Records Center).

The future of these men became uncertain and a matter of chance, for when and if the men would return to the Intelligence Division, control was an open question.

Second, in supplying investigative equipment to this unit, CIC had no firm basis or authorization on which to plan annual procurement. In addition, changes were contemplated in the Special List of Investigative Equipment, and AFSWP would not have authority to requisition new items and supplies from the list.

Colonel Noble felt that CIC had a real mission with AFSWP. While the Atomic Energy Act gave the FBI jurisdiction in complaint investigations, he pointed out that CIC could assist the command in discharging its security function and work on other types of investigations as well. He added that it was not impossible that a delimitations agreement under terms of the Atomic Energy Act could be worked out with the FBI.

In closing, Colonel Noble recommended that AFSWP be given a CIC detachment. As an alternative, he proposed that all commitments be withdrawn and that AFSWP procure its own personnel for training by CIC and return to the project. Equipment in such a case could be procured from the Technical Services. Colonel Noble favored the first course since this would prevent the formation of an additional agency performing counterintelligence missions. In addition, use of a CIC detachment would enable the project to coordinate Army areas and theaters in investigations which required CIC handling outside the project's jurisdiction.[116]

Confidential Manual TM 30-215

The Office of Operations and Training presented to the 1949 Conference recommended changes in TM 30-215. The principle reason behind the revision was the belief that there was no authority to indicate that a detachment commander was responsible for the operation of his unit. The proposed revision stated that the commanding officer of a CIC detachment was responsible for the planning, supervision, investigative direction, and control of detachment personnel, basing his actions on essential elements of information furnished by the command to which the detachment was assigned or detached.

In discussing the proposed change, it was pointed out that in some commands, the CIC commanding officer had merely become a figurehead, and the commanders of some units to which CIC was attached had gone so far as to personally assign each agent and clerk-typist in the detachment.

No attempt to deny the operational prerogatives of the command to which a detachment was assigned was made, but it was the concensus that a detachment

116 Ltr from M. C. Noble, Col, Inf, Acting Chief, CIC, to the Exec, Intel Division, 30 Dec 44 (Secret) (Kansas City Records Center).

commander should run his detachment in what appeared to him the most expeditious manner of meeting EEI's assigned him.

Some commanders expressed the thought that such revision was needed and cited examples in their own situations. They urged that the CIC commander could accomplish this end by proper orientation as to CIC's mission, but the desirability of having the desired provisions incorporated in an official document appealed strongly to most officers present. It was felt that this provision would tend to standardize detachment formations world-wide.[117]

Central CIC File

Although the desirability of a Central CIC File had long been contemplated and considered, time and personnel limitations seemed always to cause the inception of the project to be postponed.

In 1949, the files were unintentionally begun however, when the Central Registry of the 970th in Europe was microfilmed and sent for safe storage to the Center. The case of this operation and the realization that other areas were in as crucial a state as Europe made it evident that the time had come to set up the Central File. Commanders of all overseas detachments were queried for opinion on the desirability of a Central File and every reply, except one, was favorable. It was finally planned to microfilm the files of every detachment for forwarding to the Center as a basis for the Central CIC File.

It was intended that the file be a service rather than an operational agency and act as a clearing house for information on subversion and subversives. It was hoped that, with a central agency keeping tab on world-wide activities, consolidated material would allow determination of universal modus operandi, and most of all, that the file could furnish consolidated information to all using agencies in the intelligence structure.

It was immediately obvious that the consolidation could be a successful continuing project only if the file systems of the various detachments were standardized. This phase of the project was still being worked on in 1950 and it was contemplated that a process of revision and refinement would probably continue.

At the outset of the plan, it was contemplated that the microfilming process of individual detachment files would continue up to a predetermined cut-off date, tentatively set at 15 October 1950. It was not planned to consolidate and index this initial influx of material immediately, but various indexes would allow a researcher the total wealth of unintegrated information. After the cut-off date, the microfilming at detachment level was to be discontinued and all documents

117 1949 Commander's Conference (Confidential) (Staff and Faculty Library).

and reports subsequent to that date were to be forwarded to Central files for careful indexing and cross-indexing into consolidated personality and impersonal subject files.

The Center was to get the first carbon copy of all CIC operational reports produced after October 1950. They were to be forwarded to the Center by appropriate G2s, but extremely sensitive reports could be retained or delayed until the case was closed or the cause of sensitivity removed.

When the documents were received at the Center, filing of the papers was planned after indexing and integration. When a file reached such a size that filming was practical, the original documents would be destroyed.

It was planned that the Center would prepare two indexes for forwarding to each detachment. The personality index would allow the file to furnish information by name, party affiliation, and to a limited extent, description. The impersonal subject index was far more complicated.

The Intelligence Subjects Code was adaptable to this information on organizations, incidents, and activities. Machine indexing would allow speedy and accurate preparation of bibliographies by subject and area.

It was estimated in 1950 that within five years the file would contain over 20 million personality cards.

Security Surveys

The Korean conflict brought home to commanders the need for maximum security on all military installations and the consequent need for surveys to check on the security level maintained. The procedure followed by Second Army and presented for discussion at the 1950 Commander's Conference was considered practical and typical.

The G-2 Section of Second Army had drawn, in conjunction with the Second Army CIC Detachment Commander, a schedule for conducting surveys which the G2 deemed necessary. Since all subordinate commanders within the Army area had been informed of the need for security, surveys were not ordered by the Second Army Commander, but originated with a request from the commanders of various installations.

The surveys were initially carried out by CIC, under the direction of the G2, and recommendations were forwarded to the commanding officers who had ultimate security responsibility.

Although it was felt that G2 had primary responsibility for the conduct of surveys, portions of the checks involved G3 and Provost Marshal prerogatives, largely in the field of internal security. To avoid the possibility of internal conflict, a joint security survey team was eventually established with representatives from CIC, the Provost Marshal and G3. As the number of these joint teams increased, over 80 Second Army installations were surveyed.

Comments from Fifth Army CIC representatives at the Conference disclosed a slightly different approach to the security problem. Joint survey teams had not been formed by Fifth Army, but complete cooperation and coordination with the Provost Marshal was maintained. While it was felt that all staff sections had a real interest in the surveys, they were not allowed to participate in actual checks. Fifth Army had also endeavored to standardize the form and format of security surveys and effect a review of the report of survey at the Army G2 level before forwarding to the installation commander concerned. Each of the nine field offices of CIC within Fifth Army was held responsible for the job of conducting surveys within a given geographic area.[118]

Chapter 5

TRAINING

A basic change in CIC training procedure was made in 1946 when anticipated unavailability of military instructors led to the requisitioning of 54 civilian instructors for the Center, to be supplied during the first half of the year.

A six-section system of examinations was set up to provide a more accurate criteria for grading students in the Basic Investigator's course, and new courses were formulated and implemented to give a more rounded curriculum. One such course provided Chinese background and language instruction for agents being sent to the Orient.

A formal graduation exercise where diplomas were presented by the Chief, CIC, was begun during the year, and personnel were provided by the Center for a three-hour orientation lecture at the U.S. Naval Intelligence School, Anacostia, Virginia.

An administrative course was set up in March 1946, and two months later the basic course was lengthened to nine weeks. A six-week course for Air Force agents was created and a four-week course designed for agents scheduled for Zone of Interior duty was instituted. A primary photography course for agents assigned to the Military Attache Service was inaugurated before the close of the year.[119]

State Department Personnel

Funds needed for additional equipment to be purchased from local suppliers were requested in 1947 by the Center. The State Department had requested training assistance from the Center for locksmith and photographic courses for its personnel. It was felt that liaison interests made compliance with the request desirable, and supplies were not available in military channels.[120]

Training Division Survey

The Training Division was the subject of an early survey conducted by the Planning and Control Division. An interim report on the survey submitted on 13 February 1946, recommended changes in instruction methods, curriculum, student flow, student clearance, and redesignation of instructional branches with a regrouping of subjects. An eight-week training program was offered with a four-week basic and four-week advanced course; despite certain efficiency benefits,

119 1946 Status Reports, CIC Center (Secret) (Staff and Faculty Library).
120 Ltr from Col L. R. Forney, GSC, Chief, Sec Gp to Executive, Intelligence Division, dtd 24 April 1947 (Confidential) (Kansas City Records Center).

the program was never adopted. Some months later, however, a survey of the course of instruction by the Planning and Liaison Division led to the submission of an instruction plan providing a 32-week course of study. Disposition of the plan is not recorded.[121]

General Keyser's Summation

The training situation and certain recommended changes were summarized by Brig Gen George V. Keyser, Chief, CIC, in 1947. Writing the Department of Army Director of Operations and Training, General Keyser explained that while the basic CIC course included many skills and subjects, its purpose demanded that efforts be concentrated to emphasize investigations, interrogations, informants, weapons, report writing, and investigative legal principles.

He pointed out that more time could advantageously be put into the training program without a substantial loss of personnel or money. Completion of background investigations on most students took well over the nine-week training period, and field work could not be performed until the investigation was closed. General Keyser felt that the time could be used to good purpose by both the school and the detachment performing the investigation.

The Chief explained that the administrative course at the Center had been instituted to provide the clerical help necessary to eliminate the large current backlog of case work. Men graduated from the course were not only skilled in typing and Army administration, but had some knowledge of specialized CIC procedures and report writing. Since this group required the same security clearances as agent personnel, the General felt that training at the Center for this personnel could be extended with the same effect and for the same reasons as were given for extension of the agent's course. He added that if delay in completion of the background investigation caused further postponement in assignment, the men could be utilized at the Center in a special duty status.

It was suggested that the Russian, German and Japanese language courses at the Center be extended from five to eight weeks. While the purpose of the courses was not to produce proficient linguists, the courses did give the students confidence and the ability to verify the work of interpreters. General Keyser reminded the Director that his recommendation was supported by constant reports from using agencies overseas asking a longer training period in languages.[122]

121 Annual Report of Activities, Planning and Liaison Division, 1946 (Secret) (Kansas City Records Center).

122 Ltr from Brig Gen George V. Keyser to Director O & T, 7 October 1947 (Secret) (Kansas City Records Center).

Reorganization at the Center and School

The changes in administration and operation of the CIC School and Center from 1945 to 1948, were solidified and standardized by a reorganization program in 1948. With Lt Col Henry A. Veasey as Director of Training, the School reorganization was completed in November 1948, while the Center program was implemented in June of the same year.[123]

A three-day detachment problem and a ten-hour course in communism were added to the basic course in 1948, and increased attention was given to the training of civilian CIC components. Several extension courses were prepared, and a 44-hour ORC unit training program was formulated. A four-week mobilization refresher course for former agents was also prepared.

A bookstore was put in operation during the year and many volumes were added to the School Research library and the Student library.[124]

The CIC School, 1949-1950

During 1949 and 1950, several courses were offered military attaches; students of the Strategic Intelligence School, Washington, D.C., came to the Center for a one-week course. Language courses were expanded and area studies were intensified with increased emphasis being given to Russia and her satellites. The basic course was modified to include supervisory as well as investigative training, and courses in report writing, interrogation, photography, countersabotage and security were revamped to enlarge their scope.

A Faculty Board was created during this period to screen the records of students whose academic averages fell below the required 70 percent. The Board, consisting of the Commandant, Assistant Commandant, Coordinator of Training and the heads of various branches, determined the individual's suitability for retention at the School despite his grades.

New texts and student outlines were drafted and distributed for use in many classes, and the CIC extension courses were rewritten. Plans were made for creation of an ORC Associate Investigators course and an ORC Associate Advanced course.[125] Several training films were completed by the Army Signal Corps

125 Report, 1950 Commander's Conference (Secret) (Staff and Faculty Library).

Photographic Center under CIC supervision and many technical devices were approved by the CIC Board for field use. All sections at the school were charged with preparation of comprehensive courses for the Officer's Advanced Course.[126]

TI&E at the Center

The Troop Information and Education program at the Center was accelerated in 1948 when a testing center for the administration of General Educations Development tests was established, and orientation of all arrivals at the Center on the benefits and advantages of USAFI was made a part of preliminary processing.

Army education centers were opened in Buildings 100 and 136. Several men on the post participated in extracurricular language classes and night school courses offered by Loyola College. A post newspaper under the TI&E section began publication in this same year.[127]

The ORC Unit Training Program by ZI Field Detachments

In reviewing the Reserve training program for the 1949 Conference, Maj Albin P. Dearing, OO&T Division, stressed the point that in event of another war, the U.S. would not enjoy the luxury of a long mobilization period. To meet this peril, he explained, the U.S. Army had organized its reserve forces into TO&E units, earmarked with mobilization assignment for which specialized training could be arranged.

He explained CIC's role in this Reserve program. There was to be a ceiling in CIC of the proportionate Reserve detachment strehgth to implement 50 divisions, and all would have mobilization assignments along with augmentation personnel. The project number of MI reservists was about 7,000, and CIC spaces would account for about half of this force. CIC detachments were required to have all officer vacancies filled and be up above 15 percent of enlisted strength within nine months after Reserve reactivation. This meant that detachments would have an undetermined amount of participation in Reserve training. More specifically, it meant that each detachment would have to train its own augmentation personnel and reserves assigned in event of a mobilization.

The CIC Center was charged with preparing the training, by specific subject, for CIC reservists. The training program was to extend over a three year period and include 48 weeks of Reserve training and two weeks annual active duty training, this latter to be accomplished at army level. It was hoped to interpolate virtually

126 Monthly Status Reports, CIC Center 1950 (Secret) (Staff and Faculty Library)

127 Monthly Status Reports, CIC Center 1948 (Secret) (Staff and Faculty Library)

the entire Basic Investigator's course. In the active duty period each year, each detachment would be called as a unit, and function as a detachment. This would give further necessary training. It was planned that proficiency with weapons would be developed, and language specialties which reservists brought to the detachments were to be cultivated.

Organization, Operations, and Training Division

Lt Col Hugh S. Sargent, Executive Officer of OO&T, reminded all officers present that the ultimate goal of all military activities, including CIC, was success in combat. This raised, of course, the threefold responsibility of a commander for training.

He stressed that it was the CIC commander's responsibility to prepare the agents to perform his present mission, prepare him to undertake future missions, and ready him for service in a combat situation. Colonel Sargent stated that though the pressure of work might cause commanders to feel there was not time for training, it should be remembered that agents must always be prepared for the unexpected emergency and that achievement and maintenance of a high degree of proficiency could only be maintained within CIC by the training efforts of unit commanders. Colonel Sargent warned against complacency bred by the current static status in the Zone of Interior.

Language Training and Mobilizations

The importance of strategic language training, at a time before it was needed, was stressed by Colonel Sargent. Zone of Interior commanders were warned that their detachment might well be hard hit for personnel should an emergency arise. It was suggested that plans for such a contingency be drafted and filed at detachment level.

The Domestic Intelligence Problem

Several commanders expressed dissatisfaction with the domestic intelligence training which agents were receiving at the Center. In spite of provisions of the delimitations agreement with the FBI, commanders of the 111th and 116th CIC Detachments revealed that they did considerable domestic intelligence work among racial, political, and subversive groups. It was acknowledged that adequate training was not given at the school, but such work being generally considered outside the CIC mission, no ready solution presented itself. The only solution offered in the record of conference was offered by the Commander of the 108th CIC Detachment. He suggested that within current limits, the school give trainees the maximum background possible relative to the subversive groups in this country. He felt that after detachment assignment, it was up to the Army and detachment commander to supervise continued training.

Undercover Operations

The report to the Conference on undercover operations indicated that improved procedures and techniques were needed. Main difficulties turned on faulty selection of personnel and general weakness in cover. Documentation was often imperfect, and administrative details such as travel, billeting, subsistence and orders caused frequent compromise. Recommendations relative to all phases of undercover work and development were requested of commanders present.[128]

1950 Commander's Conference

Korean hostilities caused special stress on discussion of training and mobilization plans at the 1950 Detachment Commander's Conference.

The G2 at the CIC Center explained that his function under current mobilization plans was primarily to request activation of new detachments for field utilization to the G2, Department of Army. This necessitated, as the plan presupposed, a constant "keeping in touch" by the Center G2 with the general status and state of training of all active and Reserve detachments. Upon the Center G2's recommendations, G2, Department of the Army, in coordination with G3 and the Chief, Army Field Forces, actually constituted, activated, and organized CIC units for field utilization.

Augmentation of these detachments, once constituted, was provided for in the mobilization plan, but required requests by the major command concerned. Since these increases were to be allotted to the commands in bulk, it was felt that the commander concerned should determine whether the spaces would be used for CIC augmentation.

Combat Utilization of CIC

Maj Jack B. Cameron, Chief of the Operations and Training Branch of G3, opened the Conference discussion on use of CIC in a combat situation. Major Cameron had commanded the CIC unit with 3d Infantry Division during North African landings in World War II and supported the need for CIC in combat.

Major Cameron cited the early World War II conflict where one faction argued that CIC had no role in combat, on the theory that such field security work would wipe out the specialized counterintelligence role. The other faction had argued that CIC did have a combat mission. While the disagreement continued, this latter group went out and proved its point. Major Cameron's primary premise, then, was, "...combat for CIC is here to stay."

128 1949 Detachment Commander's Conference (Confidential) (Staff and Faculty Library)

Recognizing this fact, he deemed it necessary that every commander, no matter where his detachment was based, be prepared to place that detachment in tactical operation. To assist commanders in training for a possible combat situation, Major Cameron concluded that two highly flexible programs had been drawn at the Center to prepare both the individual and the unit.

Cost of Training

A cost of training breakdown was provided the Department of Defense by the Center in 1950. Based upon a maximum load in each course, the cost per student breakdown for the 12-week CIC investigator's course was $963.35 per man; for the eight-week language and area specialization course, $279.60 per man; for the administrative course lasting two weeks, $169.83 per man; for the four-week technical specialist training, $239.75 per man; for the two-week ORC associate investigation course, $169.83; and for the MA security orientation, $134.88 per man.[129]

129 January, Monthly Status Report, CIC Center, (Secret) (Staff and Faculty Library).

Part II

CIC IN THE ARMY AREAS

Postwar counterintelligence in the Zone of the Interior consisted largely of background investigations of personnel slated for sensitive positions. Cases out of the routine were much less frequent than in overseas commands. Nevertheless, the work was essential and often voluminous.[130]

An examination of CIC detachments operating in the six Army areas and the Military District of Washington during this period shows two consistent patterns. By mid-1948, most of the units had accumulated a dangerously high backlog of pending cases, a situation which was generally remedied by the end of 1949. Secondly, throughout the period, Tables of Organization for all units were revised steadily upward. In several instances, this increase more than doubled the original personnel allotment of the unit.

Zone of the Interior counterintelligence was not confined solely to pavement-pounding. A small number of agents were assigned to detachments operating with tactical outfits. These CIC detachments were involved in maintaining the security of the parent division and participating in tactical maneuvers.

108th CIC Detachment Covers First Army Area

The 108th CIC Detachment was officially activated and assigned to the Second Service Command on 10 June 1946. When the Service Command system was revamped and gave way to the Army Area geographic divisions, the 108th was relieved of assignment to the Second Service Command and assigned to First Army, with Headquarters at Governor's Island, New York. The change was in name only, physically speaking, since the Headquarters under Second Service Command had also been at Governor's Island. Important ramifications came with the redesignation, however.[131]

Since the Army Areas were considerably larger than the physical bounds of Service Commands, the detachments with Army Areas found themselves responsible for up to double the amount of work they had formerly handled.

Entering 1948, the 108th had a backlog of 18,000 cases, considerably more than any other Zone of the Interior unit. Although other detachments were able

130 CIC Operation History of Theaters, "Zone of the Interior, 1945-1948," (Unclassified) (Central Records Facility).

131 Historical Data Cards, 108th & 107th CIC Dets, (Unclassified) (Organization and Directory Section, AGO, Pentagon Building).

to diminish their accumulation of cases during 1948 and 1949, the 108th was unable to make any appreciable dent in its backlog.[132]

To assist in discharging this added burden, detachments that had formerly serviced the territory newly included in a given Army Area were called upon. In the case of the 108th, since the area granted it under First Army in the redistricting of nine Service Commands into six Army Areas encompassed both the old Second and Third Service Commands, it was able to absorb and add to its roster the personnel and equipment of the 107th, which had held down Third Service Command Headquarters at Boston, Massachusetts. The 107th was officially absorbed into the 108th with all personnel being retained in grade on 9 August 1946.[133]

Conversion Problems

Although CIC detachments were reshuffled to some extent with the conversion from the Service Command to the Army Area system, it was immediately apparent that the assignment of CIC personnel to the armies was at wide variance with the relative population and caseloads involved. It can be argued with some authority that duties of CIC in the Zone of Interior reveal a relationship between population and the need for counterintelligence coverage. The workload of any organization generally increases with the number of persons involved. This is particularly true of CIC since most of its activities are concerned with personnel, their activities and backgrounds. It should also be noted, as well, that industrial centers, where the security work of CIC is most important, generally correspond to the concentrations of population. Since the 108th had a total strength in 1946 of only 170 spaces to cover an approximate population of 27,000,000, it is obvious that effective and coordinated use of the force available was necessary to provide even a modicum of counterintelligence coverage.[134]

From 1945 through 1948, the principle duties of the detachment consisted of loyalty investigations with a few subversive activity cases. The 108th was able to call on other detachments in the First Army Area for some assistance in discharging the caseload. The 301st CIC Detachment, attached to Headquarters First Army at Governor's Island, New York, provided assistance in various branches of the Counter Intelligence Division, and further help was provided by the 9th CIC Detachment, a small unit attached to the Ninth Infantry Division at

Fort Dix, New Jersey. Yet another detachment operated within the confines of the First Army area, the 117th CIC Detachment, but it was not under control of First Army, since it was assigned for port security work to the Chief of Transportation.[135] The 117th did handle some loyalty cases, however.

Integration

Not the least among the problems of the 108th after the change from the Service Command to the Army Area system, was the integration of two formerly independent detachments, the 107th and 108th, into a smoothly functioning and efficient unit. For a short period after combination of the detachments into the 108th, operations were continued on a separate basis. Each detachment handled its own administration, files, case control, and field office network. When Col Paul A. Hurst took over as commander of the detachment in 1947, one of his first steps was the reorganization and restyling of the unit to bring about centralized control.[136]

As a first step, a standard operating procedure was published on 25 November 1947, and forwarded to all Officers in Charge, District Intelligence offices. The procedure fixed a chain of command direct to the detachment commander and set up direct report channels. Administrative activities in offices other than Headquarters were cut to a minimum, and all official correspondence and development of leads were ordered to be handled through Headquarters, with use of lateral means only in emergencies.[137]

The Headquarters office was completely reorganized on 28 December 1947, to provide for sweeping changes in the field office setup and to establish highly centralized control.[138]

Distribution of Coverage Responsibility

Until 1 July 1948, coverage of the eight state area of responsibility of the First Army Detachment was handled through two field offices and a network of suboffices.

The states of responsibility included Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, and New Jersey. The

New York Field Office controlled the activities and coverage of offices in Albany, Buffalo, New York City; Syracuse, Rochester, Elmira, Poughkeepsie, and White Plains, New York; Newark and Trenton, New Jersey; and Wilmington, Delaware. The Boston Field Office performed a similar function for sub-offices in Hartford, Connecticut; Boston and Springfield, Massachusetts; and Providence, Rhode Island.[139]

After 1 June 1948, the status of the Boston office was reduced and new offices were created, putting the whole area under control for operational and administrative purposes of the New York Headquarters office. After 1 July, all men were assigned from the New York office, and the files and administration vested in the Boston office were placed in New York. New territorial allocations of responsibility were made in the hope of attaining a higher degree of efficient coverage.[140]

The centralized setup after 1948 placed a maximum of centralized control in the New York Headquarters. Administratively, the office at Governor's Island managed the 108th. The office was divided into four sections: the personnel section; the supply and motor section; the plans and training section; and the investigation and operations section.

The personnel section was responsible for all administrative records, payrolls, confidential funds, credentials, and operation of the message center and a clerk-stenographer pool. The functions of the motor and supply section are self explanatory, as were the duties of the plans and training section. Most complex was the investigation and operations section.

This latter section had a primary task of screening and processing personnel for assignment control. It was charged with the responsibility for agency checks, special projects, revision and rewrite of reports, and special research operations. Domestic intelligence and investigative files were maintained by the section along with a technical and photographic laboratory.

Operationally, the detachment was handled through the New York City Field Office, which was under direct supervision of the investigations and operations section at Governor's Island. Under this setup, the possibility of duplication and unnecessary activity was cut to a minimum. Suboffices under the New York Field Office included: Mineola, Albany, Buffalo, Syracuse, Rochester, Elmira, White Plains, and Poughkeepsie, New York; Trenton and Newark, New Jersey, Wilmington,

Delaware; Hartford, Connecticut; Boston and Springfield, Massachusetts; Providence, Rhode Island; Montpelier, Vermont; Augusta, Maine; and Concord, New Hampshire.[141]

Deployment of CIC

Once Colonel Hurst had managed to clear away the administrative tangle that resulted from the Army Area change-over, and attained a proper organization and control in his area, he set himself to the task of eliminating the improper use of CIC agents at intermediate command levels. Upon his arrival to take command of the detachment in 1947, Colonel Hurst had found that approximately 25 percent of the total strength of his detachment was being used by G2 for non-CIC purposes.[142] To eliminate such practices, Colonel Hurst obtained a statement and definition of CIC functions over the command line of Gen Courtney H. Hodges, commander of First Army.

The letter made it clear that administration and employment of CIC agents were the function of the detachment commander, whether in a static, tactical, or [illegible] situation. Strict conformance to regulations regarding the recognition of CIC badges and credentials was ordered, and all personnel were admonished not to interfere with CIC operations. The reasons for wearing of civilian clothing by CIC agent personnel were set forth, and certain duties were specifically listed as not to be performed by CIC personnel. Among the prohibited duties were tactical intelligence missions, prisoner of war interrogations, criminal or [illegible] investigations, and fatigue and staff duties. The letter was directed to all commanders of installations and activities under the supervision of the Army commander.[143]

[illegible] Through 1949 and 1950

Colonel Hurst left the 108th in March 1949 and was succeeded in turn by Maj John [illegible] and Lt Col Frank M. Hosterman. Loyalty investigations continued to be the principal detachment activity, but security surveys, safeguarding of [illegible], and the investigation of subversive activity reports took the greatest share of available man-hours. During the year 1949, a total of 20,703 completed investigations was achieved.

143 Ltr, dtd 28 Jun 48, to all Subordinate Commands, from Lt Col D. M. White, ASST, AG, Subj: CIC Functions Within the First Army Area, (Confidential) (Central Records Facility).

Intra-detachment conferences with Headquarters and all field offices represented were implemented in 1949 in an effort to achieve a better working relationship. The interchange of ideas and problems were deemed so beneficial that plans were made to include such conferences in permanent scheduling. A rating of excellent was awarded the detachment for all activities by the Inspector General for the year.

Supply problems with regard to motor transportation which arose early in the year were eliminated when replacement vehicles arrived just prior to the close of the period. Average strength of the detachment varied between the totals of 168 and 198.

Aside from on-the-job investigative training, detachment members had made available to them the photographic facilities of the organization to experiment and improve techniques. Every effort was made to supervise the education of all agent personnel with regard to current events by dissemination of all Army and civilian publications available.

One hour weekly was devoted to a program of Troop Information and Education, with stress being placed upon skills of particular importance to CIC.[144]

109th CIC Detachment Handles Second Army Security

On 11 June 1946, the 109th CIC Detachment and the 110th CIC Detachment were assigned to the newly constituted Second Army. The 109th, with headquarters in Baltimore, Maryland, had been named the CIC unit of the Third Service Command on 24 May 1946; and on 4 June 1946, the 110th, with headquarters at Fort Hayes, Ohio, had been designated the CIC unit of the Fifth Service Command. The postwar reshuffle was not complete after the two detachments had been placed under Second Army. On 12 August 1946, the 110th was deactivated and personnel were transferred in grade to the 109th. Authorized strength of the 109th was established at [illegible] officers, 21 warrant officers and 73 enlisted men. This Table of Organization underwent a gradual increase until in July 1949 it was set at 63 officers, 12 warrant officers and 98 enlisted men.

In the first months of operation under the Second Army, the 109th continued to maintain its headquarters in Baltimore, but in June 1947, a transfer to Fort George G. Meade, Maryland, was accomplished.[145]

144 CIC Historical Report, for 1949, dtd 18 February 1950, over signature of Lt Col Frank M. Hosterman (Confidential) (Central Records Facility).

145 Historical Data Cards, 109th & 110th CIC Dets, (Unclassified) (Organization and Directory Section, AGO, Pentagon Building).

Resident agents of the 109th CIC Detachment were posted in the key cities of Pennsylvania, Ohio, Delaware, Maryland, Kentucky, West Virginia, and Virginia.

Although the detachment handled several significant subversion and disaffection cases, their main concern was with loyalty background cases. A great backlog of cases had piled up by 1948, but additional personnel assigned late in the year and the assumption of Air Force cases by the Office of Special Investigations in September brought the detachment's work up to date.[146]

Agents Provide Security for VIPs

On numerous occasions during the period, the 109th CIC Detachment was called upon to supply details to provide security for important persons. For instance, on 29 August 1949, the detachment was responsible for the security of Secretary of Defense Louis C. Johnson while he was attending the American Legion Convention in Philadelphia. Another detail furnished security for Field Marshal Sir William J. Slim during the 1949 Army-Navy football game in Philadelphia.[147]

Four Other Detachments Operate in Second Army Area

Four other CIC detachments operated at various posts and installations of the Second Army. The 890th CIC Detachment provided security for Fort Meade, the Second Army headquarters. Activated in February 1949, this detachment had an authorized strength of two officers, one warrant officer and two enlisted men.

In January 1949, the 530th CIC Detachment was activated and attached to the 3d Armored Division, a training unit at Fort Knox, Kentucky. On 25 March 1949, this CIC unit was relieved of its attachment to the 3d Armored Division and attached to Fort Knox, thus becoming responsible for the security of the complete installation.[148]

On 6 April 1949, the 11th CIC Detachment was activated and attached to the 11th Airborne Division at Camp Campbell, Kentucky. For orientation on airborne counterintelligence, the detachment commander made a trip to Fort Bragg, North Carolina to observe the operations of the 82d CIC Detachment. During May 1949, the unit began a preliminary physical conditioning program for personnel preparing for basic airborne training. Throughout the year, individual officers and enlisted

148 CIC Operational History of Theaters, "Zone of the Interior, 1945-1948," (Unclassified) (Central Records Facility); and Historical Data Card, 530th CIC Det (Unclassified) (Organization & Directory Section, AGO, Pentagon Bldg).

men from the detachment departed for jump training at Fort Benning, Georgia. Except for two officers who were subsequently transferred, the detachment's personnel successfully completed the course. By the end of 1949, the two officers and two enlisted men assigned to the 11th CIC Detachment were qualified parachutists; one officer and both of the enlisted men were qualified glidermen.

With only four members, the 11th CIC Detachment was under strength. The 11th's Table of Organization called for three officers, one warrant officer and three enlisted men. The detachment's history for 1949 concludes: "During the year, the unit strength was never up to authorized level, and on occasion the lack of personnel brought training and operations to a standstill. Personnel shortage is still a major problem."[149]

First WAC CIC Detachment Activated

On 5 January 1949, the first WAC CIC detachment was activated. The 600th CIC Detachment was attached to the WAC Training Center at Camp Lee, Virginia, and authorized three officers, one warrant officer and three enlisted women. Capt Mary E. Herman, transferred from the 401st CIC Detachment in Hawaii, became the 600th's Commanding Officer and thereby the first woman to command a CIC unit.

On 2 December 1949, the attachment of the 600th to the WAC Training Center was revoked and the unit attached to Headquarters, Camp Lee. As the unit's official history for 1949 says: "This attachment has been made with a view to providing the Commanding General, Camp Lee, with CIC personnel not otherwise authorized."

One important aspect of the attachment to Headquarters, Camp Lee was that personnel of the 600th CIC Detachment thereafter delivered security lectures to military and civilian personnel of the post.[150]

Third Army Area Covered by 111th CIC Detachment

Counterintelligence in the Third Army area was the responsibility of the 111th CIC Detachment. The 111th, originally activated on 22 May 1946, had been assigned

149 11th CIC Detachment, Camp Campbell, Ky, Subj: Annual Historical Rpt, To: TAG, Washington 25, D.C., 27 Feb 50 (Confidential) (Central Records Facility).

150 CIC Operational History of Theaters, "Zone of the Interior, 1945-1948," (Unclassified) (Central Records Facility); and Hqs, 600th CIC Det, Camp Lee, Virginia, Subj: Historical Report of the 600th CIC Det, Camp Lee, from 5 Jan 49 to 31 Dec 49, To: The Adjutant General, Washington 25, D.C., 27 Feb 50, (Confidential) (Central Records Facility).

to the Fourth Service Command and had maintained headquarters in Atlanta, Georgia. On 16 June 1946, the detachment was transferred to the Third Army and in December 1947 moved from Atlanta to Third Army Headquarters at Fort McPherson, Georgia.

Total authorized strength of the detachment at its activation was 16 officers, six warrant officers and 26 enlisted men. By 1950, the allotment had been increased to 17 officers, 16 warrant officers and 30 enlisted men.[151] To indicate the wide distribution of agents, the unit maintained 20 field offices on 1 January 1949. Offices were located in Memphis, Nashville, Knoxville, and Chattanooga, Tennessee; Birmingham, Mobile and Montgomery, Alabama; Jackson, Mississippi; Spartenburg and Columbia, South Carolina; Charlotte and Raleigh, North Carolina; Atlanta, Columbus, Macon, and Savannah, Georgia; and Marianna, Jacksonville, Orlando, and Miami, Florida.

As with Second Army CIC, the 111th had a great backlog of cases entering 1948. At one time 3,802 investigations were pending, but by the end of the year this number was reduced to 2,367 largely due to the assumption of Air Force cases by OSI.[152]

The pile-up of pending cases was reduced to 866 by the end of 1949, as the detachment completed during the year a grand total of 8,019 cases, or an average of 191 per agent.[153]

Five other CIC detachments operated in the Third Army area. The 316th CIC Detachment operated at Fort Bragg and was responsible for the security of that installation. The other four detachments operated with tactical units. The 3d CIC Detachment was with the 3d Infantry Division at Fort Benning; the 5th CIC Detachment was with the 5th Infantry Division at Fort Jackson; and the 205th CIC Detachment was attached to V Corps at Fort Bragg.[154]

112th CIC Detachment - The Fourth Army Unit

The 112th CIC Detachment, originally with the Eighth Service Command, was transferred to Fourth Army on 11 June 1946. Concurrently the detachment moved from offices in downtown Dallas, Texas, to Fort Sam Houston, Texas. At the time of its assignment to Fourth Army, the total authorized strength of the

detachment was 16 officers, six warrant officers and 26 enlisted men. By 1950, this Table of Organization, after undergoing repeated increases, stood at 56 officers, 21 warrant officers, and 93 enlisted men.[155]

Counterintelligence coverage of the Fourth Army area involved work in New Mexico, Oklahoma, Arkansas, Louisiana, and Texas. To indicate agent distribution, the 112th in 1949 maintained eight branch intelligence offices and nine resident agencies. Branch offices were in operation in Little Rock, Arkansas; New Mexico; and Dallas, El Paso, Houston, and San Antonio, Texas. Resident agencies were maintained in McAllen, Austin, Amarillo, and Abiline, Texas; Tulsa, Oklahoma; Las Cruces, New Mexico; Fayetteville, Arkansas; and Baton Rouge and Shreveport, Louisiana.[156]

The mission of CIC in a Zone of the Interior Army area, as interpreted by the 112th CIC Detachment, was stated by the unit's commander in February 1948. Writing informally to a friend at the CIC Center, Maj James Hay declared:

> I have emphasized that a CIC detachment is assigned to an Army area to carry out the commander's counterintelligence responsibilities and that they were a factfinding organization designed to produce information upon which the commander could base his domestic measures, particularly pertaining to his personnel and installations. He assigns us a mission, and the CIC, as his technician in the field, digs up the information, and turns it over to the G2 for whatever action he deems appropriate. In certain cases and under certain circumstances, we have directives prescribing our action, but always with the knowledge and concurrence of the commander under whom we have been placed.[157]

Like other Zone of the Interior detachments, the 112th was able to reduce greatly their number of pending cases in 1949. The year opened with 2,560 cases not completed and closed with 948 pending. During the year, the detachment opened a total of 7,010 cases.[158]

Two Detachments Operate With Armored Divisions

Two combat unit detachments were in operation in the Fourth Army area. The 505th CIC Detachment was attached to the 5th Armored Division at Camp Chafee, Arkansas, and the 520th was attached to the 2d Armored Division at Camp Hood, Texas.[159]

The unit history of the 520th CIC Detachment for 1949 contains the following paragraph describing the unit's activity for the year:

> During the year, the detachment participated in eight days of field exercises for a total of 138 hours as an integral part of Headquarters, 2d Armored Division, to familiarize personnel with living in the field, loading vehicles for combat, field sanitation and march discipline. Due to the mission of a tactical CIC detachment, 88 percent of the time was spent at "on the job training" while 12 percent was spent on subjects common to the Army as a whole and technical subjects peculiar to CIC. In addition, all members were given outside material to read on general CIC matters and were required to keep themselves abreast with current news, both local and international.[160]

113th is CIC Detachment for Fifth Army

After 10 August 1946, the 113th CIC Detachment possessed the sole responsibility for counterintelligence activities in the Fifth Army area. The 113th had been activated on 20 May and attached to the Sixth Service Command. This organization maintained headquarters in downtown Chicago, Illinois. On 11 June 1946, the 113th had been assigned to the Fifth Army. Concurrently, the 114th CIC Detachment, attached to the Seventh Service Command since its activation on 10 May 1946, was also transferred to Fifth Army. The 114th was inactivated on 10 August 1946 and all personnel transferred in grade to the 113th.

Authorized strength of the 113th was gradually increased throughout the period until in December 1950 it stood at 52 officers, 67 warrant officers, and 99 enlisted men.[161]

CONFIDENTIAL

The 113th CIC Detachment maintained field offices in Michigan, Indiana, Illinois, Wisconsin, Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Wyoming, Colorado, Kansas, and Missouri.[162]

The 113th also noted that in 1949 the backlog of cases had been greatly reduced. The unit's 1949 history expressed the hope that the detachment's operations would improve as a result of clearing up many pending investigations:

> During the year the backlog of cases was gradually reduced in the Fifth Army area to a point where it was believed that CIC could take a more active part in other phases of the Army security program... This detachment feels that a closer and more intimate contact should be developed between agents of the detachment and Class I and Class II installations in the Fifth Army area. It was estimated during 1949 that background investigations of both military and civilian personnel (brought CIC in contact with) little more than 3% of (the Fifth Army's personnel), leaving the remainder largely untouched.
>
> While expansion of investigative activity is not particularly desired, it was felt that complaint cases during 1949 were secured by chance information rather than by planned effort and that more attention should be given to this situation. Consideration of the matter by members of the detachment developed the belief that intelligence and security officers in Class I and Class II installations were largely untrained and had such a multiplicity of duties that security was neglected. In attempting to overcome this situation, the detachment developed a short training course for (these officers) to alert them to their responsibilities and to bring them closer to the intelligence field of operations.
>
> It is hoped that in the future more agent time will be available to make periodic calls on these installations with a view to encouraging the intelligence officers in the performance of their duties in the securing of information about personnel in the commands which they serve and to assist intelligence officers in the matter of security surveys and security inspections. By such methods, it is hoped that the detachment can adopt a more positive attitude in the matter of security than merely carrying out our routine background investigations, important as these are and will continue to be.[163]

113th Finds Flying Saucer

One of the most interesting cases of the 113th CIC Detachment involved not just seeing, but finding a "flying saucer." In October 1948, a farmer had come upon a metal disk about 18 inches in diameter in one of his fields. The "saucer" resembled nothing so much as a metal blade from a farmer's disc harrow. However, spot welded to the center of the blade's convex side in an upright position was a mysterious object which, to anyone with imagination, could have been a part of a rocket projectile.

Investigation revealed that the "flying disc" was a homemade contrivance which had indeed been made from the blade of a disc harrow. The miniature rocket turned out to be an old wartime souvenir, a spent bazooka shell, which had been welded to the disc. The contrivance was the brainchild of a local farmer who had used it as a noise maker at a wedding celebration. The "flying saucer" had fallen out of his truck during a bumpy ride across the fields.[164]

The 10th CIC Detachment was attached to the 10th Infantry Division at Fort Riley, Kansas, within the Fifth Army area. The detachment reported in its history for 1949 that, "The successful operation of the 10th CIC Detachment, attached to the 10th Infantry Division (Tng), depended upon two basic factors, namely, the complete and wholesome cooperation with civilian law enforcement agencies and coordination and cooperation with all units of the command."

In 1949, the 10th CIC Detachment took over responsibility for the security of the Ground General School at Fort Riley from the deactivated 351st CIC Detachment.[165]

Security of Sixth Army Rests With 115th CIC Detachment

In May 1946, the 115th CIC Detachment was organized and attached to the Ninth Service Command. On 11 June 1946, the organization was assigned to the Sixth Army, assuming military counterintelligence duties in Washington, Idaho, Montana, Oregon, Nevada, Utah, California, and Arizona. Like other Zone of the Interior CIC units, the 115th received a gradual increase in personnel allotment throughout the period. At the end of 1949, the Table of Organization authorized 42 officers, nine warrant officers and 82 enlisted men.

In 1949, the 115th operated four intelligence field offices which directly supervised the work of resident agents. The field offices were located in the Presidio of San Francisco, Fort MacArthur, California; Seattle, Washington; and Fort Douglas, Utah. Headquarters for the detachment were located in the Presidio of San Francisco.

A small number of CIC personnel were retained under the wartime designation of Sixth Army CIC, the 306th CIC Detachment, to supervise security at the Army Headquarters. The 306th was deactivated on 26 September 1949, and its duties assumed by the 115th.[166]

2d and 4th CIC Detachments Operate With Tactical Divisions

Two tactical CIC units were in operation in the Sixth Army area: the 2d CIC Detachment with the 2d Infantry Division at Fort Lewis, Washington; and the 4th CIC Detachment with the 4th Infantry Division at Fort Ord, California. Examples of the training in which CIC division detachments engaged were the activities of the 2d CIC Detachment in the Sixth Army amphibious exercises of 1946 and the 2d Infantry Division's Operation MIKI in 1949.

For the 1946 exercises, the detachment embarked from Tacoma, Washington for San Diega, California, on 10 November. Arriving on 15 November, the unit participated in landing maneuvers at Silver Strand, Coronado, California, until 17 November. The force then sailed to San Clemente Islands for four days of maneuvers at Pyramid Cove. Another amphibious landing was accomplished late in November at Aliso Canyon, Oceanside, California. The agents debarked at Olympia, Washington, on 9 December 1946, after a full month of tactical operations in which the part of many CIC detachments in World War II was reenacted.

In August and September 1949, the 2d CIC Detachment participated in Operation MIKI, the division's major tactical maneuver of the year. CIC's main mission was the security of the operation and the apprehension of aggressor espionage agents.

The 2d CIC Detachment, in reviewing MIKI, noted first the problem of security:

> During the preliminary stages of the MIKI exercise there were many individuals who were prone to place too little importance on the necessity of strong security. However, as CIC measures were implemented, including indoctrination of all troops, much improvement was noted. One of the principal obstacles to the achievement of a proper security attitude

166 CIC Operational History of Theaters, "Zone of the Interior, 1945-1948," (Unclassified) (Central Records Facility); and "Unit History of the 115th CIC Det, Calendar Year 1949," (Unclassified) (Central Records Facility).

was the fact that newspapers carried items of information concerning the maneuver which had been disseminated to the troops as highly classified.

The problems relating to the maneuver's aggressor agents were then outlined:

> The absence of sufficient preparation and briefing of aggressor agents detracted considerably from the realism of the problem and many advantageous training opportunities were thereby missed. Although this situation was dictated by circumstances and not a result of inefficiency, the problem suffered nonetheless.

In conclusion, Maj Kenneth T. Koeber, Commanding Officer of the 2d CIC Detachment noted:

> The necessity of the establishment of a firm CIC combat doctrine can no longer be overlooked. During Operation MIKI, prior planning and the ability to improvise means, measures, and methods as situations arose overcame the effects of having no comprehensive textual material for training and information.

Major Koeber added some remarks on the mission of CIC with an infantry division in a peacetime situation:

> It has become increasingly apparent that the security consciousness of a military organization and its consequent efficiency in the maintainance of same is in a large measure dependent upon the effects and impression made by the CIC personnel in their daily conduct and contacts. Thus, selling security becomes a part of the CIC mission.[167]

116th CIC Detachment Activated in Military District of Washington

The 116th CIC Detachment was activated to assume counterintelligence duties in the Military District of Washington on 31 May 1946. Original strength totaled 15 officers, six warrant officers and 23 enlisted men. By late 1950, the gradual increases in space allotments had led to the authorization of 54 officers, 32 warrant officers and 114 enlisted men.

---

167 CIC Operational History of Theaters, "Zone of the Interior, 1945-1948," (Unclassified) (Central Records Facility); and Hqs, 2d CIC Detachment, Fort Lewis, Washington, Subj: History of 2d CIC Detachment (1949), To: The Adjutant General, Washington 25, D.C., 25 Jan 50, (Unclassified) (Central Records Facility).

The great backlog of uncompleted cases that piled up in Washington was, as in other cases, considerably depleted during 1949. As the year began, a staggering number of 10,463 cases was pending. To make matters worse, during January an additional 1,929 requests for investigation and 1,679 requests for MDW records checks were received. Night and Saturday work and a detail of Department of the Army civilians from the office of the AC of S, G2, MDW, were needed to keep the number of pending cases from piling even higher. By mid-September, the backlog was down to 7,172 cases, and at the end of the year it stood at 3,335.

The number of individual cases handled by the 116th CIC Detachment far surpassed other Zone of the Interior detachments. However, of the 16,066 cases handled, 11,783 were MDW file checks accomplished for other detachments. Only 576 of the grand total were complete background investigations.[168]

168 Historical Data Card, 116th CIC Detachment, (Unclassified) (Organization & Directory Section, AGO, Pentagon Building); and "Unit History, 116th CIC Detachment, 1949," (Confidential) (Central Records Facility).

Part II: CIC in the Army Areas

Appendix 1

STAFF STUDY ON ESTABLISHMENT OF A PERMANENT ARMY TYPE COUNTER INTELLIGENCE CORPS

A board of officers consisting of Col Harry H. Mole, GSC, Chairman, Lt Col C. [illegible] Leydecker, GSC, Member, Lt Col Robert N. Denniston, GSC, Member, and Lt Col Vincent C. Neeson, MI, Recorder, was appointed on 20 January 1947 by the Chief Security Group, to consider the problem of establishing a Counter Intelligence Corps as a permanent branch of the Regular Army.

This board reported on 31 January 1947:

1. To consider the creation of a Counter Intelligence Corps as a permanent branch of the Regular Army.

2. The authority for the establishment of the present Counter Intelligence Corps stems from the following:

a. The Corps of Intelligence Police (now the Counter Intelligence Corps) was established initially upon the recommendation of the Commanding General, American Expeditionary Forces, through the War College Division, Office of the Secretary of War by Section II of the Act of Congress, 18 May 1917. The Adjutant General issued a general order for the establishment of a Corps of Intelligence Police on 13 August 1917.

b. Jurisdiction over the Corps of Intelligence Police was transferred from the War College Division, War Department General Staff, by General Order Nr 27, 1918.

c. After expiration of the war powers conferred on the Secretary of War by the Act of 1917, activities of the Corps of Intelligence Police were continued as part of the Regular Army by virtue of the general authority and overall appropriations of the Secretary of War in essential service of the Assistant Chief of Staff, G2, War Department General Staff. The Counter Intelligence Corps was established under Title 1 of the First War Powers Act of 1941 as an essential part of the Army of the United States.

d. By Presidential Proclamation in June 1939, the President of the United States gave clear recognition of the counterintelligence functions vested in the Secretary of War. The proclamation placed upon the Federal Bureau of Investigation, the Military Intelligence Division, and the Office of Naval Intelligence, the responsibility for investigation of all espionage, subversion, and sabotage. The three agencies, designated for such responsibility by the President, drew up plans for the spheres of operation to be recognized by each other for specific authority. This accord became known as the "Delimitations Agreement," which is still in effect.

e. By order of the Secretary of War (WD 320;2 (12-12-41) MR-M-B (13 Dec 1941)), subject: Redesignation of the Corps of Intelligence Police, the Counter Intelligence Corps, as now constituted, was established as a continuance of the Corps of Intelligence Police, and jurisdiction thereover remained vested in the Assistant Chief of Staff, G2 (now the Director of Intelligence), War Department General Staff.

3. The development of the Counter Intelligence Corps toward a permanent military establishment has been indicated by a natural trend which has set many precedents.

a. War Department General Orders Nr 149, 28 November 1917, increased the initial allotment of 50 men under the original organization order to 300 enlisted men under the original demands in the Theater of Operations and in the Zone of Interior. Subsequent demand for the services of the Corps of Intelligence Police resulted in allotment increases until the strength in World War I exceeded 600 enlisted men. Despite constant demand for increased personnel, and because of limited military appropriations, the strength of the Corps of Intelligence Police was held generally to the level of 50 enlisted men, or less, for the entire army.

b. As early as 1926, it was recognized that in case of emergency, the Corps of Intelligence Police would have to expand rapidly. A "Mobilization Plan for the Corps of Intelligence Police" was published at that time, calling for expansion under a subsection of the Secret Service Section, G2, War Department.

c. Limited personnel available after the Presidential proclamation caused the War Department to take extraordinary steps to fulfill the new responsibility defined by the President by the employment of civilians as investigators, which was authorized in October 1940, until such time as the War Department could have its own force of Corps of Intelligence Police expanded and properly trained. On 20 May 1942, the Assistant Chief of Staff, G2, War Department, held that the expansion of the Corps of Intelligence Police had been such that the use of civilian operatives no longer was necessary.

d. In order to more closely define its broadened objectives and its increased responsibilities, the Corps of Intelligence Police was redesignated as the Counter Intelligence Corps on 13 December 1941.

e. While emergency procurements and allotments had been authorized theretofore, the Counter Intelligence Corps was given recognition as a distinctive unit when authorization of Tables of Organization and Equipment 30-500 was approved on 24 June 1944.

f. Recognition as a specialized service is given the Counter Intelligence Corps in authority granted by the Secretary of War to obtain initial recruitments in the Regular Army, directly for the Counter Intelligence Corps. The Secretary of War recognized the special personnel requirements of the Counter Intelligence Corps by establishing policy under letter, the Adjutant General, AG 322 CIC (31 [illegible] 44) OB-S-M, subject: Counter Intelligence Corps, 13 November 1944, and affirmed by book message WCL 45849, 31 May 1946.

g. A trained Counter Intelligence Corps force of more than 13,000 persons was developed between August 1940 and January 1946. Of that total, more than 9,000 have been returned to civilian life, and more than 4,000 officers and men continue in Counter Intelligence Corps assignments.

4. The proper way to establish and maintain maximum security is to have a permanent professional Counter Intelligence Corps.

a. A permanent body of professionally qualified, career Counter Intelligence Corps specialists will greatly increase the efficiency of the Corps and be more productive than the present organization.

b. A permanent Counter Intelligence Corps will maintain the same personnel over a period of time, who by reason of their contacts in connection with their operations, will be able to continue to exploit these contacts more efficiently.

c. A permanent Counter Intelligence Corps is necessary in order that techniques may be developed and exploited, and that training methods resulting therefrom may be established.

d. The Director of Personnel and Administration, War Department General Staff, has granted authority for experienced Counter Intelligence Corps officers to remain in overseas assignments beyond their normal tours of duty in order that the government may continue to receive maximum benefits from contacts established and orientation received. At the present time there is, and will continue to be, a paucity of personnel until such time as a permanent Counter Intelligence Corps is established.

e. A constant turnover of personnel in the present Counter Intelligence Corps jeopardizes the efficiency of the organization through the loss of competent and experienced personnel and their replacement by inexperienced and uninterested personnel who must be trained. This lack of professional interest interferes with complete operation in conjunction with other Federal agencies, such as the Federal Bureau of Investigation, and acts to the detriment of the Corps in general.

5. In the establishment of a permanent Counter Intelligence Corps, its organization must be considered.

a. The present strength of the Counter Intelligence Corps as of 31 December 1946, is 3,391, composed of 950 officers, 257 warrant officers, and 2,184 enlisted men. This does not include personnel in training at the CIC Center as cadre.

b. The troop basis for 30 June 1947 is 5,189, based on a total authorization of 1,070,000. This troop basis was established on the request of field commanders.

c. The ratio of officers to enlisted men in the Counter Intelligence Corps is not comparable to ratios in other branches due to the fact that many of the special agents in the Counter Intelligence Corps must be of commissioned grade for the proper fulfillment of their missions and in justice to their personal qualifications.

d. At present, procurement quotas are being made by emergency procedure to fill the troop requirements. These procedures are unsatisfactory because many times the Corps has been used as a dumping ground for a very large percentage of unsatisfactory officers and men from other branches of the service.

e. The experience of established branches and technical services has proven the desirability of maintaining a proper balance between assigned and detailed officer personnel, as well as the establishment of professional branches. Permanent enlisted personnel will raise the quality and maintain the professional standards necessary for the Corps' efficiency and encourage esprit and recruitment.

f. Proper balance will be obtained in the Counter Intelligence Corps by having officer personnel both on assignment and detail from other branches. This type of organization will:

(1) Develop the long-range plans of the Corps.

(2) Maintain a fresh and open point of view.

(3) Keep pace with the progress made by other branches.

(4) Return to basic branches officers who have completed their periods of detail and thus build within all branches a better understanding of the objectives, problems and achievements of the Counter Intelligence Corps.

(5) Maintain a firm foundation of experienced specialists, regardless of further demobilization.

6. The integration of the Counter Intelligence Corps into the unification plan proposed for the Armed Forces of the United States will increase the efficiency of its function and affect a great economy in our coordinated national defense measures.

a. Investigative missions of the Navy, Air Force and Army are generally similar and parallel.

b. The Counter Intelligence Corps always has worked in close harmony with the Office of Naval Intelligence. The Navy has intelligence field offices in many cities in the Zone of Interior, but it does not possess an organization such as the Counter Intelligence Corps. The Office of Naval Intelligence has consulted the files of the Counter Intelligence Corps in thousands of personnel cases and other investigations.

c. However, the close liaison between the Office of Naval Intelligence and the Counter Intelligence Corps is not limited to the use of the Army's files, but in addition the Counter Intelligence Corps is performing investigations for the Navy.

d. The Army Air Force Counter Intelligence Corps is a component part of the overall Counter Intelligence Corps.

Conclusions

7. Continuing statutory authority, as delegated to the Secretary of War under Title 1 of the First War Powers Act of 1941, exists for the creation of the Counter Intelligence Corps as a permanent branch of the Regular Army.

8. The Counter Intelligence Corps has been recognized as a necessary and effective service since its inception in World War I, and its natural development has been toward becoming a permanent branch of the Army.

9. The establishment of a permanent professional Counter Intelligence Corps will insure maximum security within the military establishment of the United States.

10. Constant vigilance must be maintained against infiltration of the armed forces by subversive groups or organizations.

11. Based on the success of the Technical Services type of organization, the organization of the Counter Intelligence Corps should consist of both permanent and detailed officers personnel and permanently assigned enlisted personnel.

12. The Counter Intelligence Corps is readily adaptable to integration into the unification plan of the armed forces. The integration of the Counter Intelligence Corps into the Armed Forces of the United States will effect great economy and increase the overall efficiency of the counterintelligence function.

It is recommended that:

a. The Counter Intelligence Corps be constituted a permanent branch of the Regular Army under Title 1 of the First War Powers Act of 1941.

b. The Counter Intelligence Corps consist of, for the interim Army, one Chief of the Counter Intelligence Corps with the rank of Brigadier General; such additional officers in grades from Colonel to Second Lieutenant, inclusive, not to exceed two percent of the projected 45,000 Regular Army officers, and warrant officers and enlisted men not to exceed one half of one percent of the strength of the Army. This will not result in any increase in the overall strength of the Army.*

Two proposed Army regulations were included with this study. The first of these dealt with general provisions for the Counter Intelligence Corps:

Corps:

	Paragraph
Composition	1
Duties of the Chief of Counter Intelligence Corps	2

1. Composition. The Counterintelligence Corps will consist of one Chief of Counter Intelligence Corps and other officers, warrant officers, and enlisted men as may be assigned or detailed thereto by competent orders.

2. Duties of the Chief of Counter Intelligence Corps. In addition to such duties as may be prescribed, the Chief, Counter Intelligence Corps will be responsible, under the direction of the Chief of Staff, through the Director of Intelligence, War Department General Staff, for the following duties:

a. Administration.

(1) The command, administration, and government of the Counter Intelligence Corps installations and of personnel on duty thereat, except as provided in War Department Circular Nr 138, 14 May 1946, as amended by War Department Circular Nr 170, 11 June 1946.

* Report of Board of Officers 31 January 1947 on creation of a Counter Intelligence Corps as a permanent branch of the Regular Army, pp7 (Secret) (Kansas City Records Center).

(2) The general supervision over the procurement and administration of the personnel of the Counter Intelligence Corps.

(3) The establishment of policies and procedures governing assignment and utilization of personnel from the Counter Intelligence Corps for duty in other intelligence units and for duty as faculty members and students in the military intelligence and counterintelligence schools.

(4) The recommendation for assignment and utilization of Counter Intelligence Corps personnel for counterintelligence duty with the staffs of the War Department, theaters of operations, territorial commands, and other commands.

(5) The administration of funds apportioned to the Counter Intelligence Corps.

b. Training.

(1) The conduct or supervision of all counterintelligence training of Counter Intelligence Corps personnel.

(2) The conduct of specialized training of selected military personnel in those places of counterintelligence training for which centralized War Department instruction is desirable.

(3) The supervision of the counterintelligence training of military personnel in civilian universities or in foreign institutions. Such training will include, where necessary, such specialized training not primarily of a counterintelligence nature, but required as background for performance of counterintelligence functions.

(4) The maintainance of research and experimentation concerning the peacetime training of personnel in wartime aspects of counterintelligence.

(5) The supervision of the training of personnel of the Counter Intelligence Corps.

(6) The preparation and revision of all training manuals, pamphlets and instructions required by the Army for proper counterintelligence indoctrination.

(7) The supervision of the activities of the Counter Intelligence Corps in accordance with current directives of the War Department.

c. Research.

(1) The initiation of study, research, and experimentation necessary to develop counterintelligence equipment, doctrine, and procedures.

(2) Maintenance of research and experimentation concerning the use of technical methods and other advanced techniques, and its application to counterintelligence functions.

COUNTER INTELLIGENCE CORPS
COUNTER INTELLIGENCE BOARD

	Paragraph
Station	1
Purpose	2
Composition	3
Direction and Control	4

1. Station. The Counter Intelligence Board will be stationed at such post or place as the War Department may direct.

2. Purpose. The purpose of the Counter Intelligence Board will be to consider such subjects pertaining to counterintelligence as may be referred to it by the Chief of the Counter Intelligence Corps. It will submit to the Chief of the Counter Intelligence Corps recommendations for improvement of counterintelligence training, doctrine, techniques, functions and specialized supplies and equipment.

3. Composition. The Counter Intelligence Board will consist of a president, detailed as such, and such other officers as may be designated by the Chief of the Counter Intelligence Corps. Such other personnel as the War Department may direct may be employed to assist the Counter Intelligence Board in the execution of its function.

4. Direction and control. The Counter Intelligence Board will operate under the direction and control of the Chief of the Counter Intelligence Corps.

Appendix 2

ORGANIZATION OF THE CIC CENTER AND CAMP HOLABIRD

Memo Nr 20-2, Headquarters, Camp Holabird, 15 July 1948*, outlined the duties and responsibilities of the personnel at the CIC Center:

Commanding General

The Commanding General, CIC Center, was also the Commanding General of Camp Holabird, and the Chief, CIC. The duties of Commanding General, CIC Center involved those of Commandant, CIC School, which was a part of the CIC Center. He operated under the Commanding General, Second Army, in matters pertaining to Camp Holabird and under the Director of Intelligence, GSUSA, in all other matters.

Deputy Post Commander

The Deputy Post Commander was charged with assisting and advising the Commanding General and assuring staff coordination of matters other than those pertaining to the CIC. The Deputy Post Commander worked closely with the Executive Officer assuring mutual coordination of appropriate matters.

Executive Officer

1. General Duties. The Executive Officer functioned as Chief of Staff, was an assistant and advisor to the Commanding General, and acted as the principal coordinating agent of the staff. He was a member of the CIC School Board. His duties included matters pertaining to the CIC Center and School and to Camp Holabird.

2. Specific Duties.

a. Formulated and announced policies for the general operation of the staff.

b. Directed and coordinated the work of the staff groups with respect to the activities and relations within and between the groups, units or agencies.

c. Kept the Commanding General fully informed of the strength, morale, training, equipment, health, and general effectiveness of the major elements under his command.

---

* Memo Number 20-2 Headquarters, Camp Holabird, Baltimore 19, Maryland, 15 July 1948 (Unclassified) (Kansas City Records Center)

d. Received decisions from the Commanding General and took the following action:

(1) Made such additional decisions as might be directed by the Commanding General and gave necessary instructions to the staff in furtherance of the decisions.

(2) Allotted the detailed work of preparing plans, studies, reports, and orders, assured coordination of the resulting drafts and submitted them to the Commanding General for approval.

e. Took steps to insure that all orders, staff recommendations and actions emanating from the Headquarters were in accordance with the policies or plans of the Commanding General.

f. By personal observation and with the assistance of the staff groups, saw that the orders and instructions of the Commanding General were executed.

g. Maintained a continuous study of conditions with a view to being prepared for contingencies.

h. Assembled the routine reports of the staff sections, and after their approval by the Commanding General, made appropriate distribution.

i. Exercised staff supervision of the CIC-GS Liaison Office.

The CIC Board

1. General Functions. The CIC Board was charged with the coordination of overall CIC plans and policies involving two or more staff agencies and with the supervision of developmental activities in the field of special investigative equipment and techniques.

2. Specific Functions.

a. Advised the Chief, CIC, on overall plans and policies affecting the current or future status of the CIC.

b. Interviewed returned CIC personnel and disseminated reports of the information.

c. Assembled and edited "The CIC Digest."

d. Reviewed and analyzed field activities reports and disseminated the information.

e. Initiated or assembled and edited revisions to CIC field and technical manuals.

f. Supervised testing and developing of CIC special investigative equipment making use of CIC technical laboratory, field detachments, and other military or civilian facilities, and made appropriate recommendations based thereon.

g. Searched out equipment, methods, or techniques that might be of use to CIC and made recommendations concerning their further development for CIC.

CIC School Board

1. The CIC School Board was charged with the study, review, and submission of recommandations to the Commanding General on matters pertaining to the maintenance of proper instructional and educational standards and the following of prescribed doctrine in the CIC School.

2. Members of the School Board were:

a. Executive Officer.

b. Chief, CIC Board.

c. Director of CIC School.

d. Director of Intelligence, Organization, Operations, and Training.

e. Chiefs of Instructional Divisions, or other appropriate officers, who might be called before the Board for certain specific information. These were non-voting members.

CIC Liaison Officer

The CIC Liaison Officer with GSUSA insured close coordination between the Chief, CIC and the ID and other GS divisions of the Department of the Army. Procedures are prescribed in WDGS Circular 35-11, 15 August 1947.

Acting Inspector General

1. Received and processed complaints.

2. Inspected and audited funds.

3. Reviewed requests for hardships, dependency, and National Interest discharges and made appropriate recommendations.

4. Conducted special investigations and inspections as ordered by the Commanding General.

5. Supervised and coordinated established routine inspections.

Personnel and Administration Division

1. General Duties. The Personnel and Administration Division was charged with the formulation of policies, preparation of plans, and executive and supervisory functions pertaining to administrative matters and matters relating to manpower as a whole and personnel as individuals through CIC, world-wide, and for Camp Holabird.

2. Specific Duties.

a. Exercised staff supervision and coordination of the:

(1) Adjutant.
(2) Post Exchange Officer.
(3) Legal Officer.
(4) Chaplain.
(5) Special Services Officer.
(6) Provost Marshal.
(7) Clubs.

b. For CIC on a world-wide basis and for Camp Holabird locally, the personnel and administration division formulated and coordinated policies and plans for, and carried out executive or supervisory functions pertaining to:

(1) Personnel matters concerned with procurement, selection, classification, career management, processing for training, assignment, reassignment, or transfer, promotion, separation or retirement.

(2) Morale matters concerned with postal service, recreational activities, citations, honor awards and decorations, motion pictures, Army exchange, leaves of absence, religious activity, pay, insurance, allotments, welfare organizations and Red Cross.

(3) Discipline, law and order, military justice and courts-martial jurisdiction, punishments and rewards.

(4) Troop strength and casualty reports and other personnel records and reports.

(5) Personnel estimate and plans concerned with personnel statistics, personnel economy, headquarters organization and operation and suballotment of grades.

(6) General regulations and routine administration concerning individuals and administration not specifically assigned to another staff division.

Adjutant

1. Processed all official correspondence in accordance with regulations and approved policies. Where no policy had been established, he initiated action to obtain the policies.

2. Prepared, reviewed, authenticated, reproduced and distributed all orders, instructions, and communications passing through command channels.

3. Maintained the office of record for the headquarters.

4. Supervised the operation of the Army Postal Service.

5. Supervised the central procurement, storage, distribution, and issue of DA publications and blank forms.

6. Established office procedure for administrative matters, including recommendations for its extension to subordinate units.

7. Performed all functions of hiring, placement, training, payroll, employee relations, classification and wage administration, and maintained all records pertaining to civilian personnel, paid from appropriate funds.

8. Operated reports control.

9. Maintained all records of military personnel, prepared payroll for enlisted personnel and pay vouchers for officer personnel.

10. Operated reproduction section to include mimeographing and photolithography.

Provost Marshal

1. Advised the Commanding General and staff on matters pertaining to control of military and civilian personnel and on matters involving the physical security of the post of Camp Holabird.

2. Provided for the safety and protection of the post and its equipment against all types of hazards, except fire.

3. Provided the necessary police and criminal investigative activities at, and adjacent to, the post.

4. Enforced traffic and other control regulations.

5. Apprehended and received absentees and deserters.

6. Maintained necessary control records of civilians and of motor vehicles.

7. Cooperated with local law enforcement agencies in controlling the conduct of military personnel.

8. Provided ceremonial and honor guards as required.

9. Operated the guard house and controlled prisoners.

Special Service Officer

1. Advised the Commanding General and staff on recreational and welfare activities of the command.

2. Organized and supervised athletic and hobby activities of the command.

3. Planned and conducted recreational and entertainment programs.

4. Operated the Army Theater, Service Clubs, Post Library, and other recreational activities.

5. Acted as post children's school officer.

6. Cooperated with the local community and other agencies in arranging for recreational and athletic activities in the area.

Chaplain

1. Advised the Commanding General and staff on religious and morale activities of the command.

2. Supervised the spiritual welfare of the command.

3. Conducted religious services.

4. Gave spiritual ministrations to the sick, wounded, and imprisioned.

5. Corresponded with relatives of the post population and of deceased personnel.

6. Coordinated the religious, social, and civic activities of the various welfare organizations.

7. Conducted instruction pertaining to morality and citizenship.

8. Prepared estimates and allotted funds for religious activities not specifically charged to other agencies of the command.

Post Exchange Officer

1. Supervised the establishment and operation of the Post Exchange.

2. Planned for, prepared, and implemented the meeting of the needs of the military population adequately and at a reasonable cost.

Legal Officer

1. Advised the Commanding General, staff, and other members of the command on questions of law.

2. Supervised the administration of military justice within the command.

3. Reviewed and passed on questions of legal sufficiency.

4. Reviewed and recommended the action to be taken upon charges preferred for trial by military courts and the record of trial by such courts.

Intelligence, Organization, Operation and Training Division

1. General Duties. The Intelligence, Organization, Operation and Training Division was charged with the formulation of policies, preparation of plans and supervisory or executive functions pertaining to organization, training, mobilization, operations, CIC specialization of MI reserve, public information, unit histories, general education and post intelligence duties.

2. Specific Duties.

a. Exercised staff supervision and coordination of the:

(1) Troop Information and Education Officer.

(2) Public Information Officer.

b. Carried out the functions of post intelligence officer.

c. On a world-wide basis for CIC and locally for Camp Holabird, the Intelligence, Organization, Operation, and Training Division formulated and coordinated policy, recommendations and plans for:

(1) The organization of the units of CIC and Camp Holabird.

(2) Training of units and individuals of CIC Center and of Camp Holabird.

(3) Implementing established plans and policies in matters specific to the CIC Specialization of the MI Reserve.

(4) Reserve matters specific to CIC Specialization of MI Reserve, to include the preparation of training materials in coordination with the Chief, Training Group, ID, USA.

(5). Mobilization of units and individuals of the CIC and Class I activities at Camp Holabird.

(6) Allocation of priorities for the assignment of personnel and equipment (coordinated with P & A and S & S).

(7) The Army doctrine for the operational employment of CIC personnel and units.

(8) CIC participation in DA operations.

(9) Composition, activation and deactivation of CIC elements in the field.

(10) Training objectives for Army-wide CIC training.

(11) Training inspections.

d. Maintained CIC Center and post histories and coordinated and assembled history of CIC world-wide.

e. Exercised staff policy coordination for the CIC School.

f. Advised the Chief, CIC and staff on matters involving the provisions of AR 380-5.

Information and Education Officer

1. The Information and Education Officer was concerned with troop information and education activities other than those falling under the jurisdiction of the Director of the CIC School.

2. Advised the Commanding General and Staff on matters pertaining to troop information and education.

3. Provided orientation, education, and information material and aids and recommended means and methods of their dissemination and distribution.

4. Coordinated and supervised orientation, education and information activities.

5. Made facilities available for the presentation of films, exhibits, lectures and group instructions.

6. Planned organized, and administered off-duty education programs.

7. Maintained a library of current information material.

8. Conducted Army orientation courses.

Public Information Officer

1. Advised the Commanding General and his staff on questions of public relations, developed and maintained public understanding of the command, prepared material for use by informational media in accordance with established policies, and maintained liaison with representatives of press, radio and other groups.

2. Published the post newspaper.

Director Counter Intelligence Corps School

1. General Duties. The Director of the CIC School was charged with the operation of the CIC School.

2. Specific Duties. The specific duties were limited to CIC School matters and included:

a. Advised the Commanding General and staff on matters pertaining to the CIC School.

b. Prepared and directed training programs and schedules.

c. Formulated and coordinated policies and plans pertaining to the CIC School.

d. Organized curriculars and directed preparation and assembly of instructional materials and equipment.

e. Formulated and maintained training standards.

f. Directed and supervised administrative activities of the School.

g. Directed preparation of School budget and supervised expenditure of school training funds.

h. Directed assignment of staff and instructors.

i. Participated in classification and placement of student personnel with School activities.

j. Supervised the Book Store, the Student Library, and the Faculty Reference Library.

k. Maintained and operated the Technical Laboratory (coordinated with the CIC Board to assist in development activities with regard to technical equipment).

l. Developed and directed instructor guidance program.

Investigations and Records Control Section

1. General Duties. The Investigations and Records Control Section was charged with the control of all investigations of Counter Intelligence Corps personnel; the maintenance of the necessary files and records in connection therewith; and the control of CIC badges and credentials.

2. Specific Functions.

a. Initiated and reviewed background investigations of personnel procured for duty with all components of the CIC, world-wide, including reserve personnel of the CIC Specialization of the MI Reserve and U.S. civilians employed by the CIC; made appropriate recommendations thereon; and took action in accordance with the final decision regarding eligibility of persons for duty with CIC.

b. Maintained control of background investigations of active or potential CIC personnel and of badges and credentials.

c. Maintained central files and records including:

(1) Background investigations,
(2) Badges and credentials.
(3) Personnel strength and reports.
(4) Personnel statistics.

d. Prepared and forwarded CIC Intelligence Field Files on personnel found ineligible for CIC.

e. Conducted special and/or local investigations as directed by the Chief, CIC.

Troop Commander/Headquarters Commandant

1. General Functions. The Troop Commander Headquarters Commandant was charged with the command of all troops at Camp Holabird and for executive functions in the maintenance of local services.

2. Specific Functions.

a. Provided overall supervision and operation of all assigned and attached troop units of the CIC Center and Camp Holabird, including command, quartering, discipline, morale, recreation, military training, supply of clothing and equipment of troops, and routine administration.

b. Operated the consolidated EM mess.

c. Operated the Post motor pool.

d. Assisted the Post Engineer in first echelon maintenance of troop buildings and grounds.

e. Operated the post billetting office.

f. Provided and supervised periodic post area police.

g. Provided and supervised troop janitorial details.

h. In coordination with Director, Personnel and Administration, provides personnel from troops for school and post requirements.

i. Was responsible for the preparation of the CI security plan for the immediate headquarters of the Commanding General.

Services and Supply Division

1. General Duties. The Services and Supply Division was charged with the formulation of policies, preparation of plans and executive and supervisory functions relating to supply, storage, transportation, construction, maintenance overall building assignment, fiscal affairs, hospitalization, salvage, and related logistical matters.

2. Specific Functions.

a. Exercised staff supervision and coordination of the:

(1) Post Engineer.
(2) QM (Post General Supply).
(3) Post Fiscal Officer.
(4) Transportation.
(5) Post Signal.
(6) Surgeon.
(7) Claims and Surveys.

b. Operated the CIC Depot and arranged for local purchase of materials.

c. Prepared budgets and administered expenditures of funds.

d. Maintained and compiled statistics relating to logistical matters.

e. Formulated policies and prepared plans concerning requirements for procurement, storage, and distribution of supplies.

f. Allocated training arms and ammunition.

g. Furnished overall coordination of normal post police.

Fiscal Officer

1. Advised the Commanding General and staff of fiscal methods, procedures and operations involving appropriated funds.

2. Prepared post budgest, including justifications.

3. Maintained files of obligating instruments such as payrolls, orders, and contracts, and determined funds to be charged against allotments.

4. Prepared and issued monthly and annual reports of obligations and expenditures.

5. Maintained fiscal accounting records of various funds and is responsible for audit functions of nonappropriated funds.

6. Prepared post budgets, including justifications.

7. Maintained files of obligating instruments such as payrolls, orders, and contracts, and determined funds to be charged against allotments.

8. Prepared and issued monthly and annual reports of obligations and expenditures.

9. Maintained fiscal accounting records of various funds and was responsible for audit functions of nonappropriated funds at station.

10. Prepared and reviewed correspondence concerning fiscal matters.

11. Requested allotment of funds for fiscal periods and special projects.

12. Maintained fiscal control system.

13. Prepared and issued fiscal reports pertaining to the status of allotments and other fiscal matters.

Post Engineer

1. Advised the Commanding General and staff on all engineer matters.

2. Planned and supervised engineer activity of the post including use of engineer personnel.

3. Furnished plans and provided technical supervision of construction.

4. Maintained and repaired buildings except for first echelon maintenance, provided by troop commander, general utility systems, and permanently installed facilities including refrigeration, sewage systems, road, walks, railroads, and target ranges.

5. Operated and/or procured utilities and engineer facilities including water, electrical, garbage and waste and disposal, other routine police functions, gas heating and utility and post general repair shops.

6. Constructed additions, exteriors, alterations, and rehabilitations necessary.

7. Packed and crated household goods and effects.

8. Maintained and operated fire protection equipment and systems.

9. Provided insect, rodent, and vermin control and janitorial services.

10. Directed and coordinated post improvement work.

Quartermaster

1. Advised the Commanding General and staff on quartermaster matters.

2. Determined requirements for and procured, stored, and distributed quartermaster equipment and supplies.

3. Was responsible for QM storage, maintenance and repair facilities.

4. Supervised food service program except mess operation.

5. Supervised salvage service.

6. Operated QM Commissary and QM Sales Store.

7. Furnished Post Laundry service.

8. Was responsible for maintenance of proper stock levels.

9. Was responsible for local purchase of QM supplies.

10. Acted as Post Ordnance Officer and Post Chemical Officer.

11. Maintained Consolidated Property Account.

Signal Officer

1. Advised the Commanding General and staff on all signal matters.

2. Furnished, installed, and maintained communication facilities for the post.

3. Published phone directory and received phone accounts.

4. Received and sent teletype messages over ACAN net, handled Western Union Service, maintained appropriate records and accounts.

5. Handled post communication funds.

Claims and Surveys

1. Advised the Commanding General and staff on all matters involving claims and surveys.

2. Investigated accidents involving military personnel or equipment which might result in claims in favor or against the U.S. Government. Such investigations to include possible claims against the Government, line of duty status of injured military personnel, and need for disciplinary action as well as preparation of reports of investigations and recommendations appropriate thereto.

3. Estimated amount of damage on loss of property.

4. Advised on legal right and obligations as to claims.

5. Processed surveys.

Surgeon

1. Advised the Commanding General and staff on all matters pertaining to the health and sanitation of the command.

2. Provided general dispensary service for the post (and Baltimore area) to include medical and dental care for military personnel and dependents.

3. Conducted necessary evacuation activities.

4. Determined requirements for, procured, stored, maintained proper stock levels and distributes medical, dental, and veterinary equipment and supplies.

5. Provided emergency dispensary service for Headquarters Maryland Military District, Baltimore Signal Depot, and local NG and ROTC units.

6. Was responsible for inspection of meat, dairy products, vegetables and other veterinary activities of the post.

7. Inspected the sanitation and cleanliness of the post.

Appendix 3

ORGANIZATION OF THE CIC SCHOOL

Memorandum Number 1, Counter Intelligence Corps School, Camp Holabird, Baltimore 19, Maryland, dated 10 November 1948, was the authority for the reorganization of the School.

1. Effective this date, the Counter Intelligence Corps School will be organized as shown on the attached organizational chart with functions and responsibilities as enumerated below.

2. a. Director of Training. The Director of Training is charged with the coordination and supervision of the preparation and presentation of all academic material for which the School is responsible and will include:

(1) Organization of the curricula for such courses as are prescribed.

(2) Direction and supervision of the conduct and methods of instruction.

(3) Preparation of training literature and training films as to scope and content.

(4) Preparation of programs of instruction.

(5) Conduct of instructor training.

b. School Secretary. The School Secretary will act as the Adjutant and Personnel Officer of the Counter Intelligence Corps School and will have the following responsibilities:

(1) Registration of students.

(2) Maintaining records of the grades, academic standing, student evaluation and trait scale of each individual student.

(3) Preparation of diplomas and the determination of the eligibility of each student to receive a diploma.

(4) Handling of all personnel matters, including the maintenance of necessary records coincident with this responsibility.

(5) Maintenance and operation of a Message Center for the Counter Intelligence Corps School, including the routing and maintenance of a suspense system on all correspondence.

(6) Act as coordinating agent for the proper preparation and handling of officers' efficiency reports for officers assigned to the School.

(7) Act as coordinating agent for the Assistant Commandant and School personnel in matters not directly concerning training or operations.

(8) Proper organization and maintenance of general correspondence and records files for the Counter Intelligence Corps School.

(9) Coordination and general supervision of Library and Book Department activities.

(10) Coordination and supervision of the required academic efficiency reports.

c. Operations Officer. The Operations Officer of the Counter Intelligence Corps School will have the following duties and responsibilities:

(1) Supervision of design and manufacture of new training aids, supervision of maintenance of training aids, and the replacement of defective or obsolete training aids.

(2) Procurement and training of personnel to be used in the Demonstrations Unit, and materials and facilities used by the Demonstration Unit and their equipment.

(3) Preparation and dissemination of schedules for all types of curricula presently presented or to be presented by the Counter Intelligence Corps School.

(4) Procurement of supplies for the Counter Intelligence Corps School, to include T/O equipment, maps, textbooks, non-T/O equipment (through local purchase) and distribution of same.

(5) Through liaison with the proper authorities, condition of classrooms and classroom equipment, with the exception of items of equipment that are signed out to individuals by reason of their intended use within the classrooms.

(6) Preparation of security plans for buildings used generally by the school and the coordination of security plans from individual branches within the school headquarters.

(7) Preparation and coordination of fire and safety regulations in accordance with memoranda published by Headquarters, Counter Intelligence Corps Center.

(8) Establishment of proper liaison within the Counter Intelligence Corps Center to effect the efficient performance of the above duties and responsibilities.

(9) Coordination and supervision of the printing and publication of training literature and training films for which the school is responsible.

3. Instructional Branches.

a. Administrative Subjects Branch. The Administrative Subjects Branch is responsible for the preparation and presentation of all instruction in Administration in CIC, Organization of the National Military Establishment, Intelligence Procedures, Typewriting, English, and Investigative Reports.

b. Investigative Subjects Branch. The Investigative Subjects Branch is responsible for the preparation and presentation of all instruction in Security, Observation and Description, Interrogations, Informants, Evidence, Countersabotage, Surveillance, Raids and Searches, Undercover, CIC Incidents, CIC in Combat and CIC Detachment Problem.

c. Technical Subjects Branch. The Technical Subjects Branch is responsible for the preparation and presentation of all instruction in Security against Surreptitious Entry, Security against Sound Devices, Fingerprinting, Investigative Photography and Weapons.

d. Legal Subjects Branch. The Legal Subjects Branch is responsible for the preparation and presentation of all instruction in Investigative Legal Principles and Courts Martial Procedure.

e. International Survey Branch. The International Survey Branch is responsible for the preparation and presentation of all instruction in Democracy and Communism.

f. Language Branch. The Language Branch is responsible for the preparation and presentation of all instruction in German, Japanese, and Russian Languages.

4. School Library and Book Department. The School Librarian and Book Department Officer is responsible for the operation of the School Library and Book Department as a service to the faculty, cadre, and students of the Counter Intelligence Corps School, under the supervisory control of the School Secretary.

HEADQUARTERS
U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Chapter I

INTRODUCTION

In the early morning hours of 1 May 1945, a convoy of 15 American Army jeeps inched slowly through the Brenner Pass in the Italian Alps and crossed the border into Austria.

For the 25 CIC Agents who rode in the jeeps, this was the beginning of an adventure into the unknown. They had proven themselves in combat; now they faced the challenge of an occupation, with its new and different problems.[1]

It was an occupation in a land long noted for international intrigue. Austria's reputation as a mecca for spies and conspirators of every nation was legendary; few countries could have provided a more glamorous setting for a counterintelligence mission.

These first CIC agents and those who followed them were to learn in the months ahead that the devastation of a world war and the ensuing occupation did not destroy the espionage nets. New ones sprang up overnight as occupation forces of four nations and displaced persons from many more swarmed into Austria.

Post-war Austria was a hodgepodge of nationalities. Displaced persons by the thousands swelled Austria's population of 7,000,000 making it a simple matter for an agent of a foreign power to slip quietly across a border and lose himself among the multitudes. The terrain, dotted with mountains and lakes, offered cover when the crowds did not.

Divergent political philosophies and organizations further complicated the picture. Remnants of the Nazi Party still held key positions in government and business when CIC moved into Austria, and CIC's first major task was the De-Nazification of the country. Soon it became evident that Communist activities were an even greater menace to freedom and to the security of the American forces in Austria. Even among the displaced persons, particularly the Jews, there were organized efforts to subvert American authority.

By June 1948 CIC was to learn that two out of every 1000 persons in Austria were directly or indirectly linked with Soviet-aligned intelligence agencies. Their total was believed to exceed 15,000. This number was exclusive of Austria's Communists, who were estimated to constitute six per cent of the population.[2]

---

1 Interview with Maj Paul Lyon, (UNCLASSIFIED), (Central Records Facility).
2 Weekly Intelligence Summary 157, USFA, dtd 11 Jun 48 (SECRET), (Central Records Facility).

That such a situation would exist was remote in the thoughts of the first CIC agents to enter Austria. In the summer of 1945, it was assumed that CIC would remain in the country only long enough to destroy the Nazi political machine and spirit and to eradicate anti-Allied groups.[3]

By agreement of the four powers, Austria was divided into four occupation zones. The United States, with headquarters first at Vienna and later at Salzburg, controlled the northwest segment of the country. France occupied the western portion, with headquarters at Innsbruck. Great Britian maintained headquarters at Graz to control the southern zone, and the Russians occupied the areas to the northeast, with headquarters at Vienna.

Vienna, the Austrian capital, was under four-power control, although it was located deep within the Russian sector. Each of the Allies was responsible for a zone of the city, and control of a separate international zone rotated among them.[4]

Chapter 2

ORGANIZATION OF THE 430TH CIC DETACHMENT

Not until January 1945 was it definitely known to the Counter Intelligence Corps at Allied Force Headquarters in Caserta, Italy, that the United States was to join the Occupation forces in Austria. The exact zones which the four Occupation Powers were to control had not yet been established, nor had the ways and means of entering these zones been determined.

However, Allied intelligence agencies--including the Counter Intelligence Corps--did not wait for the final decisions to begin preparation for their work in Austria. Late in 1944, the British in Italy established an intelligence school at Castellamare to train their agents for work in Austria. Orientation courses, each lasting about two weeks, were conducted in an ancient castle overlooking the Bay of Naples.

American Counter Intelligence personnel tentatively selected for duty in Austria were invited to attend the British school, and CIC agents from base section detachments as well as from front line units came to Castellamare for the classes.

Although the course was short, it was adequate. The curriculum stressed the Nazi Party and its para-military organizations in Austria; German intelligence and police agencies; and the geography, history, and culture of Austria. Special training in proposed travel control operations and a tentative arrest policy were included. In addition, CIC agents slated for Austrian duty attended Berlitz courses in the German language.

Agents for Austria Selected

Senior CIC commanders in Italy met in Rome in February 1945 to make the final selection of CIC personnel for the occupation of Austria. Officers who attended the meeting included Lt Col Ralph W. Powers, Chief of CIC, Allied Forces Headquarters; Lt Col Stephen Spingarn, commander of the 305th CIC Detachment; Lt Col Floyd Snowden, 426th CIC Detachment commanding officer, and Lt Col Thomas Qualters, commander of the 428th CIC Detachment.

Colonel Qualters was designated to remain in Italy as Chief, CIC, Allied Force Headquarters. Colonels Powers, Spingarn, and Snowden were selected to lead the CIC organization in Austria. It was determined that CIC personnel in Italy would be divided equally between Allied Forces Headquarters and the Occupation forces in Austria, with the Mediterranean Theater retaining most of the Italian linguists. The contingent remaining in the Mediterranean Theater assumed the title of 426th CIC Detachment, while the group destined for Austria was to be known as the 430th CIC Detachment.

Ultimately, headquarters of the 430th CIC Detachment would be established in Vienna, with sub-detachment "A" at Salzburg, "B" at Linz, and "C" at Vienna. The process of organization was slow, however, and both the Salzburg and Linz sub-detachments were active at least a month before CIC agents entered Vienna.

Actually, the advance group of agents who entered Austria from Italy did not originally operate as the 430th CIC Detachment. Since the American element of the 15th Army Group at that time constituted the United States forces in Austria, the advance detachment was called the 15th Army Group CIC.[5]

CIC Arrives in Austria

The first group of CIC agents to enter Austria from Italy consisted of 25 men with 15 jeeps and was led by Captain Paul Lyon. The convoy arrived in Innsbruck via the Brenner Pass on 1 May 1945.[6]

These agents had been drawn from all the CIC detachments in Italy at that time: the 85th, 88th, 91st, and 92nd Infantry Division Detachments, detachments with the 10th Mountain Division, II and IV Corps, Fifth Army CIC (305th), Rome Area Command Detachment (426th), Peninsular Base Section (430th), and the Mediterranean Air Force CIC (425th).[7]

Twelve days later, on 12 May, the second group arrived in Innsbruck. They had taken off by plane from Caserta on 4 May, going via Paris, France, since the first CIC group had reported difficulty in travelling from Southern Italy into Austria. Since not all German commands in Italy had signed an official armistice, this larger contingent of agents, 35 to 40 men under the command of Major W. J. Kaufman, took the long way around.[8]

On 9 May, after the end of hostilities in Europe, the group left Paris in high spirits after celebrating VE Day in the French capital. They had been issued jeeps and other equipment from the Seine Base Section in Paris. Enroute to Austria, they stopped at Heidelberg and Augsburg, Germany.

In Innsbruck, both groups first were placed under the command of Major Harry Costello, Commanding Officer of the VI Corps CIC Detachment of Seventh Army. At that time the 103d Infantry Division was the American unit on liberation duty in

the Austrian Tyrol, and the division's CIC detachment under Lt Dugard W. Hudson, was in Innsbruck, the provincial capital.

By the middle of May, a third group of CIC agents arrived from Italy under the command of Major Jack B. Cameron.

Innsbruck: Transitional Stage

Innsbruck was not the ultimate destination of CIC agents who arrived for the occupation of Austria, since it fell within the French zone. However, agents operated there temporarily before pushing on toward Linz and Salzburg in the American zone.

Major Cameron was in charge of the 15th Army Group CIC located at the Gauhaus (District House) in the city. Also in Innsbruck was a Seventh Army subsection under Capt Walter E. Greene, and a VI Corps Detachment under Major Costello. Lieutenant Hudson's 103d Detachment teams were located at Schwaz, Seefeld, Tels and Steinach; and 44th Detachment teams under Lt Edward A. De Cindis were located at Imst, Reutte, Landeck and Wenns. Major John Lucas of 15th Army Group was in charge of border control teams at Scharnitz, Nauders, the Brenner Pass and other points of entry.[9]

Since CIC agents were in Innsbruck only a short time, they encountered few operational problems there, but a problem of a different sort resulted in what agents termed the "battle of the border."

Post exchange supplies were unavailable in Innsbruck. To obtain them, agents made regular trips across the border into Italy. A CIC agent would race to the Brenner Pass in his jeep to be there early in the morning when the border control post first opened. After picking up what supplies could be found at CIC offices and outposts down the line in Italy, he would make another dash to the border in order to cross into Austria before the check point closed for the evening.[10]

By 15 July, the Americans had withdrawn from Innsbruck and the Tyrol, leaving the province in French control.

CIC Moves to the American Zone

Early in June 1945, Colonel Spingarn and a small group of CIC agents moved from Innsbruck to Salzburg to open the first office of the 430th CIC Detachment in the American Zone of Austria.

9 History of the 430th CIC Detachment in Austria, CIC, 430th CIC Det, City of Vienna, APO 777, 15 May 1947 (SECRET), (Central Records Facility).

10 Interview with Maj Paul Lyon (UNCLASSIFIED), (Central Records Facility).

Moving into Salzburg, the agents found that the region had received preliminary counterintelligence coverage by CIC combat detachments with Seventh Army, XV Corps, 3d Division, and 101st Airborne Division. The combat detachments turned over their files to the 430th CIC Detachment as the occupation began. The 430th obtained a building within the city for office space, and agents were billeted in a castle seven miles away.[11]

Colonel Spingarn returned to the United States in October 1945, and Maj Kaufman commanded the Salzburg section of the 430th CIC Detachment until June 1946, when he was succeeded by Gerald Weber, a former CIC captain who was retained as a civilian employee. In January 1947, John Burkel, also a former CIC officer in Italy, became chief of the Salzburg office and remained until the summer of 1950.

Shortly after the first office in Salzburg was opened, a small group of agents entered Upper Austria and established an office in Ried, with Agent John D. McDonald in charge. Later in June 1945, Agents Paul Lyon and Francis Looney went to Linz from Innsbruck to find suitable offices for a headquarters. At that time, the exact borders of the American Zone in Upper Austria were not yet determined; in fact, the Ried office had a sub-section at Rohrback on the Czechoslovakian border. This region was turned over to the Russians in August when the demarcation line was moved further south, and the Rohrback sub-section was closed.

The quarters found by Lyon and Looney for Sub-Detachment "B" were on Roseggerstrasse in Linz. The buildings were roofless, windows were broken, and there was no running water. German highway engineers who occupied the buildings moved to other quarters. After repairs, the Linz section, 430th CIC Detachment, moved in. Colonel Snowden took charge on 17 June 1945 and remained until September 1947, when he became Chief, CIC, United States Forces in Austria. Maj Jack Cameron was the first executive officer and chief of investigations. Agent Carl H. Nicholson was adjutant. The Linz City sub-section was headed by Agent McDonald.

The Linz Section was organized on a sub-section basis because it covered so much territory. Small offices were established in the key towns by November 1945, and the Linz Section soon became the largest of the CIC sections in Austria, with 102 agents. Originally the section had twelve sub-sections and two sub-offices; later there were twelve sub-sections and four sub-offices. During the time when there was a dearth of personnel, the section had only ten sub-sections, several of them manned by only one agent.

---

11 History of the 430th CIC Detachment in Austria, CIC, 430th CIC Det, City of Vienna, APO 777, 15 May 1947, (SECRET), (Central Records Facility).

In November, Special Agent John W. Berg replaced Maj Cameron as chief of investigations. Special Agent Thomas Lucid replaced Nicholson as adjutant and later became chief of the Linz Section. In March 1946 Special Agent Allen Robe took over as chief of investigations when Berg went to Salzburg.[12]

430th Headquarters Opened in Vienna

For about a month after offices were opened in Linz and Salzburg, those sections of the 430th CIC Detachment operated virtually as separate detachments. Then, late in July, CIC moved into Vienna, and Colonel Powers arrived from Italy to assume command of the 430th CIC Detachment.[13]

Counterintelligence operations got off to a late start in Vienna because of the failure of the Allies to reach full agreement on the extent of their activities in the Austrian capital. The first agents destined for work in Vienna were forced to wait idly in Linz until the Russians agreed to the presence of US intelligence personnel in the capital.

Policy disagreements between the four powers were settled during the last week in July, and a CIC jeep caravan formed at Linz to accompany the first American troops into Vienna. Russian soldiers with machine guns were posted at regular intervals along both sides of the road through the Soviet Zone. They snapped to attention and saluted as the CIC convoy passed.

In Vienna, a skeleton CIC staff moved into the Steinboeck Hotel, which served as a base of operations until permanent facilities were located. Within two weeks, billets at 70 and 72 Sternwartestrasse and at 21, 23, and 25 Tuerkenschanzstrasse were assigned to CIC. Detachment offices were opened in a building on Roosevelt-platz (Roosevelt Square). Soon the strength of the Vienna staff was increased to twenty-two and eventually to eighty-five.[14]

Both 430th CIC Detachment Headquarters and the Vienna Section of the detachment, later known as Sub-Detachment "C," were located in the same building. As a result, operations of the Vienna section were more closely related to headquarters than were the activities of the sections at Linz and Salzburg.[15]

At headquarters, Capt James R. Gardner became executive officer to Colonel Powers, the detachment commander. When Colonel Powers returned to the United

States in November 1945, Maj John R. Rossell became chief of the 430th. He was succeeded in September 1946 by Colonel Snowden.[16]

One of Colonel Powers' first jobs in Vienna was to establish liaison with the other occupying powers, the Austrian Central Government, and the Austrian police.

Colonel Powers quickly established excellent relations with the British Field Security Service and the French Securite Militaire, but the Russians rebuffed his efforts to reach a working agreement with their intelligence agencies. In fact, when Colonel Powers made his official visit to Soviet Headquarters, the Russians curtly denied having any intelligence or counterintelligence organizations in Austria. Repeated attempts at cooperation with the Soviets failed.

Sub-Detachment Organization

Each of the sub-detachments--Vienna, Salzburg and Linz--were organized into four sections: Administration, General Investigations, Police, and Political, of which the Police and Political were generally the most complicated and possibly the most important. Particularly was this true of the Vienna office, the only one on which complete reports are available.

The Police Section quickly established liaison with the Vienna Police organization, including the two most important bureaus which would control the Austrian police in the various Bezirks (districts) scheduled to fall under American jurisdiction. The bureau charged with police work of a political nature was called the Staatspolizei or STAPO. The STAPO had been reconstituted with the approval of the Soviets before the Allies entered Vienna. It was modeled after the pre-Anschluss Vienna STAPO and was headed by Dr Heinrich Duermayer, a member of the Austrian Communist Party. The STAPO was filled with Communists who had been imprisoned in concentration camps during the Nazi regime.

When the 430th CIC Detachment arrived in Vienna, it found that the two largest jails in town and one smaller jail, all within the American Zone of the city, were packed with prisoners. Subsequently a number of cells in one of the jails were set aside for CIC arrests.

The Police Section of the Vienna CIC office proceeded to make a survey of the re-organized Vienna Police Department, and of the police authorities in the Ministry of the Interior.

16 History of the 430th CIC Detachment in Austria, CIC, 430th CIC Det, City of Vienna, APO 777, 15 May 1947 (SECRET), (Central Records Facility).

By October 1945 this section began screening prisoners who had been arrested by the Austrian Police, and those prisoners who fell within the prescribed "Arrestable categories" were sent to the American internment center at Camp Marcus W. Orr, near Salzburg.

Other duties of this section of the Vienna CIC office included: keeping files on people arrested by CIC in Vienna, collecting statements of denunciations, and other matters of counterintelligence interest brought to the attention of the section either through US Army channels or by direct interview.

Political Section

The Political Section of the Vienna CIC office observed political and economic events and trends in Austria which might affect United States interests, and took remedial action when American interests appeared to be endangered. This mission required careful evaluation of information as to its reliability and accuracy; it involved making a careful choice between what was pertinent to American interests and what was not. To judge the accuracy and reliability of information required a sound knowledge of Austrian politics, past and present, and of Austria's economic framework. To decide on the importance of information for American authorities required a familiarity with the aims of American policy in Austria and constant liaison with those American agencies which made and enforced American policies.

The work of the Political Section consisted largely of providing reports which either emanated from the section directly or were initiated on requests of an American agency for detailed information on a particular subject. Reports originating in the section frequently dealt with anticipated changes in Austria's political structure, such as changes in the government, formation and activities of new political groups, attitudes of Austrian politicians toward important political and economic issues, and forecasts as to what might be expected in the future. Because of the methods employed in obtaining such information, the Political Section frequently was in a position to report in advance political situation changes which otherwise would have remained unknown. The section also conducted surveys of public opinion, including public reaction to methods used by American and other occupying authorities. It checked and reported on the progress of De-Nazification by Austrian authorities.

Often requests for reports came from such US agencies as G2 USFA and from the Political Adviser of the State Department in Vienna. Many of the reports answering these requests were highly classified. They usually concluded with recommendations as to what action should be taken, and in most cases the recommendation made by the CIC Political Section was adopted by the requesting agency.[17]

17 Operations of the 430th CIC Detachment in Austria, Dated 15 May 1947 (CONFIDENTIAL), (Central Records Facility).

The development of a well organized political section within the Vienna detachment of the 430th was a feature in the cop for the detachment throughout Austria. The liaison established in the early days with Austrian and Allied political, economic and governmental personalities was invaluable in establishing and maintaining the premise of the American authorities in Austria. Soon after the arrival in Vienna, the 430th CIC began to gather material on the activities of the provisional government of Austria and on the political parties of the country. The results of their initial efforts were two important and extensive reports for guidance of the American occupation authorities and for the use of the War and State Departments in Washington. These were a report on the Austrian Provisional Government and a general analysis of the anti-Nazi groups.

The 430th CIC Detachment in Vienna was the first American intelligence unit to establish contact with Dr Karl Gruber before he became Austria's Foreign Minister.[18]

Additional Sections Added

By 1947, all three sub-detachments of the 430th had added two other sections--Special Projects and Research.

Colonel Snowden described the work of the Special Projects sections in a letter to the Assistant Commandant of the CIC School at Fort Holabird:

> "Special Projects: Is responsible for the investigation of individuals and situations that have a direct bearing on the Austrian Government and other Allied powers, also for the safe conduct and interrogation of well-known European personalities seeking refuge because of anti-Russian statements made in their respective countries, and who have departed their native lands because of possible threat to their lives."

18 Operations of the 430th CIC Detachment in Austria, Dated 15 May 1947 (CONFIDENTIAL), (National Records Facility).

3501

Although the Vienna CIC agents technically had no jurisdiction outside the American zone, on rare occasions they requested and obtained consent of British and French authorities to enter those zones on special cases. Before entering another zone, however, clearance with the American Provost Marshal also was required. Seldom did CIC agents venture into the Soviet sector of Vienna.

In the early days of the 430th CIC Detachment, a critical shortage of operational personnel limited the detachment's investigative work.

Because of this personnel shortage, there was little time to channel operational orders for the various sections of the detachment through a central CIC operations office. Both the Salzburg and Linz sections continued to receive requests for investigations directly from the G2 at Vienna. This saved time, especially in cases which required transmittal of information through the message center or by courier. It was deemed inadvisable to transmit operational orders in the clear via teletype or telephone, since American communication lines ran through the Soviet zone of Austria and were vulnerable to wire tapping and the possible compromise of information.[20]

Dearth of Agents Brings Recruiting Campaign

The personnel shortage became acute in the winter of 1945. Virtually all the agents of the 430th were eligible for discharge under the Army's point system, and as many of them began the trek homeward, the detachment's strength dwindled to

19 CIC History, 1945-1948, undated (SECRET), (Central Records Facility).

20 Operations of the 430th CIC Detachment in Austria, Dated 15 May 1947 (CONFIDENTIAL), (Central Records Facility).

65 agents, instead of the authorized 235. Only 27 of the remaining agents had been with CIC for more than eight months. Few replacements came from the United States, and prospects for recruiting agents locally were dim.

Authorization of Civil Service ratings for CIC alleviated the critical situation. When, in November 1945, the 430th CIC Detachment was given permission to employ United States civilians as agents, twenty-six agents who had intended to return to the United States applied for jobs as civilian investigators for CIC. Sixteen were approved, and the first contracts were signed on 22 December. Other agents later converted to civilian status.

In January 1946, the 430th vigorously attacked the problem of filling its depleted ranks. The G1 in Vienna advised the detachment that no local Army personnel were suitable for CIC duty, nor was it likely that such men would be available in the near future. Contact with CIC Headquarters of United States Forces, European Theater, disclosed that no help could be expected from that source. The recruiting problem was placed squarely in the hands of the 430th itself.

Each agent was instructed to watch for qualified candidates. Each unit which left Austria, or was inactivated, was screened for personnel with proper educational background and necessary skills. Advertisements were published in unit bulletins to interest candidates. Military government activities were being discontinued, and many military personnel from that section were qualified and available. They had worked very closely with CIC in border control and in screening refugees.

The recruiting campaign was successful. By 1 July 1946 the detachment numbered 117 Agents, despite the fact that 58 more Agents had been redeployed between 1 January and 1 July 1946.[21]

The first outside help came in the fall of 1946, when 115 new agents came from the United States during October and November. While inexperienced, the new recruits caught the enthusiasm of older members of the organization, and in a relatively short time were carrying their share of the work in both administration and operations.

Until the summer of 1947, all CIC personnel in Austria wore uniforms with the US insignia only; and all other CIC personnel, except section commanding officers, worked on civilian status. After the summer of 1947 all personnel wore civilian clothes.

---

21 History of the 430th CIC Detachment in Austria, CIC, 430th CIC Det, City of Vienna, APO 777, 15 May 1947 (SECRET), (Central Records Facility).

Private Transportation a Problem

There were apparently sufficient jeeps for operations in Austria from the beginning. However, private transportation did become a problem. In Salzburg, for example, billets for all personnel were located in a castle about seven miles from headquarters in the city, and transportation was needed. There was neither civilian nor military transportation in Salzburg area. Linz, with more field offices, had an even greater transportation problem. When dependents began to arrive in 1946, some agents purchased their own cars, thereby partially solving the problem. Practically all the dependent families were quartered in houses which had been requisitioned from private owners, former Nazi Party members.[22]

1950: Year of Changes

The year 1950 brought numerous personnel changes to CIC in Austria--changes in command all the way down the line from the Commanding General, USFA, to the commanding officers of the Linz and Salzburg sub-detachments.

Col Hugh Sargent arrived in Austria to succeed Col George Schrantz as Chief, CIC, USFA. Col Schrantz returned to the United States after serving as chief of the detachment for two years.[23]

Linz and Salzburg changed sub-detachment chiefs, and there was almost a complete exodus of "old timers" from the Detachment during the last six months of 1950.

The death of John McDonald following an automobile accident was a blow to the entire 430th. He had been with the detachment for five years and at the time of his death was Chief of Operations for the Linz Sub-Detachment.

With the new personnel in USFA echelons as well as CIC circles, policies, training programs, administration, and supply all changed. A new training program initiated in all three detachments included semi-weekly classes in German. Technical sections of the three sub-detachments profited by a new directive issued by G2, USFA, in the fall of 1950. All photographic equipment from Military Intelligence Service in Austria was consolidated with the equipment of the three CIC offices, and each of the photo laboratories of the 430th was given the responsibility for all intelligence photographic work in the area. The laboratories, expanded both in space and personnel, served not only CIC, but other Army, Air Force, Military Intelligence Service and G2 agencies in Austria. Each field office of the Salzburg and Linz sub-detachments was given adequate equipment for taking

22 Operations of the 430th CIC Detachment in Austria, Dated 15 May 1947 (CONFIDENTIAL), (Central Records Facility).

23 CIC History 1945-1948, undated (SECRET), (Central Records Facility).

photographs and fingerprints, and the training program included instruction in the use of this equipment."

A succession of promotions for both officers and enlisted men began in October of 1950, and morale took a new hike upward.[24]

24 CIC History 1945-1948, undated (SECRET), (Central Records Facility).

Chapter 3

DE-NAZIFICATION

CIC's first major responsibility in occupied Austria was the apprehension of war criminals and the removal of ardent Nazis from key positions in government and industry.

When the first CIC agents entered Innsbruck early in May 1945, they already were aware of the complexity of this aspect of the CIC mission in Austria. At the British Intelligence School in Castellamare they had studied proposed policies for arrest and detention of Nazi leaders. When they entered Austria, they carried lists of "Arrestable Categories," which spelled out in detail the groups of persons slated for automatic arrest.

The arrest lists included Gestapo members, all SS[25] men down to and including sergeants, all SA[26] men down to and including majors, and members of the Reichssicherheitshauptant, the combined Nazi Party intelligence agency. CIC was directed to find these people, arrest them, and turn them over to the War Crimes Commission for prosecution.[27]

On 11 July 1945, with CIC offices already functioning in Salzburg and Linz, the G2, USFA, issued a directive further clarifying CIC's role in De-Nazification. The directive was issued "as a guide for the arrest, detention, and documentation of all persons of counterintelligence interest taken into custody by the Counter Intelligence Corps in the United States Zone in Austria." It interpreted previous instructions from Allied Forces Headquarters as they applied to the United States Zone Austria. The directive stated:

> "The mission of CIC in Austria is great and manifold. The arrest and incarceration of certain proscribed individuals does not complete the task of CIC here. The complete destruction of the Nazi political machine, its formations and subsidiary organizations, the dissolution of the German Intelligence Services, the exposure and eradication of anti-Allied groups and individuals, and the prevention of the resurgence of the Nazi principle and the spirit are among the chief responsibilities of CIC in Austria."[28]

---

25 The Schutz Staffeln, popularly called SS, was the Protection Guard for the Nazi Party.

26 The Sturm Abteilungen, or SA, were the Nazi Party Storm Troopers, or Brown Shirts.

CIC Traps "Dynamite Johnny"

High on the CIC blacklist of persons accused of war crimes was Johann Schanda, better known to CIC agents as "Dynamite Johnny."

Schanda was a minor Nazi Party official in Austria who achieved notoriety--and his nickname--through a one-man reign of terror in which he blithely dynamited public buildings, tossed tear gas bombs into public meetings, beat Jews mercilessly, and tossed priests out of second-story windows.

CIC's first clue to Schanda's presence came from a woman in Vienna who had been severely beaten by the Nazi terrorist in 1938 when she criticized Hitler's actions. The informant reported that she had recognized Schanda on a Vienna street. He wore dark glasses, and his nose had been altered by plastic surgery, but the woman was positive in her identification of "Dynamite Johnny."

Agents immediately launched an intensive background investigation of Schanda in an effort to pinpoint his location. The investigation produced little more than the names of some of Schanda's relatives. One undercover agent who spoke the Viennese dialect cultivated the friendship of "Dynamite Johnny's" kinsmen. The agent soon learned that Schanda had maintained the same mistress over a period of years.

Three CIC agents were assigned to a fixed surveillance of the woman's home. Within twenty-four hours, they determined that Schanda was living there. Police registry checks revealed that Schanda had assumed the name of Johann Stadler, an Austrian who had been killed in action during the war.

A snag developed. The house occupied by Schanda and his mistress was in the Russian Sector of Vienna, and CIC agents were powerless to arrest him.

To lure Schanda into the American Sector where arrest would be possible, a CIC undercover agent requested him to appear at an American office to testify in connection with a black market case. Schanda agreed. The agent led him directly to CIC headquarters.

When Schanda entered CIC offices, agents met him with a startling greeting: "How are you, Dynamite Johnny?" After this greeting, Schanda made little effort to conceal his identity or to deny the charges against him. Growing hysterical, Schanda begged the agent in charge to hang him immediately. He was told he would have to await his turn.

The Eigruber Case

Another prominent Nazi arrested by CIC during the early days of the Austrian occupation was August Eigruber, Gauleiter (District Leader) of the Upper Danube of Austria.

Several days before the end of hostilities, German Field Marshal Kesselring met Eigruber in Graz, Austria, and warned him that the German surrender was imminent. Hoping to evade capture by the Allies, Eigruber assumed an alias and fled to a mountain hideout. His staff, except for a bodyguard named Sachermayr, deserted him. Together the two men shuttled from one mountain hideaway to another in a desperate attempt to save their lives.

Sachermayr soon tired of the incessant moving. More fearful for his own safety than for Eigruber's, the bodyguard secretly contacted CIC and outlined the itinerary Eigruber would take on his next change of hideout.

Major Cameron, then chief of investigations in the Linz office, formulated a plan for Eigruber's capture. Under Cameron's supervision, CIC agents faked a collision between a jeep and a civilian automobile at a sharp curve on the Kirchdorf-Windischgarsten road. The ruse completely blocked the narrow road Eigruber had chosen for his escape route. Eight CIC agents were placed strategically at the accident scene.

When Eigruber's automobile approached the curve, CIC agents wearing American Army uniforms ostensibly were attempting to disentangle the two vehicles. After a time, one agent asked Eigruber's chauffeur to assist them. With the chauffeur out of the car, Agents John McDonald and Henry Feldman walked back and demanded that Eigruber and his bodyguard also get out and help.

No sooner had Eigruber stepped from the car than big John McDonald pounced on him and pinned him to the ground. Feldman took over the task of subduing the bodyguard. Feldman ran into difficulty. After knocking the bodyguard to the ground, he placed his weight squarely on the bodyguard's back and began pelting him with a blackjack. But the bodyguard was tough. Other agents in the arrest party heard Feldman cry out to McDonald, "I'm hitting him on the head with the blackjack and he won't pass out. What do I do now?" McDonald, still pinning Eigruber to the ground, called back, "just hit him harder, Henry!"

The operation produced one casualty. During the few seconds required to complete the actual capture, Major Cameron stuck his finger in Eigruber's mouth to determine whether the Nazi had concealed poison. Eigruber bit the major.

After his capture, Eigruber complimented CIC on the effectiveness of the arrest plan, adding that he would have shot himself had he suspected a trap. The Nazi leader subsequently was convicted by a War Crimes Court and was hanged. Before his execution, Eigruber declared to CIC agents that he was "proud to be executed by the most brutal of the Allies."[29]

CIC Screens Pierre Laval

Sometimes during the early days of the occupation, the 430th CIC Detachment investigated, captured, and interrogated persons whose notoriety was international. For example, Special Agent Thomas Lucid (later Chief of Upper Austria Section) screened Pierre Laval, French collaborator and onetime premier, when Laval landed at Hoersching Airport near Linz on 31 July 1945. Laval had come from Spain in a Messerschmitt piloted by two German fliers.

The United States State Department had put pressure on Franco to expel Laval from Spain, where he had sought refuge after the liberation of France. It was believed that Laval intended to flee to Japan via neutral countries or, that failing, to land in an American occupied zone. He did just that. Laval got as far as Linz, then decided to throw himself on the mercy of the Americans. CIC had no sympathy for the French collaborator, however. After interrogating Laval, CIC released him to French authorities. Returned to Paris, Laval was found guilty of treason and was executed.[30]

Nazi Youth Leader Captured

That part of Austria which constituted the American zone was an area which Hitler had always called his homeland. Hitler was born in Braunau, a two hour trip north of Salzburg, in a house which CIC claimed for office space in 1945. He attended school in Leonding, a little village less than a mile up the road from CIC headquarters in Linz.

Hitler easily won support of people in this area of Austria, particularly among youth groups. The accepted leader of the Nazi youth in Upper Austria was one Johannes List, a graduate of schools which Hitler instituted to develop future leaders for both Austria and Germany.

Even before Hitler seized control of Austria, List was a leader of the Hitler Jugend in Land Salzburg. When the Nazi Party and its subordinate organizations came into power, List quickly gained a reputation as one of the most fanatical

29 CIC Cases MIS ETO, XU-741, undated (UNCLASSIFIED), (Central Records Facility).

30 CIC History 1945-1948, undated (SECRET), (Central Records Facility); and The Encyclopedia Britannica.

Nazis in the province. He was generally considered the potential leader of any Wehrwolf resistance movement which might develop.

When the Americans entered Land Salzburg, List retreated to the hills. Had his wife been less attractive, his mountain hideout might never have been discovered by CIC. But when CIC learned from informants that List occasionally visited his wife at night, agents baited a trap for the Nazi youth leader. An agent from the Hallein office of the Salzburg sub-detachment secretly entered List's home and hid in a dark hallway. Within twenty minutes, List appeared and was arrested.[31]

CIC Investigates Illegal Organizations

A year after the occupation began, CIC still was forced to devote much of its time to the tedious process of investigations of reports of revivals of Nazism, many of which were merely persistent rumors.

On 25 June 1946, a CIC team from the Linz detachment operating in Wels received a report that mysterious meetings were taking place in the vicinity of Buchkirchen, in Upper Austria. Investigation disclosed that on several occasions lights had been seen in the meeting places until around midnight, and swastikas were found cut in nearby trees.

Two days before, about 100 members of the "League of Democratic Fighters for Freedom" had held an unauthorized meeting in the Liedertafelsaal in Wels. In view of the fact that most of the men present were former members of the Heimwehr, it was felt that the movement might be a fascist organization operating under a democratic label. Investigation, however, indicated that the meetings were social rather than subversive.

Letters of Retaliation to Austrian Females

CIC at Tamsweg, near the British occupation zone, reported that threatening letters were received by several girls friendly to US troops. The letters, all similiar in tone, accused the girls of being traitors to the fallen Austrian soldiers and warned that "the day of reckoning will come." They were threatened with having their heads shaved.[32]

32 USFA Weekly Intelligence Summary #58, 13 Jul 46 (SECRET), (Central Records Facility).

Nazi Rumors

Badgastein CIC Section reported on 9 November 1946 that it was investigating a rumor that propaganda spread by former Nazis had gained new heights. The propaganda reportedly had four main targets: the Jewish Displaced Persons, the Austrian Government, the Occupational forces, and the differences between the Western Allies and the USSR. Much of this propaganda, it was reported, was spread by female members of Nazi circles on their daily shopping trips and while in beauty parlors and other places where women congregated. Available records do not show the results of this investigation.

Persistent rumors were reported by the St. Gilgen CIC Section concerning the existence of an illegal organization referred to as the "Gray Ring" or "Gray Wolf," whose chief function was the collection of funds from Nazi sympathizers for the support of families of persons interned in Camp Marcus W. Orr. The group was rumored to have branches in all of Land Salzburg and Upper Austria.

Attempt at Sabotage

On 4 November 1946, a 24-pound box of US Army Engineer explosives was discovered in the ventilator of an ammunition bunker at an American Ammunition Depot in Stadl-Paura, Bezirk Wels. It appeared that the explosives were to be detonated by a time fused charge dropped into the ventilator. The bunker contained 300 tons of US Army ammunition.

An attempt was made to sabotage the American military grain warehouse at Ranshofen, Bezirk Braunau on 10 December. An unidentified person threw into the conveyor two sacks of grain tied together. One sack was filled with binder twine and wire; the other was converted into an apron and was saturated with petroleum. Had the sacks entered the conveyor system, they would have jammed the wormscrew and halted operation of the warehouse for at least three days. The prepetrator of this attempted sabotage was not apprehended.[33]

De-Nazification of Business

A CIC survey conducted during the week of 23 November 1946 revealed the extent to which key businesses in the American Zone had been removed from Nazi control.

At St. Gilgen, 113 private businesses with 324 employees were in operation. Thirty-seven businesses, approximately 35 per cent of the total, were owned or managed by persons registered as former members of the Nazi Party or its

33 USFA Weekly Intelligence Summary #76, 16 Nov 46 (SECRET), (Central Records Facility).

affiliates. In Strobl, the managers of 20 per cent of the village's 153 businesses and 29 per cent of all employees were persons with Nazi backgrounds.

The Steyr De-Nazification Committee had placed fourteen businesses under public control and one firm under an appointed administrator. De-Nazification committees in Bezirk Wels had closed 124 shops and placed 275 under trusteeship.[34]

Agents Nab a War Criminal

As late as 1947, some war criminals on CIC blacklists still had not been apprehended. One who had evaded capture was known only as Spatzenegger, a non-commissioned officer of Hitler's SS. Despite his low rank, he was high on the wanted list because of atrocities at Dachau and Mauthausen concentration camps.

A concentration camp guard for 13 years, Spatzenegger was accused of participating in the murder of approximately eight hundred Americans, Jews, Germans, and Czechs. He reportedly had forced many of his victims to leap from a steep cliff into a stone quarry.

Early in February 1947, a CIC informant gave agents a vague account of an unidentified person hiding in a farmhouse in the mountainous region north of Salzburg. On 20 February, two agents from the Salzburg office, accompanied by the informant, set out to locate the farmhouse. After many weary hours of mountain climbing, the informant pointed out the house in which Spatzenegger was hiding.

Faced with capture, Spatzenegger displayed none of the courage that might be expected of a war criminal of his stature. As the two agents closed in on the house at a dead run, they saw a man scuttling into the hay loft. When they confronted him, he was so unnerved that he blabbered, "Ja, Ja, Spatzenegger, Nicht schiessen (don't shoot)." After conviction by a War Crimes Court, Spatzenegger was hanged at Landsberg Prison, where Hitler had written "Mein Kampf" years before.[35]

The US Army Cleans House

On 27 March 1947, the US Army launched a final clean-up of Nazis among its indigenous employees. Finance officers were directed to place on every payroll a certificate to the effect that each employee had filed a personal history statement attesting to the fact that he had never been a member of the Nazi Party. It was

34 USFA Weekly Intelligence Summary #77, dtd 23 Nov 46, (SECRET), (Central Records Facility).

35 Outstanding CIC Cases, 21 March 1948 (UNCLASSIFIED), (Central Records Facility).

estimated at this time that approximately ninety per cent of the persons in the mandatory removal category had already been dismissed from key US jobs.[36]

It was not as easy, however, to purge former Nazis from key business, professional, and Austrian government jobs. According to official statistics from Upper Austria, the strict application of the De-Nazification Law would make sixty per cent of the medical doctors subject to registration and probable removal from their positions. The Upper Austria Dentists Organization faced the loss of 111 of its 164 members.[37]

Nearly all persons accused of false registrations made the same excuse. They claimed that in filling out questionnaires back in 1938 or 1939 they lied about or exaggerated their Nazi activities in order to insure their acceptance as members of the Nazi Party. In most cases, local police were reluctant to arrest such persons. The Austrian police contended that the accused, if arrested, might remain in jail for months before being called to trial. Authorities felt it was better for the community to let the former Nazis continue working until they could appear in court. Such persons were arrested immediately only when it appeared likely that they would run away or try to influence witnesses.[38]

Of all cases submitted by the Hallein police authorities up to May 1947, the Linz People's Court tried only two cases.[39]

Many anti-Nazis complained about the appointment of public administrators for Nazi-owned enterprises. It was argued that while small officials and employees who were party members had been ousted and left without means to provide for their families, Nazi businessmen had succeeded in getting close relatives to administer their property. They not only continued to profit from their former enterprises, but often played an important part in the economy of Austria.[40]

A preliminary investigation of the Salzburg Landesgendarmeriekommando Headquarters to determine the extent of the Nazi Party affiliations of its officials and employees disclosed that out of 58 gendarmes and higher officials, 28 persons, or 48 per cent, had had Nazi affiliations. In mid-May 1947, Land Salzburg

gendarmerie was the least de-Nazified organization in the entire land.[41]

Adding to CIC headaches was the refusal of Austrian reviewing commissions to make full use of the information available to them. Leaks in the security of investigations against former Nazis by the police were frequent and kept the CIC busy building up a security dam.[42]

In September 1947, CIC reported that throughout most of the US Zone, Austrian officials were reluctant to insist upon strict enforcement of the De-Nazification Law. They argued that further arrests and trials of small Nazis would only hamper the Austrian economy and overburden the Austrian Courts.[43]

Chapter 4

THE DISPLACED PERSONS PROBLEM

Even before the beginning of the Occupation, CIC had foreseen that the presence of extremely large numbers of displaced persons in Austria would constitute a grave security problem. By July 1946, investigations involving displaced persons represented about 73 per cent of the work load of the 430th CIC Detachment.[44]

Many types of persons were lumped together in the DP category--liberated inmates of concentration camps, people who had been imprisoned by the Germans for political, religious, or racial reasons, and forced laborers from many nations who had been impressed into service in German camps and factories. These persons came from every nation in Europe, and deep-rooted prejudices which touched off riots among the various DP groups complicated the work of screening these people and returning them to their homelands.

Screening and repatriation of the thousands of displaced persons as soon as conditions permitted was a necessity for several reasons. Besides purely humanitarian aspects, the continued presence of the displaced persons on Austrian soil created political and economic problems for Austria and for the forces of occupation.

Jewish Displaced Persons a Major Problem

Much of CIC's work with displaced persons involved the thousands of Jewish persons who had been freed from concentration camps.

Intensely nationalistic, the Jewish people were impatient either to return to their homelands or to migrate to Palestine. The Jewish DP Camp in Bad Gastein, for example, contained approximately 1,500 Jews from Eastern Europe who were moving westward with Palestine as their ultimate destination. Among them was an active core of fanatical Palestinian nationalists, or "Revisionists," who did not accept the borders of Palestine as then recognized by the world. From time to time, the presence of uniformed members of the organization's special "honor guard" was noted, both at Bad Gastein and at the Bindermichl Jewish DP Camp in Upper Austria. The group was a constant source of agitation at Bad Gastein. At the slightest provocation, it aggravated civil disorder; its leaders were continually engaged in underground political and para-military planning for revision of the status of Palestine. CIC maintained a constant check of the activities of this group.

On one occasion, a former Russian Army officer told CIC agents that Jewish displaced persons had tried to persuade him to accept a commission in the

44 USFA Weekly Intelligence Summary #103, 23 May 1947 (SECRET), (Central Records Facility).

Palestine Army. The Russian said he was offered a two-year contract as a "military expert" to train small groups of Jews in military science and tactics. The ex-officer was told he would be paid in any currency he preferred; an extra reward after two years of service in Palestine would be a passport to any desired destination.[45]

Bad Gastein presented a greater concentration of displaced persons of all varieties than any other area in Austria. Once a resort center, its hotels in the days following the war were crowded with a mixture of displaced persons from Southern and Eastern Europe. Serbian, Croatian, and Slovenian nationalist groups were predominant. Many feared to return to their homes because of prior political opposition to regimes in power; particularly was this true in the case of Yugoslavian officers billeted in a camp at St. Johann, Bezirk Bischofshofen.

Displaced Persons in the Black Market

Although CIC was not directly concerned with black market activities, the 430th CIC Detachment occasionally was forced to investigate black market operations among displaced persons because of the security threat involved. Virtually every group of displaced persons was associated with the flourishing black market. The black market among the DP's was not a matter of small-time trading of cigarettes or items from Red Cross packages, but a vast commerce including silks, textiles, jewels, and wholesale lots of staple food items. The chief operators of this commerce appeared to be Yugoslav and Croatians, though all national groups were involved.[46]

Travel Control of Displaced Persons

By 6 July 1946, illegal crossing of Austrian borders by groups of Jewish refugees was one of CIC's greatest problems, since it was considered possible that infiltrating enemy agents might hide among the refugees.

Official arrangements were in effect to funnel refugees from Austria to various DP Camps in the American Zone of Germany; however, small groups of refugees persisted in circumventing the authorized channels for travel. Moving by night without semblance of travel authority, they often coordinated their plans with organizations whose self-appointed task it was to arrange transportation for refugees who could successfully bypass frontier posts. Most of this traffic represented idle journeys by displaced persons in Austria to visit friends in German camps, but CIC considered any unauthorized movement potentially dangerous.

45 USFA Weekly Intelligence Summary, 16 Nov 46 (SECRET), (Central Records Facility).

46 USFA Weekly Intelligence Summary #57, 6 Jul 46 (SECRET), (Central Records Facility).

On 19 November 1946, a CIC representative from Linz conferred with the assistant police chief of Bezirk Schaerding on travel control measures. They discussed the possibility of an agreement with the Public Safety Office in Passau to facilitate the exchange of illegal border crossers prior to sentence by respective German or Austrian Military Government courts.

After several meetings, an agreement was reached. It was determined that German citizens and displaced persons lacking Austrian identity cards would be turned over to German police with an arrest report for prosecution by the Passau Military Court. All foreigners stopped for unauthorized border crossing would be turned over to the Schaerding Military Court. Local police were ordered to surrender to the Schaerding District Court for Military Court trial all Austrians and displaced persons apprehended by German border police or customs guards for unauthorized border crossing from Austria to Germany.[47]

One CIC investigation uncovered a ring of Yugoslav displaced persons who were selling forged travel permits. An agent at Bad Gastein discovered one of the forged permits during a routine investigation. The Yugoslav who held the fake permit admitted purchasing it from displaced persons at Bludenz, Vorarlberg. Improper completion of one portion of the travel permit branded it as a forgery.[48]

Riot at Camp Haid

Jewish displaced persons at Camp Haid, in Upper Austria, rioted on 14 November 1946 following an inspection of the camp by the military commander of Upper Austria. While the inspection party was at Camp Haid, Jewish delegates insisted they needed more fuel and clothing and urged the removal of invalids, children, and pregnant women to more suitable camps. Shortly after the inspection team left, small groups of demonstrators began smashing property at the camp.

Six military policemen who were rushed to Camp Haid to halt the destruction immediately arrested eleven riot leaders. As the eleven were loaded on a truck for transport to jail, a mob of 1000 more displaced persons stormed the military police in protest. One of the demonstrators grabbed a carbine. When an unarmed member of the camp staff attempted to retrieve the carbine, it was accidentally discharged, and the bullet struck a displaced person. Immediately the demonstrators pounced on the military policemen, beating and stoning them severely. The mob refused to permit the camp commander to remove the injured men to a hospital. Military Police riot squads soon arrived, dispersed the mob, and arrested four ringleaders.

---

47 USFA Weekly Intelligence Summary #84, 11 Jan 47 (SECRET), (Central Records Facility).

48 USFA Weekly Intelligence Summary #82, 28 Dec 46 (SECRET), (Central Records Facility).

CIC investigation of the Camp Haid riot revealed that the youth element of the camp was responsible for the demonstration. There was no evidence that the riot was Communist-inspired, although Communist agitators were known to have touched off lesser demonstrations in other camps.[49]

Jewish Underground Organization

Extensive underground activity developed in Austria through the work of Brycha (Escape), the overall Jewish organization guiding the mass of Jewish emigration out of Europe toward Palestine. Organized about 1939, Brycha was unable to function effectively until after the end of the war. Young members of the Jewish Home Guard in Palestine volunteered for one-year periods of duty with Brycha, and the organization succeeded in infiltrating numbers of the volunteers into the Jewish Brigades on the fighting fronts in Europe. Equipped with false papers and identities, the volunteers never formed part of the normal table of organization. At the end of the war, when the brigades were recalled, the Brycha volunteers merely stayed behind and proceeded to form other units of the Jewish underground throughout Europe.

As a cover for their activities, many Brycha leaders obtained positions of responsibility within the Jewish Agency for Palestine, created by the League of Nations and later authorized to assist the United Nations Relief and Rehabilitation Administration in work among Jewish displaced persons in Europe.

Brycha members also obtained key positions at Jewish Displaced Persons Camps created by the Allies, and the camps soon became important stopover points for refugees being smuggled from behind the Iron Curtain to Palestine. Because Brycha functioned underground, its escape routes were not generally known. The result was that espionage agents bound for the Allied occupation zones rather than for Palestine began to utilize the Brycha network for their covert activities. CIC consequently was keenly interested in Brycha, its leaders, and its activities. Too, the organization reportedly had connections with Jews in intelligence networks of every Central and Eastern European nation.[50]

A report dated 2 May placed the number of displaced persons in the American zone at 164,932, plus 21,244 Jewish refugees.[51]

---

49 USFA Weekly Intelligence Summary #77, 23 Nov 46 (SECRET), (Central Records Facility).

50 "The Jewish Underground in Austria," annex to USFA Weekly Intelligence Summary #108, 20 Jun 47 (SECRET), (Central Records Facility).

51 USFA Weekly Intelligence Summary #100, 2 May 47 (SECRET), (Central Records Facility).

With the approach of warm weather in April 1947, the refugees began to move slowly toward Italy with the hope of ultimately reaching Palestine. Once more their failure to comply with travel regulations added a burden to the CIC work load. On 13 June 1947, a head count at the Wegscheid Jewish Refugee Camp, Linz, revealed 1000 surplus registrations. The extra registrations provided an excellent cover for illegal transients and represented a major security problem.[52]

But the Jewish displaced persons were not the only ones who violated travel regulations. In July, 20 Yugoslavs illegally entered the American Zone through the Boeckstein-Mallnitz tunnel. CIC agents at Bad Gastein immediately apprehended five of the group and returned them to the British Zone. A check with British authorities at Mallnitz revealed that all passenger trains were closely watched; the only method of illegal entry into the American zone was by freight train, and with the help of Austrian railroad employees. The Austrians willingly assisted authorities in enforcement of travel control rules where Jewish displaced persons were involved, but they often were sympathetic towards Yugoslavs travelling without proper travel papers.[53]

Communists Stage Anti-Semitic Demonstration

Austrians were openly hostile toward many of the displaced persons in their midst. On 4 January 1947, the Salzburg CIC office reported an alarming increase in the number of incidents involving Austrians and Jewish displaced persons, particularly on tramways and buses. There were indications that the incidents were the result of systematic provocation by certain Austrian elements.[54] At Bad Gastein, where residents depended on the tourist trade for a living, there was considerable resentment toward displaced persons who were able to live comfortably without being required to work.[55]

The hostility between Austrians and displaced persons was watched closely by CIC as a potential source of trouble. On 20 August 1947, the ill will erupted in a vicious anti-Semitic demonstration at Bad Ischl, in Upper Austria. In late evening, a crowd of 300 gathered in the streets to protest the recent cancellation of a special milk ration for women and children and the substitution of American powdered milk. The anger was aggravated by Communist statistics that local farmers were 37,000 liters delinquent in milk deliveries.

52 USFA Weekly Intelligence Summary #112, 25 Jul 47 (SECRET), (Central Records Facility).

53 USFA Weekly Intelligence Summary #112, 25 Jul 47 (SECRET), (Central Records Facility).

54 USFA Weekly Intelligence Summary #83, 4 Jan 47 (SECRET), (Central Records Facility).

55 USFA Weekly Intelligence Summary #57, 6 Jul 46 (SECRET), (Central Records Facility).

City officials appeared and promised conferences to settle the milk ration and call delinquent farmers to account, but the mob was not placated. Shouts of "Hunger! Hunger!"; "Out with the tourists!"; and "The Jews are growing fat!" mounted to a high pitch.

A local Communist leader led the crowd to the Hotel Goldenes Kreuz, Bad Ischl's Jewish Refugee Camp, where a minor Communist official made a shrill, anti-Semitic speech. One of the demonstrators hurled a rock through a hotel window. When the camp director appeared, he was clawed and threatened with bodily harm. Jewish refugees inside the hotel were enraged by shouts of "Down with the Jews!" and "Jewish Pigs!"

Local police, prodded by CIC agents, reluctantly dispersed the crowd. When CIC investigation showed the Communists had inspired the demonstration, five leaders were arrested.[56] Convicted by a Military Government Court, the ringleaders received sentenced ranging from a six-month suspended sentence to fifteen years imprisonment. The Communist press made a field day of the trial and the sentences.

Displaced Persons Sabotage British Train

On 12 August 1947, an Austrian Gendarme stationed at Boeckstein, near the Boeckstein-Mallnitz tunnel between the British and American Zones of Austria, arrested a displaced person who was travelling without documents. A routine search revealed that he was

He carried two loaded pistols and spare ammunition. claimed that he was carrying the pistols through the railroad tunnel for a third person. Shortly after his arrest, he attempted to flee along the track and was recaptured, after receiving a slight flesh wound in the thigh.

When interrogated by CIC repeated the story that he was carrying the weapons for a third person. He was turned over to the military court in Salzburg on a charge of illegal possession of firearms.

Later the same day, the Medloc, a British leave train, enroute to Klagenfurt with about 200 military and civilian passengers, was derailed at the Doesenbach-Luessen tunnel. A bomb, constructed of explosives packed in a tin biscuit container and placed between the railroad ties, exploded under the baggage car, causing the engine and several coaches to tilt to the left side of the tracks toward the mountain. A second charge placed near the first failed to detonate. Had this charge exploded simultaneously with the first, it could have caused the train to plunge into a steep abyss on the right side of the track.

---

56 USFA Weekly Intelligence Summary #117, 29 Aug 47 (SECRET), (Central Records Facility).

On learning of the derailment, CIC Agents re-interrogated . It was learned that he was a member of BETAR (Revisionist Jewish Youth Organization) and had been implicated in the distribution of "Irgun Zwai Leumi" literature. After a long and intensive interrogation, admitted his complicity in the sabotage of the Medloc train and implicated two other Jewish displaced persons. He was turned over to the British authorities in Austria for prosecution.[57]

Project DP-48

Although the 430th CIC Detachment had been involved with the problem of displaced persons from the beginning of the occupation, it was not until 1948 that the screening of displaced persons became an official part of the CIC mission. The Displaced Person Act of 1948 gave the Army the responsibility of conducting investigations to determine the character, history and eligibility of persons applying for admission to the United States under provisions of the Act. Only CIC was qualified or prepared to conduct such investigations, and the 430th CIC Detachment was assigned the mission of screening from Austria.

To expedite the mission, the 430th CIC created a special section known as the Displaced Persons Screening Project, or DP-48. A special memorandum fixed the responsibility of the 430th as to the DP-48 Project. Originally the project was given a target date of June 1950, but a congressional amendment to the act extended the screening to include German Ethnic groups, and termination date for the entire project was set at June 1952.

Henry Fuchs, a former CIC officer employed in the Salzburg CIC office as a civilian, organized the DP-48 Project. He developed an assembly-line technique for processing the applications for visas. Agency checks plus neighborhood checks were considered sufficient investigation for clearance of most applicants.

At the beginning, a few officers and key personnel from the 430th Detachment were chosen to form the nucleus of DP-48 personnel. In addition, enlisted personnel were procured and assigned to the 430th CIC Detachment on a temporary basis. Three agents from the Linz Detachment of the 430th screened enlisted personnel awaiting assignment in the replacement battalion at Camp McCauley, near Linz; forty men were chosen here. Other officers from Vienna and Salzburg detachments journeyed to Zell-am-Zee, near Salzburg, to choose qualified non-commissioned officers from a pool. These two groups of enlisted military personnel were sent to Vienna for a week's indoctrination course. They were then assigned to the sub-detachments of the 430th for duty with DP-48 Project. In practice, these troops often were used in clerical positions to release CIC agents for work with DP-48. Some officers from other branches of the military services in Austria

57 USFA Weekly Intelligence Summary #121, 26 Sep 47 (SECRET), (Central Records Facility).

were also placed on detached service with DP-48, Some officers from other branches of the military services in Austria were also placed on detached service with DP-48 until personnel earmarked for the project arrived from Fort Holabird. Austrian personnel for the project were from those sections of the 430th Detachment which were in the process of being discontinued or had already been closed--visa, border control, and De-Nazification. Each of the three DP-48 offices set up a supply and transportation section of its own, apart from the 430th motor pool and supply sections. Liaison was established with Austrian officials, various displaced persons organizations, the Berlin Document Center, and American agencies, as well as with French and British authorities in their respective zones of Austria.

The first year saw great progress made in screening, although with every change of American DP-48 commissioners, there was usually a new DP-48 Project director who was an officer of the 430th Detachment. By 1950 most of the temporary military personnel were replaced by trained CIC Agents. However, a handful of the original enlisted men's group remained with the project until its completion. Two of them were accepted for training at the CIC Center, Fort Holabird, and successfully completed the Basic Agent's training course.

When USFA Headquarters moved from Vienna to Salzburg in 1949, DP-48 went along with 430th CIC Detachment Headquarters.

Agents assigned to the Linz branch of DP-48 uncovered and neutralized a ring of smugglers and forgers who were selling blank registration certificates to displaced persons ineligible for emigration to the United States. The smuggled certificates were forged by entering false data and used by displaced persons in an attempt to prove residence in Lower Silesia in 1945.

The polygraph was used in several interrogations involving murder, narcotics charges, and aggravated cases of questionable political activity among the displaced persons. The results proved an aid in establishing the veracity of misrepresentation of statements made by applicants for emigration.

To comply with a directive from the CIC Center, effective 1 January 1951, reports of investigations of all applicants for emigration under the provisions of the Displaced Persons Act were made and submitted to Central CIC Files. At first, this added work caused a considerable drop in the number of cases completed, but Vienna and Linz offices soon developed a system which made the CIC report an integral part of the procedure of completing case reports. By the end of 1951, the Vienna and Linz offices had eliminated the backlog of reports. The Salzburg office and its branches at Innsbruck in the French Zone, and at Graz and Klagenfurt in the British Zone were lagging behind. By April 1952, when the Ethnic German phase of DP-48 was completed, all Holabird reports on the DP-48 Screening Project had been completed.

"The workload for CIC continued to grow right up to the end of the program because of the Commission's reliance upon CIC as the basic investigative agency."[59]

Displaced Persons Problem Diminishes

By the end of 1949, the displaced persons problem, particularly insofar as Jewish refugees were concerned, had diminished considerably. Beginning in May 1949, monthly quotas of 2000 Jewish displaced persons were shipped to Israel.[60] By the end of the year, 10,476 Jews had been transported to Israel from Austria.[61]

Chapter 5

CIC VS. COMMUNISM

Although it was not stated in official directives, CIC quickly realized that the primary mission of De-Nazification soon would be replaced by the Soviet problem. The "cold war" was on in Austria.

As early as July 1945, a paragraph from a sample form for situation reports prepared by G2 USFA for CIC indicated CIC's concern with Communist activities. The sample read: "The Communist Party held a secret meeting in the city of Linz. CIC did not interfere with this meeting, as two of our agents were present as members."[62]

General Mark W. Clark, first American High Commissioner for Austria, described the difficulties which his command had with the Soviets in his book, Calculated Risk. Despite General Clark's efforts to establish working agreements with his Russian counterpart, relations steadily deteriorated.

From the moment Washington instructed General Clark to permit a Russian Repatriation Mission to enter the American Zone, the 430th CIC Detachment was deeply involved with the Soviet problem. The Russian mission caused nothing but trouble. General Clark finally informed Marshal Konev, his Soviet counterpart in Austria, that the mission was no longer welcome. Konev agreed to send the mission home, but requested permission for a new one to take its place. General Clark relented and agreed, with some misgivings, to permit another mission to enter the American zone.

Shortly before the first mission departed, however, CIC received a tip that the Russians would attempt to kidnap an Austrian citizen who was a key counter-espionage agent for CIC. The 430th quickly prepared a trap for the would-be kidnappers.

On the night of 23 January 1946, several automobiles without lights crept close to the CIC employee's home. Several men armed with pistols got out of the car, entered the house, and threatened the CIC employee. At that moment, American Military Police who were hiding in key positions near the house switched on powerful floodlights and moved in to close the trap. Several members of the Soviet Repatriation Mission were among those arrested. One officer wore the complete uniform of the US Military Police, and the lining in his helmet was

62 Weekly Sitrep Report - Land Salzburg, for period June 23 to June 30, 1945, Hq, Salzburg CIC Detachment, dtd 30 Jun 45 (SECRET), (Central Records Facility).

marked to show that it had been stolen from the 250th Military Police Battalion in Salzburg. Another officer wore a civilian overcoat, but his hat plainly was a Red Army cap. An enlisted man driving one automobile wore the Red Army uniform.

The following day, General Clark officially notified the Soviet Marshal that his men had been arrested and that they would be sent across the line into the Soviet Zone at Linz.[63]

Communist Long Range Plan Reported

On 14 December 1946, the Bad Ischl local police reported to CIC that the Communists had, in at least one case, successfully completed a long range program of placing members in businesses formerly controlled by Nazis. Alleged NKVD Agent , formerly of Lengau, Berzirk Braunau, had moved to Bad Ischl with the announced intention of managing the firm owned by . had been arrested in September 1945 by CIC upon the information of Communist , a member of the self-appointed Political Police of Bad Ischl. purportedly received the aid of who, the local police asserted, was forced into the affair by clever Communist pressure in Linz.

at this time was under consideration for release from Camp Orr, where he was interned for his Nazi activities. When arrested, had been charged with beating displaced persons. Local police refuted the charge. They said they had sworn testimony that was innocent and that the charges were faked by so that the Communists might later control the business, with its high value as a potential Communist courier network throughout Austria.[64]

Operation "Highboy"

One early Communist tactic was to attempt to confuse CIC and to create friction between the Americans and the Austrians through the dissemination of false, or partially false, information. One case which developed out of such a Communist effort was known as Operation "Highboy."

On 29 January 1947, the Vienna police reported an underground resistance movement composed of former Hitler Jugend officers operating within the American zone, with headquarters at Salzburg. Investigation by Special Agents Carl H. Koch and Stephen A. Eckardt convinced CIC that the persons named in the Vienna police report were bound together only by social bonds. The agents felt that the purpose

63 General Mark W. Clark, Calculated Risk, pp. 476-477.

64 USFA Weekly Intelligence Summary #76, 16 Nov 46 (SECRET); (Central Records Facility).

CONFIDENTIAL

of the police report was an attempt by Communist elements with the Staatspolizei to mislead CIC and to alienate Austrians and American Occupation authorities. Apparently the Communists also hoped CIC would take action which might cause some of the former youth leaders to flee to the Soviet Zone where, through pressure, they could be used to exert a Communist influence on Austrian youth.

John B. Burkel, chief of the Salzburg CIC office, had assigned only two agents to the case instead of tying up his entire detachment as the Communists had hoped.[65] Actually, Communist activities in the Salzburg area were few compared to industrialized areas such as Linz.[66]

Part of the Communist deception activities involved passing false information in deliberate attempts to create rumors or to plant stories with specific authorities. Misinformation was generally passed on by two methods.

Communists deliberately discussed false plans in the presence of People's Party or Socialist Party members. These discussions were generally in subtle allusions, couched in language which convinced the listeners that they were hearing conspirators talking in guarded terms. The Communists felt, apparently, that they had been successful in sucking in the opposition on many occasions.

Manufactured and false information was deliberately passed on to the Western Powers, and especially their intelligence services. According to one report, the Communists claimed great success in this field, expressing a low opinion of all Western intelligence services in the cases with which they were misled.[67]

The Mayer Case: Political Intimidation

Political intimidation was a method used frequently by the Communists in Austria. A typical incident was the kidnapping of Josef Mayer on 23 March 1947.

Mayer, an Austrian citizen, was the Werk Meister (Shop Manager) of the Central Railroad Repair Shop in Linz. His job with the State-owned railroad was not too important, but he had long been influential in railway trade union affairs. He was in a position to oppose the Russian proposal to establish a Railroad Trade Union in Upper Austria, and it was expected that he would do so.

65 430th CIC Detachment Case S-S-11372, S-L-927, 22 Apr 47 (UNCLASSIFIED), (Central Records Facility).

66 Interview with Henry Fuchs, 3 October 55 (UNCLASSIFIED), (Central Records Facility).

67 USFA Weekly Intelligence Summary #187, 7 Jan 49, (SECRET), (Central Records Facility).

When Mayer left the trolley at the Urfahr end of the bridge between Linz and Urfahr at about 1545 hours on Sunday, 23 March 1947, he was detained by the Russian guard. A short time later an automobile containing two Russians picked Mayer up and drove away.

On 12 April 1947, CIC was notified that Mayer had been returned to his home in Urfahr on the previous day. Mayer would give agents absolutely ... ...formation on the reason for his arrest or his release, and would not state where he had been held. He stated only that he was interrogated continuously during his entire arrest. He was determined to continue to live in Urfahr and remain active in politics.

Mayer attended the April meeting of the Trade Union in Vienna, but independent Linz papers noted that his opposition to the Communists had weakened.[68]

Interrogation of Russian Deserters

Interrogation of Russian Army deserters and other individuals who had fled Russia or its satellite nations was an important CIC function in Austria by 1947, according to a report by Colonel Snowden on 3 November 1947.[69]

The desertion rate in the Russian Army was high, and the 430th CIC Detachment found that most Russian deserters were willing informants on military and economic matters. Literally hundreds of deserters were questioned by CIC Agents in Austria.

Lev Durow was one. Durow in 1947 was a twenty-three-year-old former Soviet Signal Corps lieutenant who said he had served in the European campaigns and had participated in the liberation of Berlin and Prague. He claimed he was wounded four times and, after the European campaigns, served in Kazwin, Iran, until 22 May 1946, when the Russian Sixth Army left Iran. Durow said he returned to Moscow but fled the country after becoming dissatisfied with conditions there. He told of being arrested, then escaping, as he crossed through Czechoslovakia. Durow said he crossed the Danube in a stolen boat and arrived at Linz on 7 August 1947. At Linz, he was taken into "protective custody" by CIC.

Interrogated at length on phases of Soviet Army, civilian, political and industrial life, Durow talked freely. He told of Russian searches for oil in Iran, of Soviet efforts to industrialize the Middle East, of reconstruction of railroads, and of the Russian massacre of 10,000 Polish officers at Katyn, Poland.[70]

Russian Pilots Defect

Two other Russian lieutenants, both pilots, fled to the West on 9 October 1948, when they crash-landed their Soviet plane at the Hoersching Airstrip at Camp McCauley, Austria.

A CIC Agent who lived at Camp McCauley recognized the plane as a Russian aircraft as it circled above the airstrip. Knowing that Soviet military planes were not permitted to land at Hoersching, the agent telephoned his headquarters at Linz, then rushed to the scene of the crash. The CIC agent arranged for guards to protect the plane from souvenir hunters and prevented anyone except authorized personnel from talking to the Russian fliers and a Russian sergeant who accompanied them.

Agents from the 430th soon arrived from Linz, seven miles away. With G2 personnel, they questioned the three Russians. The sergeant and the airplane were returned to Soviet control the following day, but the Russian officers, 1st Lts Peter Pirogov and Vladimer Barsov, remained in the American Zone. At Linz, the defectors were billeted in the CIC Compound. Agents furnished them with clothing.

After several days of interrogation, the two lieutenants were flown to Germany, then to the United States, where a joint Federal Bureau of Investigation-Central Intelligence Agency team took control.

In the United States, Pirogov wrote several articles for national magazines and authored a book entitled, "Why I Escaped." Barsov became a pants presser, but soon grew dissatisfied and was contacted by the Soviet Embassy. He then urged Pirogov to return with him to Russia, but Pirogov refused.

US agents who had kept themselves informed of Barsov's desires eventually placed him on a plane for Frankfurt, Germany, where he was met by three CIC agents from Salzburg. The agents droved Barsov to a "safe house" in St Gilgen and placed him in the custody of the Salzburg sub-detachment commanded by Lt Col Robert S. Seaver. For nine days, the 430th CIC Detachment maintained the strictest security measures over the Russian flier. The former flier hardly uttered a word throughout the period.

Finally word came from Washington that Barsov was to be taken to the middle of the Uhfar Bridge and turned over to the Russians. The order specified that no intelligence personnel would be involved in the action.

Russian authorities were notified by telephone that a Russian would be released to them. At the American end of the Uhfar Bridge, opposite the guard home, Colonel Glenn L. Schmidt, the G2, walked to the center of the bridge. Colonel Schmidt asked

for a receipt for Barsov. The Russian officer refused. When Colonel Schmidt demanded a receipt, the Russian reluctantly gave him one.

Three weeks later informants told CIC that Barsov had been interrogated continually since his return to the Soviet zone. Finally, informants said, Russian troops were assembled to watch the execution of Barsov by a firing squad as a lesson to anyone else who might decide to defect to the West.[71]

Communists Increase Intelligence Activities

In mid-January 1949, CIC informants reported that Soviet intelligence services were exploiting Austrian Communists both to speed the flow of intelligence into Russia and to serve as counterintelligence agents.

Under the new program, a Counter Intelligence Committee was to be elected within the Austrian Communist Party, informants reported. Party chiefs were to submit lists of members with particular qualifications for counterintelligence services, and special training courses were to be conducted at district and city levels. Reports by the Counter Intelligence Committee were to include the identity of persons seen in the company of Americans, British, and French. High bonuses were promised to English, French, and Russian linguists among the Austrian Communists who were successful in obtaining employment with occupation authorities in the western zones.[72]

Soviet Kidnappings Reach Alarming Proportions

By 13 August 1948, Soviet kidnappings had reached such alarming proportions in Austria that CIC found it necessary to compile an extensive report analyzing the kidnapping pattern.

Although the kidnappings could be grouped into several categories, CIC concluded that most of the abductions involved persons suspected of espionage or of association with the United States or other Western intelligence activities. Such kidnappings usually were the result of Soviet counterintelligence activity, primarily out of considerations of military security.

Indications were that the Soviets considered the kidnappings only a form of legitimate, if clandestine, arrest. The CIC report pointed out that there were few kidnappings during the early days of the Occupation, when the Communists were in firm control of the Staatspolizei, and the Soviets could pressure the Vienna police into making arrests for the Russians. Later it was the Economic Police which,

71 Interview with Lt Col Robert S. Seaver (UNCLASSIFIED), (Central Records Facility).

72 USFA Weekly Intelligence Summary #189, 21 Jan 49 (SECRET), (Central Records Facility).

because of its Communist penetration, was for some time able to make "legal" arrests for the Soviets. After the purge of the Economic Police, the kidnappings took a sharp rise.

Actually, the first kidnappings were reported immediately after the Russian Army moved into Austria. As early as 22 January 1946, the Soviets seized and imprisoned a railroad engineer accused of being responsible for a railway accident which resulted in the death of several Russian soldiers. CIC insisted the engineer was innocent.

A separate program of kidnappings was detected by CIC in May 1947, when it was learned that the Russians were seizing former residents of Soviet satellite countries. One incident involved a woman who was carried from her apartment rolled in a rug. Another concerned a Hungarian repatriation commissioner who disappeared after being invited to take a brief ride in the automobile of another party of Hungarian repatriation officials. Former Soviet employees also were kidnapped during this phase of the clandestine arrests by the Russians.

Unconfirmed reports indicated that the Soviets also were abducting Austrian scientists, linguists, and other specialists and impressing them into service behind the Iron Curtain. Shortly after Russian agents penetrated the University of Vienna, several students from the university were whisked away into Russian territory.

Early in 1948, public sentiment against the Soviet kidnappings caused the Russians to modify their activities slightly. Soviet authorities began reporting some of the kidnappings and attempted to justify them as "arrests for cause."

However, the rash of kidnappings for intelligence and counterintelligence purposes continued unabated. Former German intelligence personnel were added to Western agents on the Soviet wanted lists. For example, Col Felix von Tarbuk-Sensenhorst, a former German intelligence officer, was taken from his Vienna apartment by Russian agents in civilian clothes. Unconfirmed reports stated that his brother also was seized by the Soviets and required to serve as an instructor in a Soviet intelligence school in Czechoslovakia.

At least three Austrian secretaries employed by CIC were arrested and released after three days of extensive interrogation by Russian agents.

A special objective of the kidnappings was to destroy networks of Austrian informants employed by CIC. Shortly after the kidnapping of , three other informants known by disappeared. Only stringent security precautions by CIC prevented further abductions. The Russians were relentless in the abduction of their own informants who were believed to have doubled as agents for the West.

CONFIDENTIAL

Finally, the Soviets frequently kidnapped minor Austrian officials, apparently for purposes of political intimidation of other members of the Austrian government.[73]

Soviet Agents Harass US Military Intelligence Personnel

The most spectacular kidnappings, from the American point of view, involved US personnel. During the first two weeks of June 1948, one CIC agent was kidnapped by Soviet authorities, and another agent and a civilian employee of Military Intelligence Service were arrested on pretended charges.

The arrested agent, who had inadvertently wandered into the Soviet zone of Vienna, was physically manhandled and given no food during the more than twenty-four hours he was held before being released, without his personal papers, in a city about an hour and a half's drive south of Vienna.

The agent who was kidnapped had been assigned to guard from possible abduction a civilian employee of CIC. The Soviets attempted the abduction, but the British Military Police intervened and arrested one of the Soviet agents and the CIC agent and took them to an Austrian jail; the Austrian CIC employee managed to escape. Within twenty minutes a group of armed Soviet soldiers arrived and took both the CIC agent and the Soviet agent away by force. Inadvertently the Soviet agent's papers had been left behind; these were traded the following afternoon for the CIC agent, who had been so badly beaten that he was confined to a hospital.

The next evening, 4 June, a civilian employee of Military Intelligence Service was arrested in a Russian district of Vienna by the Soviet authorities. The Russians explained that the civilian was driving a US Army vehicle while in civilian clothes and was arrested only to ascertain whether the car had been stolen. He was well treated, but was detained for three and a half hours.

All three of these intelligence personnel were carefully interrogated by the Russians on the organization and mission of Military Intelligence Service and CIC and the personnel in the organizations. These and other indications pointed to increased Soviet activity and interest in US intelligence services. The primary target at that time apparently was CIC. The Soviets evidenced considerable interest in photographs of CIC agents, and the campaign seemed to be to relate names and jobs with the photographs.

It was also known that the Soviets were attempting to penetrate US troop units throughout Austria, using female operators to gain information from enlisted and civilian personnel.[74]

Project Snatch-Counter Snatch

One series of kidnappings from the Allied Zones of Austria led to one of the most extensive investigations ever conducted by the 430th CIC Detachment. Combined, the cases became the project known as "Snatch-Counter Snatch."

In September 1949, a CIC informant at Linz, was reported by his wife as missing. Although he frequently was away from home for short periods, he never had been absent more than twenty-four hours without some message to his wife.

On the second day of the investigation of his disappearance, wallet was found on the street a few yards from CIC Headquarters. Austrian Security Police were asked to help locate the missing man.

Two days later, informants reported that was being held in the Russian Zone of Vienna. He had been abducted, informants said, by unidentified persons driving a black, 1938 Buick sedan. Shortly afterwards, CIC Agents halted a 1938 Buick on Landstrasse as it headed toward the Uhfar Bridge. They apprehended two men and a woman who were passengers. Arrested were a man known as , his mistress, and a black market operator named Later the same day, agents arrested , a close friend of

broke quickly under questioning. He admitted pointing out for the kidnappers, but accused and of the actual abduction. also talked freely. He said the trio had delivered the CIC informant to the Russians in return for the privilege of selling cigarettes on the black market in the Russian Zone. On the night of the kidnapping, they had approached on the street of Bad Aussee, slugged him with a hammer, tossed him in the automobile, and carried him across the Danube into the Russian-controlled village of Uhfar.

A few weeks later, two displaced persons approached a CIC informant in Salzburg for the use of his car in another kidnapping. The CIC informant secretly reported the incident to his control agent and was instructed to go along with the plans. The victim was to be a Russian Army deserter who was then a patient in the Salzburg Displaced Persons Hospital.

When all the plans had been revealed, CIC arrested the two men who said they were working for a man in Vienna named Benno Blum. They thought Blum was a Russian Army Major, although he always wore civilian clothes and claimed to be a Polish displaced person. They alleged that each month Blum delivered a specified number of persons to the Russians in Vienna through a network of professional kidnappers. For these deliveries Blum was given permission to black-market American cigarettes. Blum's agents would buy cigarettes on the open market in the United States and ship them via air express to Holland or Switzerland. From these points,

to Hungary, then brought by Soviet Ar
...n Zone of Austria, for sale in Austria and Bavaria.

From the interrogations, CIC gradually determined Blum's methods of op
tion for the kidnappings. When he struck again, CIC agents were waiting.

Blum's next victim was CIC informant , a former Rumanian
, a Hitler-anti-Communist, had fled Rum
after the Putsch. When word was received that was to be kidnapped, h
was placed under close surveillance.

At the Central Cafe, in Linz, just across the Danube from the Russian Zone
was approached by a , who suggested that they get together, ge
some girls, and do some serious drinking. , frightened out of his wits,
ran all the way home. The next morning he reported to his control agent. After
much persuasion, was convinced that the thing to do was to go ahead with
plan.

On the night set for the kidnapping CIC moved in to arrest
the driver of the kidnap car who was also a CIC informant, and a man named
Richter as they came from the Central Cafe. Under interrogation,
admitted that he had been hired by Benno Blum.

CIC next learned of activity by Blum's agents on 10 January 1950, when an Italian displaced person, a cook for an American unit, reported seeing two strange cars, one containing two men and the other a beautiful blonde who spoke Russian fluently. It was then learned that the blonde had, two weeks previously, approached another displaced person, Viktor Marjiv, and made a date with him to help her with her luggage at the Steyr railway station, near the border of the Russian zone on that date, 10 January.

CIC was notified only minutes before the scheduled meeting between the blonde and Marjiv. Agents quickly called Austrian police, then dashed for the railroad station.

Two Chevrolet automobiles were parked at the station. The blonde stood nearby. As the CIC agents moved in to arrest her, she screamed for help. Two men who ran to her assistance were quickly arrested. The three were taken to CIC Headquarters for questioning.

En route to the CIC office, the woman tried to destroy an identification card which described her as Gisella Sell, 20, a native of Berlin. She also carried another identification card which bore a different name. Later, the blonde told agents that Gisella Sell was her true name. She said she carried the other card to save her mother embarrassment in the event of her arrest. She claimed she

had purchased the fake identification papers from a Jewish displaced person in Vienna.

In searching the two cars, CIC agents found two pistols, a full bottle of Cherry brandy well laced with Chloral hydrate knockout drops, and two sets of Soviet Army license plates.

In a thirty-five page confession, Sell stated that she had been employed by the Russians since the end of the war. She had lived with a Russian Senior Lieutenant for two years and continued to work for the Russians after his return to Moscow out of fear of exposure to the Western authorities. Her previous assignments had been small ones, but for this kidnapping she was to receive 5,000 Shillings and a new fur coat.

Her confession implicated a Captain Orlov of the Russian Army. It was he, according to Sell, who had put the chloral hydrate in the cherry brandy. The intended victim was known to be fond of cherry brandy. Benno Blum had accompanied the kidnap crew as far as St. Valentin and was to meet them there on the return trip.

Michael Berger and Rudolph Weichselberger, the two men who had been arrested with Sell, were sentenced to eight years in prison. Sell received only seven years due to her cooperation with the authorities.

In Vienna, meanwhile, the Blum gang had been penetrated by the defection of one Meyer Stoessel to the West.

Immediately following the arrest of Gisella Sell, Blum and most of his associates were arrested by the Soviets and held for several weeks. When Blum was released on 22 April 1950, he went to the apartment of his mistress, Margararete Hochegger, in the French Zone of Vienna.

Two CIC agents teamed up with one French agent to close in on Blum. As they entered the front door of the third-floor apartment, Blum scrambled through a kitchen window. Agents caught him and pulled him back inside the apartment. Desperate, Blum pulled a knife and attempted to wrest a pistol from one of the agents. During the scuffle, the agent managed to place his thumb between the hammer and the firing pin and kept Blum from shooting. Both the French agent and the other CIC Agent fired their weapons, wounding Blum. He died in a hospital a short time later.

The Soviets denied any knowledge of Blum or his activities. Blum's body was unclaimed. He eventually was buried in Potter's Field.

In the break up of the Blum gang, CIC had stopped one of the Russians' most powerful weapons of the cold war.[75]

The "Rover Boys" Case

Closely related to Project Snatch-Counter Snatch was the case of the "Rover Boys," United States Military Police who got into the kidnap-for-pay racket by snatching a CIC informant for the Russians in Vienna. Eventually a dozen members of a Military Police battalion were implicated in the kidnapping, either by participation or by knowledge. Few cases handled by the 430th had such far-reaching repercussions.

CONFIDENTIAL
3536

The Rover Boys Case had a simple beginning when an American soldier short cash, decided to steal and sell an Army radio transmitter which did not appear on any of his battalion's supply records.

With the aid of two other members of the loaded the transmitter into a jeep and drove to the home of an Austrian woman with whom he was acquainted. She directed him to a man known only as "Sajzeff" who she thought might purchase the radio. Sajzeff was not interested, but he called three Russian friends to examine the transmitter. They also refused to buy it.

Unable to sell the transmitter, returned it to the battalion radio shop and was ready to forget the incident when Sajzeff phoned to say that his Russian friends wanted to talk with . One of the Russians, known to only as "John," arranged a meeting with the soldier in a Vienna bar.

John, who spoke English fluently, offered to pay several thousand shillings for kidnapping Red Army deserters from American and British zones of Vienna and turning them over to Soviet authorities. said he was interested, but wanted time to consider the proposition. The Russian suggested that try to persuade another Military Policeman to join him in the project.

discussed the proposed kidnappings with several members of his battalion. One of them, , was interested. Together they met secretly with the Russian known as John and received their instructions. They were to kidnap one , described as a Russian deserter who had given information to the Germans during the war. was to be turned over to the Russians at an abandoned factory on the Tullin Road outside Vienna. and agreed. They promised to deliver to the Soviets on the first Saturday in November.

When the day for the kidnapping came, the soldiers obtained a jeep from the battalion motor pool and drove to apartment in the British Zone of Vienna. was drunk. The would-be kidnappers circled the block four or five times, then decided to postpone the abduction until both were sober.

After reporting to the Russian agent, and agreed to make another attempt the following Saturday. The plan of action was the same.

When they reached apartment on 12 November 1949, went inside while waited in the jeep. did not answer knock. Instead, an old woman came to the door of the next apartment and told that probably was still asleep. The two soldiers drove to the factory on Tullin Road and told John what had happened. He instructed them to return to home and try again.

This time, both soldiers entered the apartment. When appeared they told him an American officer wanted to talk with him. assuming that the Military Police had been sent by his CIC employers, agreed to accompany them. He did not suspect what was happening until and turned off the road and into the deserted factory. John and four other Russians appeared, searched , then handcuffed him and carried him away. The American soldiers were paid 7,000 shillings.

That night, and celebrated their success with a party at the home of the Austrian woman who had originally directed to the Russians. Several other Military Police were present and were aware that and had kidnapped a man for the Russians.

In the weeks that followed, John outlined other kidnapping missions to and and gave them smaller amounts of money as advance payment for future abductions. One proposed kidnapping was cancelled after the soldiers learned the victim had moved. Several others were planned.

But newspaper accounts of the arrest of persons who had participated in kidnappings for the Russians frightened both and Each secretly contacted CIC in Vienna and told agents that he had been approached by Russian agents. At first, neither told of the kidnapping.[76]

CIC investigations soon revealed the entire story, however. One of neighbors identified and as the soldiers she had seen entering the CIC informant's apartment on the day of the kidnapping.[77] A painter who was working in the building also remembered seeing two Military Police enter apartment.[78]

Other members of the 796th Military Police Battalion revealed after questioning that at least seven of them had heard and tell of kidnapping a man for the Russians.

Confronted with the evidence against them, both and made full confessions of their part in the abduction of the CIC informant. They subsequently

77 Statement of to Agents R. Clark and Thurston I. Benson, 8 Dec 49 (CONFIDENTIAL), (Central Records Facility, Dossier X8 000 786).

78 Statement of 25 Nov 49 (CONFIDENTIAL), (Central Records Facility, Dossier X8 000 786).

were convicted by a General Court Martial on charges of kidnapping, dealing with agents of a foreign power, and Lesbianism.[79]

Ten other members of the 796th Military Police Battalion were granted immunity from prosecution for failure to report the kidnapping in return for their testimony against the principals in the case.[80]

The Verber-Ponger Case

On 11 January 1953, newspapers all over the United States headlined the arrest of Otto Verber and Kurt Ponger on charges of conspiring with Yuri Novikov, Second Secretary of the Soviet Embassy in Washington, to commit espionage against the United States Government. Novikov, already known by American intelligence to have controlled Valentin Gubitchev in the latter's contacts with government girl Judith Coplon, was declared persona-non-grata. Both Verber and Ponger confessed, pleaded guilty to the indictment and waived trial, becoming two of the few Americans ever convicted of espionage. Verber was sentenced to a penitentiary term of forty months to ten years; Ponger, five to fifteen years. Both Verber and Ponger, Viennese brothers-in-law who fled from Nazi oppression to the United States in 1938 and later became citizens, had served in US Army intelligence units during the war, and later were on the investigative staff of the Nuremberg War crimes Trials. Both were ideological Communists.

79 Summary of Information prepared by Operations Section, Requirements Branch, Intelligence Division, AC of S, G2, Department of the Army, dtd 26 Mar 51, Subject: Pvt Thomas L. Pilley, Cpl David E. Duncan, Cpl Victor M. Griffin, Pvt Aubrey Lowry, Cpl Daniel M. Markly (CONFIDENTIAL); (G2 Central Records Facility, Dossier X8 (P) 786).

80 Cable from Commanding General, USFA, to Deptar, Washington, D. C., for G2, 12 Apr 55 (SECRET), (G2 Central Records Facility, Dossier X8 (P) 785).

When the Washington case was finally ready and the alert was given: Verber, Ponger, and three others were arrested in widely scattered parts of Vienna within a twenty-minute period. Verber and Ponger were landed in Washington and presented for indictment twenty-four hours later. Until their arrest, they were completely unaware of CIC's interest in their activities. The wealth of evidence against them convinced the two that their best course was to make full confessions, plead guilty to espionage, and waive trial.

One of the other men picked up was Walter Lauber, a naturalized American citizen who lived in the American zone of Vienna. After a short while he was released, but later was again taken into custody.

After the arrests of Verber and Ponger, dozens of their contacts among USFA personnel were interrogated and removed from government employment as poor security risks.[81]

81 Interviews with Capt K. E. McDougall, Maj Henry Windmoeller, and Lt Col Robert F. Seaver (UNCLASSIFIED), (Central Records Facility).

Chapter 6

MISCELLANEOUS CIC OPERATIONS IN AUSTRIA

Less dramatic than tracking down Nazi war criminals or foiling Communist kidnappers were the routine security measures which agents of the 430th CIC Detachment practiced daily. Security surveys and lectures and countless personnel checks also were a vital part of the CIC mission during the occupation of Austria.

One of the first assignments agents received on entering Vienna in July 1945 was to conduct a security survey of the villa to be occupied by Gen Mark W. Clark, the first US High Commissioner for Austria. That task completed, the detachment made similar security checks of all office buildings slated for use by American forces in Vienna.

Agents of the 430th CIC Detachment also provided security surveillance of distinguished persons visiting the American zone of Austria. When General of the Army Dwight D. Eisenhower toured Austria in the fall of 1946, he was closely guarded by CIC agents in Salzburg, Linz, and Vienna. Other 430th agents accompanied General Eisenhower on his inspection trip to Italy. CIC also maintained security of the special train, the A-300, used by General Clark for his travels in Austria.

The king and queen of Greece visited Austria in 1950, and agents of the Linz sub-detachment guarded them day and night for two weeks, under the supervision of the chief of the Gmunden field office. Three agents received special awards and commendations from the Greek royal family for their part in the operation.[82]

Other routine duties which required numerous personnel and a considerable amount of time included clearance of military personnel for cryptographic duties and the screening of Austrian civilians employed by the United States forces. In November 1945, the latter task was handled by a special branch of the Public Safety Division, with the exception of G2 file checks conducted by CIC. Agents also investigated persons who claimed United States citizenship and made appropriate reports to the State Department.

When the ban of fraternization with the Austrians was lifted and American soldiers were permitted to marry Austrian girls, the 430th CIC Detachment was requested to investigate the moral and political backgrounds of the prospective brides. At first, CIC made recommendations to appropriate authorities regarding the advisability of the marriages, but in 1949 the Salzburg office discontinued the practice of recommending action on the marriages. Soon the Linz and Vienna offices also discontinued the recommendations.

82 CIC History 1945-1948, undated (SECRET), (Central Records Facility).

Because there was no other American investigative intelligence agency in Austria, the 430th CIC Detachment often received assignments from G2, Unites States Forces in Austria, which ordinarily would not be in the detachment's geographical jurisdiction.

One such case involved the discovery of irregularities in lateral mail communications with the US Military Attache in Moscow. These irregularities involved security requirements of Army Regulation 380-5, "Safeguarding Military Information." At a conference in the G2 office in April 1947, two agents of the 430th were assigned to conduct an investigation of the security violations. The agents traveled to Budapest, Bucharest, Sofia, Munich, Vienna, Frankfurt, Berlin, and Paris to check postal agencies and procedures. Their report blamed six agencies for the violations. The agents recommended preparation of a single directive that would adequately cover the needs of all US military agencies in the Balkans.[83]

One case investigated by the 430th in the summer of 1946 created an international furor and, before it was closed, contained elements of espionage, sabotage, black market, and theft.

Several Yugoslav vessels were anchored on the Danube in the Linz port area. The ships, together with their crews, were being held by the United States in retaliation for the seizure and nationalization of American property by the government of Yugoslavia. In the summer of 1946, a CIC informant reported a plot to sabotage the vessels. Agents quickly raided and searched the ships. Although a half-pound block of Army explosives was the only evidence that sabotage was planned, agents confiscated large amounts of propaganda materials.

Interrogation of crew members revealed that the Yugoslav sailors were members of an intelligence network which financed its espionage activities through black market activities and widespread pilferage of US Army equipment. Two days after their arrest, the sailors were released to the custody of the Yugoslav liaison officer who subsequently banished them from Austria.

On 28 September 1946, Yugoslavia protested the CIC action in a note to the State Department charging violation of Yugoslav sovereignty, damage to that nation's property, and violation of the personal freedom of Yugoslav citizens. On 9 October, the Linz sub-detachment refuted the charges and marked the case closed.[84]

Another black market investigation shared by all sub-detachments of the 430th turned up an extensive Nazi underground movement.

---

83 430th CIC Detachment Monthly Report of CIC Activities for June 1947 (CONFIDENTIAL), (Central Records Facility).

84 CIC History 1945-1948, undated (SECRET), (Central Records Facility).

The case, known as "Operation Sugar," opened in Salzburg in 1946 when CIC discovered a large-scale blackmarket ring which was smuggling saccharin into Austria from Switzerland. Agents seized a list of names of all dealers and consumers involved in the ring's operations. A check of the names revealed a startling peculiarity: almost every name was a prominent Nazi on CIC's wanted list.

Investigating further, Agents learned that the black market operations were only a minor phase of the ring's activities. The Nazis on the list held secret meetings in Linz to plot illegal underground operations. At one of these meetings, no less than four county chiefs were present. Members of the group were scattered all the way from Vienna to Innsbruck.

Eventually, when CIC had gathered sufficient evidence, key members were arrested, including SS Gen Walter Raffelsberger.[85]

Occasionally CIC cooperated with Austrian police in the apprehension of persons accused of criminal actions. However, the crimes had some relation to the counterintelligence mission.

On 14 December 1946, the Hallein Section of the Salzburg sub-detachment reported that local police had arrested a gang of smugglers who had carried weapons across the Austro-German border. Further investigation by CIC resulted in the arrest of five more persons believed to be members of the same gang. They were charged with illegal sale of weapons, house breaking, robbery, unauthorized possession of ex-Wehrmacht property, and illegal border crossing.[86]

86 USFA Weekly Intelligence Summary #82, 28 Dec 46 (SECRET), (Central Records Facility).

Chapter 1

CIC OPERATIONS IN ITALY

The end of war and the beginning of occupation found CIC facing a host of operational problems in the Free Territory of Trieste and the adjacent areas of Northern Italy.

Italy had been the enemy country; even after the Italian surrender, a sizeable portion of the country remained under German and Republican Fascist control. As a result, CIC found it necessary to adopt procedures regarding the arrest of persons accused of war crimes. In keeping with Allied policy, CIC established certain "arrestable categories," but delegated much of the responsibility for such arrests to Italian authorities.

Movement control, always a problem in combat, was no less a concern of CIC during the static occupation phase. Refugees and displaced persons still roamed the countryside, and their movements had to be closely regulated to neutralize the activities of Fascist or Communist agents who cloaked their activities by posing as refugees. Identity cards, Military Government travel permits, hotel and boarding house checks, refugee collection points, road blocks--all these were wartime measures which were carried over into the occupation era as a part of CIC's movement control program.

Security was a problem in occupation as in war. Screening and clearance of civilian employees, security surveys and lectures at military installations, and port security were among the most important tasks of CIC agents in post-war Trieste and Northern Italy.

Relations between the occupation forces and the civilian population became an even greater problem as Allied troops settled down for an occupation of undetermined length. CIC had to be constantly alert to the temper of the natives. Investigating incidents between troops and civilians, tracking down anti-American propaganda, political reporting--all these became a part of CIC's occupational mission, and close cooperation with Allied Military Government was an absolute necessity.[87]

Espionage Investigations

The change over from war to occupation duties was rapid for Agents of the 10th CIC Detachment who had uncovered enemy spies until the last desparate days of the war as German Intelligence Services made their final bids for information.

87 Report on Counter Intelligence, Officer in Charge, 10th CIC Det to G2, 10th Mountain Div. 21 Jun 45 (CONFIDENTIAL), (Kansas City Records Center).

One of these German agents, a beautiful blonde named was arrested on 30 April 1945, two days before the surrender, by 10th Mountain Division Military Police as she was walking south on the Lake Garda road, near Malcesine, and was brought to the office of the 10th CIC Detachment. Her first story was that she was trying to return to her husband in Rome, after her German lover, with whom she had come north, had tired of her. After several hours of interrogation about her lover and about the eleven new one-thousand lire notes, in series, that she was carrying, she admitted that she had connections with the German Intelligence Service, through a Dr. Kroll whom she and her husband had met in January 1945 in a Venice cafe. Although she claimed that this was a chance meeting, she admitted that her husband, a former Italian Air Corps Lieutenant, had offered his services to the Germans after the Italian Armistice in September 1943 because he needed money.

On 11 February 1945, as a result of the "chance" meeting with Dr. Kroll, husband left to attend an informant's school in Northern Italy. accompanied him as far as Verona, but remained there with Alfredo, a chauffeur who had been sent to meet her husband and direct him on his way. Wishing to remain there with Alfredo, she requested Alfredo's employer, a for employment with the German Intelligence Service. kept postponing his answer, but in the meantime turned her over to a Lieutenant Schmidt of the Gestapo in Venice. She performed one Gestapo mission against the partisans in the Chioggia-Loreo-Cavalzaro-Piove-di Sacco area, for which she received 1000 lire.

After her husband completed his training, claimed, they both became disillusioned with the German Intelligence Service and decided to travel separately--she to Rome and he to Naples--in order to escape their connections. On the way met another German Intelligence Service employee, Anna Marie, who warned her that she had been considered suspect by the Service for two months because she had been overheard saying that she expected Germany to lose the war. In spite of this, claimed, the woman gave her 15,000 lire on the following morning and told her to go to Naples, join her husband and assist him in his assigned missions.

whole story was so vague and so contradictory that CIC was led to believe that she actually had been returning from a short mission when she was captured. Through information sent to Naples, the husband was arrested. Both were turned over to Military Government for prosecution.[88]

OCCUPATION OF ITALY AND TRIESTE

Chapter 1: CIC Operations in Italy

Chapter 2: CIC Operations in Trieste

Appendix 1: Roster of 428th February 1947

CONFIDENTIAL

Post-Armistice Target Reduction in Milan

Counterintelligence target reduction continued after the unconditional surrender of the German armies in Italy. CIC task forces were still active in late May and June arresting enemy intelligence personnel and capturing German intelligence documents. Typical of these target reductions was the uncovering by IV Corps CIC agents of a large stay-behind sabotage network which operated under the commercial cover of a cosmetics distributing firm called Gibim Prodotti Corporation.

On 16 May 1945, Allied counterintelligence in Italy had captured and initiated interrogations of Dottore Reme, a senior Abwehr officer, GIS, Italy. Although Dott Reme was not cooperative, Allied counterintelligence agents were able to deduce some valuable leads to Abwehr II agents with the address of the Gibim Prodotti Corporation: Via Rosales 4, Milan; and members of the CIC task force in Milan were alerted.

On the morning of 20 May, IV Corps agent John Marino was searching among the political prisoners of San Vittore prison, Milan, and found the names of Amado Torres, a zone inspector of the Gibim Prodotti and suspected Abwehr agent, and Franca Pasquali, Torres' female companion and fellow Abwehr agent. Agent Marino obtained an immediate confession from Franca Pasquali. Both she and Torres had been apprehended by partisans on 3 May and interned as political prisoners. Torres was also willing to make a preliminary confession of his intelligence activities as a member of Abwehr II, Trupp 211 under the direction of Dott Reme.

Torres had been an administrative assistant and reculter for Dott Reme from 1 December 1944 to May 1945. In January 1945, Abwehr Agent Guido Belloni formed the Gibim Prodotti, as directed by Reme, and Torres became a zone inspector of the firm. Although Belloni had been a cosmetics dealer and knew the trade, Torres and many other Abwehr agents were placed on the Gibim Prodotti payroll as inspectors and sales representatives of the firm but actually did no work for it.

After leaving San Vittore prison, Agent Marino proceeded to Belloni's residence on Corso Como, Milan. From a check in the neighborhood, Marino learned that Belloni and another Abwehr agent, Vincenzo Sacchi, left the area on the night of 24 April 1944 and were last known to have been at Belloni's cosmetics laboratory near Genoa. Agent Marino placed Belloni's mother under arrest for interrogation and organized an informant network in the neighborhood so that he would know if Belloni returned to Milan.

Accompanied by SIM Agent Invernezzi, Agent Marino entered the offices of Gibim Prodotti, Via Rosales 4, on the afternoon of 20 May. They conducted a complete search of the premises and examined all the company's documents and records.

They seized the personnel files of the firm and lists of all employees. At the completion of the raid, a partisan guard was placed on the offices, with instructions to apprehend any person attempting to gain entry.

With the personnel records in hand, Agent Marino returned to San Vittore prison and again interrogated Torres concerning each employee of the firm. Torres identified nearly every name as that of an Abwehr agent, trained in both sabotage and espionage. The records contained twenty-four names of which only two were those of unwitting and innocent persons.

Late in the afternoon of 20 May, Agents Emery W. Seymour and Marino made the first two arrests of Gibim Prodotti undercover agents, Ermanno and Silvio Bernasconi. The brothers were taken to San Vittore prison and interrogated separately. Their stories proved to be substantially the same. They had been recruited by Torres in November 1944 and they had also attended a sabotage school in Milan. From December 1944 until May 1945, they had been idle, their only activity being to report occasionally to Gibim Prodotti to receive their pay. They had not had a chance to perform any sabotage missions before their capture by CIC.

On the afternoon of the following day, Agent Seymour arrested and interrogated Alfredo Bernabe who was listed as a sales representative of Gibim Prodotti. Bernabe had been recruited and trained by Dott Reme's staff. He claimed, truthfully it was believed, that he had not performed any sabotage missions. Agents Seymour and Marino interned Bernabe in the security wing of San Vittore prison.

During the next week, these agents apprehended and interrogated eight more members of the Trupp 211 sabotage network. On 24 May, the two agents went to the address listed for Belloni's administrative assistant, Vincenzo Sacchi, who had last been seen leaving Milan with Belloni late in April. The residents at the listed address proved to be relatives of Sacchi's, who gave the agents the telephone number of Sacchi's female companion and suggested that they contact Sacchi through her. Agents Seymour and Marino discovered that Sacchi usually visited the girl's apartment at lunch time. They picked him up that noon, and interrogated him only briefly before he confessed that he had been recruited the previous November by Torres and had served as an administrator with Gibim Prodotti.

Through lists which were disseminated to Allied intelligence and security units, the remaining personalities were apprehended and forwarded to higher echelons for final interrogation and disposition. No acts of sabotage were reported

to have been committed by any of the network's members who had been apprehended by CIC.[89]

War Criminals, Fascists, Hunted

Of immediate concern to CIC at the close of the War was the apprehension of war criminals hiding in Trieste and adjacent areas of Northern Italy. Agents were guided by lists of "arrestable categories" published by higher headquarters and distributed to CIC Detachments.

On 8 May 1945, an informant reported to the 10th CIC Detachment that SS Obersturmfuerher, Horst Edler, who had participated in the killing of three Italian partisans after the surrender of the German Army, was hiding at a home in Merano. After his arrest by CIC Agents, he revealed the location of the Gestapo in Merano along with the information that they had hoarded all kinds of supplies and stolen goods which they hoped to trade to the International Red Cross in exchange for help in getting to Switzerland.[90]

On the same day, the Japanese Embassy staff, consisting of 20 Japanese with their Italian and German employees, and the staff of the Manchurian legation, consisting of three Japanese, were placed under the protective custody of the 10th CIC Detachment.

On 9 May, Baron Gabor Kemeny, Hungary's Secretary of the Foreign Office, his secretary, Mathias Kallay; and the former Austrian Nazi Leader, Baron Fuchs Vittoria; were arrested by CIC at Obermeis and transferred to the civil jail at Marano. Kemeny, leader of the Hungarian Nazi Party, had written many propaganda books which vilified the United States, Great Britian, and the Soviet Union and had organized strong armed resistance against these Allied nations.

90 An undated, unsigned document in the 10th CIC Det files (UNCLASSIFIED), (Kansas City Records Depot).

CONFIDENTIAL

He had become regent when Admiral Horthy, former Regent of Hungary who tried to make an armistice with the Allies in October 1944, was overthrown by the Hungarian Hitler, Ference Szelesi. Kemeny had then fled Hungary, taking with him vast treasures of gold, diamonds, and jewels, including the Hungarian Crown of St. Stephen, and had hidden them in various banks. Kemeny then requested the protection of the International Red Cross as a means of keeping his hoard. In searching Kemeny's home, CIC Agents found many import[illegible]ocuments. He was turned over to the Soviets, who had him on their list of war criminals.[91]

One other war criminal investigation by the 10th CIC early in the Occupation resulted in the arrest of Guiseppe di Massimo Redelli. Redelli had been taken prisoner by the Germans at the time of the Italian armistice on 8 September 1943. Given the choice of internment in a concentration camp or service in the Republican Fascist Navy, Redelli had chosen the Navy, with which he had served until 8 September 1944. On that date he transferred to the Guardia Nazionale Republican and was assigned to duty at the Questura of Udine and later at Cividale.

In spite of the fact that Redelli had collaborated closely with both German and Italian Fascists at Cividale, when the Italian village was liberated by the Allies, he managed to become a member of the police force (Patrioti Dell'Ordine). As a member of the Patrioti Dell'Ordine, he effected numerous arrests of alleged Fascists and German collaborators. The fact that many of the police arrests were based upon personal hatred caused a general resentment in Cividale against the Patrioti Dell'Ordine and particularly against Redelli, who abused and beat the prisoners he arrested.

Agent James P. Furniss recommended in his report that Redelli be suspended from any public office and placed under town arrest in Udine. Further action against Redelli was left to a local "Epuration" committee in Udine.[92]

CIC Organization for Trieste

After a brief period from early May until 26 June 1945, during which the 10th and 91st CIC Detachments operated with their divisions in the Trieste area, responsibility for counterintelligence in the Free Territory passed to the 428th CIC Detachment, which was on occupation duty in Italy under the Mediterranean Theater of Operations.

Six zones of operations were established by the 428th CIC Detachment. Each zone was further divided into sub-sections.[93] Trieste and the adjacent areas in northern Italy fell into Zone One.

91 An undated, unsigned document in the files of the 10th CIC Detachment. (UNCLASSIFIED), (Kansas City Records Center).

92 10th Mountain Division CIC Report, 1 June 45 (CONFIDENTIAL), (Kansas City Records Center).

93 Interview with Maj Leo W. O'Leary (UNCLASSIFIED), (Central Records Facility).

In May 1947 the 428th CIC Detachment left the Mediterranean Theater, and the 17th CIC Detachment was sent to Trieste to provide counterintelligence coverage for the Trieste United States Troops (TRUST), at that time the 351st Infantry Regiment.

The 17th CIC Detachment, commanded by Major Wadie Giacobbi, was composed of thirty-three officers and enlisted men who had previously served in Italy. In addition, eleven civilian investigators were employed by the 17th CIC.

Since Trieste was a fairly small area, the organization of the 17th CIC Detachment was never complex. Detachment headquarters was located in the heart of the actual city, and a small sub-office was maintained in the area occupied by American troops on a hill overlooking the city.[94]

Dual Control of 17th CIC Operations

Operations within the 17th CIC Detachment were handled and controlled by a confusing system of dual command. The Commanding Officer of the 17th CIC Detachment was responsible to the G2, TRUST, and had direction of all military activities within the unit.

The other key figure was Chief, CIC, TRUST, who was responsible to the Commanding Officer, 17th CIC, for all operations.[95] This dual control of CIC operations was apparently at the request of the G2 TRUST.[96]

For operational purposes, the detachment was organized into four sections: Port Security and Investigations; Political-Economics; Combined Counter Espionage and Positive Intelligence; and Interrogations.

The Port Security and Investigations Section was responsible for port security measures and general troop and installation security in the Trieste area. Functions of this section also included military and civilian security clearances, security surveys, security indoctrination lectures, investigations of violations of Army Regulation 380-5, and frontier control. The section maintained two offices, one in the port area and one in the city proper.

Primary aim of the Political-Economics Section was to report political and economic conditions and trends in the United States-British Zone of Trieste, but

94 Interview with Maj Demetri Vignovich, Army Intelligence School, Fort Holabird, Md, on 12 Oct 55 (UNCLASSIFIED), (Central Records Facility).

95 Returnee Report of 1st Lieutenant John Skvarna, dtd 10 December 1948, Army Intelligence Board, Army Intelligence Center, Fort Holabird, Md.

96 Returnee Report of Major Wadie Giacobbe, dtd 6 December 1948, Army Intelligence Board, Army Intelligence Center, Fort Holabird, Md.

it also made similar reports on Italy, Yugoslavia, and the Yugoslav-occupied area of the Free Territory. Coverage of political parties, labor organizations, demonstrations, and strikes and the preparation of detailed economic studies were among the functions of this section.

The Counter Espionage-Positive Intelligence Section was further divided into Counter Espionage and Research (Positive Intelligence) sub-sections. The Counter Espionage division was concerned with foreign intelligence agencies operating within Trieste and with Yugoslav and Italian information services within Yugoslavia and Italy. Basic work of the section included detailed investigation of commercial firms and consulates suspected of providing cover for espionage activities. The Research, or Positive Intelligence Division, directed efforts of both long- and short-range line crossers who gathered information from within Italy and Yugoslavia. Through key contacts in Trieste, the Research Section developed sources of information among anti-Communist nets operating in Yugoslavia. This section maintained an office separate from detachment headquarters.

The interrogations section worked closely with British personnel in operation of an interrogation center.[97]

The Trieste Interrogation Center

The Counter Intelligence Corps was not the only Allied intelligence agency in Trieste. French Intelligence operated on a limited basis, working through the Chief of the French Mission. British Field Security Service agents provided coverage for British units in the area.

In 1948, CIC and the Field Security Service established a joint interrogation center in Trieste, first at the displaced persons camp and later in a downtown office. Designed as a field collection agency for all types of intelligence, the center was staffed by two CIC agents and two British personnel. Each person brought to the center was photographed and fingerprinted, and the interrogation center soon developed an identification bureau of some value. However, by 1950 the primary work of the center was the collection of order of battle information. In 1950, Military Intelligence officers relieved CIC of its work at the center.

While much of the intelligence work was done on a cooperative basis, the rivalry between the Allied intelligence agencies was intense. As a result, most suspects were milked of any information by the capturing agency before they were taken to the interrogation center. Such practices reduced the worth of the center considerably.[98]

97 Debriefing Interview of Edward W. McGettigan by CIC Board, 21 Dec 48, (CONFIDENTIAL), (Army Intelligence Board files).

98 Ibid., an Interview with Maj Leo W. O'Leary, (UNCLASSIFIED), (Central Records Facility).

Another example of the rivalry between the Allied agencies was a penciled note which appeared on a CIC report on British intelligence activities in Trieste:

> "I suggest this information or any other information (on British intelligence) be forwarded to Washington to show them what is going on. It would be good for Bert while he is there. Also suggest we blow the thing just to be mean."[99]

Despite the rivalry on some occasions, strict cooperation was a necessity on others. In the spring of 1948, the TRUST G2 Section was integrated with British Intelligence, and all Allied intelligence activities in Trieste came under the control of the combined section.[100]

CIC Gets a New Commander

In October 1948, Maj Demetri Vignovich relieved Major Giacobbi as commander of the 17th CIC Detachment. Major Vignovich held the post until January 1952, when he was replaced by Col Pete Derzis.

After Major Vignovich's arrival, the 17th CIC Detachment stepped up its training program for agents and civilian investigators. Weekly training sessions at detachment headquarters were held on Saturday mornings and featured such subjects as report writing, investigations, counter espionage, and counter sabotage. Several agents attended Berlitz classes in Italian and Yugoslav languages.

As a part of the training program, agents often participated in counterintelligence field problems in connection with the 351st Infantry.[101]

Chapter 2

CIC OPERATIONS IN TRIESTE

A Mistaken Arrest

One arrest by CIC agents created a public furor in Trieste. Alfi- -abrici, a lieutenant with the Italian Alpine Troops, had returned to his home in Trieste after the capitulation of Italy, since he had no desire to fight with the Fascist Republican armies. In Trieste he lived with his father, an official at the Monfalcone shipbuilding yards. His Yugoslav wife had been persuaded to return to fight with the Yugoslav partisans.

But CIC Sub-Section "A" did not know Fabrici's full story when agents arrested him on 4 May 1946 on charges that he had served with the SS. Upon interrogation by Agent Arthur Henning, Fabrici said the Fascists had given him only two choices: serve with the SS or be sent to a concentration camp. He unwillingly selected the first alternative.

Immediately after CIC arrested Fabrici, a great number of persons came to the CIC office to protest. Italians, Yugoslavs, and Austrians--some of whom were partisans, others Communists--all pleaded for Fabrici's release.

CIC Agent Henning soon discovered that, although Fabrici had been a member of the SS, he had actively aided the partisans. He had given them the troop strengths of the various Axis organizations and had requisitioned materials for partisan use. Without the knowledge of his German superiors, Fabrici had issued a permit for the Partisan leader Di Antoni to carry a weapon. He also engineered the surrender of SS General Globoonik, supreme commander of the Litorate, to the local partisan leader--an act which invoked the Nazi wrath. Just before he was scheduled to be arrested by the Germans, Fabrici had gone into hiding in the hills of Tarvisio.

Agent Henning in his report concluded: "While it is true that Fabrici was an SS member, he used his position in the organization for the benefit of partisan groups whose ideals were close to those of his own. He risked his life in helping these organizations. He was not a believer in the principles of the SS. While atrocities and the like are generally attributed to the SS, he used his position to help people against the harsh policies of the organization. It is recommended that the Subject be given his discharge and that he be exonerated."[102]

---

102 Case A-94.1 Sub Section "A" Folder 50-000324, 21 June 1946 (CONFIDENTIAL), (Central Records Facility).

Although rounding up war criminals was an important counterintelligence mission, CIC realized early in the occupation of Trieste that a threat was posed by Communist espionage attempts, principally those inspired by the Yugoslavs. Records of the CIC Detachment in Trieste contain numerous cases that reveal these attempts to be continuous. One case involved a man named who had been active in Communist agitation in Zone "A." He was arrested by Agent Henning on 14 June 1946, and when a search of his home revealed an extensive supply of military maps of the region, he was charged with espionage. Preliminary interrogation disclosed that was employed by the Yugoslav Espionage Service and also worked for another espionage agency in the Tarvisia area, supervising Italian Communists. He appeared to be well informed on the Slovene Communist underground organization and the overt activities of the Italian Communist Party in the Trieste area.[103]

A Swiss citizen of United States parentage, was arrested by CIC in Venice on suspicion of being involved in several "shady" operations and because of his general lack of moral character. But when further investigation revealed that he had been dealing with a suspected Yugoslav intelligence agent, he was placed in jail to await further action by the Allied Military Government.[104]

Rumors of illicit radio sending sets cropped up from time to time. One persistent rumor in May 1946 pinpointed such a radio, said to be operating in code, in the Cave del Predil area, but careful investigation failed to locate it.[105]

CIC Under Surveillance

was arrested on 17 October 1946, when it was discovered that she had been reporting the agents' activities to the sister of a suspected operative of a Yugoslav agency. Investigation revealed that this information had been forwarded to the Yugoslav government.[106]

CIC suspicions that surveillance was being kept on their activities were heightened when a reliable Italian agency reported that an unidentified man, armed with a German light machine gun was seen within fifty yards of the CIC billet on

103 Zone "A" MTOUSA Monthly Activities Report 50-00008 23 June 1946 (CONFIDENTIAL), (Central Records Facility).

105 Zone "A" MTOUSA Monthly Activities Report 50-00008 May 1946 (CONFIDENTIAL), (Central Records Facility).
106 Zone "A" MTOUSA Monthly Activities Report 50-00008 23 October 1946 (CONFIDENTIAL), (Central Records Facility).

the evening of 19 August 1946. The man could not be found; security precautions were increased.[107]

Although little activity of the Yugoslav Military forces as such came to the attention of CIC in Trieste, CIC frequently was concerned with the National Security Police (OZNA) Intelligence. An informant reported on 23 January 1946 the presence of a division of National Security Police in Zone "B," along with 60,000 Yugoslav troops.[108]

One of the few CIC investigations which directly concerned the Yugoslav military forces was a security survey of a former Yugoslav hospital in Gorizia.

On 29 August 1947, Yugoslav army authorities vacated the military hospital which they had occupied in Gorizia for the past two years. No incidents occurred either during or after the actual evacuation. Troops formerly stationed in the hospital proceeded unmolested to the Yugoslav Detachment Area in Zone "A." On the same day, agents of Sub-Section "G" conducted a security survey of the building and the immediate vicinity. Nothing of counterintelligence interest was discovered. Information obtained from members of the Italian monastery located on the hospital grounds revealed that on 26 August the Yugoslav soldiers were engaged in transporting large boxes out of the building and onto waiting trucks. It was believed the boxes held a cache of arms and ammunition which had been stored in the hospital.[109]

Sabotage Investigations Numerous

Although numerous incidents in which the possibility of sabotage was involved required CIC investigation, few such investigations resulted in actual proof of sabotage. One exception was a bridge at Uccea, which was inspected by Agent Rosmino N. Barengo in late February 1946, on the basis of information received from the Italian Forestry Service. The agent discovered that seventeen large bolts holding the planking had been removed at various intervals and that a clevis pin anchoring one end of the bridge had been driven out of position in such a manner that any heavy traffic would cause the bridge to collapse. It was obviously sabotage, but the perpetrators were not discovered.[110]

The ever-present danger of sabotage or revolts against the occupying forces led to numerous raids conducted by CIC, accompanied by local police and military units, to recover arms and ammunition hoarded in Italian homes.[111]

Two such raids occurred during the week of 5 December 1945, when Special Agent Charles J. Rubacky of Sub-Section "B," Zone One CIC, led searches in the town of Sammardenchia, which netted twelve heavy machine guns, [illegible]ght machine guns, one automatic rifle, one rifle, 155 hand grenades, and 8760 rounds of ammunition.[112]

A large raid was staged at Buia on 29 October 1946. CIC, Italian police, a battalion of the 350th Infantry, and the 350th Infantry's Special Police participated in the raid. Troops quickly established roadblocks, effectively sealing off the village. Entering the town, the troops and police seized large quantities of gunpowder, fuses, ammunition, hand grenades, and military automotive parts. One villager was arrested when agents found a Sten gun in his possession. Discovery of a large antenna touched off a hunt for a clandestine radio operation in the area, but a thorough search failed to turn up the radio.[113]

Border Crossers Pose Problem

From the outset of the occupation, border crossers--persons who illegally passed international boundaries--plagued CIC in Trieste and in Northern Italy.

As early as 25 May 1945, Special Agent James O. Braly of the 10th CIC Detachment reported that hordes of persons were attempting to cross the border from Austria into Italy. The Italian-Austrian frontier had been closed to all but military personnel and vehicles. Nevertheless great numbers of civilians attempted to pass through control points into Italy.[114]

CIC Detachment Zone One, Sub-Section "A," reported on 23 October 1945 that most of its border control work concerned the screening of applicants for American Military Government Travel Permits, disposing of displaced persons, and the enforcement of regulations governing the frontiers around Venezia Giulia.[115]

114 Memorandum for the OIC, 10th CIC Detachment, 25 May 45 (CONFIDENTIAL), (Kansas City Records Center).

115 Monthly Activities Report 50-000008, dtd 23 Oct 1945 (SECRET), (Central Records Facility).

CIC's main concern with border crossers was based on the possibility that enemy agents were slipping into Allied territory to commit espionage or sabotage. But the agents discovered that the black market was the motive of the illegal movement.

In June 1946, CIC broke up a ring of cattle rustlers and smugglers operating in Northern Italy and Southern Austria. The thieves had stolen horses and oxen in Austria, then driven them across the border for sale in Italy. CIC began an investigation when the thieves were found to be smuggling cocaine as well as cattle. Ringleaders were arrested and turned over to Military Government for prosecution.

The arrest of by Agents of Zone One Sub-Detachment "A" brought out important information regarding illegal border crossing for black market operations. Questioned by CIC agents, told how black market organizations had extensive connections on both sides of the Austrian-Italian border. Members of the organization possessed travel papers authorizing movement in either country. said the usual route of the black market operators was from Klagenfurt, Austria, through Feistritz, Sella Bartolo on the border, Ugovizza, Camporossa, and then by train south.

Austrians Apprehended

Four Austrian youths who crossed the Italian-Austrian border illegally were picked up in the vicinity of Malborghetto and interrogated by CIC at Tarvisio on 20 February 1946. The youths had in their possession four German pistols, one Italian pistol, and several hundred rounds of ammunition. They also carried maps of the area. They stated upon interrogation that many Austrian civilians had not turned in their weapons, and that a great many small arms were hidden in the forests. The youths were turned over to the British Field Security Service.[117]

Displaced Persons Cross Borders

During September 1946 an excessive increase in illegal border crossers was noted by all security authorities in the area of Sub-Section "A" Zone One CIC.

Most of the border crossers were well organized Jewish displaced persons who were attempting to migrate from Middle European countries into Italy en route to Palestine. The first group of illegal travellers filtered past British authorities in Austria and eventually reached the vicinity of the Italian border. Here they purposely attracted attention by their suspicious movements and were apprehended by

116 Zone "A" MTOUSA Monthly Activities Report 50-0C008, 23 Jun 46 (CONFIDENTIAL), (Central Records Facility).

117 Zone One MTOUSA Weekly Situation Report 50-000007, 23 February 1946 (CONFIDENTIAL), (Central Records Facility).

CONFIDENTIAL

security agencies. Claiming to have recently arrived from Italy, they said they desired to return to their homes in Middle Europe; consequently, they were escorted to the Italian border and advised not to return to Austria. Once in Italy, the Jewish Displaced Persons contacted waiting trucks and were transported to Udine.

Another group, which attempted the same ruse at a later date, was closely and individually interrogated by British Field Security Service authorities until it was definitely ascertained that the people in question had started from Austria or further north. As a result of these questionings Field Security Service was able to apprehend several of the local leaders and obtain information on other important organizers. It was also revealed that the displaced persons used a similar ruse with Italian authorities. Jewish DP's would effect a successful illegal crossing of the frontier, journey several miles south of the border, then board a train bound for Austria. As was to be expected, these individuals would be required to produce documents prior to reaching the Austrian-Italian border. At this point they would claim that they were attempting to return to their homes in middle Europe and would be escorted out of the area, back into Italy.[118]

Adding to the movement control problem was the fact that whenever American military units changed locations, their indigenous employees were allowed to follow. This complicated CIC's security task in several ways: The moves brought new civilians into new areas; prostitutes, always a security threat, followed the troops into each new area; and, until the units were well established in their new locations, there were no effective border patrols to control movements of persons not authorized to travel. Particularly was this true along the Yugoslav border, where both Italians and Slavs attempted to leave Zone "B" after it became part of Yugoslavia.[119]

Women border-crossers caused their share of trouble by moving back and forth in the Trieste area. Typical of the female travellers were two girls who crossed the Austrian border in British trucks to visit British troops in Trieste. Upon their return to the Austrian border they were halted and turned over to CIC. They were referred to Military Government officials for disposal.[120]

American officers who had girls friends outside of the Venezia Giulia border caused an additional CIC problem. CIC reported that the guards who controlled the check post on Route 54, Venezia Giulia Border, had on at least two occasions

118 MOIC Illegal Border Crossers Folder 50-000393 dated 10 October 1946 (CONFIDENTIAL), (Central Records Facility).

119 Zone "A" MTOUSA Monthly Activities Report 50-00008 23 July 1946 (CONFIDENTIAL), (Central Records Facility).

120 Zone "A" MTOUSA Monthly Activities Report 50-00008, 23 June 1946 (CONFIDENTIAL), (Central Records Facility).

had difficulty with American officers who were transporting their lady friends across the Venezia Giulia lines.

On 28 July, a military vehicle driven by an American lieutenant was halted at a road block, and guards requested that the officer's civilian female companion produce a travel permit. The girl did not possess one and agreed with the guard on duty that she could not cross the boundary lines. The lieutenant insisted that his friend and the vehicle be allowed the proceed, stating that he was an officer and would vouch for the girls's conduct. Eventually the frightened guard allowed him to pass.[121]

Civil Movement Control

CIC Sub-Section "A" reported on 23 February 1947 that the general exodus of troops from the Tarvisio area was accompanied by a lack of discretion in revealing the date and destination of the proposed movement. Many transient civilians desired to follow the troops. While a few of these persons possessed legitimate claims to proceed to Trieste with the military units, a large majority appeared to be habitual trouble makers, both male and female, who would congregate in any region where soldiers were present. Neither AMG nor division authorities took any preventive measures against the mass imigration to Trieste, but rather in certain cases appeared to encourage it. The influx of additional people, among whom were many undesirables, into an already impoverished area, forboded discontentment and all types of covert activity.[122]

CIC Stresses Security

The numerous security measures which CIC supervised at military installations was an important phase of Trieste operations. At the end of the war, troops tended to relax their security guards, and CIC found it necessary to increase their efforts to promote security-consciousness.

CIC had to begin at home. In June 1946 CIC Sub-Detachment "A" of Zone One staged a surprise security raid to check up on its own agents. Numerous military documents were found in unlocked containers in agents' homes. The condition was attributed to lack of security or carelessness.[123]

Another example of lack of security during the same month was the compromise of information concerning the departure of the 351st Infantry Regiment and

121 Zone One MTOUSA Weekly Sitrep 50-000006 (CONFIDENTIAL), (Central Records Facility).

122 Zone "A" MTOUSA Monthly Activities Report 50-00008, 23 Feb 1947 (CONFIDENTIAL), (Central Records Facility).

123 Zone "A" MTOUSA Monthly Activities Report 50-00008, 23 Jul 46 (CONFIDENTIAL), (Central Records Facility).

the 88th Division from the Tarvisio area on 11 June 1946. Within hours after the alert for the evacuation of the troops, the local populace knew when the movement was to take place, what units were to leave, the sequence of departure, and what units were to remain in the area.[124]

To control the security weaknesses, CIC agents presented a lecture of an hour's duration to each cycle of replacements trained by the 351st Infantry Regiment. Agents attempted to impress new personnel with the obvious necessity of strict military security in Venezia Guilia and adjacent areas. In addition, the lecture included information on policies and duties of CIC in order to insure maximum cooperation and understanding between troops and CIC.[125] But some security lapses persisted. In one regiment, the 350th Infantry, security safeguards were so inadequate that agents from CIC Sub-Section "B," Zone One, found a pin-point order of battle map of the regiment posted on a public bulletin board in the center of Tricesimo, on Highway 13 north. The map was removed.[126]

A year later, in March 1947, Company L of the 350th Infantry was under secret orders for a move to Pola. One member of the unit told his domestic servant about the coming move, and within twenty-four hours the entire Tarcento-Tricesimo populace knew of the "secret move."[127]

On 13 June 1947 the Gorizia CIC Office received a report from the Assistant Chief of Staff, G2, stating that a breach of security regulations had been discovered in the Office of the AC of S, G3, Trust. While investigation failed to unearth the military personnel responsible for the leakage of classified information, CIC agents cautioned all individuals in the office against further unauthorized disclosure of the contents of official documents.[128]

CIC Guards VIPs

A different type of security assignment was the security surveillance of important persons visiting in Trieste. Among the personalities that CIC guarded in the post-war years was General Mark W. Clark, who visited Trieste in May 1947. Agent Joel J. Hobson in his report of 10 May said:

124 Zone "A" MTOUSA Monthly Activities Report 50-00008, 23 June 1946 (CONFIDENTIAL), (Central Records Facility).
125 Zone "A" MTOUSA Monthly Activities Report 50-00008, 23 Sep 1946 (CONFIDENTIAL), (Central Records Facility).
126 Zone "A" MTOUSA Monthly Activities Report 50-00008, 23 June 1946 (CONFIDENTIAL), (Central Records Facility).
127 Zone "A" MTOUSA Monthly Activities Report 50-00008, 20 March 1947 (CONFIDENTIAL), (Central Records Facility).
128 Zone "A" MTOUSA Monthly Activities Report 50-00008, 1 July 1947 (CONFIDENTIAL), (Central Records Facility).

"It is the opinion of this Agent that the secrecy of General Clark's visit was very well kept by the 88th Division personnel. CIC Agents were on duty at all danger spots along the route followed by the official party. It is believed that the use of the dummy car preceeding the General's car worked satisfactorily, and should an attempt have been made against the General's life, protective measures could have been taken in time to prevent serious consequences.

"It was noted that the personnel in the General's party were unaware of the security measures being taken, so it is recommended that all personnel connected with the visitor's party be informed of the need for their cooperation in the security measures."[129]

Agents Dominic Rossow and Aloysius J. Majszak were less fortunate while performing as security escorts for General C. H. Lee. On 12 July 1947, as the General's convoy approached a fork on Via Miramare, a civilian jeep driven by an American officer cut into the convoy. Special Agents Rossow and Majszak asked the officer to drop behind the convoy, since he was interfering and preventing them from doing their duty. He refused to get out of the convoy and said he would turn when he was ready. The officer asked who the agents were to be giving orders to an American officer. He finally turned off the highway, and the agents resumed their positions.

On 16 July 1947, William W. Tyng, Chief CIC Trust, wrote G2 TRUST: "It is requested that action be taken by your office to properly indoctrinate the officer concerned and if deemed advisable to initiate an official reprimand. [130]

Port Security in Trieste

Because Trieste had one of Europe's busiest harbors, port security became a vital part of CIC's work in the Free Territory. Trieste CIC's Port Section was small, but exceedingly busy. A large percentage of the goods of Europe and Asia were channeled through the "Free Port" city.

Smuggling was a common trade. Although CIC was not directly concerned with the apprehension of smugglers, agents often found themselves investigating pilferage of army cargo and enforcing measures designed to halt the illegal commerce.

More important to CIC was the smuggling traffic which attempted to move aliens in and out of Trieste without proper authority. On one occasion, agents in Trieste discovered a ring of smugglers who had been illegally ferrying aliens into the United States for several months.

129 CIC Guard Details Folder 50-000196 10 May 1947 (CONFIDENTIAL), (Central Records Facility).

130 Report of CIC Guard Details Folder 50-000196 14 July 1947 (CONFIDENTIAL), (Central Records Facility).

Special Agent Wiltz Evans reported on 21 November 1949 that the gang transported the aliens from Trieste to the United States aboard the Italian steamship Maria Bibolini. A specially constructed room in the bow of the ship, between the anchor chain locker and the water tank, was used as quarters for from twenty-five to thirty-five persons on each ocean crossing. They were debarked at Baltimore.

The ship's master, the chief engineer, the second in command, and the storeroom men all were involved in the racket. Prices for the voyage ranged from 1,700,000 to 1,900,000 lire per person.[131]

In July 1947, CIC investigated the sewer system of the port of Trieste. Some of the larger sewers were thought to run under dock warehouses where valuable American supplies were kept, and it was believed that villagers might use the sewers for the purpose of evacuating pilfered supplies.

As another port security measure, CIC formulated a plan for issuing badges to authorized dock employees. The badges were collected at the end of the working day to insure that no worker overstayed his working hours and that no unauthorized persons entered.[132]

Constantly on the alert for the illegal shipments of arms and war materiel, CIC port Security agents became well informed on transport conditions in and out of Trieste.

Typical of methods to avoid the ban on sale of armaments to the satellite countries was a ruse used by one Italian manufacturer to sell ball bearings to Czechoslovakia. The Milan manufacturer would sell a shipment to a dealer in Zurich, Switzerland--a legal transaction. The shipment went by rail to Trieste, since no duty was charged for shipments from the free port. More important, while the ball bearings were enroute to Trieste, they were resold to a dealer in Czechoslavakia.

The sale of strategic material by the Swiss to Czechoslovakia was legal as far as the Swiss government was concerned, but the United States and British security forces were ordered to find and impound all of these shipments to await the decision of the proper authorities. Much CIC manpower was expended in the search for this contraband.[133]

133 Interview with Maj Leo W. O'Leary (UNCLASSIFIED), (Central Records Facility).

CIC and the Local Population

CIC investigations in Trieste led to many problems in dealing with the native population. Sometimes the problems were easily resolved, involving no more than efforts to placate a crackpot inventor disgruntled because the Americans did not recognize his genius. Often the problems were serious and required delicate handling to prevent outbursts of anti-American demonstrations.

Of particular concern to agents in Trieste was the propaganda situation. Post-war Trieste was a hodgepodge of nationalities--Italians, Slavs, Austrians. Each faction tried to out-do the other in matters of propaganda.

CIC Agent W. A. Berlin reported on 22 February 1946 that a wave of propaganda and pro-Slav rumors had flooded the Tarvisio area in January and February. Reports of threats against anti-Tito Slovenes were becoming more and more numerous and pro-Tito groups were holding many small clandestine meetings throughout the area.[134]

During the latter part of October 1947, the Yugoslav radio station in Ljubljana organized a propaganda service directed toward Yugoslav refugees in Italy and Austria in an attempt to persuade these individuals to return to their homes. Preliminary programs included a short talk by a prominent Slovene novelist and priest, Franc Sebastijan Finzgar. All refugees were invited to establish communication with Radio Ljubljana for any additional information which they might desire.[135]

Anti-American Propaganda Circular

In the fall of 1948, an informant gave Special Agent Gabriel B. Celetta a copy of an anti-American propaganda circular being distributed among middle-class Italians. The document, purportedly a report of an intelligence agent, was not traced to its source, although it was believed that the circular was distributed by Russian agents.

The leaflet praised the military superiority of the Soviets over the United States and condemned the Americans for robbery, rape, and other crimes against the people of occupied Germany. Morale and discipline of US troops were said to be very poor.[136]

136 Summary of Information Folder 50-000714, 6 Oct 48 (CONFIDENTIAL), (Central Records Facility). The propaganda leaflet is reproduced as Appendix 1.

Propaganda by Dollars

On 2 October 1950, a communication from the AC of S, G2, TRUST, advised CIC that propaganda was being disseminated in the form of a photographed United States dollar bill.

The investigation conducted by CIC disclosed that a copy of a fake dollar bill had been given to a Corporal Jackson by one Giovanni Pirozzi, an employee of the American Forces in Trieste.

Pirozzi claimed that he found the counterfeit American dollar rolled up on the top of a trash can on the ground floor near the entrance to his home.

On the front of the bill was a photograph of an ordinary one dollar bill, United States currency. On the back was a circled atomic bomb with the words "Terrore Atomic Morte" (Terror, Atomic, Death) and a circle enclosing a hooded figure labeled K.K.K. and two persons hanged by the neck. In the inside border were these words in Italian: "With this money they have not bought the Koreans. With this money they will not buy the Italian people."

Special Agent Dino Mernone in his report stated that there were no laws in the Free Territory of Trieste which prohibited the photographing of United States currency, so no further action could be taken.[137]

Reporting on the Trieste Situation

Propaganda studies were but one phase of a system of reporting developed by CIC in Trieste and Northern Italy.

Reporting on the Trieste situation proved a complicated process. It required a thorough knowledge of Italian politics--intricate in themselves--and employment of vast informant nets to cover the more than two hundred Italian political parties.

As a part of the political reporting task, agents filed reports on attitudes of the people in Trieste and surrounding areas towards the United States, the Italian government, Tito's regime in Yugoslavia, Communism, and a host of other subjects. Some typical examples of CIC political reports emanating from Trieste follow.

CIC Agent W. A. Berlin of the Tarvisio office reported on 22 February 1946 that increasing numbers of Yugoslavs were fleeing Yugoslavia because of oppression under the Communist regime. On the other hand, a number of local Slavs were

137 MOIC Photographs of American Currency used as Propaganda, Folder 50-001098, dated 13 October 1950 (CONFIDENTIAL), (Central Records Facility).

attempting to enter Yugoslavia because relatives, friends, or propagandists had convinced them that they would find ideal conditions under the Tito government.[138]

The arrival of a United Nations Organizations Commission on 2 April 1946 touched off a wave of propaganda by both Slav and Italian elements in Trieste. Long before the arrival of the commission, the Yugoslavs had been busy with the preparation and dissemination of pro-Yugoslav propaganda designed to impress the visitors. But when the Commission arrived, the Slavs played a secondary role to the Italians. The Italians put on a tremendous demonstration, and on the night of 2 April went so far as to threaten the Slav leaders with violence. Following the commission's visit it became clear that the Austrians were also leading opponents of the Italians, and the Italians united for the forthcoming elections against a possible Austro-Yugoslav block.[139]

In the days preceeding 1 May 1946, the political scene became tense in the Free Territory of Trieste. In the Tarvisio area, rumors of a Yugoslav invasion were received with mixed emotions. CIC personnel worked around the clock to keep track of the situation. The agents found tense Italians making defense preparations while the enthusiastic Slavs appeared to be spirited and boastful.

Aside from the prolific amount of rumors and stories, however, 1 May 1946 passed quietly.[140]

Surveys of political sentiment were an important part of CIC's reporting mission in Trieste, as the countries surrounding the Free Territory fluctuated between Communism and democracy. According to a CIC report of 23 June 1946, at least 80 per cent of the people in Trieste opposed the Tito regime. At Sonzia, no one except actual party members supported him. At Baucizza, all citizens but one were against Tito, and the people said "Come what will, but not the Yugoslavia of Tito."[141]

CIC Sub-Section "A" reported on 23 July 1946 that the people of the Tarvisio area were eagerly awaiting the Big Four decision on Trieste since their future also was at stake. The results drifted in rather quietly. People on the whole were satisfied with the disposal of Trieste, but dissatisfaction soon developed concerning the rest of the area involved.

141 Zone "A" MTOUSA Monthly Activities Report 50-000008, 23 June 1946 (CONFIDENTIAL), (Central Records Facility).

It soon became apparent that the Italians blamed the United States and Great Britian for the unsatisfactory agreement. Hostility toward the Americans became more open, and Italians hurled obscene remarks at Americans who passed them on the streets.[142]

Roman Catholic opposition to Communism was the subject of another political report prepared by Zone One CIC Sub-Section "G."

On 26 October 1947, Archbishop Margotti of Gorizia warned the town's inhabitants that Catholics were forbidden to participate in the Fronte della Gioventua (Youth Front) and the Unione Donne Italiane (Union of Italian Women), both Communist-dominated political organizations. Communist teachings were declared to be contrary to doctrines of the Church.

The Gorizia Provincial Committee of the Fronte della Gioventua reproached the Archbishop for his declaration and directed its representatives in Rome to investigate the circumstances which resulted in the pronouncement.[143]

CIC Meets the Press

Another aspect of CIC's political reporting involved coverage of party meetings and the countless patriotic demonstrations staged by the various factions within Trieste.

At one such demonstration on 21 March 1948, however, the political aspects became secondary to an encounter between CIC agents and members of the press.

Agents Don Braun and Alesander Galli, assigned to cover a political demonstration in front of the Army Exchange Service "Sugar Bowl," Piazza Unita, Trieste, were interrupted by a Mr. Green, an Associated Press correspondent, who wanted to know what action the police were going to take to curb the demonstration. When the agents refused to answer, the newsman became offensive in his language.

Moments later, the agents noticed a female photographer posing an American soldier and sailor in a manner which made it appear that they were participating in the demonstration. Agent Galli approached the woman, a part-time photographer for United Press, and asked her not to make the picture. When she refused to cooperate, the agents asked her to leave the scene. Again she refused. Meanwhile, another photographer, one Vitrotti, also photographed the soldier and the sailor as participants in the demonstration.

142 Zone "A" MTOUSA Monthly Activities Report 50-000008, 23 July 1946 (CONFIDENTIAL), (Central Records Facility).

143 Zone One MTOUSA Weekly Situation Report 50-000007, 5 Nov 47 (CONFIDENTIAL), (Central Records Facility).

Believing that the woman photographer was abusing her press privileges by tricking American military personnel into posing for photographs with definite political implications, the CIC agents telephoned their office for further instructions. The agents were instructed to bring the woman to the CIC office. After considerable argument, she finally accompanied the agents, but refused to surrender her exposed film to the G2 duty officer. She was released when she promised to show the prints to intelligence officers before publication.

Meanwhile, agents were sent to locate Vitrotti, the other photographer who had made pictures of the Americans at the demonstration. They found him at his laboratory, where he surrendered the negative. As the agents left the laboratory, they met Green, the Associated Press correspondent. Green demanded that the agents give him the film they had taken from Vitrotti. When they refused, the reporter assailed them bitterly, accusing them of restricting freedom of the press. Both Green and Vitrotti accompanied the agents to the CIC office.

When the group reached the CIC office, Green was permitted to examine the negative for the first time. He immediately announced that it was not suitable for publication. Green apologized for his bitter words, and the case was closed.[144]

Reporting on Army-Civilian Relations

The reaction of the local population to the army forces was of CIC interest because the temper of the people was often an indication of events that might affect security. A typical survey of civilian sentiment was reported by a reliable CIC informant, on 12 June 1946, when American troops were preparing to leave the Tarvisio area. This departure was greeted with mixed feelings among the local populace.

Many small businessmen and laborers expressed disasspointment on seeing their main source of income disappear, but the leaders of parties and partisan organizations were pleased with the mass departure. They quickly formulated plans to punish those who had cooperated with American troops.[145]

Troops and Civilians Clash

Reporting on army-civilian relations was not always the end of CIC's responsibility. At times, CIC agents were called on to investigate disorders resulting from clashes between troops and civilians.

144 Memorandum for the Officer in Charge, Port and Security Section, CIC, Trieste, dtd 24 Mar 48 (CONFIDENTIAL), (Central Records Facility).

145 Zone "A" MTOUSA Monthly Activities Report 50-00008, 23 June 1946 (CONFIDENTIAL), (Central Records Facility).

At 0100 hours on 5 June 1946, agents of the Cividale office investigated a clash between Italian civilians and soldiers of the 313th Engineer Battalion at Prestento. Investigation revealed that right wing elements in Prestento had requested Dino Comelli, commander of an Ossopo Partisan Company, to distribute arms to frightened inhabitants, who feared a Slav attack that evening. This arms distribution was reported to certain anti-Ossopo individuals in the Cividale Civilian Police, who raided the Benati home, assisted by two men from the 313th Engineer Battalion. Tense with fear, Teresa Benati mistook the American soldiers for Slavs, cried for help, then hurled nine grenades at them.

CIC agents ordered the Carabinieri to surround the house while they themselves returned to Cividale to obtain assistance for a raid of Prestento. The raid was carried out between 0600 and 0900 prior to the arrival of units of the 350th Infantry Regiment and the 752nd Tank Battalion. All Partisans in Prestento voluntarily surrendered their arms.[146] Following the arrival in the small Italian city of Padua of the General Headquarters, British Forces, Central Mediterranean Forces, the civil population became increasingly annoyed and disturbed by the traffic conditions and the number of serious accidents involving British military vehicles. Special Agent F. Sanders Washburn reported on 12 December 1946 that certain elements made capital of the situation for propaganda purposes.

At about noon on 10 December the driver of a British motor vehicle ignored the signal of the Italian traffic policeman at a principal intersection, crossed the opposing traffic, and struck the policeman, continuing at increased speed until he rammed the wall of a cafe. This event proved to be the match which ignited an already tense situation. Crowds in the streets administered a beating to the driver, then turned on all British personnel or property in sight. A Military Police squad rescued the driver, but were themselves attacked. Several other vehicles were overturned. Officers were assaulted. One of these was reported by the newspaper "Gazzattino" to have used abusive language toward the crowd.

The rioting continued throughout the day and into the early morning hours. Twenty persons were injured and fifty vehicles were burned, overturned, or otherwise damaged.

The next day was calm until well after dark, when approximately one hundred British troops moved out from their quarters in military formation, apparently without orders. The group marched through the main streets of Padua molesting any civilians in their way. A few taxis and private cars were damaged, and windows were shattered.

The Communist press made capital of the situation.[147]

147 Disorders at Padua, Folder 50-000407 Dec 18, 1946 (CONFIDENTIAL), Central Records Facility).

CIC Agents Attacked

CIC agents of Sub-Section "G" were attacked on 5 June 1947 while searching for documents pertaining to Communist Party activities in the area. An informant had reported the presence of such documents on grounds surrounding a building previously occupied by Allied troops in San Pietro di Gorizia.

While searching the grounds, the agents were approached by Max di Ivan Nemec and Ivan Isidor Forcessin, who threatened to overturn the agents' vehicle. At a signal, thirty other persons rushed in and attacked the CIC agents.

Civil and Military Police rushed to the scene and arrested the instigators of the demonstration.[148]

Miscellaneous Investigations

CIC assignments in Trieste occasionally fell outside the counterintelligence mission. Among the more unusual CIC encounters with civilians were the contacts agents had with the local inventors who claimed their products would be of value to American military forces.

In September 1950 Special Agent Ely S. Matteri investigated the claim of that he had invented a new type anti-aircraft projectile which he desired to sell to the American government.

said he had developed the projectile while engaged in research work for the Italian Army during World War II. explained that the normal anti-aircraft shell spread fragments in a conical pattern after the projectile exploded, leaving that part of the target inside the cone unharmed. claimed that his projectile first spread in the form of a cone, then gradually changed to a cylindrical shape after the explosion saturating the entire area within the cylinder with fragments.

According to the shell had proven satisfactory in tests for the Italian Army, but Italy's military collapse had prevented further development. He said he had destroyed all the documents and plans of this projectile after the Italians surrendered, but that he could reconstruct them for a sum of $50,000 and a place in American intelligence.

When questioned about other engineers who had worked with him on the project, said he had done all of the work himself. Records of the 17th CIC Detachment do not show the outcome of the proposal.[149]

148 Zone One MTCUSA Weekly Situation Report 60-000007, 9 June 1947 (CONFIDENTIAL), (Central Records Facility).

149 MOIC, Interview Concerning Anti-aircraft Projectile Folder, 50-001098 14 September 1950 (CONFIDENTIAL), (Central Records Facility).

CIC again [illegible] the receiving agency for scientific material when a confidential CIC source for [illegible]ied copies of written correspondence and reports of the [illegible] which indicated that Engineer [illegible] had invented a new and successful method of transmitting secret messages, both by telegraph and radio.

All tests run by the [illegible] were positive, and the system was declared to be foolproof from the viewpoint of detection, reception, transmittal, mobility, efficiency, durability, maintenance, and range. The system was reputedly effective on any wave length and under all radio and telegraphic conditions.

The Italian government had turned down the purchase of the instrument because of the lack of funds, the report stated. [illegible] had offered it to the United States for $1,000,000 and to the British for 350,000 pounds.[150]

CIC Investigates Criminal Cases

Occasionally, CIC agents in Trieste investigated purely criminal cases. Black market activities and smuggling most frequently came to CIC attention, although agents investigated other types of crimes ranging from petty theft to murder.

Black Market Investigations

On 27 November 1945, a representative of the 62d Field Security Service contacted Sub-Section "A" CIC and requested assistance in a raid on the home of [illegible] suspected along with his son of being the biggest wine smuggler and black marketeer in the area.

The raid took place at 1400 hours on [illegible] with Carabinieri, Guardia di Fineza, Austrian Civil Police, British Military Police, and CIC participating. In the cellar of the house agents found between fifty and seventy-five bottles of wine and about 200 empties. In other parts of the house they found three shot gun shells and four rounds of 7.65 Mauser ammunition.

In one of the [illegible] found in his room was a loaded German Dreyse pistol, and a clip of seven rounds. Also in his room were old German and Italian uniforms and a large sum of money in Reichsmarks and Italian lire.

A 27-year old man was hiding in one of the upstairs rooms. He carried an AMG travel permit from Gradisca to Ferrara and return, made out to [illegible]. He was held for being in a prohibited 20 km zone without proper permission. While the raid was in progress, two teenagers appeared at the [illegible] house with the

150. [illegible] (CONFIDENTIAL), (Central Records Facility).

Austrian civil police. They had been stealing chickens in Austria and trading them to for wine.

The Carabinieri took the uniforms, the British held the chickens, and CIC claimed the pistol, ammunition and the money.[151]

German Prisoners of War in The Black Market

While CIC was not directly responsible for investigating black market activity in the Tarvisio area, the black market did constitute a security threat. Reports had reached the Tarvisio CIC office early in 1946 to the effect that German Prisoners of War were carrying on extensive black market activity in wine and tires. The people in the area felt the Allies condoned the POW in their illegal activities. The populace also felt that should there be an outbreak between the Yugoslavs and the Allies, the POW would be enlisted to fight against the Yugoslavs.[152]

Black Market in Tires

In mid-May 1947, CIC agents of Sub-Section "B," Zone One, arrested two American soldiers and two Italian civilians for selling US Army tires on the black market.

Acting on a tip from an informant in the 788th Ordinance Company, CIC undercover agents followed all loaded trucks leaving the company area. On one of the surveillances, agents followed a pick-up truck loaded with tires. Soon the soldiers in the truck stopped and began unloading the tires. One agent went ahead to notify Agent Eric H. Delling, Jr. of the action. As Delling came from Cividale, he met the truck, now empty. He arrested the soldiers and took them to Torreano, where one of the prisoners identified the Italians to whom the tires had been sold.

The soldiers were court martialed, and the Italians were turned over to Military Government for prosecution.[153] In January 1947, a black market case led to the arrest of a US Army deserter, when CIC agents apprehended for black market activities.

Interrogation revealed that was a deserter from the United States Army who had left his unit in 1944. Born in Trieste, had been commissioned in the Italian Army, but had been exiled during Mussolini's regime because

151 Blackmarket Activities Folder 5-000165 19 May 1947 (UNCLASSIFIED), (Central Records Facility).

152 Monthly Activities Report 50-000008 23 April 1946 (SECRET), (Central Records Facility).

153 Black Market Activities Folder 50-111065, 19 May 47 (UNCLASSIFIED), (Central Records Facility).

he was a Jew. After migrating to the United States was drafted into the US Army and shipped to the Mediterranean Theater. He deserted his unit in Naples, Italy. After interrogation, CIC turned him over to the Provost Marshal of the 88th Division for disposal.[154]

CIC Breaks Up a Confidence Racket

Often agents in Trieste were accidentally drawn into criminal investigations. In February 1948, for example, agents assisted in the destruction of a confidence game which preyed on American military personnel.

Agent Peter Gordon was strolling along a Trieste street on 9 February 1948 when he noticed a young woman who seemed to be trying to attract the attention of Allied soldiers and sailors. A closer observation revealed that the woman was exchanging occasional glances with a man who followed her at a short distance. Gordon watched the pair for fifteen minutes without approaching either.

Moments later Gordon was startled when the man accosted him in a loud, arrogant voice and accused the CIC agent and other American officers of molesting his wife. Convinced that the man was trying to provoke an incident, Gordon summoned the nearest civil police patrol to arrest the pair and take them to a Military Police Station for identification and questioning.

At the police station, the man, Mario Sidi, insisted that the agent was attempting to molest his wife. Sidi claimed to be a well-known journalist and said he could obtain innumerable witnesses to the incident. The woman was identified as Lidia Canciani. When the couple produced a marriage certificate, they were released.

Further investigation revealed that Canciani lived with her mother and was unemployed. She had given birth to an illegitimate child in 1945, and at the time of the incident was the mistress of an unidentified individual who frequently visited her home. She was often seen in the company of Allied soldiers and maintained close connections with Sidi. Neighbors and the Municipal Guard stated that Canciani was a prostitute.

A check on Sidi's background convinced CIC that the man had made false statements regarding his identity, occupation and marital status. The investigation produced one startling result, however; Sidi apparently had good friends within the Allied command. Within thirty minutes after Sidi's release, two different military sources called to request a detailed explanation for Sidi's arrest.

154 Zone "A" MTOUSA Monthly Activities Report 50-00008, 25 February 1947 (CONFIDENTIAL), (Central Records Facility).

CIC concluded that Sidi and Canciani were engaged in a confidence racket. They enticed inexperienced Army and Navy personnel into compromising situations, then blackmailed them.[155]

CIC Solves a Triple Murder

Another case that fell outside the normal CIC mission was the investigation of a triple murder in May 1949. The case indicated clearly what type of cooperation CIC could expect from the Venezia Giulia Police.

Giusto di Giusto Trevisan, a jeweler in Trieste, occupied a villa at Muggia with his mistress, Lidia di Giovanni Ravasini, and a maid, Edvige Pia Odonocini. On 15 September 1946 when Trevisan's parents arrived at the Muggia villa for a visit, they discovered the bodies of Trevisan and the two women in the cellar. All had been shot.

Venezia Giulia police officials from Muggia, who investigated the murders, ruled out theft as a motive, since the killers had failed to take objects of considerable value located conspicuously throughout the house. It was apparent, however, that the house had been searched. Every room was in utter disorder.

A CIC informant brought in the clues which ultimately led to the solution of the crime. The informant claimed he was present in a bar one evening when one Umberto Picca revealed to companions that he had had a part in the triple murder. Picca reportedly had said Trevisan's murder originally was intended only as a robbery to replenish empty Communist Party coffers. Party intelligence agents in Trieste had instructed four bandits to raid Trevisan's home and steal ten kilograms (twenty-five pounds) of gold believed to have been in the jeweler's possession.

Under arrest, Picca related the following account of the murders:

Upon arriving at Trevisan's home, Picca and three assistants, all of whom concealed machine-guns under their overcoats, ascertained that the jeweler was not at home; consequently they waited for his arrival, not informing Ravasini or Odoncini of the nature of their visit. When Trevisan eventually returned, Picca requested him to surrender his gold, but Trevisan denied possession of such a sum. Picca and his associates then searched the house. Finding no gold, they finally decided to leave. First, however, Picca informed Trevisan, Ravasini, and Odoncini that they would be bound and placed in the cellar of the house so they could not notify police before the robbers could escape to Zone "B." Trevisan, believing that the intruders were Communists and desiring that they leave as quickly as possible, permitted himself to be tied up and escorted to the cellar. Once the group arrived in the cellar, however, Picca shot Trevisan and the two women and returned with his associates to Capodistria.

155 Incidents US personnel--Italians, 12 Feb 48 (CONFIDENTIAL), (Central Records Facility, Folder 50-000407).

Picca stated that he killed the three because he did not want to leave any witnesses to his attempted theft.

It was of interest to the CIC to find that all photographs taken by the Police during their investigation of the incident had disappeared from the Police Scientific Laboratory, the Police Museum and the Central Files. Agents also ascertained that the names of the individuals assassinated were not contained in the Homicide and Murder Book of the Venezia Giulia Police Scientific Laboratory.[156]

Available records do not show the final disposition of the case.

A Crackpot Comes to CIC

Investigative organizations are frequent targets of crackpots and people desirous of getting their names in the news, and CIC was no exception. One of the most fantastic tales which came to CIC's attention was the story told in August 1946 by Diki Cernja.

CIC received from Cernja a confession that he and two other men had kidnapped the son of Charles A. Lindbergh in the United States.

Cernja told a rambling, incoherent story, first to the Royal Police and later to CIC. He gave a "souped up" movie version of the kidnapping, including the shooting of the driver of the pursuing police car. He claimed among other things that the child was wounded and died from the police bullets.

Cernja also claimed that the child was buried in a New York cemetery under the name of Cernja.

A motive for the confession was never established, but it was thought that Cernja hoped to get a free trip to the United States.[157]

Police Agent Aspirant

Another crackpot who plagued CIC agents in Trieste was a man who wanted to be a detective.

In mid-December of 1947 the self-styled investigator stalked into the CIC office and boasted that he, Enrico Schueller, had information on a counterfeit money and narcotics ring operating in Trieste and headed by a Commander Kelly.

156 Summary of Information dated 28 May 1949 (SECRET) (Folder 50-000513 Central Records Facility).

157 Translation of an undated "confession" of Diki Cernja made to the Regia Questura (Royal Police) (SECRET), (Folder 50-000513 Central Records Facility).

The information given by Schueller was so sketchy and incomplete that it offered no basis for further investigation. Whenever the agent attempted to elicit detailed facts, the informant changed the subject and discussed other investigations he would like to perform. Schueller claimed that he would have to arrest or at least hold for questioning several persons of whom he had heard, but whose names or addresses he did not know. He repeatedly referred to a restaurant in Trieste where all principals in the narcotics ring gathered. The CIC agent checked with other members of the detachment and found that this restaurant had been under surveillance for a long time. They were convinced that none of the habituees of the place could be members of a narcotics ring.

Schueller was extremely vague in his description of the persons involved. He mentioned an American soldier who came from Chicago, an American officer whose name was Montgomery, and an Italian civilian from Udine who drove a big car. He could not give the license number of the car or the organization to which the two Americans belonged.

In return for his assistance, Schueller demanded that he be granted the power of arrest, a weapon, Post Exchange privileges, and a room in a good hotel. Without these privileges he was not willing to work. On the other hand, he refused to give essential information which would have warranted the granting of any of these demands.

During an interview with agents of the CID, it was learned that the CID accused Schueller of ruining two cases on which he had offered help. Schueller appeared unreliable and seemed to be a shifty individual who wished only to obtain personal privileges.[158]

CIC Investigates Attempted Kidnapping

In Zone A, CIC agent Hugh E. Harvey investigated an attempted kidnapping when a peasant reported on 5 July 1946 that Yugoslav soldiers had tried to abduct him the day before.

Stanislav Gaberscek, a farmer, claimed that he was working with his two brothers and a girl in the family fields near Ursina on 5 July when two Yugoslav soldiers armed with machine guns appeared. The soldiers accused Gaberscek of being the leader of White propagandists in Ursina. Gaberscek denied the charge, but voiced his opposition to the communist government. One soldier asked whether the farmer had forgotten his twenty-eight months of service as a Partisan. The man replied, "no." Pointing his machine gun at Gaberscek, the guard dared him to repeat the answer. The peasant vowed he would say no a hundred times. Still the soldier did not fire.

158 MOIC, Purported Counterfeit Currency and Narcotics Ring-FTT Folder 50-000396 dated 15 December 1947 (CONFIDENTIAL), (Central Records Facility).

Gaberscek refused the soldiers' order to accompany them to Monte Nero for questioning by their superior officer. The three brothers and the girl interlocked their arms and told the guards if one went, all would have to be carried.

Perplexed, the soldiers held a hurried conference. One then left to obtain help, while the others remained to guard the four peasants. Several hours later, a Yugoslav captain and five enlisted men appeared, and the officer began questioning Gaberscek. He threatened to shoot all four if the farmer did not accompany him to Monte Nero. Again, the group locked their arms and refused to budge. Four of the enlisted men attempted to pull them apart. Unsuccessful, they began battering the peasants with fists and gun butts. After more than twenty minutes the stubborn peasants were subdued and the officer and three enlisted men departed, leaving three soldiers to guard the four prostrate bodies. Five hours later, the guards deserted their posts, and the peasants escaped.

CIC investigation failed to disclose the identities of the soldiers responsible for the attempted abduction, or the motive, and the case was closed without solution.[159]

CIC Plots Arrest of Kidnappers

By the fall of 1947, a wave of kidnappings had terrorized a large segment of the Trieste population. It was believed that four key members of the Communist Party were behind most of the abductions, and all persons involved were thought to be either Communist Party members or agents of OZNA, the intelligence agency of the Yugoslav Central Police.

CIC, working in cooperation with the British Field Security Service and both American and British Military Police, carefully plotted a raid aimed at seizure of the persons responsible for the terrorism. A TOP SECRET memorandum dated 11 September 1947 listed addresses and detailed physical descriptions of the suspects and outlined plans for the raid.

Ten agents were to direct individual projects and searches with the aid of twenty-four other agents who were to participate in the searches. Ten persons were designated for interrogation and document-analysis duty in connection with the mass arrests. Sixty-eight Military Police and thirty security guards were to participate in the operation.

To counter the reaction of the Communist press, the following press release was prepared for handout on the day of the raid:

159 Kidnapping of Zone "A" Civilians, Folder 50-000452, 5 July 1946 (CONFIDENTIAL), (Central Records Facility).

"To meet a serious threat to public safety, peace and order, which is the result of recent kidnappers, threats of kidnappings, and terrorization, a number of arrests have been made this morning by Allied Military Authorities.

"The persons arrested are believed to be, and in some cases are known to be, responsible for inciting, planning, and directing terrorist actions based upon political considerations which are foreign to peaceful and ordered society. The principals in these acts have used their positions of responsibility and prominence in the Communist Party and Julian Partisans Association to hide their actions. This abuse of political freedom and activity represents a direct threat to the Trusteeship Administration of the Trieste Free Territory in its mission of obtaining and securing public order and safety."[160]

Available records do not show the final results of this project.

Russian Rocket Sites Reported

On 12 November 1947, Sub-Section "G," CIC Zone One, reported that Italian authorities had received what they considered definite proof that a rocket launching track had been constructed by a specialized engineer company of Russian troops in the Cepovan (Chiapovana) area. According to reports, the track was directed toward the city of Udine. However, the presence of rockets or other similar types of missiles had not been detected. Other reports indicated that the engineer company stationed in Postojna (Postumia) was constructing another rocket track which would cover the Trieste area.[161]

160 MOIC dated 11 September 1947 (SECRET), (Central Records Facility) Folder 50-000513.

U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

PART I ···PLANNING AND ORGANIZATION

PART I

PLANNING AND ORGANIZATION

The collapse of the vaunted German forces had been rapid once the Allied Armies quelled the last enemy offensive in the Ardennes and Alsace and poured across the borders of Germany. By 4 May, Armies of the Wehrmacht began surrendering en masse, and three days later, on 7 May, Field Marshal Jodl agreed to unconditional surrender on behalf of all the German forces.

Long before V-E Day, American intelligence officials had recognized and prepared for the huge counterintelligence mission that the occupation of Germany would entail. Even in the waning days of combat, the importance of CIC operations had begun to overshadow almost all other intelligence efforts. Teams from IPW, OB, MII and other G2 units had been assigned to help CIC wherever and whenever possible.[1]

Pre-Surrender Planning for CIC in the Occupation

The initial planning for CIC operations in Occupied Germany dated back to the fall and winter of 1944 when Allied troops were still emerging from the hedgerows of northern France and battling across the muddy fields of the Low Countries.

To the Administrative Section of the 418th CIC Detachment, serving at Headquarters, 12th Army Group, fell the task of planning the organization for an overhead CIC Detachment for Germany, to go into immediate action once the combat phase was over. The requirements were not easy to meet; counterintelligence operations would require an extensive CIC network. They would also require a high degree of flexibility.

It was immediately evident that the 12th Army Group CIC Detachment, the logical organization for such an assignment, lacked sufficient strength to be converted into the Occupation Detachment. It was decided that personnel would be drawn from combat CIC Detachments being inactivated and by the reduction of other division detachments. This would bring the 418th to a strength of 323 officers and 1,100 agents, organized in appropriate teams in accordance with TOE 30-500. Although the plan called for the reduction of division detachments, the strength of the corps and army detachments was to remain unchanged.

---

1 See "Germany Overrun", Chapter 10, Series 1, this History

This pre-planning meant that CIC operations could continue, virtually uninterrupted, once the combat phase was completed. Accordingly, on 25 April, Organization Order Nr 276, published by Headquarters, European Theater, activated the 970th CIC Detachment, effective 10 May 1945, and reorganized 55 divisional CIC units as teams, with surplus personnel to be transferred to the overhead detachments.

On 10 May, the large-scale paper transfer of CIC personnel took place. The 418th CIC Detachment was inactivated and the 970th CIC created in its stead. Consisting of approximately 300 officers and 1,100 agents, the 970th CIC had its personnel split into units which were referred to unofficially as "slash teams" since their numerical designations were always preceded by the figure "970" and a slash mark, e.g. 970/88. The teams were assigned to duty with the American Armies, the 6th Army Group, and, in the Bremen Enclave, Norway, the Berlin Military District Headquarters, and Communication Zone. The entire US Zone of Occupation, including the frontiers, was covered by CIC personnel. Static CIC teams functioned in every city of reasonable size; border teams arranged controls along the frontiers; and other teams operated at numerous headquarters, providing internal security for these installations.[2]

CIC units, that continued to operate with their combat components, were permitted to retain one team type A-1 and one team type B-1 or two officers and five enlisted agents each. Extra personnel were frequently retained, in fact, if not in theory, by assigning them to the 970th CIC and simultaneously attaching them on detached service to the division detachment. These "paper transfers" permitted current operations to be performed without interruption, and the men on detached service were ordered to remain physically with their unit even though their records were sent to the 970th CIC.[3]

Commanders and Location of the Overhead Detachment

When the 970th CIC Detachment was initially activated at Wiesbaden, Germany, Lt Col Norman J. Hearn became the first commanding officer . By mid-July, it was necessary to transfer the headquarters of the 970th CIC to Frankfurt, where, after several shifts, the Detachment settled down to a four-year stay at the

2 Report of Operations, 12th Army Group, Volume IV, p 114-115 (UNCLASSIFIED) (Staff and Faculty Library)

3 Ltr to CO, 94th CIC Det, from CIC Hq, ETO, Subj, "Orders," dtd 14 May 45 (UNCLASSIFIED) (Box 25095, Kansas City Records Center.)

I. G. Farben Building. Lt Col H. E. Wilson, who at the end of the war had been Chief, CIC, ETOUSA, succeeded Colonel Hearn as Detachment Commander until 31 October 1945, when Lt Col R. D. Stevens was designated as the Commanding Officer.[4] It was on the date of Colonel Stevens' appointment that the first major change in the Occupation Detachment took place.

CIC Organized on Regional Basis

Until the directive of 31 October 1945 had been issued, operational control of the CIC teams had been vested in the ACofS, G2, of the area in which the agents operated. For the initial counterintelligence operations, which consisted largely of wholesale roundups and interrogations of individuals on the automatic arrest lists, this decentralization was practicable. However, after the first four months, the number of automatic arrests took a sharp decline, and the result was that CIC manpower, already depleted by constant redeployment of personnel to the United States, was being wasted.

Intelligence officials at United States Forces European Theater Headquarters, concluding that the organization for security in Occupied Germany should be patterned after the structure in the United States, entrusted the occupational counterintelligence mission to the 970th CIC Detachment at CIC headquarters in Frankfurt. Operational considerations that dictated this major shift included the change in CIC assignments to highly specialized investigations, the necessary lifting of certain civilian control measures, CIC assistance in the War Crimes operations, the increased importance of the non-identification of CIC agents with local troops, and the greater dependence in counterintelligence operations upon a central clearing point with adequate files and direct communications.[5] The reorganization and the personnel shortage resulted in the withdrawal of CIC teams from Theater Service Forces and establishment of regional and sub-regional CIC offices.

Under the new plan, which was formally initiated on 30 November 1945, placement of CIC units was based on geographic and demographic considerations rather than the location of American military forces. Regional CIC offices were established in order that key cities in the US Zone could be given complete and continuous coverage.

---

4 History of 66th CIC Detachment, Udtd, (CONFIDENTIAL) (Central Records Facility)

5 Weekly Intelligence Summary No 16, dtd 1 Nov 45, Hq USFET, office of the AC of S, G2 (SECRET) (Central Records Facility)

However, the CIC units with Seventh Army (Western Military District), Third Army (Eastern Military District), several tactical divisions, and the Bremen Enclave were maintained. The relationship between army CIC and the regional offices was somewhat complex; the situation in the Third Army area serves as an example.

Under the revised organization, the Third Army and Eastern Military District were divided for CIC coverage into three regions, corresponding to former corps areas. Regional headquarters were established in Munich, Bamberg, and Regensburg and given the responsibility for coordinating CIC activities, regrouping and consolidation of CIC personnel, and the establishment of working communication network within their respective areas.

The three regions were further divided into sub-regions. The sub-regions were then covered by from one to four former "slash teams" of the 970th CIC, each of which had been consolidated administratively and operationally into single sub-regional detachments. The commanders of these detachments were responsible for supervising the work in the field and maintaining liaison with higher echelons.

Within the Eastern Military Districts, CIC units attached to Third Army and to the First and Ninth Infantry and the Fourth Armored Division continued to function. Their responsibilities were largely security of troops and installations, with Kreis coverage limited to the immediate area in which their tactical headquarters was located.[6]

The situation within the Seventh Army area (Western Military District) was similar, but records do not indicate the relationship between tactical and regional CIC units.

Problems of the Reorganization

The initial effect of the transfer of most CIC operations in the Third Army area to USFET was "confusing." No provision had been set up for an operational headquarters, although in December, the CIC Central Registry at Frankfurt began to take over control of all CIC operations. Problems of liaison, channels, personnel, and numerous small details plagued CIC throughout the first month of changeover.

But the principal matter of concern to the Third Army CIC Detachment Commander, Major Anthony Lobb, was the "....many 'investigating' agencies running around Germany, one delving

6 Monthly Information Report from Hq Third US Army, 303d CIC Detachment, dtd 10 November 1945, (UNCLASSIFIED) (Central Records Facility)

into the other's case, each doing a part of a case, and leaving it half done. The most important thing facing CIC is coordination at the top."[7]

The CIC Mission in Germany

The 970th CIC grew from a small force to a linked organization of 2,500 officers and men that had an overall mission "to protect the interests of the United States in the European Theater against espionage, sabotage, and subversive activities, to prevent the reorganization of ex-enemy intelligence services and secret police, and to locate and apprehend specified war criminals, suspects, and witnesses." All this was in addition to the continuing work of locating and apprehending persons in automatic arrest categories. Specific CIC duties, that were outlined during the late months of 1945, included the responsibility of screening all persons in Germany, claiming American or British citizenship, to check for possible traitors; the compilation of reports on the loyalty of all United States civilian employees (including those working for United Nations Relief and Rehabilitation Administration (UNRRA), the Office of Strategic Services, and Camp Shows; and the screening of German brides of American servicemen prior to issuance of visas by the American Consulate General. Army personnel engaged in the formulation of policies for the Information and Education Branch were added to the list of individuals who required a loyalty clearance for their work.[8]

Counter Intelligence Directive For Germany

The principal document upon which the mission of the Counter Intelligence Corps was based, during the first year of occupation in Germany, had been published at Headquarters, 12th Army Group, before the combat ended. The Counter Intelligence Directive for Germany, dated 10 April 1945, laid down the basic policies that governed operations. A special section dealing with the Counter Intelligence Corps listed 16 different functions to be performed by CIC agents during the occupation.

1. To arrest any person who constitutes a threat to the security of the Allied armed forces, including leaders

7 Monthly Information Report from Hq, 303d CIC Detachment, dtd 3 January 1946, (CONFIDENTIAL) (Central Records Facility)

8 Law, Order and Security, from Occupation Forces in Europe Series, 1945-46, from Officer of the Chief Historical, European Command, Frankfurt-Am-Main, Germany, 1947 (SECRET) (Central Records Facility)

of the Nazi Party and affiliated organizations.

2. To investigate cases of espionage, sabotage and subversion.

3. To search buildings, billets and installations which are known to, or may contain documents of CI value...

4. To search for documents which the Germans consider important as a basis for creating a new military machine or for the continuation of the Nazi Party.

5. To contact the civil authorities initially with MG if practicable.

6. To establish informant systems among local persons known to be friendly to the Allied cause in order to procure all possible information of CI interest, particularly that information relating to underground, anti-Nazi, or anti-Allied activity.

7. To locate and seize enemy sabotage equipment....

8. To coordinate with MG in the discovery and collection of any hidden armament, radio transmitters or equipment which have not been surrendered or reported in accordance with MG proclamations, laws, ordinances, notices or orders.

9. To cooperate with MG and PM regarding security requirements involved in marshalling refugees and the screening of refugees for individuals of security interest.

10. To coordinate with MG in the establishment of check points for travel security control and to recommend to MG approval or disapproval of requests by applicants for travel permits.

11. To conduct security surveys and make continual security checks for protection against sabotage of military, public and private installations, the continued operation of which is essential to the Allied armed forces.

12. To coordinate with AAA to secure information indicating the dropping of parachute agents.

13. To check, in coordination with MG, the observance by the civil population of all security provisions contained in the proclamations, laws, ordinances, notices and orders issued by MG and to make recommendations

to MG for added measures or for improvements in the enforcement thereof.

14. To recommend to MG the removal of unreliable officials. Civil officials will be arrested by CIC without consulting MG only when immediate apprehension is necessary for security reasons.

15. To investigate civilians employed by the army in capacities which might endanger classified information or equipment.

16. To report all trends of civil dissension to the appropriate G2 (CIB).[9]

The provisions of this directive, modified by subsequent changes and additions, remained in effect throughout the first year until superceded in July 1946 by a new counterintelligence directive.[10]

The Security Situation During the First Ten Months

Although the Counter Intelligence Directive had been drafted with the expectation that the Germans would actively resist the Allied occupation, this resistance failed to materialize in any organized form. For the first ninety days after the surrender, the security picture was obscure. No major difficulties were encountered, despite the fact that there were continual boundary changes between army units, thousands of American troops were being redeployed, displaced persons crowded Germany, and an influx of refugees poured in from the east to escape the Russian occupation.

The docility and cooperation of the German population during these first months surprised the American security officials, and several possible explanations were offered. CIC experiences showed that the collapse of Germany had been so rapid that Nazi plans for underground activities against the Allies had never progressed beyond the formulation stage. The hasty roundup of SS, SD, and Gestapo[11] personnel by CIC also

---

9 Counter Intelligence Directive for Germany, from Hq 12th Army Group, dtd 10 April 1945, (CONFIDENTIAL) (Central Records Facility)

10 Law, Order, and Security, from Occupation Forces in Europe Series, 1945-46, from office of the Chief Historical, European Command, Frankfurt-Am-Main, Germany, 1947 (SECRET) (Central Records Facility)

11 The Schutz Staffeln, popularly called SS, was the Protective Guard of the Nazi Party: the Sicherheitsdienst, or SD, was the Secret Service of the SS; the Gestapo was the State Secret Police; and the Abwehr was the overall military intelligence agency.

robbed any incipient resistance movements of their backbone strength.

Other conclusions were ventured, based upon certain generalizations of the German national character. The traditional German acceptance of strong authority was cited, as well as an overall resignation to the fate of having lost the war. But some cautious security officials viewed the passiveness of the German population as a deceptive lull before a storm. The German experiences in France, where resistance had not developed against the Nazi conquerors until the shock of defeat had worn off and weaknesses in the military administration were spotted, was offered as a warning.

This latter viewpoint was justified several months later. In October 1945, the German population, faced with an intensified program of denazification, the approach of winter and its acute economic problems, and the removal of non-fraternization barriers with attendant incidents between occupying troops and German youths, began to react. Indications of increased unrest dropped up frequently. The number of incidents of counter-intelligence concern, which had dipped steadily through August and September, swung sharply upwards. Minor disorders, such as violations of curfew orders and infringments of travel and border regulations, increased. Numerous instances of illegal possession of American goods were uncovered. A sudden epidemic of wire cutting broke out, apparently unorganized, but widespread. But more significant and dangerous were the frequent reports of isolated attacks on American soldiers, thefts of American supplies, and possible acts of sabotage.

This unfavorable situation prevailed through the months of October and November and was somewhat aggravated by measures that were implemented by MG. Public Law Nr 8, which called for the denazification of all commercial enterprises and relegated all confirmed Nazis to manual labor, provoked "strong and bitter resentment."[12] The Germans seemed particularly fearful that this law would wreak further havoc with their economy and reduce the amount of available goods. Only a small segment of the population applauded the Allied effort to purge all Nazis from places of importance in industry.

The inability to inforce fully, the provisions of Public Law Nr 8 resulted in a growing disrespect and attempted evasion of MG rulings. A number of reports revealed that many ex-Nazi businesses were functioning smoothly after a change of title

12 Weekly Intelligence Summary No. 13, from Hq USFET, Office of the AC of S, G2, dtd 11 October 1945 (SECRET) (Central Records Facility)

and the installation of a front man. One party member was overheard stating: "We must act quickly to transfer the business, only the stupid get caught." From Third Army, in northern Bavaria, came the statement that "there is much feeling against complete de-nazification. It is particularly manifest in regards to withdrawing the licenses of professional men. It is felt that at this time, when certain professional skills are so badly needed, it is wasteful to force these men to work as common laborers."[13]

A sudden stabilization of the security situation occurred during December as German thoughts centered on obtaining enough food and fuel to endure the winter.[14] This improvement of attitude among the civilian populace held fairly well until the middle of March, 1946. Even the beginning of large-scale withdrawals of American troops, under the redeployment plan, did not encourage the Germans to disregard security controls.

Another adjustment of the American forces, that was expected to produce repercussions in civil security, was the severance of MG from the field forces, which took place on 1 January 1946, and was followed by the centralization of MG activities in three offices of MG (OMGUSZ), located in Bavaria, Wuerttenburg-Baden and Greater Hesse.[15] But the gradual transference of certain military government operations failed to result in lawlessness, although the customary civilian grumblings about restrictions and ordinances persisted. After the winter period had ended, American intelligence sources concluded:

"The German people, on the whole, have tended to cooperate with MG. This does not imply any great degree of popular enthusiasm for MG for it is incompatible with the many reported instances in which Germans twist and squirm in their efforts to evade MG control. In the end they must all knuckle under to get anything done. They have no other choice.

"A note of exasperation is beginning to creep into the more vociferous German complaints about MG. Over and above the hardships often caused by the inevitable delays and inconsistencies attending MG operations, many Germans appear to

15 Frederikson, Oliver J., The American Military Occupation of Germany, 1945-53, Historical Division, Headquarters, United States Army, Europe 1953 (UNCLASSIFIED) (Staff and Faculty Library)

find themselves baffled when confronted with the, to them, utterly strange American mentality.

"Most of the standard criticisms of MG run chiefly to two points--the selection by MG of German officials and employees generally considered inferior, opportunistic or bureaucratic, and the application of denazification in such a way that harmless small fry are caught, while shrewd "big shots" allegedly escape."[16]

New Concepts for Re-Occupation

By the end of March 1946, the initial phase of occupation in Germany had clearly come to an end. Although the European Theater could not yet be established on a long-term occupational basis, definite moves had been made to restore certain governmental functions to the Germans. Political parties had been authorized to organize on Laender level. (There were initially three Land areas in the US Zone) under close American supervision as early as 23 November 1945. On 5 March 1946, General Lucius Clay, the Deputy Military Governor and Commanding General, Office of Military Government (SS) met with the three Laender minister presidents to sign a "Law for Liberation from National Socialism," which placed a measure of responsibility for de-nazification upon German authorities. Also during March, US consulates were opened in six key German cities. Finally, by 1 April, the extent of the revival of the German state could be gauged by the fact that all German courts, up to and including superior appellate courts, had been opened.

Concurrent with the increasing responsibility vested in the German government, was a revised distribution of American military forces. By 2 January 1946, the mass redeployment of ETO soldiers to the Asiatic theater and to the United States ended. The need for a small, but highly mobile, zone-wide security force, carefully trained for occupation duties, led to the establishment of Headquarters, US Constabulary, on 15 February 1946 at Bamberg. Training for "search and seizure" operations, police policy and procedure, and other security functions was given to prospective members of the Constabulary throughout the spring, but the organization did not become fully operational until 1 July 1946.

Meanwhile, the Seventh Army was inactivated at the end of March and its personnel transferred to the Third Army or the

16 Weekly Intelligence Summary No. 35, from Hq USFET, Office of the AC of S, G2, dtd 14 March-1945, (SECRET) (Central Records Facility)

Constabulary.[17] The American military forces were being streamlined for increasingly stable occupation duties.

PART II

CIC OPERATIONS, MAY 1945 - FEBRUARY 1946

Against this ten months' background of American military occupation of Germany, CIC operations can be grouped largely under a single heading: De-Nazification.

CIC work in ferreting out former Nazis had started with the US entry into Germany during the combat phase, and the Occupation simply gave detachments and teams a stable situation in which to conduct their activities. The arrest lists bulged with the names of Abwehr officials and agents; SD operatives including members of the Gestapo and Kripo;[18] Nazi Party officials; war criminals of counter-intelligence interest; and other Germans who had roles in the Nazi regime. During a typically busy period, the week of 5 July to 11 July 1945, there were more than 6,500 arrests,[19] and by the end of 1945, more than 120,000 counterintelligence personalities had been apprehended.[20]

A Typical Round Up: CIC in Heidenheim

Although the situation facing CIC teams, and the manner they confronted it, varied from area to area during the Occupation, the experiences of the 970th team operating in Heidenheim were more or less typical. The agents comprising this team had been drawn from disbanded CIC units and were under the operational control of Seventh Army G2.

The agents set up two residences for CIC: one in a villa outside the town, used also as the agents' billet; and the other in Heidenheim, itself. CIC was "deluged" with denunciators, and the agents often found it necessary to intern both the denouncer and the person he had denounced until they could check on the reliability of the two individuals.

The agents in Heidenheim adopted a firm attitude in dealing with Germans, and this "always the master" appearance paid dividends. No real resistance was encountered from the Wehrwolf or other subversive groups. Letters received at the CIC office were frequently addressed to the "American Gestapo" or the "American SD," a clear token of German respect for the Americans' authority.

---

18 Near the end of the war, the Gestapo and Kripo had been placed under the SD with Kaltenbrunner at the head.

19 Weekly Intelligence Summary No. 2, from Hq USFET, Office of the AC of S, G2, dtd 24 July 1945, (SECRET) (Central Records Facility)

CONFIDENTIAL

3600

Although overt resistance to the Americans did not crop up in Heidenheim, there were occasional threats. One, in particular, was addressed to CIC. Passing the bulletin board outside the town hall one morning, Agent Paul Funk noticed a tacked-up message signed with the Wehrwolf emblem and stating that all CIC men would be shot. A hurried conference followed, and the team commander, deciding that the best answer to this threat would be a show of nonchalance, selected Agent Funk to play the role of the self-assured American intelligence man. Funk was detailed to drive an open jeep, clearly emblazoned with the letters "CIC," down the main street of Heidenheim for a period of several nights. The agent was somewhat taken aback by this mission, but he carried out his orders. Nothing unusual occurred; the threat, fortunately for Agent Funk, was an idle one.

During the months of June and July, the CIC agents in Heidenheim set about the arduous task of gathering and reviewing Fragebogen (personal history questionnaires) from the populace, at the rate of about 150 per day. The diligence of the agents was rewarded. It was possible to open local schools in July and August, far ahead of most areas. Military Government, a unit that had been "cooperative" with CIC in Heidenheim, selected a native German to serve as "education officer" and CIC supplied teachers for the school.

Meanwhile, the agents also attended to the matter of automatic arrests. In general, they discovered that little dependence could be placed on lists and name cards that had come down from higher headquarters. (In the city of Darmstadt, prior to the Occupation, Agent Funk and another agent had been assigned to alphabetize a jumbled pile of 80,000 personality cards that had come down from SHAEF. This proved to be an "impossible task" and a forecast of the difficulty to be faced during the occupation.)

Instead of relying heavily on information from higher headquarters, the agents used their own initiative in Heidenheim. Lateral communication and personal liaison with teams in adjoining detachment territories furnished additional leads. Once the team was well established, arrest procedures became standardized in the case of petty Nazis. CIC sent a note to the wanted person, stating that he should report to Room 13 (the CIC office) in the city hall on a specified data at a specified time. The procedure was much like "issuing a draft notice" to a prospective American service man. Most of the suspects appeared, however when an appointment was not kept, the CIC team in Heidenheim spread an alert for the wanted person, throughout the Seventh Army area.

In this manner, without unusual incidents, the American occupation of Heidenheim was effected.[21]

---

21 Interview with former S/A Paul J. Funk, New York, New York, at the NCICA Convention Hotel Waldorf-Astoria, New York, N. Y., 5 August 1955.

Larger Scale Operations

Coverage, by CIC detachments and teams, of the areas assigned by tactical commanders provided the chief and continuing source of apprehensions of former Nazis. It was also the theater commander's policy, as expressed in the Counter Intelligence Directive for Germany, to schedule unannounced check-and-search operations on civil communities. The main purpose of these operations was to uncover illegal and subversive activities; confiscate illegally-possessed weapons and vehicles; disband black market activities; check identification and travel papers; and impress the Germans with the vigilance, sternness, and determination of the Occupation forces. Individuals apprehended during these raids were turned over to screening teams of CIC and MG personnel, and, through interrogation, automatic arrestees were often discovered among the prisoners.

Since the large scale search and seize operations depended, primarily, upon the element of surprise, they were planned with as much secrecy as important tactical undertakings. The usual procedure was to seal off a given area with road-blocks covering all primary and secondary roads leading into and out of the zone. As soon as the area had been isolated, parties of from three to six soldiers conducted house to house searches for wanted individuals and personnel. After the screening of arrestees by CIC, security threats were detained, and violators of existing civil regulations were turned over to MG for trial.

Although at theater headquarters, there was recognition of the fact that these hasty and comprehensive operations laid the German population open to possible looting by the American troops, the actual need for the searches outweighed this consideration. Participating troops were amply warned against improper conduct while engaged in the searches, and some commanders ordered "show down" inspections for evidence of looting, once the operation had been completed.

In the US Zone, there were two principal types of unannounced search and seizure operations. On the largest scale were zone-wide and army-wide maneuvers; on a smaller scale, and more frequent, were the so-called "Swoop" operations which were restricted, both in aims set forth and area covered.[22]

Operation TALLY HO

The first zone-wide security check and search operation was initiated upon the special request of the commanding general, 12th Army Group, who asked for a thoroughly coordinated operation within the US Zone, prior to the redeployment of a great mass of American troops. Weeks of careful planning preceded Operation TALLY HO, which took place from 21 to 23 July 1945.

22 Law, Order, and Security, from Occupation Forces in Europe Series, 1945-46, from Office of the Chief Historical, European Command, Frankfurt-Am-Main, Germany, 1947 (SECRET) (Central Records Facility)

Three general objectives governed the planning for the operation:

a. "To effect a meticulous check of credentials of all persons, including not only civilians, but also United States or Allied military personnel.

b. "To uncover, by search of all premises and individuals, the possession of prohibited articles and the illegal possession of property of the United States government, and to insure suitable confiscation and disposition thereof.

c. "To uncover evidences of black market operations and to initiate appropriate prosecution of violators."

At daybreak on 21 July, TALLY HO was initiated throughout the US Zone. In the Seventh Army area alone, more than 160,000 troops were detailed to the operation. Frontier and travel security control was highly intensified, and every effort was made to keep secret the objectives of the operation.

The initial reaction, from the civilian population, was one of utter surprise, mixed with fear that was largely due to ignorance of what was taking place. Rumors circulated madly: among them such reports as that the operation was being conducted because of a large-scale SS jail break; that the Americans were searching for items which they believed worth taking before turning over their occupation zone to the Russians; and that the operation was a security measure in preparation for President Truman's anticipated visit.

However, the initial reaction wore off quickly, and the civilian populace became resigned and generally cooperative with the search. There was little manifest resentment, and most persons accepted the operation as a normal procedure in an occupied country. Few complaints of pilfering by troops were based on more than hearsay.

Forty-eight hours later, amazing totals of apprehensions and confiscations had been recorded. More than 85,000 German apprehendables had been detected; their misdemeanors ranged from violation of travel and curfew restrictions to suspicion of being automatic arrestees and other security threats. More than 310,000 items of contraband were confiscated, including panzer fausts (bazookas), radio transmitters, coffee, and miscellaneous items of clothing and equipment. Although no evidence was developed that pointed to an organized black market in the US Zone, individuals were found in possession of as much as 1,000 pounds of sugar, 100 gallons of gasoline, and other large hoards.

In assessing the value of Operation TALLY HO, it was noted that in addition to the tangible results, the psychological effect on the German people was highly beneficial. TALLY HO made apparent the need for further implementation of existing MG policies. One decided drawback, from a CIC viewpoint, was that the participating

troops had been insufficiently schooled in examining documents and detecting persons of counterintelligence interest.

The chief post-operational recommendations brought forth were that the area to be covered should be limited, thereby lessening the time consumed and maintaining a higher degree of secrecy; and advanced training, in such matters as examining and certifying identity documents, should be given.[23] However, it was felt, in retrospect, that the final results of the operation fully justified the weeks of preparation and the large number of troops involved.[24]

Operation DOUBLE CHECK

The second zone-wide security operation in which CIC took part was ordered by the theater commander on 18 October 1945 and code-named Operation DOUBLE CHECK. The order was disseminated a full month before the raid was to take place in order to give commanders ample time to ready their troops. The objectives of DOUBLE CHECK were similar to those of TALLY HO, with stress on searches of premises and individuals, along with a tightening of frontier and travel control. The operation was divided into two phases, the first beginning at 0730 hours, 18 November 1945, and continuing for 36 hours.

Again the psychological effect upon the German people was considered good. At this time, American troops were spread thinly across the US Zone, and the show of strength resulted in a greater respect from the civilian population towards the Occupation forces.

The factor of surprise, which had been important to the success of TALLY HO, was somewhat diminished in DOUBLE CHECK, Phase I. Troops involved in the search pointed out that telephone security was lacking, and civilians frequently telephoned their next door neighbors as soon as Americans had completed their search.[25] There were also some indications that a security leak had occurred prior to the operation.[26]

---

23 Final Report on "Operation TALLY HO" in Weekly Intelligence Summary No. 10, Hq USFET, Office of the AC of S, G2, dtd 20 September 1945 (SECRET) (Central Records Facility)

24 Law, Order, and Security, from Occupation Forces in Europe Series, 1945-46, Historical Division, Hq, US Army, Europe, 1953 (UNCLASSIFIED) (Staff and Faculty Library) (A typical CIC detachment's experiences during Operation TALLY HO are covered in this chapter under the heading "45th CIC Detachment."

25 Weekly Intelligence Summary No. 19, from Hq USFET, Office of the AC of S, G2, dtd 22 November 1955, (SECRET) (Central Records Facility)

26 Weekly Intelligence Summary No. 20, from Hq USFET, Office of the AC of S, G2, dtd 29 November 1955, (SECRET) (Central Records Facility)

However, the results of the first phase were good, if not as impressive in figures as Operation TALLY HO. Considerable quantities of American canned rations were uncovered as well as large supplies of gasoline. But, again, there were no signs pointing to the existence of any organized black market rings. Individual Germans had apparently managed to secure American goods with varying degrees of success.

The second phase of DOUBLE CHECK caught the Germans completely off guard. This operation consisted of a 24 hour check, beginning on 25 November, of all persons, for the possession of proper identifying documents. Road blocks were formed, and all persons on foot or in vehicles were stopped and checked for the proper papers. The operation proceeded smoothly, but there was one major hitch; guards found that there was a wide disparity in the identification documents, and it was recommended, in retrospect, that the issuance of a standard quadralingual paper would ease such checks in the future.

From a CIC standpoint, Operation DOUBLE CHECK was not as fruitful as Operation TALLY HO. Only 150 security suspects and/or automatic arrestees were uncovered, a fact which indicated that, while vast numbers of former Nazis had already been interned, many of those who were still free had managed to slip through DOUBLE CHECK.[27]

"Swoop Operations"

In the Third Army area, during the months of September and October 1945, more than 50 of the coordinated security checks, dubbed Swoop Operations, were carried out. Although conceived on a far smaller scale than TALLY HO and DOUBLE CHECK, these operations entailed the use of some 10,000 American troops and netted more than 100 persons of counterintelligence interest.[28]

Operation LIFEBOUY

Far different in intent and procedure from the large scale security raids was Operation LIFEBOUY, a thorough purging of Nazis holding public office in the Seventh Army area. Beginning on 24 July 1945, the aims of LIFEBOUY as outlined by the commanding general of Seventh Army were:

1. To carry out the United States Government's announced aim of removing Nazis from positions of responsibility in Germany.

---

27 Weekly Intelligence Summary No. 26, Hq USFET, Office of the AC of S, G2 dtd 10 January 1946, (SECRET) (Central Records Facility)

28 Weekly Intelligence Summary No. 16, Hq USFET, Office of the AC of S, G2 dtd 1 November 1945, (SECRET) (Central Records Facility)

2. To remove from the German people any fear, inspired by the Nazis, of cooperation with the Allies.

3. To remove fear from retribution in the reporting of Nazi activities.[29]

From its inception, LIFEBOUY was the primary mission of all static CIC teams in the Seventh Army area.[30] The initial reaction of the German populace was reported as "good," at least from those who sincerely desired to be rid of the Nazis. But numerous complaints were voiced that American authorities failed to distinguish between old time Nazis, those who had joined the Party under compulsion, and those who had resisted joining to the last possible moment.[31]

As the Operation proceeded, CIC encountered successively fewer automatic arrestees still holding public position, but the screening process often eliminated so many officials that replacements for vacancies in the civil administration became a problem. In the Kreis of Esslingen, for example, CIC team 970/98 estimated that fifty per cent of the office holders would have to be removed.[32] Often the individuals who could not pass CIC screening were the most efficient and best suited for their positions; but the American forces had to carry through with their full-scale De-Nazification Program.

When LIFEBOUY neared the goal of complete purging of the public offices, CIC teams gradually turned their attention to the professions, trades and industries, where many important and once-powerful Nazis still lurked. Bank employees, insurance workers, teachers, manufacturers and countless others had to prepare Fragenbogen that would guide CIC in its screening.[33]

In determining which individuals should be dismissed, CIC had to establish a date, before which, membership in the Nazi Party would be considered automatic grounds for removal. All party members who had joined after this date would be scrutinized for their reliability and removed largely at the discretion of the CIC agent who carried out the investigation.

33 Weekly Intelligence Summary No. 10, from Hq USFET, Office of the AC of S, G2, dtd 20 September 1945, (SECRET) (Central Records Facility)

After much discussion 1 May 1937 was selected as the guide date, a fact which upset many anti-Nazi Germans who claimed that often the more recent recruits into the Party had been the fiercest advocates of the Nazi line. The attitude of the intelligent Germans towards the dismissal of petty Nazis was typified by the remark of a school teacher to CIC Team 970/16 in Giessen:

> "It is a pity for the Americans to discharge thousands of people, many of whom are old and have worked all their lives in one position. They will have no money, and where can they find work? Most of them are loyal to the Allies. Much suffering will ensue next winter, and it may encourage underground activity for which the Americans will be partly responsible. It could be avoided by a more common sense policy. I approve--and most Germans approve--of the general idea, but the Americans are making a mistake in its application. Too much emphasis is placed on nominal memberships (in the NSDAP) and titles. Military Government should have an advisory anti-Nazi commission to assist in weeding out the real Nazis and thus avoid injustice.[34]

In the final stages of LIFEBOUY, a consolidated report indicated that CIC screening teams had recommended the dismissal of about 36 per cent of MG-approved employees as mandatory or discretionary removals. On the whole, response to CIC recommendations was swift, and close cooperation between the two groups was reported throughout the operation.

The replacements that CIC screened to fill the vacated positions proved far more satisfactory than had been predicted; about 85 per cent were declared fit for civil service. Although operational efficiency of local governments was undeniably hampered by the LIFEBOUY cleansing, a majority of CIC teams felt that in the long run, new administrations would provide greater progress towards the achievement of Allied objectives.[35]

Operation NURSERY

Although most of the large CIC operations during the De-Nazification phase of the Occupation were overt raids and searches, Operation NURSERY was a

35 Consolidated Progress Report on Operation LIFEBOUY, in Weekly Intelligence Summary No. 20, from Hq USFET, Office of the AC of S, G2, dtd 29 November 1945 (SECRET) (Central Records Facility)

NOTE: For specific activities of a CIC Detachment during Operation LIFEBOUY, cf, 36th CIC Detachment, this Chapter.

clear break with this pattern. For this was a highly classified, long-range penetration of subversive organizations which had the aim of keeping alive the National Socialist ideal.[36]

37 The only available report of Operation NURSERY does not explain the lack of planning implied by the use of the word "happened." It seems probable, from the general conduct of the Operation, that this was merely an error in phraseology, and that this change was the result of a change in plans.

These arrests formed the start of a mass clean-up in the south. One by one, figures on the underground lists were trapped by the CIC agents. So skillfully had the agents covered their moves that not one person on the primary arrest list managed to escape.

Planning for the final phase of Operation NURSERY consisted of the evaluation of all available lists, the preparation of a master target sheet, and the transmission, to field units, of this target list together with the details of a coordinated swoop operation that would take place simultaneously in the British and US Zones Germany and Austria. Each person marked as a target was to be screened, his house searched for information, and, if either the screening or the search produced incriminating evidence, the man was to be interned. 1 April 1946 was established as the swoop date; 0200 was designated a "H" Hour.

The core of the underground movement had been destroyed. Many of the funds which had been hoarded for the long range subversion had been impounded. Devoid of its key personnel and its financial support, the remaining portion of the underground, that had not been obliterated, was considered helpless.

gained the added dividend of lists containing the names of men to watch as potential subversives and members of contemplated future moves against the occupation.[38]

CIC Finds Hitler Documents

On 26 December 1945, CIC personnel in Bavaria received information from Major Trevor-Roper of British Intelligence that a Wilhelm-Zander, alias Paustin, one time adjutant to Martin Bormann, was in the vicinity of Tergernsee.

Together with Major Trevor-Roper, the CIC agents raided the suspected house only to learn that Zander had departed from the area to visit his fiancee near Passau. CIC kept on the case and, on 28 December, discovered from informants in Tergernsee that Paustin had left a suitcase with his prospective sister-in-law.

When the agents seized the suitcase, they found inside it some key documents of the last days of the Hitler regime. Bormann's former adjutant had secreted the original marriage license of Adolf Hitler and Eva Braun, witnessed by Goebbel and Bormann, Hitler's signed political testament, Hitler's private will, and a letter of transmittal covering the documents from Admiral Doenitz to Bormann.

All these documents were shipped to the United States where a laboratory test performed by the FBI confirmed their authenticity. The documents were then sent for storage in the National Archives.[39]

Although available records do not indicate whether CIC ever caught up with Zander, the agents had made one of the prize document discoveries of the post-war period.

Operation CHOO-CHOO

A counterintelligence search operation that was somewhat unusual occurred on 2 February 1946 on the crowded passenger train that ran from Bamberg to Nurnberg.

The Operation was instigated at the suggestion of agents of the Bamberg CIC Sub-Regional office who had noted the increasingly great amount of passenger travel

38 Report on Operation NURSERY from 970th CIC Detachment, Undtd, (Unclassified), (Central Records Facility); and
Law, Order, and Security, from Occupation Forces in Europe Series, 1945-46, from Office of the Chief Historical, European Command, Frankfurt-Am-Main, Germany, 1947, (SECRET) (Central Records Facility)

39 Unsigned Letter to Mr. Thad Page, Administrative Secretary, National Archives, dtd 4 April 1946, (Unclassified), in MID 314.4 GERMANY, G2 Repository, Departmental Records Branch, AGO, Alexandria, Virginia.

on the rail line. Conferences with commanders of local troop units resulted in the coordinated formulation of Operation CHOO-CHOO. The target was the train that left Bamberg at 1245 hours on 2 February.

In order to seal off the train completely once it was loaded and to allay suspicion, the counterintelligence operatives decided to permit it to depart from the Bamberg station on schedule and halt it a slight distance from the city, where a complete inspection could be made. An officer from an army unit was designated to ride in the locomotive cab and order the engineer to stop the train at the point selected for the operation. Ten CIC agents, ten military police personnel, and 15 tactical security troops were named to participate in the search. In addition, armed tactical troops were to be deployed along both sides of the track in the area. The cars were numbered, and one CIC agent and one military policeman were assigned to each car; the agent responsible for examining personal papers and brief interrogation of all passengers, and the military policeman responsible for searching these individuals as they detrained.

On 2 February, the Operation was accomplished as smoothly as planned. An estimated 1,200 persons had jammed into the ten delapidated passenger cars at Bamberg--individuals who formed a representative cross section of the post war population shuttling about the American zone of occupation. When the train was halted outside the city, each person was searched, along with his accompanying luggage, as he dismounted. Identity documents were scanned, and each individual was asked his destination and reason for travel. Following this examination, the passenger, if cleared, was taken to an empty field bordering the railroad tracks and kept under guard. All persons for any reason suspect (a group which totaled twenty-four) were segregated, also under guard. When the train had been completely emptied of civilians, each car was thoroughly searched for concealed or discarded contraband. No weapons or other prohibited materials were discovered.

Seventy minutes after the train had been halted, the principal part of Operation CHOO-CHOO was over. Except for the small group of suspects, who were transported back to the Bamberg CIC office, all passengers were permitted to reboard the train and continue on their way.

But Operation CHOO-CHOO still had a final phase. When the train had left Bamberg at 1245 hours, two CIC agents in civilian clothes had mingled with the crowd. Their mission was to ride as "disgruntled" passengers to a town 20 kilometers distant from Bamberg and to eavesdrop on civilian conversations. When the train was stopped, these agents presented identification cards and were submitted to a complete search. The military police had been alerted, in advance, to the presence of these undercover agents and "overlooked" the weapons that the men were carrying. At the conclusion of the search phase of CHOO-CHOO, the agents were returned to the train and continued on their way. Nothing unusual,

either preceding, during, or after the search, was noted by the agents. For the most part, the civilians took CHOO-CHOO in stride.

Although no tangible evidence of counterintelligence interest was uncovered, CHOO-CHOO was a successful operation. It offered an insight into the generally satisfactory civil security situation, and indicated that the great preponderance of travellers were engaged in personal enterprises of a totally innocent character. CHOO-CHOO had the additional benefit of leaving an impression of the US Army's thoroughness and efficiency on the minds of the civilians. CIC expected that further benefits would be derived when word of CHOO-CHOO spread among the populace via "grapevine" channels.[40]

PART II CIC OPERATIONS, MAY 1945 - FEBRUARY 1946

Part III CIC WITH TACTICAL UNITS

CONFIDENTIAL

PART III

CIC WITH TACTICAL UNITS

Although the bulk of counterintelligence personnel were transferred to "slash teams" of the 970th CIC upon the cessation of hostilities, numerous CIC detachments, which had operated with tactical units during the war remained with their divisions, corps and armies until redeployment. Some of the "slash teams" served on detached service with these detachments. The work of most of these detachments was similar and localized; apprehending automatic arrestees was the first order of the day. At times, the detachments participated in zone-wide counterintelligence operations, but the CIC agents continued to function as the security specialists for the military force to which they were attached.

To recount the activities of all these detachments would be repetitious and too lengthy for inclusion in this volume. As a result, representative units from various geographical sectors of the US Zone of Occupation and various command echelons have been selected to illustrate the problems besetting counterintelligence in the first phase of the occupation and the manner in which these problems were faced.[41]

CHAPTER 1

CIC IN WESTERN MILITARY DISTRICT

The key CIC Detachment in the Western Military District was the 307th CIC, attached to Seventh Army, with headquarters in Augsberg until 22 July 1945, and then at Heidelberg until its inactivation on 13 May 1946.[42]

307th CIC Detachment

The situation in Germany had scarcely changed from combat to occupation when agents of the Seventh Army CIC received the man who had perhaps been Allied Intelligence's prime adversary during the war, Otto Skorzeny. The renowned SS Obersturmbannfuerher and Chief of AMT VI/S (Sabotage) of the German Intelligence Service was taken into custody on 16 May 1945 at the headquarters of a Third Infantry Division component, when he presented himself with a letter requesting permission to gather his agents and be taken to intelligence headquarters.

The American forces allowed the wily Skorzeny his request, and the following day escorted him to the 307th CIC Detachment for interrogation. Special Agents Alan Dinehart, George A. Perper, Victor S. de Guinzbourg, and William N. Bower questioned Skorzeny and discovered that he apparently had a limited knowledge of the names of agents employed by the AMT VI/S. But the arch saboteur was willing to talk freely about new sabotage techniques, his personal leadership of combat missions of the Jagdverbande (sabotage divisions which he had headed), and political action that he had fomented against the Russians through insurrections in the Ukraine and the Balkans.

The CIC agents had Skorzeny outline the organization of the AMT VI/S. In an affable manner, he described the troubles he had selling the "Army Brass" on the potential usefulness of his operatives. Wehrmacht officials had promised all Skorzeny's recruits commissions, but rarely issued them. If an officer vacancy occurred, instead of promoting an agent, a commissioned man from some other branch was brought in to fill it. Skorzeny explained how the agents never had enough to live on, and how their expense accounts were not paid until six weeks later, unless disapproved. His agents had been ordered to wear civilian clothes but were never given sufficient funds to purchase them. For the CIC agents, many of Skorzeny's complaints had a familiar ring; CIC had experienced some of the same difficulties throughout the war.[43]

---

42 Historical Date Card, 307th CIC Detachment, (UNCLASSIFIED) (Organization and Directory Section, AGO, The Pentagon)

43 Interview with former S/A Alan Dinehart at 39 Ingram Street, Forest Hills, New York on 7 August 1955.

The agents also elicited, from Skorzeny, information on Wehrwolf training. They were told that, contrary to other reports, no provisions had been made to continue German Intelligence Service sabotage activities from a resistance headquarters. However the 307th agents avoided detailed and lengthy interrogation of Skorzeny, since higher headquarters were eager to receive him for final questioning.

Although Skorzeny was the most impressive figure that the 307th CIC Detachment handled in the early stages of the occupation, agents found that the section of Bavaria where Seventh Army was located had numerous smaller officials of the once vaunted German intelligence. Several former German espionage agents were apprehended when they presented themselves to CIC headquarters voluntarily, posing as friendly informants and offering to provide information on Gestapo and SD agents. By the end of May, the 307th CIC Detachment issued a serious warning: "Experience has shown thorough permeation of German intelligence in fields of industrial espionage, on the theory of "total spying." This should be borne in mind by counterintelligence personnel for occupational work. German agents have consistently followed the pattern of offering their services as informats and seeking employment at key information spots, such as hotels and military government offices. [44]

Occupational Espionage Plans

During the month of June 1945, 307th CIC agents continued to receive information from interrogations of German intelligence operatives that supported the theory that occupational espionage would not proceed in any organized manner. Apparently, most of the German Intelligence Service's resistance plans had been predicated on the assumption that, at least, parts of Germany would not figure in the complete collapse that had come with such devastating swiftness. The report of Friedrich Bermes, a former Abwehr Captain was typical.

According to Bermes, the Gestapo chief of Munich had been informed, in April 1945, that a National Redoubt was to be formed in the Bavarian mountains, under the cover name of "Sigrune." RSHA, [45] Berlin, had asked for an intelligence set-up that could inform the Redoubt concerning the morale of the civilian population in occupied Germany. Stay-behind agents were hastily organized and equipped in Munich, but the steamrolling Allied advance prevented them from carrying out their plans.

Outwitted

So rapid was the round-up of German intelligence agents that 307th CIC operatives were principally occupied with interrogations, but there were moments at which all the varied skills of a counterintelligence agent had to be brought into play.

Members of an MIS team and agents of the 307th CIC, screening POW at the detention cage in Furstenfeldbruck, encountered an SS non-commissioned officer by the name of Gruber who tried to bribe them into discharging him under the demobilization plan. Gruber offered considerable information about the RHSA, and, playing along with the attempted bribe, the interrogators were led to treasures and money belonging formerly to German intelligence. But some of Gruber's confidants told the American intelligence men that the German had not revealed everything: Gruber, in actuality, was a fanatical Nazi named Joseph Spacil who was purported to have information that could lead to the discovery of Hitler's body and diary, the whereabouts of the gold crown and scepter of Charlemagne, and other riches. The confidants also stated that Spacil-Gruber possessed some poison, and any open attempt at arresting him as a Nazi would result in his suicide.

The CIC agents decided that if what the confidants claimed was true, the only means of obtaining the information would be through direct interrogation of Spacil, but a ruse had to be constructed to prevent him from committing suicide. All arrangements were made for Spacil's discharge, the CIC men pretending to consider him still merely an SS non-commissioned officer. However, prior to being given the discharge, Spacil was told that he would be given a physical examination by German doctors. Special Agent George Perper, posing as a German physician, together with a bona fide native doctor from a nearby military hospital, examined the trusting Spacil in a routine manner, guarding especially against his alleged possession of poison. While the Nazi was receiving the examination, his clothes were carefully searched, and a vial of poison was located. Spacil was immediately placed under arrest and subjected to intense interrogation.

As it developed, Spacil had no knowledge of the hidden caches. In his better days, he had apparently tried to exaggerate his importance by claiming this special knowledge. His confidants had been fooled and so, in turn, were the CIC agents. But Spacil did prove of some counterintelligence value after all; he was used as a source of information about former SD members.[46]

---

46 Monthly Information Rpt from Hq 307th CIC Det, dtd 12 Jul 45 (CONFIDENTIAL) (Box 25099, Kansas City Records Center)

CONFIDENTIAL

"Bonjour, Monsieur

Late in the afternoon of 24 June, Special Agent Victor de Guinzbourg and Commissaire Jean Ambrosi, a member of the French Surete aux Armies attached to the 307th CIC, were driving through a wooded area about five kilometers from Augsberg. The two counterintelligence men, wishing to engage the services of a civilian for assistance in barbecuing a sheep, approached a slightly built man who was picking berries in the woods.

The data on the passport and the physical appearance of the man were instantaneously linked in Ambrosi's mind, and he suddenly greeted the man, "Bonjour, Monsieur ."

What Ambrosi had perceived was that the alleged was actually the handling agent of many German espionage figures who had been captured in Alsace. Ambrosi, who had participated in these Alsace arrests, had recalled that was the name that , a former in had taken to mask his activities on behalf of the German Intelligence Service. This, plus appearance, which Ambrosi had seen several times on photographs, served to convert the apparently harmless berrypicker into one of the men most wanted by Allied counterintelligence.

feeling that Providence must have been set against him, broke down completely on Ambrosi's salutation, and declared that he would willingly provide information. After fully revealing his own personal history, admitted that he had been hiding out with the main object of establishing new contacts for espionage operations against the Allies. He subsequently revealed the names of other German Intelligence figures.

The case of illustrated to CIC the importance of tracking down and arresting the more intelligent leaders and organizers of espionage groups and networks, since their continued circulation left them free to recruit for future resistance operations.[47]

SECRET UNCLASSIFIED

Seventh Army CIC operations against former German espionage agents continued through the summer of 1945. Frequently, individual opportunities presented themselves to the CIC offices, proferring their services and attempting to take advantage of any situation. One of the principal arguments used by professional espionage agents was that their aid could be enlisted against the Russians. So [illegible] that CIC concluded it might well be a well-defined pattern of enemy propaganda.[48]

Tennis, Anyone?

On 22 May, agents of the Securite Militaire unit attached to Seventh Army CIC apprehended a man named a native of Estonia, who had performed several espionage missions for the German Intelligence Service. It was not until 31 July that the CIC interrogation of was completed.

The account of this man's life was dramatic enough to fashion into a novel. A physician by profession, had come to Germany in 1920 to continue his medical studies. Lack of funds led the young man to abandon this training and drift into the life of an itinerant tennis instructor. As the tensions of approaching war increased, started to run missions on behalf of the French Intelligence. But in July 1940, while stranded in Talinn, Estonia, by the Campaign Armistice, took advantage of the Nazi rise in fortunes by contacting a German representative of the RSHA, and, subsequently, accepting the mission of gathering political intelligence in Morocco. His motive for this change of allegiance was partly to find a way out of the precarious situation in Estonia, and partly the venting of disappointment with the defeatist attitude of the French. But did not relinquish entirely his French connections. He contacted French Intelligence and volunteered to furnish information on both German Intelligence Service personalities and the attitude of French political refugees in Spain. He continued as a double agent throughout most of the war.

As the collapse of Germany appeared imminent, was ordered by the RSHA to lay the groundwork for a stay-behind intelligence mission in the city of Munich where he was to operate as a bogus Russian agent. was to propagate among the Western Allies the idea of an anti-Soviet front with Germany aligning with the Western Powers against Russia.

was the first of a number of former " turned professional espionage agents, that the 307th CIC Agents interrogated.[49] On 8 August, Special

Agent George Meisel, together with members of the 99th CIC Detachment, arrested agent who listed his occupation as His adult life had been spent largely in flitting from one international tennis tournament to another, and he rose to the captaincy of a German tennis team that toured the world in 1937. But during the war, used his tennis and social connections to bring information to the Germans from such neutral nations as the principality of Monaco, and Switzerland. It became readily evident, to the CIC agents who interrogated that the friendships formed, on the tennis courts of Europe prior to the war, had often continued to flourish in the more serious game of espionage during the conflict.[50]

University Screening

As the CIC mission of screening civil service employees began to taper off, agents of the 307th CIC were able to focus their attention on the personnel of Heidelberg University, which was scheduled to re-open in the fall of 1945. The entire faculty of the famed university had been effectively under the control of the SD and the Gestapo during the war, and it was necessary for CIC to ascertain, from a counterintelligence standpoint, which professors and instructors were eligible for re-instatement as active members of the university.

After intensive screening, with each professor receiving individual treatment, the medical and theological schools were opened in November 1945. However, it was not until January 1946 that the remaining facilities of the school could be opened. Thorough checks were made on each professor's background to determine his political stand from 1930 to 1945, but the questions of academic capability were left entirely to the university board.

Potential students who applied for admission to Heidelberg University were checked first by the school's officials. All doubtful cases were then referred to CIC[51]

51 Monthly Information Report from 307th CIC Detachment, dtd 13 September 1945, (CONFIDENTIAL) (Box 25099, Kansas City Records Center) and Rpt, Accomplishments of this Detachment since V-E Day, from 307th CIC Detachment, dtd 7 February 1946, signed by Lloyd G. Baysdorfer, S/A, CIC, (CONFIDENTIAL) (Box 25099, Kansas City Records Center)

A New Phase of CI Activities

By the end of September, 1945, the per diem haul of automatic arrestees, which had been large in the first months, began to dwindle appreciably. Agents of the 307th CIC had to search for individuals in automatic arrest categories who had established themselves in communities away from their homes, with a degree of certainty that they had dodged Allied counterintelligence. Denunciations, offered voluntarily to CIC by informants, often exposed these transplanted individuals. Yet 307th CIC found an ever-increasing need for the development of "positive sources of information to procure apprehension of arrestable individuals who have so far evaded capture and to keep abreast of activities of potentially subversive elements."[52]

Reassignment

During November, operational control of the 970th "slash teams" that had been assigned to Seventh Army was transferred to US Forces, European Theater (USFET), and the operations of the 307th CIC Detachment were restricted to activities concerning the security of Seventh Army, Western Military District, performance of the counterintelligence mission within the Heidelberg enclave, and "certain special cases."

Included in the revised mission of the 307th CIC was the presentation of semi-weekly lectures to candidates for the military police about the CIC role in the area. The necessity for close cooperation between the two units was stressed, and certain CIC methods of operations were discussed.

CIC agents also conducted a complete security survey of the Seventh Army Headquarters and submitted recommendations regarding the physical security of installations, employment of alien civilians, and safeguarding of classified information and documents. Numerous screenings of individuals proposed for access to Top Secret material had to be undertaken as well.[53]

Where is Bormann?

Even as CIC was rounding up thousands of automatic arrestees, it soon was evident that one of the most important war criminals had slipped through Allied counterintelligence nets: Martin Bormann, Deputy to Hitler and Reichsleiter of the NSDAP, became established as the Number One wanted personality of the Nazi regime, a position that he was to hold unchallenged until virtually all hope of ever apprehending him had been abandoned.

52 Monthly Information Report from 307th CIC Detachment, dtd 19 October 1945, (CONFIDENTIAL) (Box 25099, Kansas City Records Center.)

53 Monthly Information Report, 307th CIC Detachment, dtd 10 December 1945, (CONFIDENTIAL) (Box 25099, Kansas City Records Center.)

In December 1945, while there still seemed a definite possibility of snaring Bormann, intensive interrogation of a man named started a new search. contended that Bormann was hiding in the Garmisch-Partenkirchen area. On 16 December, a party that included two CIC agents, an Alpine expert, a CIC informant, and entered the Oetz valley in an unmarked car. The pretense of their journey was that they were looking for mountain goats.

pointed out the spot in the mountains where he had seen Bormann and the approximate location of a lodge. Then, to avoid arousing suspicion among the inhabitants of the valley, the CIC agents dispatched their informant to sound out local inhabitants about the possible presence of the Nazi leader. The informant returned without any clue to Bormann's whereabouts, and the party decided to set up an observation post opposite the suspected location of the lodge. For five days, no trace of human habitation was noticed. Finally, on 21 December, a team of two men was sent to approach the lodge. Under the cover of darkness, the men entered the mountain-chain, climbed the peak, and followed the ridge to a point presumed to be above the lodge. When the mountain hideout was reached, the climbers found it abandoned. They searched several other huts in the vicinity, none of which appeared suitable for winter use. The team returned to the base camp.

A second team was dispatched, after again pointed out the area in which he believed the lodge to be located. No building was discovered. Finally, discarding the pretext of searching for mountain goats, the entire party participated in a general and thorough combing of the indicated area, without success. The agents apparently began to doubt story and reinterrogated the German. He maintained that his original account was true and that the changed winter conditions may have caused him to lose orientation. The agents were inclined to believe but abandoned the search for Bormann.[54]

Trouble Among the Troops

In January 1946, CIC agents of the 307th CIC Detachment faced a problem of great and sudden urgency: unrest, real or simulated, among the Seventh Army troops was reportedly rising. On 9 January, the detachment was alerted by army headquarters that an unauthorized mass demonstration of military personnel would take place. Investigation failed to disclose specific instigators, although a plan, "primarily of spontaneous generation," was being circulated to commandeer city transportation for a parade to the home of the commanding general. Agents were spotted over the alleged route of the demonstration, and, while signs of intent were discernible, no overt march on the general's house took place.

54 Monthly Information Report, 307th CIC Detachment, dtd 31 January 1946, (CONFIDENTIAL; [illegible], Kansas City Records Center)

Three days later, the detachment was handed a copy of a telegram that had been dispatched to four American columnists by an American soldier. The telegram, purporting to have 800 co-signers (their names were not listed), was a long harangue condemning the handling of the redeployment program, and, specifically, the Secretary of War. CIC made an intensive check of the Machine Records Unit files without discovering any person of the name and serial number appended to the telegram.[55]

New CIC Personnel

Like all CIC units, the 307th found that during the first year of occupation, there was a rapid turnover of personnel as agents were constantly redeployed to the United States. The detachment remained on the alert for potential agents among the occupation troops and as waves of replacements arrived, likely candidates were tapped for CIC service. By February, 1946, more than fifty new agents had been recruited and trained in CIC methods of operation by the detachment; some were subsequently assigned to teams in the Seventh Army area, others were retained at the Detachment's headquarters.[56]

But the new agents did not remain long with the 307th Army CIC. Plans for the inactivation of Seventh Army and dispersal of its personnel to the new constabulary and other occupation CIC units were realized by the end of March. Personnel of the 307th CIC were merged with agents from the 303d CIC or released to the 970th CIC and the detachment was officially inactivated on 13 May 1946.[57]

223rd CIC Detachment: CORPS CIC in the Occupation

As the Allied forces took over occupation duties in Germany, the 223d CIC Detachment attached to the XXIII Corps split its area of responsibility in western Germany into sub-areas, the principal ones being Koblenz, Trier, Saar and Pfalz. Screening of German nationals and persons of Allied nationalities to be employed in German civil governments throughout the corps area was the prime concern of the Detachment. However, CIC also concentrated on cultivating, throughout the Corps area, informants who could furnish information on the security conditions among the populace and on political trends in general.

Like all CIC units, the 223d Detachment tracked down personality targets listed by all echelons. Suspects were interrogated and, where data was sufficient,

57 Monthly Information Report, from Hq 303d CIC Detachment, dtd 1 April 1946, (UNCLASSIFIED) (Central Records Facility)

interned.[58] The task was sizable; one CIC informant who had helped the agents that arrived in Alsey during the combat phase, remarked, at the end of May, that "the CIC team that entered the town during the active period did a fine job of cleaning out Nazis and their sympathizers, but in order to do a thorough job, the remaining Nazis, who hold power, should be removed. Today, these men are trying to forget that they had been active Party members and they bend over backwards to provide American authorities the maximum possible aid."[59] Locating these former Nazis was not always the end of the task. Some suspects, when apprehended, feigned heart attacks and other illnesses to avoid internment.

The agents of XXIII Corps CIC helped divisional CIC units in their area with investigations of MG and German civil government employees. The hiring of pro-Nazis in Koblenz and Saarbrucken was halted, and immediate steps were taken to substitute cleared persons for unsatisfactory incumbents. In addition, the Corps agents checked German church services in the area to ascertain if Nazi doctrine was still being preached from the pulpit, as some informants had claimed.

Liaison activities claimed a good share of the agents' time. Since part of the Corps area was due to be turned over to French control, liaison with Securite Militaire officials was necessary to acquaint them with special security problems. CIC files were revised and condensed to meet the needs of the incoming French security units.[60]

Whitewash

On 17 May, a major in the MG organization in Mainz was notified by the Oppenheim field office of the 223d CIC Detachment that his secretary and interpreter, had been a leader of the Bund Duetchesmaedel (BDM). The same day, an agent of the Mainz CIC office contacted the major to determine what action had been taken against the woman. The major replied that she had been previously screened and cleared by CIC.

The CIC agent was not satisfied with this reply and, on the following day, he contacted the Burgermeister of a nearby town where had allegedly served

59 Memorandum to the Officer in Charge, 223d CIC Detachment from Anthony Pickett, S/A, CIC, Subj: Background of public officials in Alsey, (Cont) dtd 29 May 1945, (CONFIDENTIAL) (Box 25099, Kansas City Records Center

60 Report After Operations Against the Enemy, Narrative--Activities of the 223d CIC Detachment, XXIII Corps, for the period 1 June 1945 to 30 June 1945, inclusive, (UNCLASSIFIED) (Box #25099, Kansas City Records Center)

the BDM. According to the Burgermeister, the MG major had approached him the previous evening and warned him that "no information should be given to any [illegible] political activities. The Burgermeister was extremely hesitant to speak, but admitted to the agent that belonged to one of the most ardent Nazi families in the town and had been a BDM leader as alleged.

Further inquiry led the agent to , a young man of the town who was under house arrest, at the order of the MG major. claimed that the major had warned him not to mention connection with the Nazi Party. The warning was backed up by a threat that would be put in jail for two or three years if he failed to comply. On the night of 17 May, the major had discovered the addition of and her family on a list of Nazi Party members and accused who completely denied the deed. When the youth's parents consulted the major, they were told that their son would be put in jail for the rest of his life and that the youth was to stay away from CIC in Oppenheim.

Several more inquiries led the CIC agent to conclude that "Major... is misusing the authority invested in him by the US Army. It is apparent that he is cognizant that and her family were active in the Nazi Party and with this knowledge, by retaining the subject as his interpreter and secretary, is violating the purposes of the American Military Government.[61]

This was not the end of the case. A full background investigation supported the previously-offered evidence against but on 30 June, more than a month after the initial investigation, the woman was still serving as the major's secretary, despite repeated recommendations to her employer.[62]

On 4 July 1945, the commander of the CIC unit at Kaiserslautern forwarded a complete report of the major's failure to comply with CIC suggestions to the commanding officer of the 223d CIC Detachment. The report used the following strong language: "In view of the fact that Major ... has allowed himself to become so solicitous of the interest of his German secretary as to threaten imprisonment to at least one person, as to intimidate others, and as to completely ignore, for more than one month, a recommendation made by a CIC detachment that the woman be not only removed from employment by the Military Government Detachment at Mainz but also be barred from employment by any installation of the

Allies...," The CIC officer recommended that the major be transferred from Mainz "immediately."[63] Records do not indicate disposition.

36th CIC Detachment: Varied Duties

Immediately following the German capitulation, the 36th Infantry Division assumed occupation in the Kaufburen-Memmingen-Landsberg area. The 36th CIC Detachment, composed of 15 special agents, under command of Lt William R. Marh, accompanied its parent unit.

The agents discovered a general willingness on the part of the Germans to comply with MG regulations. On the whole, these natives appeared cooperative, and civil security within the area was reported as "very good." Restrictions had to be placed on civilian travel; the military check points at strategic locations throughout the division area, which had been a necessity during the combat phase, were still employed. Local MG authorities issued passes that permitted necessary travel and clamped a strict curfew on the populace.

The CIC teams set about screening local police and civil authorities, removing undesirable members and supplanting them with reliable individuals. In general, the indigenous officials were actively cooperative with the CIC agents.

But there were problems. Automatic arrests were being carried out at such a brisk rate, and in such quantity, that people within the automatic arrest category became increasingly aware that their past behavior or positions left them open to apprehension. The most common method to avoid capture was flight to out-of-the-way farms and small towns, and some key individuals were discovered in strange guises and strange places.

On 27 May, a CIC agent found the former German-appointed Oberburgermeister of Colmar, Haute Rhin, France, taking refuge in a sanitorium under the guise of being a Wehrmacht Lieutenant. Several days later, agents traced down a doctor, at a Reserve Hospital, who had performed an operation removing an SS tattoo mark. They also found a nun who, at the request of an SS soldier, had changed his rank on the hospital records from "Unterscharfuhrer" to "Unteroffizier." These attempts at evasion made the CIC task more than a simple matter of ticketing and shipping suspects to internment areas.

In addition to their other duties, CIC agents maintained a survey of the effectiveness of the non-fraternization ban. With the memory of war still fresh in his

63. Rpt to Co, 223d CIC Detachment, from Captain Loran L. Elliott, Kaiserslautern CIC, Screening of Persons for Military Government Detachment, Mainz, Germany, dtd 4 July 1945 (CONFIDENTIAL) (Box #25099, Kansas City Records Center)

mind, the average GI was not bothered by any desire to violate the ban. However, the German women, at first hostile to the conquerors, soon gave "every indication of wanting to become acquainted with American military personnel." In spite of this shift in attitude, CIC found only rare cases of "overt acts of friendliness,"[64] during the early days of occupation. After several months had passed, CIC noted that the non-fraternization policy was beginning to be unpopular with Americans in all ranks, and a CIC report took cognizance of this gradual transformation:

"The natural gregarious urge of the American soldier is beginning to assert itself and is expressed through numerous complaints among military personnel that since fraternization is allowed in the Russian Zone of Occupation, there is no reason to continue the policy in this sector... All ranks still feel animosity, of a greater or less degree, towards German males of military age, but do not feel this animosity towards children and girls. The attitude of the German population is apparently in favor of fraternization. They freely state that the war is now over, that they are trying to reconstruct a new country for themselves without the taint of Nazi-ism, and that they and their children want to learn more of the American system of democracy which can only come about through learning to know Americans first-hand. This reasoning and the sincerity behind it can be readily questioned since the attitude of the German is still one to place highest importance on German welfare, forgetting, completely, past crimes.[65]

Arrests Begin to Slacken

The initial days of the occupation had featured a continual parade of informants and denouncers arriving at the 36th CIC offices; their motives ran the varied gamut typical of any group informants. But after the first month, the ardent anti-Nazis began to come forward at a far slower pace. CIC attributed this decline to the fact that the persons denounced by these individuals could not be arrested in wholesale numbers. Higher priorities of arrest often had to be accomplished before CIC men could investigate the informants' reports. In addition, there were not enough agents to conduct investigations into cases that lacked sufficient importance, from a security viewpoint, or where personal animosity seemed to be the basis of a denunciation.

Despite its limitations, the CIC anti-Nazi campaign continued to produce desired results: no cases of subversive activity were reported through the middle of July, and agents surmised that the internment of former Nazi leaders was depriving resistance groups of potential organizers.

64 Periodic Counter Intelligence Report covering period from 14 May to 15 June 1945, from Hq 36th CIC Detachment (CONFIDENTIAL) dtd 15 June 1945 (Box #25095, Kansas City Records Center)

65 Periodic Counter Intelligence Report for period from 15 June to 15 July 1945, from Hq 36th CIC Detachment, dtd 15 July 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

CIC Keeps a Steady Flow of Reports

Since the number of arrests made by 36th CIC agents often exceeded ten a day, the detachment prepared daily reports for the VI Corps CIC. These summaries, which listed the personalities apprehended, towns covered, and unit locations, formed the basis for a weekly counterintelligence report that was sent to the division G2. These weekly reports replaced the periodic counterintelligence report that had been previously sent to the division G2 and then forwarded to the corps G2. Through the steady flow of reports, 36th CIC kept all echelons informed of the activities and maintained a full picture of the early weeks of operations.

An Underground Movement

On 28 May, 36th CIC agents took into custody Dr Wilhelm Irion, who had been a Stammfuhrer of the Hitler Jugend, and Helmuth Brunisch, who had served as a Sturmfuhrer of the SA.[66] Only after the two men had been interrogated at length, did CIC realize what an important catch had been landed.

On 2 April 1945, Brunisch and Irion had been summoned to Augsberg by a secret order which instructed them to bring bicycles and two days rations on their journey. Upon arriving in Augsberg, the men proceeded to the Kreisleitung where they were told of a special mission for which they had been selected: membership in the "Sonder formation ADOLF HITLER," a rabid resistance organization that CIC believed to be a branch of the Wehrwolf. So crucial was their assignment that they were recruited by Dr Robert Ley, Reichsorganizationleiter, in the name of the Fuehrer.

The formation consisted of only 100 Nazi leaders, upon whom was bestowed the highest trust. From 2 April to 14 April, the recruited fanatics received training along military lines: firing of rifles, panzerfausts, pistols, machine pistols and hand grenades; sabotage methods using high explosives; and techniques of attaching mines and setting booby traps.

Following this military training, the class was broken up into groups of seven men each and received clothing bundles that included such items as caps, windjackets and camouflage suits, all of which could be rapidly discarded in an emergency. The units were then dispatched in various directions. Brunisch and Irion travelled through most of Bavaria, joining with elements of the Wehrmacht. Upon the collapse of the German Army, these men were immediately provided with vehicles, gas and food to return home. This special issuance was considered, by the CIC agents, as an unmistakable sign that the two men were acting under orders of a "very superior authority" which held precedence over even the Wehrmacht.

66 The Sturm Abteilung, popularly called SA, was the Nazi Party Militia or "Storm Troopers."

By coupling the statements made by Lieutenant Brusterly in the course of several interrogations, with information gathered from other sources, the agent concluded that the ultimate mission assigned the two men was to hamper Allied MG by terrorizing Germans who demonstrated any willingness to set up a new government in collaboration with the Allies.

Before sending Bronisch and Brion through POW channels, the CIC agents probed the Nazis for the names and descriptions of other operatives of the resistance formation.[67] The apprehension of these two men had provided 36th CIC with the first hint of a serious threat to the security of the occupation troops.

The Communist Menace

During the early months of occupation the most persistent rumor spreading through the civilian populace in the 36th Division area was that the Communist Party had begun to organize all over Germany. Accompanying this rumor were individual predictions that America was eventually going to war against Russia.

By the end of July, CIC agents were able to report that although Communist propaganda was still being felt, there was no proof that the Communist Party had been formed in any part of the 36th Division sector.[69]

Operation TALLY HO at Division Level

During the month of July 1945, agents of the 36th CIC Detachment, along with operatives from other units of the MG and tactical troops, participated in the

67 Periodic Counter Intelligence Report for period from 15 June 1945 to 15 July 1945 from 36th CIC Detachment, dtd 15 July 1945 (CONFIDENTIAL) (Box #23075, Kansas City Records Center)

68 Weekly Counter Intelligence Rpt from Hq 36th CIC Det, dtd 25 July 1945 (CONFIDENTIAL) (Box 23075, Kansas City Records Center)

69 Weekly Counter Intelligence Rpt from Hq 36th CIC Det, dtd 29 July 1945 (CONFIDENTIAL) (Box 23022, Kansas City Records Center)

zone-wide raids and screenings that were code-named Operation TALLY HO.[70]

This operation was designed to speed up the apprehension of war criminals and other security risks, and its effect on the population was electrifying. Rumors circulated wildly that the operation was being held because an American soldier had been murdered or Allied supplies had been looted or the Americans were at last retaliating for the losses suffered in the war.

However, the civilians' confusion of the aims of TALLY HO failed to hinder the efforts of 36th CIC. Numerous arrests were made of persons classified under SHAEF counterintelligence automatic arrest lists, arms and ammunition were collected by the box load, and displaced persons camps were thoroughly searched. In the course of a week, the 36th CIC, and attached units, made a total of 80 arrests of people listed in the automatic arrest category. As the security vice was tightened by American MG, the Germans came to feel the presence of occupying troops far more strongly than in the first days of the occupation.

How TALLY HO Was Carried Out in the 36th Division

Typical of the organization and implementation of Operation TALLY HO were the 36th CIC activities between 0430 hours 21 July and 0430 hours 23 July. Thirteen agents from the 36th CIC Detachment and 970/68 CIC Detachment, 15 agents from territorial CIC teams, two members of the 36th Infantry Division IPW, and four interpreters were briefed together.

These men were told that each Kreis in the Division area was to be placed under the command of a regiment, with the town of Geislingen and its surrounding territory assigned to the supervision of Special Troops, Headquarters Company, 36th Infantry Division.

Screening centers were established in each Kreis with the main screening center located in the regimental command post town. Battalions were ordered to channel all suspects and information of counterintelligence interest to the main screening center, where CIC agents would segregate the suspects into three categories: those who had been guilty solely of MG violations, those who were of definite counterintelligence interest, and POW.

CIC turned the first category offenders over to the MG Detachment for trial. The second group was detained for intensive interrogation and, where necessary, investigation. The POW were delivered to the Division enclosure.

---

70 The zone-wide plans and results of this operation are discussed in Section 2, this Chapter; the accounts of 36th CIC's participation in this operation and in Operation LIFEBOUY are given as examples of a divisional detachment's activities.

The two day operation was deemed "satisfactory considering the short time permitted for planning and organization" Many POW who lacked valid discharge papers were caught, a number of automatic arrest personalities, who had been bypassed in previous searches, were apprehended, the CIC gained a clear picture of the areas in which to concentrate future counterintelligence activities.

In addition, the operation proved an "eye opener" for the average GI who participated in the raids. He came to understand the significance of MG regulations more clearly, and he obtained a more certain knowledge of the aims of counterintelligence.

Civilian reactions were less pleasing to counterintelligence officials. At the outset of the raids, most of the population was thoroughly bewildered and frightened, and the Germans became submissive and cooperative. As in other large scale operations, rumors circulated freely, in order to justify, in the civilian mind, the reason for the sudden crackdown. Some people claimed that an army truck had been ambushed, plundered, and the American driver shot; others held forth that Germans were being sought for forced laborers; still others announced that two officers had been shot. In almost all cases, the Germans missed the mark in their speculations.

By the end of the Operation, the fright had dwindled somewhat, but the bewilderment remained. Only in one town had 36th CIC agents found resentment openly voiced. The citizens in Kircheim had gathered around the jail, which was being used as a screening center, and as fellow townsmen were brought into the prison, had assumed an air of defiance, disregarded orders of the military police, and cheered their compatriots, who had been arrested.[71]

Weapons Uncovered During TALLY HO

One of the important sidelights of Operation TALLY HO was the discovery of a considerable number of weapons within the homes and buildings that were searched. Among the items of contraband were swords, pistols, bayonets, panzerfausts, grenades, tear gas, radio transmitters, and large amounts of wire cutters. These implements did not seem to be the arsenal of a resistance group, but the 36th Division G2 had no intention of leaving them around as souvenirs for the Germans.[72]

72 G2 Periodic Rpt, Hq 36th Inf Div, dtd 23 Jul 45 (CONFIDENTIAL) (Box 25095 Kansas City Records Center)

Death by Strangulation or Lightning

The intelligence mission of the CIC investigators was, at times, misinterpreted. On 29 July, CIC was advised of the possible murder of an American soldier in the vicinity of Ulm. The CIC agents who examined the body of the victim noted that 1,500 marks in the soldier's possession had not been disturbed, and robbery was temporarily ruled out as a motive. The investigators listed strangulation or possible accidental death by lightning, and then forwarded the body to the 1st Medical Laboratory in Darmstadt for a detailed pathological examination. Meanwhile, the case and initial reports were turned over to the Criminal Investigation Division, the agency that should have handled the investigation originally.[73]

Security Along the Interzonal Border

The 36th Division area of occupation bordered, in part, along territory occupied by the French, and frontier security became a responsibility of both commands at these lines. The major problem was the passage of civilians in both directions across the boundary. Lack of instruction of the local population in the travel restrictions, and the failure of the MG authorities in the French and US zones to achieve a uniform pass policy were the principal causes of the confusion. Local arrangements with individual French units relieved the difficulty in certain areas, but there were still violations, many of which were unintentional.

After a northbound train had been halted at the border, and a quick survey of the 1,058 civilian passengers had revealed that only 320 of them possessed proper passes, arrangements were made for the future checking of all trains crossing from one zone into another.

A program of further orientation of the civilian populace in both zones was put into operation, and French and US authorities met to standardize and coordinate their travel control activities.[74]

Displaced Persons

The displaced persons within the division area frequently became involved in breaches of the peace, and CIC agents were called in to investigate the disturbances. On 1 August, four Polish displaced persons were caught in the act of stealing an MG vehicle.

---

73 Weekly Counterintelligence Rpt from Hq 36th CIC Det, dtd 29 July 1945 (CONFIDENTIAL) (Box 25095, Kansas City Records Center

74 G2 Periodic Rpt, from Hq 36th Inf Div, dtd 30 July 1945 (CONFIDENTIAL) (Box 25095, Kansas City Records Center)

Just the previous day, two Poles, a boy four and one half years old and a man, were injured by an exploding American anti-tank rifle grenade. Agents of the Ulm CIC Territorial Detachment, attached to 36th CIC, went to the scene of the disaster, a displaced persons camp at the east end of Ulm. After a thorough investigation, the agents found no reason to suspect sabotage. But the presence of the grenade in a garbage pail could not be accounted for, unless the boy had unwittingly placed it in the pail, or some other inmate of the camp had done so ignorantly. The agents noted that garbage in the displaced persons camp was collected on a regular schedule by two Germans who, at the time of the explosion, were in the immediate vicinity and were soon to have emptied this particular pail. There was nothing that suggested the Germans were responsible for the explosion, but CIC arranged for a thorough search of the camp to be made by American military personnel to prevent a recurrence of similar incidents.

Other reports of misdemeanors involving displaced persons filtered into CIC offices. Three farmers claimed to have been attacked by a group of from eight to ten displaced persons who were carrying pistols and knives. A search of the surrounding area yielded about 30 displaced persons, three of whom resisted arrest. All were jailed pending investigation. Other incidents concerned looting of farmhouses by persons alleged to have been displaced persons.[75]

The displaced persons continued to prove the main source of unrest and the principal threat to the security of the division area during August. However, preventive measures, that included the arming of civilian police and the addition of a Displaced Persons Auxillary Police Force consisting of trustworthy Polish and Lithuanian displaced persons, reduced the number of incidents considerably.[76]

Although 36th CIC Detachment agents were kept busy apprehending former Nazis and establishing the measures necessary for civil security, the responsibility for military security was still lodged with CIC. No cases involving the loss or compromise of classified documents or information were received at the detachment, but some minor sabotage incidents did occur. Telephone wires were occasionally cut, and CIC investigations, while failing to bare the actual perpetrators, indicated that these were isolated deeds and not the work of an organized subversive effort. Preventive measures were taken by publicizing, through posters and town criers, the penalties that would be incurred for cutting wires, and placing the responsibility for sabotage on the owner of the property where it should occur. No recurrences of the activity were reported for some time.[77]

---

75 Ibid.

76 Weekly Counterintelligence Rpt, from Hq 36th CIC Det, dtd 4 August 1945 (CONFIDENTIAL) (Box 25095, Kansas City Records Center)

77 Periodic Counterintelligence Rpt, from Hq 36th CIC Det, dtd 15 Jul 45 (CONFIDENTIAL) (Box 25095, Kansas City Records Center)

Surveys of military installations in the 36th Division area during the month of August indicated that the posts were adequately manned with guards. But the agents encountered a tendency towards "Personal relaxation of the guards while on duty, particularly during night hours." This nonchalance was more apparent at the small unit dumps and unit command posts than at larger division installations.[78]

36th CIC Detachment Reduced in Strength

The recall to USFET of the 970/68 CIC team that had been on duty with the 36th CIC Detachment since March 1945 reduced the detachment to five agents, one member of Division Military Intelligence Service Detachment, and one interpreter at the end of August. All personnel under this revised T/O worked out of the detachment headquarters which was located in the Rathaus, Geislingen/Steiger, Wurttemberg. A new plan of operation designed to fit in with the personnel reduction was instituted.

The 36th CIC assumed as primary duties: (1) division headquarters security, which consisted of handling all cases of counterintelligence interest within the division headquarters area and counterintelligence coverage for the Geislingen Military Government Detachment; (2) Liaison with regimental S2's concerning matters of counterintelligence interest; (3) Liaison with permanent Seventh Army CIC detachments in matters concerning their work within the division area e.g. automatic arrest; and (4) investigation of cases of special counterintelligence interest where troop security was directly or solely concerned.[79]

De-Nazification Program Continues

Although the revised T/O altered the mission of the 36th CIC Detachment from operations of a territorial nature to matters of coordination and liaison with elements of the division, the agents continued the De-Nazification Program. An important aspect of this program began in August when CIC was assigned a key role in Seventh Army's Operation LIFEBOUY, the removal of Nazis from public office. Agents of the 36th CIC Detachment were required to screen all government officials and employees; they started with the members of the proposed Civil Courts of Geislingen and then began screening personnel of the city administration and police force. In addition to the actual interviewing of the individuals in public employ, CIC reviewed hundreds of Fragebogens (Questionnaires) filed by people who wanted civil service positions. Numerous rejections of applicants were made on the basis of unfavorable data in investigations, but CIC reported that the greater percentage of civilians approved the aims and actions of Operation LIFEBOUY.

---

78 Weekly Counterintelligence Rpt, from Hq 36th CIC Det, dtd 4 August 1945 (CONFIDENTIAL) (Box 25095, Kansas City Records Center)

79 Weekly Counterintelligence Rpt, from Hq 36th CIC Det, dtd 25 Aug 45 (CONFIDENTIAL) (Box 25095, Kansas City Records Center)

Particularly pleased with the program were anti-Nazis already working in public positions, since they were now able to work without lingering fears of the Nazi cliques that had controlled the government.[80]

As Operation LIFEBOUY progressed into September, CIC agents became more and more aware of the extent to which members of the Nazi Party had manipulated local governments. In one town, the Land Survey Office had to be temporarily dissolved when CIC discovered that the removal of personnel had virtually emptied the office. The success of Operation LIFEBOUY in ridding the civil service of Nazis prompted CIC to expand its investigative efforts to private industries in the division area.[81]

By October, the review of the Fragebogen of civil government and public utilities employees was practically completed, and CIC focused its attention on German industry and schools. The reaction of the German businessman to this program was basically fearful. There was also considerable confusion among the former industrial leaders because MG failed to announce the program of the future for those businesses owned by Nazis.

The matter of screening school employees was critical. Almost from the start of the occupation, the Germans had been complaining about the MG's delay in providing education for the children. Agents of the 36th CIC surmised that the opening of schools would keep the youth of the country busy and reduce the idle bands that had been roaming aimlessly. But there were serious problems attendant upon the revival of Germany's education system. In the town of Geislingen, removal of all Nazis from the school system would virtually exhaust the faculty since every teacher had been compelled to join the Nazi teacher's organization, Lehrverband. The replacements for unsuitable mentors would have to come from among the young discharged soldiers. But these men hardly had an ideal background for inculcating democratic principles in the German youth. Their past training had been largely in the principles of Nazi-ism and the militarism of the Wehrmacht, even though most of them never had a chance actually to join the Nazi Party.

CIC suggested that each potential teacher, whether old or young, be investigated individually. The reasoning behind this suggestion was that many older teachers, who had taught under the Nazis, at least had had the opportunity to instruct and think ideas permitted prior to the Nazi regime. These individuals would be in a better position to teach democratic ideas than some non-Party members who had never known democracy in their lifetimes, and CIC recommended

81 Weekly Counterintelligence Report from 36th CIC Detachment, dtd 1 Sep 45 (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

that the general policy--"All Nazis out, whether active or nominal party members"--be waived when a calculated risk seemed advisable.[82]

Among Those Present

The individual round-up of automatic arrest personalities continued alongside Operation LIFEBOUY. As time progressed, it became increasingly difficult to find the few key individuals who managed to escape apprehension. In some cases, CIC instituted a police and private informant dragnet; one Untersturmfuhrer of the SD was "fingered," for CIC agents, by an informant as he was crossing a bridge. Another Nazi was apprehended at a farm, where CIC agents found him working as a hired hand. Denunciations by local civilians, of this "widely-hated" individual, had led to his capture.

CIC discovered that defeat had not humbled all the former Nazis. An officer who had served with an SS Police unit in Poland was captured with two loaded pistols and a German command car still in his possession. Despite his background, the agents found, among his papers, a pass issued by a lieutenant colonel of the MG. The prisoner explained away his ownership of the firearms of his personal theory that, as a former officer, he should have been permitted to retain his weapons. He flatly denied any knowledge of orders to the contrary and even claimed to have worn the pistols before an MG colonel in Munich.[83]

The automatic arrest situation gradually underwent a change as the 36th Division area of occupation was cleared of former Nazis. No longer could CIC agents enter a town, contact a few informants, arrest the wanted individuals and load them into a truck. Apprehension of the remaining automatic arrestees was often a matter of detailed investigation; the agents had to sift out false identification documents and piece through involved cover stories and cover positions that had been assumed by the evaders.

Large scale operations involving tactical troops were still used in some areas to apprehend hidden Nazis. In August, Operation GOTHIC, a spot checking, by battalions, of the 36th Division, was undertaken and 4,500 persons were screened for identity documents. Five persons including one automatic arrestee were turned over to CIC for further investigation.[84]

---

82 Weekly Counterintelligence Report from 36th CIC Detachment, dtd 6 October 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

83 Weekly Counterintelligence Report from 36th CIC Detachment, dtd 1 September 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

84 Weekly Counterintelligence Report from 36th CIC Detachment, dtd 25 August 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

At irregular intervals, Operation GOTHIC was revived, and several hundred soldiers were dispatched in a given battalion area to search out MG offenders and former Nazis. CIC teams along with teams from Military Intelligence Service handled the screening after these unannounced searches but, in general, failed to find personalities of counterintelligence interest. Violators of MG ordinances were channeled to the proper authorities for disposition.[85]

Civilian Voice Resentment

After several months of placidity towards the occupation forces, some German civilians began to complain about certain MG policies. A former leader of the Centrum Partei, pre-Hitler, Catholic Centrist party, told CIC agents that Germans felt the arrests were being made without proper investigation, and that it was impossible for a "blanket arrest policy to be considered just." The informant stated that apprehension of individuals who held smaller, non-paying positions as "leiters," even though they were not Party members, was unfair. He left the CIC office with the warning that a "policy of persecution, and not prosecution, will aid greatly in the formation of a Communist Party when the people recoil from the highly touted but unpracticed American democracy." After reviewing this informant's report, CIC noncomittally stated, "This information is passed on for what it may be worth."[86]

Fraternization Incidents

The lifting of the fraternization ban occasioned several incidents between German civilians and American soldiers. In the town of Goppingen, a group of about ten youths made remarks about a certain girl who was walking along the street with an American soldier. After bidding the girl goodbye, the soldier returned to the Germans and ordered them to move on their way. When they made several replies which he did not understand, the American struck and knocked down two of the boys. The remainder of the youths left hurriedly.

Almost all similar altercations were caused by German youths resentful of the preference shown to American soldiers by the German girls. CIC received reports of a group of individuals, signing themselves as "The Black Hand," that had been "feebly active" in one town. This organization composed anonymous notes to girls who had been seen with American soldiers, warning them that they were being watched. CIC decided, in turn, to watch the young men who were watching the girls.[87]

86 Weekly Counterintelligence Report, from 36th CIC Detachment, dtd 11 August 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

87 Weekly Counterintelligence Report from Hq 36th CIC Detachment, dtd 18 August 1945 (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

In their dealings with civilians, CIC agents were careful to note prevailing opinions about the future of Germany. In mid-September, a CIC report summed up recent observations as follows:

"The German majority has no clearly defined political outlook. Its primary concern is its day-to-day problems. Many individuals, even former Nazis, [illegible] primarily could not form an independent state in the near future, and they would like to see it become a protectorate of the United States for some time to come."

This attitude pointed unmistakably to the fact that the German lot under the American occupation, was not an unhappy one. Despite the occasional grumblings, from one side, that the Americans were too hasty in their apprehension of Nazi Germans and, from the other, that the process was too slow, members of the 36th CIC Detachment found that the occupation was proceeding satisfactorily in the month of October, less than half a year since the unconditional surrender.[88]

100th CIC Detachment

Following the German surrender, agents of the 100th CIC Detachment were assigned coverage of the division area centering around Ulm, approximately 70 miles long and 30 miles wide and containing about 350 cities and towns. Liaison with corps and army "pinpoint" (i.e. territorial) detachments was essential, and maximum security was obtained through frequent coordination with unit S2's and IPW personnel.

The size of the counterintelligence task in the division area necessitated thorough indoctrination of all intelligence personnel in automatic arrest and detention policy. CIC agents briefed these personnel and soon found that civilians, apprehended by a unit, could be interrogated at that unit level by IPW personnel, and then channeled either to CIC or MG. This system relieved CIC of the interrogation of people who had no counterintelligence importance.

Another boon to the CIC agents was a carefully developed informant network that kept them aware of any resistance groups, organized or contemplated, in the area. One confidential informant, posing as a Wehrwolf member, approached two fanatical members of the Hitler Jugend, [illegible] The CIC informant requested explosives and ammunition, and the resistance men not only delivered hand grenades and ammunition but told him where further arms were cached near Geislingen. CIC lost no time apprehending the fanatics and committing them to the stockade for trial by MG.

88 Weekly Counterintelligence Report from 36th CIC Detachment, dtd 15 Sep 45, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

The whole-hearted cooperation of local authorities and police further aided CIC in its De-Nazification Program. At times, this cooperation was "overenthusiastic" as the authorities strove to "arrest individuals simply because they have been local Nazis or because of petty jealousies."

Communications Security

As late as 15 June, agents of the 100th CIC Detachment continued to hold tight rein on civilian communications. Telephone communications were barred except in a few instances where intra-city lines were operated under the direct supervision of MG. Post offices were kept under lock and key, and all incoming mail was impounded while MG debated the advisability of resuming mail service on a strictly local basis.89

Stuttgart Gestapo

Agents of the 100th CIC Detachment found that the capture of wanted persons could be speeded up if key persons in Nazi organizations could be prompted to talk at length. Such was the case with Willie Seeger, formerly "N Referat" of the Stuttgart Gestapo and, by 10 June, a prisoner of the 100th CIC. Under interrogation, Seeger revealed the organizational plan of the Stuttgart Gestapo office and provided a list of employees and their respective positions within the different departments.

As a direct result of Seeger's information, 100th CIC arrested 11 members of the Stuttgart Gestapo and disseminated the names of other members, still at large, to nearby CIC units.90

New Responsibility

On 8 July, the 100th Division assumed command of a new sector that embraced the Kreise of Stuttgart, Esslingen, Weiblingen, Boblingen, Leonberg, Pforzheim, and Vaihingen. Since four 970th "slash" teams and agents of the 307th CIC Detachment were assigned areas within the division boundary, a large part of 100th CIC's efforts were concerned with liaison. Agents of the detachment were named to sit on a sabotage board consisting of representatives from specialist branches. They also participated in Operation TALLY HO, the mass screening of local civilians by all troop elements. CIC's principal mission in this operation was determining to which interested agency, arrestees were to be sent, but TALLY HO indicated

89 Monthly Counterintelligence Report #11 for Period from 15 May to 15 June 1945, from 100th CIC Detachment, dtd 15 June 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

90 Monthly Information Rpt for 100th CIC Det, dtd 4 July 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

to 100th CIC agents that "there is little to be gained by CIC in operations of this kind. Of necessity, the searches and on-the-spot interrogations conducted by the troops are too superficial to reveal many cases of counterintelligence interest."[91]

511th CIC Detachment: Periodic Raids

Agents of the 511th CIC Detachment attached to the 11th Armored Division participated in periodic raids in the vicinity of Ulm during the month of November 1945. These raids, in addition to uncovering minor "gifts" of American goods, brought to "the attention of the local populations that they were citizens of an occupied country... something which many civilians, in their increasing boldness, are often apt to forget."

The searches occasionally netted sizeable caches of contraband. In one house, eighteen cans of gasoline were located; in another, two foot lockers crammed with cigarettes, soap, and other small commodities. The usual excuse for the possession of American goods was that they were payment for having washed clothes or done other chores and were being stored for use as Christmas gifts.

Aside from these hoarded items, Nazi propaganda leaflets and books were found in a great many homes, and CIC warned that "the products of the printing press are very often more important to a budding underground than more lethal weapons."

Checking the Success of SWOOP Operations

In order to sound out the real German reactions to the series of American SWOOP Operations that had been carried out, two agents of the 511th CIC circulated around the town of Geislingen in civilian clothes, posing as Germans in order to overhear local comments. Among the remarks that were addressed to the undercover agents or to other Germans were:

"Look at the American guard there--he looks like a typical Bavarian drunkard."

"Look how they are going from house to house searching and checking; it reminds me how we did exactly the same thing in France."

"Gosh, I wish I was back in the British occupied zone. I have been living in Westfalen all this time, and for the past eight months the Tommies haven't raided our town once. Those Ammies certainly are a bother."

---

91 Monthly Information Rpt from 100th CIC Detachment, dtd 1 August 1945, (CONFIDENTIAL) (Box #25095, Kansas City Records Center)

Some of the "man-in-the-street" remarks were not as temperate as these, for the speakers had no idea that CIC was listening.

The undercover mission actually served a dual function, since it placed the agents in a good position to observe American as well as German conduct. What they noticed was not always complimentary to the efficiency and thoroughness of the raids.

One agent walked through the main streets of Geislingen for 45 minutes during curfew without ever being stopped by US personnel passing in vehicles. Only a German policeman warned him but did not make a check for papers. At one roadblock, a civilian trudging on foot carrying two valises and a cardboard box tied to his back, asked the guard if he could enter the town. He was refused but not questioned or searched. A woman in the crowd, clustered at the roadblock, then suggested that he enter the town by a roundabout route that would skirt the block. The man liked the suggestion and conveyed his intention to the guard in broken English to which the American replied, "OK, then, go ahead. I am looking the other way." The nearby civilians were much amused by this exchange.

The other CIC agent donned an American officer's field coat over his civilian suit and set out by jeep on the road between Gmund and Kirchheim. Using a trip ticket that bore an entirely different number from the figures stenciled on the hood of the jeep, the agent experienced no difficulty passing a number of check points. None of the guards ever noted the fact that the collar and trousers of his civilian garb protruded outside the military coat.

Once in the town, the agent walked freely on the streets during the curfew without encountering a single US patrol. He was finally arrested by German police and questioned thoroughly. His lack of authentic identity papers was spotted, and he was turned over to MG. Unaware that the man was a CIC agent, the MG operatives searched him and placed a suspicion of black marketing upon him when an American-made lighter was found in his possession.

No conclusions had to be made at the end of the agents' report on their undercover assignment. It must have seemed obvious that lax enforcement of even the most stringent rulings was hurting the American forces.[92]

A report on another raiding operation, code-named BLACK SATCHEL, that took place in Mannheim in February, 1946, revealed a considerable improvement in the conduct of the mass search. This time an undercover agent of the 511th CIC was able to report, "locations for roadblocks were well chosen, at positions

92 Special CIC Report from Hq 1st Armored Division, CIC Detachment 511, to G2 1st Armored Division, dtd 26 November 1945, (CONFIDENTIAL) (Box #25104, Kansas City Records Center)

where the by-passing would offer great problems and dangers to anyone attempting it... there was some confusion as to who was allowed to pass and who was not, but by 1500 hours, the official starting time of the operation, everybody knew his duties well. From then on, strict adherence was noted in all cases, although there was some reluctance to use weapons against unruly pedestrians." The agent was stopped and kept from leaving the area at each roadblock, but he was never searched. He noticed that searches in buildings appeared to be well organized and were completed in the allotted two hours. "The orderly dismounting from trucks and marching in platoon columns made very favorable impressions on the population... efficiency of guards remained steady throughout the operation." As the agent circulated among the civilians, he gathered fragments of conversations that indicated the Germans were accepting the searches more as a matter of course. The remark of one woman seemed fairly typical: "I don't see why these stubborn people (pedestrians) don't stop bothering the guards. Those soldiers have their orders and just can't let anyone pass. Why don't the people resign themselves to the fact that they just will have to wait till the thing is over?"[93]

Chapter 2

CIC IN EASTERN MILITARY DISTRICT

Complementing the work of the Seventh Army CIC and subordinate units in the West was the 303d CIC Detachment and its subordinate units attached to Third Army and the Eastern Military District.

303d CIC Detachment

At the close of the ETO campaign, elements of the Third US Army were spread over the eastern reaches of what was to be designated the US Zone of occupation. This area was crammed with displaced persons; approximately two million individuals of varied nationality had been swept into the region by the tides of war.

The problem of displaced persons was of pressing importance to the 303d CIC Detachment. Over a three-month period, which had started prior to the end of the war and continued into June 1945, CIC controlled special counterintelligence personnel engaged in the screening of these refugees. The special screening teams were composed of members of the Polish, Russian, French, Belgian, and Dutch Armies, supplemented by sixty-two displaced civilians who functioned as interpreters. The teams were dispatched to various displaced persons camps, and, while it was impossible to screen each individual, informant systems and other special operations kept the teams alerted about potential subversives in the camps.

303d CIC Field Operations

From the start of the occupation, the 303d CIC with headquarters at Freising had planned for long-range coverage of the Third Army area. Local offices were established in major cities throughout the area, staffed by agents on detached service from the 970th CIC. Informant systems were instituted on a local basis and diligent efforts undertaken to apprehend all individuals in the automatic arrest categories.

Coverage of the Army Occupational Zone was maintained on a landkreise basis; each 970th team covered from one to ten landkreise, depending on population density, counterintellgience problems, and the availability of corps and division CIC units for temporary assistance. By the end of June, 1945, a total of 43 "slash" teams from the 970th CIC were on duty in the Third

Army area.

But the principal problem for the 303d CIC Detachment remained the same as during the tactical phase: lack of sufficient personnel. The detachment was permitted to augment its staff with fifty additional enlisted personnel, but even the satisfactory efforts of these men did not fully alleviate the shortage.

A valuable addition to the counterintelligence forces was the establishment of a special agent of the Federal Bureau of Investigation with the 303d CIC Detachment "for the purpose of handling cases involving alleged or proven traitors of US nationality and the disposition of counterintelligence information pertaining to the Western hemisphere."

As the CIC mission in DP camps began to wane, CIC formed special teams to serve as interrogators in army internment centers. Headed by CIC agents and staffed by the attached Allied army personnel, the teams engaged in detailed interrogation of arrestees. Based upon the recommendations of these interrogators, internment camp commanders could determine the ultimate disposition of the arrestees. A continued shortage of clerical aid forced many trained interrogators to double as clerks, a situation which had plagued CIC throughout the War.[94]

To facilitate the dissemination of leads through the Army area, a CIC Operations Section was established at the Third Army Intelligence Center. All leads that extended outside the confines of a single operational team's assigned area were cleared through this Operations Section and routed to Research for any additional information on the subject in the files.

But CIC operations were still impeded by the lack of adequate teletype, radio and telephone communication systems that would permit the development of leads before they became unusable. The need for such communications had been recognized in principle in the various counterintelligence plans submitted prior to V-E Day; but execution lagged considerably behind planning.[95]

The CIC personnel shortage in the European Theater which

95 Monthly Information Report, 303d CIC Detachment, dtd 12 July 1945 (CONFIDENTIAL) (Central Records Facility)

had been felt from the start of the occupation in Third Army area became even more severe as "critical" (Adjusted Service Rating) scores were lowered and increasingly large numbers of men were rotated back to the States.

The detachment commander of the 303d CIC noted with dismay that by the end of November, the number of agents in his area had been reduced to fewer than 175 enlisted men and 50 officers. Recruitment of suitable personnel to take the place of redeployed Agents had met with "unexciting results." Some candidates for CIC appointment were funneled out of other military intelligence agencies, but the loss of experienced counterintelligence Agents was still felt.[96]

Perhaps most significant was the observation in the November Monthly Information Report that a glaring weakness in Third Army CIC units was "the lack of adequate coverage due to personnel shortages, the poor quality of the CIC agents who make up the present CIC, and the need for better, older trained personnel to continue the CIC operational job."[97] The fact that at this time of personnel difficulties CIC had to relax its standards in order to fill existing gaps was to have repercussions in later years of the Occupation.

Even in the early months of 1946, when CIC Agents trained in the Zone of the Interior began to arrive, the personnel situation was not cleared. The enlisted men came without prior training for occupational duties. They had completed a five weeks course in "detective" type work and lacked a background in such matters as "German political history from 1918 until the present, the history of the NSDAP, party ranks, the arrest categories and the geography of Germany." This problem was remedied to a degree by sending the "green" Agents to the European Theater Intelligence School at Oberammergau, Germany, for a ten day "blitz" course.[98]

208th CIC Detachment: Security...Before the Russians Moved In

The 208th CIC Detachment, reorganized after the German surrender, took over responsibility for an area vacated by First Army. The VIII Corps Command Post, located in Weimer, and its area was covered by one CIC team while other teams operated in the sectors assigned Corps Artillery and the 6th Cavalry Group. The Americans were not required to prepare for a long stay; as a result of Four Power agreements, the area was soon to be turned over to the Russians.

In general, conditions were well settled in the extensive VIII Corps region. The large cities of Weimer and Eisenach had police forces that "gave an appearance of willing cooperation." But a problem was posed from the start by a heavy influx of refugees coming from the direction of the Russian lines. There seemed to be widespread fear of mistreatment by the Russians, and rumors that the Russians would occupy Thuringen circulated widely.[99]

On 7 June, a mass exodus of civilians from Eisenach was threatened after some of the civilians had heard a radio broadcast stating that the proposed Russian occupation was soon to begin. But the anxiety subsided somewhat, and civilians were overheard making such statements as "we are glad that the Americans have our car, now the Russians will not get it."[100]

9th CIC Detachment

The 9th CIC Detachment was one of the few CIC units to remain with its tactical command well into the Occupation. While other CIC detachments were phased out or transferred to Regional CIC office six months after the Occupation began, the 9th CIC held onto its mission of providing security for the 9th Infantry Division and its area for almost two years.

Headquarters Security

On 10 May 1945, the official team composition of the 9th CIC detachment was reduced by two officers and five enlisted men; and nine days later, the remaining four officers and six

enlisted men were transferred to operate as a team of the overhead 970th Detachment. By October 1945, the remaining members of the detachment under the command of 2d Lieutenant Harold Nadel had accomplished thirty-three investigations and apprehensions of persons in "automatic arrest" and "wanted" categories and completed ten cases of suspected sabotage and thirteen cases of espionage. But the customary routine of checking headquarters and vital installations for security, screening civilians for employment, and investigating military personnel occupied most of the agents' time.

Throughout this period, the strength of the detachment constantly varied as problems of CIC organization were being discussed at higher headquarters in Germany and back in the United States. This instability carried over into 1946, and it became increasingly difficult to obtain men with linguistic backgrounds and investigative experience. The period of reorganization and readjustment continued until September 1946 when personnel from the CIC center began to arrive to fill vacancies. By this date, the counterintelligence mission of the detachment was gradually defined and narrowed to include enforcing security regulations, safeguarding US property, investigating security violations and threats, and screening for employment all persons within the command jurisdiction of the 9th Infantry Division. The Agents performed another service for the Division by assuming responsibility for the security of all DP, civilian internment, and POW enclosures. In addition they were called on to investigate disorders and unlawful acts that occurred within these compounds.

On December 1946, the 9th Infantry Division was deactivated, and the members of the CIC Detachment were reassigned to the First Military District. A revised mission accompanied the shift in responsibility: CIC Agents became primarily concerned with the investigation of all acts--subversive, criminal, and otherwise--committed by displaced persons. Close liaison was maintained with all G5, UNRRA, and military government agencies within the Military District, and an informant net was established to help the agents keep a close watch over the military and civilian populations, and to gain information relative to DP incidents.

This modified detachment continued to operate for four months. On 20 April 1947, the unit was formally deactivated and the agents were reassigned to serve with Constabulary CIC Detachments.101

101 Report from Ninth CIC Detachment, Stuttgart Military Post, Subj: Unit History, dtd 28 April 1947, (UNCLASSIFIED) Kansas City Record Center Box 25094).

45th CIC Detachment - In the Nazi Heartland

Members of the 45th CIC Detachment in excess of TOE allotments were assigned to the 970th CIC and then immediately placed on detached service with the 45th CIC during the administrative reshuffling that followed the German surrender.[102] The number of Agents was augmented to sixteen, and Captain Rupert Guenthner remained in command of the Detachment, which operated with the 45th Infantry Division in and around the city of Munich. On 18 May, the Division was ordered to establish Area Commands in the regions of Dachau, Munchen and Furstenfeldbruck, and CIC Agents were deployed to provide coverage for the areas.[103]

The problems facing CIC in Munich and its environs were considerable. Here, in the virtual birthplace of Hitlerism, were hundreds of Germans who had played important roles in the Nazi regime. Over three hundred enemy personalities including members of the Gestapo, SD, Abwehr, and SS, as well as other party officials (among them the Oberburgermeister of Munich) were rounded up by the end of May. CIC could not expend all its efforts gathering war criminals; the massive concentration camp at Dachau, where some of the most brutal crimes of the Nazis had been committed, had to be thoroughly covered for evidence of the atrocities; and the usual watch over military security had to be maintained. Aid was given to the hard pressed Agents in the city of Munich by members of the Advance Third Army CIC during the early weeks of occupation duties.

A Typical Opportunist Group: The FAB

Most CIC units in Germany were concerned lest a revival of Naziism occur through the medium of resistance organizations. But the 45th CIC had, in addition, the problem of a self-styled, pro-Allied group of Germans who fancied themselves the leaders of a New Germany.

The history of the Freiheits Aktion Bayern (FAB) (Freedom Action Bavaria) apparently commenced about seventy-two hours before the Americans entered Munich. In the confused turmoil of the final days of Hitlerism, a Dr. Rupprecht Gerngross, with a small coterie of friends, attempted to implement a plan that must have been lurking in their minds ever since the doom of Germany had been sealed, so detailed was the organization which they had prepared.

On 28 April, the FAB made its first appearance. On that

date, Gerngross, a Wehrmacht captain of an interpreter company, attempted a military putsch on a small scale by leading his men against the German armed forces in Munich. The only aid Gerngross received was from a band of civilians from an organization known as C-7.

The mutiny was successful to a degree. Gerngross's men seized the radio station and broadcast to the people of Munich and the military garrison, calling them to surrender. Another group from the company kidnapped Reichstatthalter Franz Ritter Von Epp, the governor general of Bavaria, from his residence near Munich and attempted to convince him that he should surrender the city.

Gerngross, failing to receive the approval of Von Epp, did not hesitate to broadcast that the Governor General was a co-leader of the revolutionary movement. But Von Epp's positive refusal to aid the FAB and the approach of SS troops to the radio station caused the members of the cabal to flee without defending their position. With the failure of this one-day revolution, the FAB split up, and its members went into hiding in Munich and at various points in the south of Bavaria.

On the evening of 23 April, after the reseizure of the radio station by Nazi authorities, the local Gauleiter addressed the populace, denouncing the attempted putsch and ridiculing Gerngross. This was the first time that Gerngross' name had come before the people of Munich.

The next appearance of the FAB was after the occupation by American forces. The FAB had contacted an American air officer who had accompanied the first wave of troops into Munich. They were referred to the subsection of the 45th CIC Detachment that had arrived in the city. The Adjutant of the movement, a Dr. Leiling, proposed that the FAB serve as an initial liaison unit with the American authorities, apparently intending to gain the support of the occupation forces through this offer of assistance, and the FAB soon set up office and commenced operations on a pseudo-offical scale. Their activities began despite the fact that CIC Agents explained that the American authorities neither sanctioned nor sponsored the movement, but would welcome any cooperation in the procurement of counterintelligence information.

The FAB was not satisfied with the idea of simply serving as informants for the Americans, and they began to represent themselves as the saviours of Bavaria and as members of a long term underground movement. To the people of Munich, the FAB declared that they were the prime ministry and advisers of the Military Government as well as the dispensers of patronage to

local Bavarians.

Convinced of their own importance, the members of the FAB moved into successively more pretentious quarters to accommodate their mushrooming organization, and they began to requisition vehicles and additional premises in the name of the second senior Military Government officer without his authorization or consent.

The FAB extended its activities to arrest subjects whom they considered leading Nazi officials. On 14 May, an individual was apprehended at his house by FAB men and committed to a local prison for the night. On the following day, interrogation by CIC Agents disclosed that the individual had been wrongly held, and the FAB personnel concerned were severely reprimanded.

Other misdemeanors by the FAB included the issuance of a warrant of authority to a member which delegated to him certain prerogatives and executive powers that should have been exercised by the local Burgermeister, the receipt of monetary contributions for the support of the movement, and the posting of printed proclamations in close proximity to public writs of the Military Government, thus gaining prominence by association.

An example of the operations of the FAB was given by one CIC informant, an actor in a municipal theater. Shortly after the Occupation, a member of the FAB paid a call on a director of the theater and informed him that any efforts to have the theater opened would have to be mediated through the FAB. A virtual spy system was set up within the staff of the theater and through this system, the FAB sought to exert pressure on members of the staff to affiliate with FAB or lose their positions.[104]

The wide license that the FAB had assumed was climaxed in a letter to the Military Government, dated 15 May, which was reproduced in such quantity that CIC could only conclude it had been intended for distribution as an open letter. The FAB stated its concept of the occupation program that the Military Government should initiate, closing with the note:

"We submit this immediate program and ask for the opportunity to collaborate with Military Government in carrying out that program. We are able to nominate experts of unimpeachable character who are able to work out the necessary detail

104 Investigation Report from Lt Holger E. Hansen from "T" Force, Headquarters 6th Army Group, dtd 18 May 1945 (UNCLASSIFIED), (Box 45121, Kansas City Records Center).

plans for the immediate program " (italics from the FAB original)

Since the FAB had far exceeded the role which Military Government had granted it and had violated the order calling for the dissolution of all politcal movements and cessation of all organizations having a political motive in the area, CIC Agents decided to interrogate the FAB leaders and investigate the organization thoroughly.

Investigation disclosed that the FAB had represented itself as the sole organization sanctioned by Allied authorities and the most effective approach to American Military Government and the CIC. Although FAB claimed that its membership was devoid of former Nazis, at least one Nazi follower worked in the organization's office. More disturbing was the discovery that the FAB had never shed the vestiges of its military form. Correspondence of the organization revealed, both in context and by constant reference to members of the movement by rank, that the nucleus of the FAB was still the military company of interpreters that had participated in the unsuccessful mutiny.

Special Agents Russell B. Frizzell and Timothy Reis who interviewed Gerngross concluded that he was primarily an opportunist without basic principles of belief other than a certain enjoyment of the power and influence that he suddenly had come to wield. It was particularly apparent to the Agents that Gerngross had invented accounts of his having been a long-term resistance leader, since he could not cite any act of positive resistance prior to the attempted putsch, nor was he able to give details of any aid he had offered to Allied Agents in the Munich area before the Occupation. His immediate goal was clear; Gerngross hoped to gain such ascendancy in Bavarian affairs that the FAB could not be disregarded by the Military Government or the Bavarian people.

On 17 May, as a result of the potentially dangerous situation caused by the FAB, the Allied Military Government informed the movement that it would have to "voluntarily disband" and cease further political activity. Gerngross and the other key figures in the FAB were required to file personal history statements with CIC so that these opportunists could be kept in check.[105]

105 Information on the FAB contained in Memorandum for the Officer in Charge, Hq 307th CIC Detachment, dtd 17 May 1945 (CONFIDENTIAL), (Box 45121, Kansas City Records Center).

Others Get Into the Act

The FAB was not alone in its attempt to convince the Bavarians that the Military Government bestowed special privileges on certain organizations. On 17 May, Special Agent Charles G. Ewing noticed a door of an office in Munich that bore the legend National Komitee FRIES DEUTSCHLAND (National Committee 'Free Germany'). Inside the office, a man was seen interviewing a weeping woman, and in an outer office, a staff of employees were at work. The chief of the organization, Josef Urban, was found to be posting placards that claimed his office was an intermediary between complainants and the Military Government.

Following interrogation, the CIC Agent concluded that Urban was probably operating a racket and receiving fees for his self-claimed official advice. But Agent Ewing did not rule out the possibility that Communist or other political backing was behind the operation.106

Compiling Data on Berchtesgaden

The big question near the end of the war in Europe had been: where would the Nazis choose to make their last stand? Most answers seemed to point to one place: Berchtesgaden, high in the Bavarian Alps. Fearing that the Germans were going to turn this mountain retreat into a National Redoubt manned by the finest SS troops, General Eisenhower had decided to direct the southern Allied Forces towards this objective. The rapid conquest of Berchtesgaden by elements of the Seventh Army indicated that Intelligence estimates of the "National Redoubt" had been far wide of the mark. But some key Nazis apparently had fled to Berchtesgaden, and 45th CIC Agents developed leads on personalities that might be hidden near this Alpine hideaway after the occupation.

On 1 June, Special Agent Frederick J. White located and interviewed the president of an organization known as the Alpine Rescue Service, that had a membership of 500 mountaineers familiar with the Bavarian Alps in the vicinity of Berchtesgaden. According to the president, the Alpine Rescue Service was at the disposal of any units of the Allied Armies that wanted to search for Nazis believed to be hiding in the mountains, and Agent White recommended the use of this service to VI Corps CIC.107

CIC Agent Uncovers Nazi Party Documents

Although the Germans had attempted to destroy records and documents of the deeds and personalities of the Nazi regime, both nationally and locally, they had not always succeeded in finishing their work before the Americans entered a town. In the village of Freimann, Agent Francesco S. Quaranta was advised that 68,000 kilos of party documents had been left for the Reichsleitung SA in a paper mill by Gestapo guards.

When Agent Quaranta went to the mill on 20 May, he discovered that the owner had been ordered to accomplish immediate and total destruction of the documents as the American forces neared Freimann, but had not carried out the command. The entire second floor of the mill was covered with papers that included all the Party membership cards of Germany with identification photos on the back, documents of the highest party court and highest SA court, and many other papers that concerned high level Gestapo figures and actions. Agent Quaranta, aware of the extreme importance of these documents to the Occupation, posted temporary guards around the mill, designated the area as"Off Limits," and hastily prepared a report for the AC of S, G2 so that immediate action could be taken to remove the papers to a safe repository.[108]

Round Up of War Criminals Continues at Rapid Pace

Although agents of the 45th CIC were called upon to perform many counterintelligence functions, their prime mission remained the apprehension of Nazi leaders. Daily reports indicating the persons apprehended by the Detachment were forwarded to Corps CIC, and a pattern familiar to all detachments began to emerge: the "automatic arrest categories" made detention of hundreds of Germans a necessity.

Among the key individuals that the 45th CIC found in Munich and its environs were a Major General of the Wehrmacht, the former head of the Bavarian police forces, the chief of the SD Austenstelle of Munich West, and a Kriminal Inspektor for the Gestapo.[109] But the case that most interested the agents dealt

with a naturalized American citizen whose past was thickly spotted with espionage efforts on behalf of the land of his birth.

, a Preserver of German Culture in America

On 12 June, Agents of the 45th CIC working in Munich tracked down a man named who had spent most of his life shuttling back and forth between Germany and the United States. Interrogation at detachment headquarters resulted in numerous and varied statements from as he tried to coat his entire life with a series of alibis. But the central core of his activities was clear enough to the CIC agents. had been a leading Bundist and apologist for Hitler in America during the pre-war years.

If pre-War activities had a possible ambivalence, there was no disputing the record he compiled on behalf of the Nazis during the War. In 1940, passport was extended through 1944 by the American Counsel General, and he enrolled in the Party. His addresses to the Germans continued in schools and universities, and the Propaganda Ministry employed as a speaker at selected meetings. He also gained prominence as a lecturer throughout Germany for the Verein fur Das Deutschum in Ausland (Society for Furtherance of Germanicism in foreign countries), generally known as VDA. In 1944, as the accelerated Allied bombings of the Reich forced to abandon his cultural efforts, he became the liaison man between the SD, Gestapo the VDA, in charge of clearing information that passed between the three agencies.

Although made every effort to convince his CIC interrogators that his activities had been prompted by a desire to organize German life in the United States, not from a political but from a commercial and intellectual point of view, the agents remained skeptical and turned him over the 303d CIC Detachment for further interrogation, with the recommendation that he be brought back to the United States for trial for his anti-American activities.[110]

45th CIC Agents at Dachau

As the Allies overrun Germany, they came across many con-

110 Special Report from 45th CIC Detachment to AC of S, G2, 45th Inf Div, Subj: dtd 14 June 1945 (UNCLASSIFIED); and "Notes made by of his activities here and abroad."(undtd) (UNCLASSIFIED) (Box 45121, Kansas City Records Center).

centration camps where some of the worst Nazi atrocities had been committed. Sights were seen there that caused men as inured to the horrors of war as General Patton to sicken.[111]

The concentration camp at Dachau, several miles outside of Munich, was one of the worst. Special Agent Earnest T. Gearhart from the 45th CIC Detachment was detailed to aid the International Prisoners Committee that was investigating the situation at Dachau. The order, given by the Division G2, was for Agent Gearhart to determine the status of prisoners being held by American authorities and to classify these prisoners for future disposition.

There were already CIC agents from the 970th Detachment at the camp when Gearhart arrived on 22 June and, in a special report, the 45th CIC agent had some choice remarks to make:

"There seems to be something fishy about the set-up there at DACHAU. I haven't been able yet to determine whether it's just the normal jealousies that arise between different armies, or 'brass politics,' or CIC vs. CIC criticism, or just a plain snafued situation arising out of lack of continuity and liaison of all agencies that may have had anything to do at the Camp. I don't believe there is anything critically wrong in the whole set-up; there's just been a lot of bucking back and forth with nobody taking the ball."[112]

A great deal of the CIC confusion stemmed from the failure of the Seventh Army command to settle on one group to carry out the investigations. Agents of the 307th CIC were the first on the scene and were soon followed by a specially designated team from the overhead 970th CIC. In this change of responsibility, there was a total neglect of transferring reports, and the new detachment had no basis for continuing the investigations. Resentment was voiced that Gearhart had been sent in to "check on their work," and the 45th CIC Agent found himself limited in "sources of information and cooperation."

Despite the problems, Agent Gearhart was able to effect liaison "of a rather unsatisfactory nature" with the CIC team at the Camp. The Commanding Officer of the Camp informed Gearhart that there were still people in the Bunker and that he

112 Memo for the Officer in Charge from S/A Gearhart, Subj: Interim Reports on investigation of Prisoners in Bunker at Dachau Concentration Camp, dtd 22 June 1945 (UNCLASSIFIED) (Box 45121, Kansas City Records Center).

wanted CIC to evacuate this area and process the prisoners as quickly as possible. Another high-ranking officer, representing the Commanding General of the Dachau area, held views almost diametrically opposite. He felt that there was nothing unhealthy in the situation at the Bunker and that charges against prisoners and channeling of foreign nationality prisoners back to their respective countries could be handled for the most part by the International Prisoners Committee. But this man failed to specify who would deal with the German and Austrian prisoners--CIC or the War Crimes Commission.

Agent Gearhart and another CIC man started the task of compiling individual cards on each prisoner found at the Bunker and gathering all information that records in the Camp revealed. On 23 June, Agent Gordon B. McPherson relieved Gearhart at Dachau and continued the processing and investigations until 29 June.

A total of eighty-one Prisoners, most of whom were accused of brutality towards other inmates of the camp, were screened. Fifty-seven of these were designated either for transfer to their own governments for trial or for investigation by the War Crimes Commission, the Dachau MG and CIC units; or for review by the Dachau Camp Review board. The 45th CIC Agents had managed in a single week to eliminate a great deal of the mismanagement that had existed among the authorities at Dachau.[113]

"The Butcher of Dachau"

The barbed wire enclosure at Dachau did not contain the whole story of the atrocities that had been committed at the Concentration Camp. Scattered among the inhabitants of occupied Germany were the guards and executioners who had helped make Dachau a place of bones.

On 7 May, Agents of the 45th CIC Detachment arrested who had been denounced as an executioner at Dachau. had been sent to Dachau in 1940 as a prisoner, but in August 1943, he applied for the job of cremating corpses "in order to get more food." He received the position in the crematory, and gradually began to acquire other duties such as whipping inmates

113 From Memorandum for the Officer in Charge, from Special Agent Earnest T. Gearhart, Subj: Interim Report on Investigation of Prisoners in Bunker at Dachau Concentration Camp, dtd 22 June 1945 (UNCLASSIFIED); and Report to AC of S, G2, 45th Inf Div from 45th CIC Detachment, Subj: Classification of Prisoners at Dachau Camp, dtd 29 June 1945 (CONFIDENTIAL), (both in Box 45121, Kansas City Records Center).

CONFIDENTIAL

during Gestapo interrogations, and hanging captives. declared, "In the beginning I was very satisfied with my work as I had only to burn the corpses," but he claimed that his other activities were not so pleasing. Reports from prisoners who had known and his brutality failed to support his professed dislike of the additional tasks. He acquired professional ability in hanging prisoners in record time, averaging twenty to twenty-five executions per week. His zeal for the positions he held was exemplified in one instance when he first hanged three inmates, removed the ropes after twenty minutes and placed the corpses in kneeling positions like marionettes before giving them a violent kick. Nicknamed the "butcher of Dachau," was denounced to the CIC Agents as a sadist, a coward, and a bloodthirsty individual who had no compunctions about his grisly employment.[114]

Remorse of Fear

On 12 June, 45th CIC Agent MacPherson arrested a man accused of mistreating an American pilot who had parachuted into the Munchen-Solin area in July 1944.

Transported to CIC headquarters in Munich, was confronted by a detailed interrogation from Agents Fausto Molinet and Herman Kristeler. He admitted to having mishandled the downed flier by beating him in the back until the pilot was in bloody condition.

After receiving confession, the Agents turned him over to a photographer in the building to have his picture taken for the records. On the way back from the photographer's studio to the interrogation room, broke without warning and dashed out a window, plunging to the ground two floors below. He was removed from the scene to a nearby hospital in critical condition.

The CIC Agents had taken all possible precautions to prevent a suicide attempt to stripping of a considerable number of sleeping tablets, a knife, and glasses. But the prisoner, overcome either by remorse in having his past crimes brought in the open or fear for his future, had managed to foil his captors' precautions.[115]

5th CIC Detachment Winds Up Operations

The month of June in the Munich area was marked by a decreasing number of Occupation problems for the 45th CIC Agents. Collection of former Nazis was proceeding at a steady rate, and civil disturbances such as looting had decreased with the evacuation of a large number of displaced persons. Traces of Wehrwolf activity were reported; some informants found threatening messages glued to their doors. But no overt action against civilians aiding the Allies was reported.

Military security during this period was considered excellent. The troops of the 45th Division remained wary of all Germans "since the testimony of Dachau was witnessed by them first hand."[116]

In the middle of June, the detachment headquarters were moved to Maisach, and one month later the unit was transferred to an assembly area in France for return to the United States. The 45th CIC Detachment, which had been activated in Italy, landed in Southern France, and had fought with the Division through Rhineland and Central Europe had now completed its European operations.[117]

79th CIC in Czechoslovakia

During June, the 79th CIC Detachment moved with the Division reassigned from Northern Germany to the Third Army's area of occupation in western Czechoslovakia. This new location brought the agents into an area heavily infested with former Nazis; it also afforded them an opportunity to operate close to the forces of the Soviet Union.

Working with agents of the 1st Division CIC, the 79th CIC agents, during June, apprehended a total of 1349 automatic arrest personalities as follows:

Civilian Automatic Arrests, all nationalities.....290
Wehrmacht Automatic Arrests, all nationalities.....384
WAFFEN SS Automatic Arrests, all nationalities.....250
WAFFEN SS Totenkopfverband Automatic Arrests, all nats.....399

116 45th CIC Detachment, Monthly CI Periodic Report Nr 1 for the month of June 1945, dtd 18 June 1945 (CONFIDENTIAL) (Box 45121, Kansas City Records Center).
117 Historical Data card, 45th CIC Detachment, (UNCLASSIFIED) (Organization and Directory Service, AGD, The Pentagon).

Female Automatic Arrests--SS Women..... 7
Political.....19

Among this large group of arrestees was an American from Chicago who had returned to Belgium, the land of his parents, prior to the war, and who claimed that his only alternative to joining the SS was shipment to a concentration camp.

CIC Agents found several procedures effective in their search for former SS men. Hospital patients were subjected to careful scrutiny, and suspects were examined for blood type tattoing that could usually be found under the arms. In many instances, these tattoos were partially removed or fairly faint as a result of amateurish operations. The Agents also encountered numerous cases of forged identity documents, but the round up continued at a steady pace.[118]

Is It Authentic?

During June, 79th CIC Agents received a translation of an instruction sheet supposedly issued by the Russians to members of a select group of their operatives in Germany a short time prior to the end of the war. According to the German who supplied the translation, the original instruction paper was written in Russian but had been lost.

The paper set forth a model of organization. Russian agents were ordered to carry out Soviet agitation in "such a way that resistance by the Germans becomes purposeless. They were directed to stimulate sabotage efforts in the camps of eastern workers, give aid to Red Army parachutists, liberate POW, procure weapons, and take other steps to guarantee a successful insurrection against the Germans. The goal was clear: "We won't have to rule for more than a week as the Red Army will be there by that time. We will have smoothed their path so that they can occupy as much of Germany as possible."

But the portion of the letter that most interested the CIC agents was the concluding paragraph:

"Remember this: The English and Americans will be our enemies in the near future. We must not help them; we must beat them as far as possible. Only the one who conquers the greatest part of Germany is going to win the war. We are serving the toiling masses."

---

118 Monthly Information Rpt from 79th CIC Det, dtd 1 Jul 45 (CONFIDENTIAL) (Box 25095, Kansas City Records Center).

The CIC agents who read this document could render no evaluation of this final paragraph. Whether the remark was a spurious statement composed by the Germans to promote anti-Russian feelings or whether it was an authentic translation of the original document was a matter for open speculation. The paper had been lost and only its recovery could have proved the accuracy of the version that CIC possessed.119

The "SS Zeppelin" Schools

Not all the efforts of the 79th CIC agents were directed to problems of the present. Upon receipt of information from the 516th CIC, the agents began on 21 June to investigate the history and operations of a former Nazi espionage unit known as the SS Zeppelin Schools.

One of these schools, located in Kynsvart, Czechoslovakia, had been opened in October 1944 as a military institution whose mission was kept secret. About forty Russian and Ukranian girls, some wearing Red Cross and Wehrmacht uniforms, attended the school, presumably to receive training in wireless transmission. In the opinion of CIC informants, the school was designed to develop low level agents to function behind Russian lines. But little was actually accomplished. The students, for the most part, were uneducated laborers from Russian lagers, and they failed to apply themselves seriously to training for espionage.

Further CIC investigations revealed other schools for training male agents to accomplish similar missions, but all the units of SS Zeppelin were dissolved prior to the arrival of the American troops.

Current Sabotage Efforts

The 79th CIC Agents also had to deal with a currently operating resistance group, designated as Organization SCHAEFER. This group was formed originally in Sudetenland to combat the return of the Czechs whom the Germans feared would exact revenge. Organization SCHAEFER was composed wholly of Nazi Party members, who were to be instructed by SS and other men experienced in the methods of propaganda and sabotage. The control of the SCHAEFER Group was delegated to a Kressleiter who had to designate a well hidden area in the vicinity where members could live and receive training.

The first known meeting of the group was on the night of

119 Monthly Information Rpt from 79th CIC Det, dtd 1 July 45 (CONFIDENTIAL) (Box 25095, Kansas City Records Center).

Hitler's death when the members gathered for a"pep talk." The entire organization was told to remain inactive until the sector had been occupied for several months. Then, after the initial caution of the occupying troops was relaxed, Organization SCHAEFER would be poised to strike. Direct cooperation betweer Wehrwolf and SCHAEFER forces was to be maintained; the crucial difference between the units being that SCHAEFER members were all adults.

Early in the Occupation, SCHAEFER and Wehrwolf signs appeared on sidewalks and walls in the towns within the division area. But during June and July, CIC arrested all known members of the organizations, and evidence of this subversive activity disappeared.

The Blood Type Tattooes

CIC Agents had arrested many suspected SS members and discovered partial eradications of the blood type tattooes that had been customarily inscribed under the trooper's arms. Rumors added to the CIC suspicions that these removals were being accomplished by former medics, and, on 10 July, the 79th CIC Agents conducted interrogations of all medical personnel within the 79th Division Concentration area. All doctors in the camp denied any knowledge of the operations having been performed.

The CIC Agents were not satisfied with the blanket denials. More extensive investigation indicated that a German medical officer in the camp, had performed such an operation on an SS man named whom CIC had under arrest. After re-interrogation, admitted that he had removed some tattooes but stated that was not one of his patients. The Agents continued to gather witnesses and informants until they had enough material to confront a third time.

This third investigation left with no alibi, and he confessed that the man was among those on whom he had operated. The doctor explained that when he made the incision to remove the tatto, he also cut into the outer side of the SS man's arm to give the impression that had been wounded. also admitted that he had falsified military records to remove all evidence of SS membership.

This confession along with the physical evidence in the person of the former SS man and the statements of witnesses provided CIC with enough material to recommend for Court

proceedings.

Capture in the Mountains

Immediately after the German surrender, rumors began to pour [illegible] 80th CIC offices in Vocklabruck, Austria, concerning the whereabouts of Dr. Ernst Kaltenbrunner, the Nazi chief of Gestapo, Kripo, and all German intelligence. Few Nazis were more important than Kaltenbrunner, who had worked his way up in the Nazi Party until 1943 when Himmler appointed him to succeed Heydrich "the Hangman" as the chief of the Gestapo, the Krip, and the SD. While Kaltenbrunner was in power the little known and super-secret SD was enlarged to include the Abwehr (German military intelligence) with a major mission of keeping "constant supervision of all open and secret enemies of Nazidom in closest cooperation with the Gestapo, its executive agency."

The rumors pointing to the hideout of Kaltenbrunner suggested that the arch-Nazi was somewhere in the area of Alt Aussee. Generally, this area was further delimited to the Totes Gebirge range of the Austrian Alps. On the morning of 11 May, [illegible] in Alt Aussee, came to the 80th CIC office with some startling information pertaining to a forester. Kaltenbrunner and his adjutant, Scheidel, along with two SS men, had been seen in a cabin at a spot [illegible] Wildensee which crowned the Totes Gebirge.

Agent Robert E. Matteson, who had previously captured and arrested Ernst Kaltenbrunner, hastily negotiated with [illegible] for a group of reliable mountain climbers to accompany him up to the cabin retreat. The Commander of the American Task Force in the area [illegible] agreed to supply a patrol of ten men and two officers to accompany the searchers.

Agent Matteson decided to wear native Austrian clothes with the intention of thereby facilitating the approach to the cabin and negotiation with the Nazi leader, hoping to capture Kaltenbrunner alive. Consultation with the Austrian guides led to the selection of midnight as the departure time. Three advantages were to be gained at this time: semi-darkness would prevail [illegible] arrival at the cabin (the trip was calculated to take five hours); the men would probably still be in bed; and there would be a hard crust of snow until approximately three hours after sunrise.

Information Rpt from Hq 79th CIC Det, dtd 1 Aug [illegible] (CONFIDENTIAL) (Box 25095, Kansas City Records Center).

All four men were interrogated briefly. None admitted being either Kaltenbrunner or Scheidel, and Matteson had no concrete evidence to establish their identities. One man presented papers certifying that he was a Wehrmacht doctor by the name of Unterwegen; another brought forth papers that also seemed authentic.

At 0730, the patrol with its four prisoners started the long trek down the mountain, not certain if they had apprehended the persons whom they had sought. By 1130 the town of Alt Ausse was reached, and the party proceeded to the house of Scheidel. When they arrived, Frau Scheidel rushed out and planted a kiss on one of the men. This settled the identity of Scheidel; shortly after, Kaltenbrunner's mistress and other acquaintances identified the phony "Dr. Unterwegen" as the Intelligence Chief. But neither man was willing to admit his true identity until later in the day despite the conclusive evidence. Under renewed interrogation, Kaltenbrunner was confronted with a picture of his wife and two children which had been taken from his billfold. He then saw the futility of holding out further against the American interrogators. Kaltenbrunner's confession was followed by a similar statement from Scheidel, and the capture of "two of the three worst war criminals at that time still at large in Europe" was ended.[121]

83d CIC Detachment: Aid From Civilians

The agents of the 83d CIC Detachment were operating in the vicinity of Bad Harzburg when the Germans officially surrendered. At the time, the agents were responsible for security in the large area that had come under divisional control. The pressure of the tactical campaign had lifted, and counterintelligence work assumed a long-range aspect, with the detachment reporting that it had now found it possible "to spend more time and to exercise a greater discrimination in investigating cases."

The detachment was bolstered by the addition of teams from the overhead 970th CIC, and the divisonal area was partitioned into six sectors with a CIC team assigned to each. Agents in these sectors cultivated their own informants and found generally that the civilian attitude was one of "reserved cooperation." Agents noted that the ordinary German civilian was willing, "temporarily at least," to cooperate in the apprehension of former political and Nazi Party leaders. Information concerning

121 Memorandum for the Officer in Charge, 80th CIC Detachment, from S/A Robert E. Matteson, Subj: The Capture of Dr. Ernst Kaltenbrunner, Nazi Chief of GESTAPO, KRIPO and all German Intelligence - and his Adjutant Scheidel, dtd 13 May 1945, (UNCLASSIFIED) (Box 25099, Kansas City Records Center).

such physical security targets as ammunition dumps and stores of grenades was easily obtained and, where records of interest to CIC had been found, there was no attempt by civilians to break into the sealed buildings. The 83d CIC attributed the favorable attitude of the civilians, in part, to the fact that no organized resistance movements had gained ground in the division area.

Military Government and Officers Pro Tem

Since the 83d Division area was crowded with towns, it became necessary to supplement the trained military government officials with officers from various tactical units. CIC received complete cooperation from these "pro tem" military government officers. Relatively permanent arrangements were made to regulate curfew hours and travel; at the start of the occupation, civilians were restricted to their homes between 2100 and 0500 hours and permitted to travel without passes only within their residential Kreis. Civilians living in the immediate area of a command post were ordered to move elsewhere, and all civilian access to critical military installations was denied.

Along the Border

On 13 June, the 83d Division officially relieved the 5th Infantry Division of occupational responsibilities in the Passau-Degendorf area, close by the German-Austrian and German-Czecholslovakian borders. This sector of Bavaria proved a hot bed of rumors, many of which were caused by the proximity of Russian and American forces. Citizens claimed that the area was to be relinquished to the Russians by 25 June, a rumor which persisted until after the expected date. The Germans also contended that the Russians and Americans would enter into conflict "in the near future."

Two of the attached CIC teams from the 970th CIC were assigned border patrol duties exclusively. The Austrian border control team made a detailed survey of the conditions existing along its sector and discovered that traffic consisted largely of three types of persons: Fronteliers, discharged German prisoners of War with appropriate papers, and groups of DP's who were being transported home under Military Government supervision. This survey revealed that mass screening of all the inhabitants would be impracticable.[122] But the CIC team selected appropriate points for screening personnel who were permitted to remain near the borders in areas designated as "prohibited."

122 Counter Intelligence Periodic Report (For the Period 13 June - 30 June 1945) from 83d CIC Detachment, dtd 10 July 1945, (CONFIDENTIAL)(Box 25095, Kansas City Records Center).

ırgermeisters in the border region helped in the compilation of omplete lists of the residents of the area. The team operating along the German-Austrian border received additional aid from the geography of their sector: he Danube and Inn Rivers formed part of the border and served as a natural protective barrier against any attempted crossing.

The Austrian border southwest of the Danube River was well sealed. Roads were closed either by physical barriers or blocks manned by personnel of the artillery units in the area. The port of entry at Passau was examined in detail and found to pose a serious frontalier problem. Commanders of the border CIC teams recommended that all frontaliers be given special authorization so that they could be checked by guards manning the control points.[123]

The portion of the Austrian border running from the Danube northeast to the Czech border opposite the Russian occupation zone was laced by nine principal roads, all of which had to be closed to unauthorized persons. But complete "sealing off" was made extremely difficult because of the numerous trails and footpaths that crossed the border. CIC agents developed informants in the area to serve as a further check on the existence or non-existence of illegal border crossers.

The control problem along the Czech border was less difcult. Occasional illegal crossings occurred, but all violators who were apprehended were turned over to CIC. If screening proved negative, the offenders were sent to Military Government for disposition. Regular crossings were permitted to frontaliers whom local guards allowed to pass either upon personal recognition or the possession of frontalier identification issued by the local unit.[124]

After more than two months of border control measures and improvisations, the commander of the 83d CIC detachment presented a recapitulation of the situation in the critical area under CIC supervision.

The segment of the border fronting on the Russian zone in Austria was found still to be a source of considerable trouble. Both the Austrians and Russians appeared to be taking every

123 Weekly Intelligence Report from Hq 83d Inf Div, dtd 2 July 1945, (CONFIDENTIAL) (Box 25095, Kansas City Records Center).

124 Weekly Intelligence Report from Hq 83d Infantry Division dtd 9 July 1945, (CONFIDENTIAL) (Box 25095, Kansas City Records Center).

means available to shunt discharged Wehrmacht soldiers across to Germany without regard for the existing regulation which closed the border to all traffic except frontaliers. In one instance, a group of three hundred discharged Germans were apprehended by an American patrol. They had been told by the Russians to cross at a point where there were no American guards. As a temporary expedient, the American forces made arrangements to accept the Germans in exchange for three hundred Hungarians that had been stranded in Germany.

The confusion befogging the handling of these German soldiers was attributed to a failure of higher headquarters in both the Russian and US camps to disseminate information concerning the exchange of nationals to the units actually engaged in the transfers. CIC suggested that, since the soldiers were given bona fide Russian discharge papers, they could revert to American control while still in Austria. Such a plan could be implemented by proper liaison between the Russians and the US Occupation forces in Linz.

Some coordination did exist with the Russian troops along the border. Twelve guard posts were manned jointly by Russian and American personnel, but Austrian burgermeisters managed to add to the confusion by issuing passes to Germans without notifying the Russians. When the recipients of these phoney passes arrived at the guard posts, the Americans had no choice but to refuse them entry to Germany and turn them over to the Russians.

Frontaliers in this sector posed another thorny problem. Since there had been no uniform pass developed for all persons who needed to cross the border as part of their daily activities, the approximately four hundred frontaliers had to be screened by CIC in coordination with Military Government.

The situation along the segment of the 83d Division's border facing US occupation troops in Austria was far simpler. There were no international difficulties here, and the aforementioned geographical features kept crossings at a minimum. At Simbach, Germany, an Austrian named Alfred Watzinger was arrested for operating an illegal ferry across the Inn River; and, at Passau, two Germans were arrested for attempting to smuggle mail from Czechoslovakia across the nub of German territory to Austria. Both men were sentenced by Military Government to six days imprisonment.

Controlling the Division sector, the southern Czechoslovakia-German border was apparently the least troublesome. The only two recognized ports of entry were guarded on one side by personnel of the Czech Army and on the other, by personnel of the 83d Division. The few frontaliers in the region were allowed to

cross freely, as were the small number of German dischargees if they possessed British, French or German discharge papers. All other persons were turned back at the border.

In addition to the two official ports of entry, there were about twenty guard posts along the Czechoslovakian border on subsidiary trails and roads. The few persons captured trying to enter Germany illegally were turned over to Military Government for trial; the usual sentence imposed amounted to a fine of 100 marks and return to Czechoslovakia.

Reviewing the border situation, Captain Oliver A. Vietor of the 83d CIC Detachment recommended two measures that he felt would effectively seal the border: the dissemination of clear and definite instructions to all guards manning border posts and the issuance of a standard pass to all frontaliers which would remove any doubt whether an individual had the right to cross from one country into another.[125] By 1 September, Captain Vietor was able to report that "on the whole frontier security .....was satisfactory."[126]

CIC Along the Northern Czechoslovakian Border

The CIC Border Control Team assigned to the northernmost stretch of the common border between West Germany and Czechoslovakia was composed of 12 agents drawn from the 970th CIC, the linguist pool of the American Division in the area and new CIC arrivals in the European Theater. The team was substantially aided by the division commander who placed virtually all the division's services at CIC's request. This high degree of cooperation was prompted by the fact that the division was entrusted primarily with maintaining the security of the border, and the CIC team was placed under the operational direction of the divisional G2.

The terrain that CIC had to control had no commanding natural features to delineate the boundary between the two countries. There were many open fields through which the border ran a jagged path. Only occasionally did a stone marker or a brief distance of fencing serve to point out the division. The area had a history of petty smuggling from one country to the other, since civilians had little difficulty in crossing the line.

126 Weekly Counter Intelligence Report from 83d CIC Detachment to AC of S, G2, 83d Inf Div, dtd 1 September 1945, (CONFIDENTIAL) (Box 25095, Kansas City Records Center).

When the CIC team arrived in Wieden, the agents quickly selected positions for establishing check points. Roads, paths, and towns were the principal spots to be guarded and initially this scutiny was to be airtight. Orders from higher headquarters stated that everyone attempting to cross the border would be stopped and turned back. The CIC agents were too few in number to man the check points, but all offenders caught by the border patrols were brought to the CIC office for questioning. CIC found that in order to keep a close control of the border, it was necessary to supplement the stationary check posts with roving patrols that cruised along the border in jeeps, keeping an outlook for violators.

A week after the original non-crossing order had been issued, CIC was informed that frontaliers who had daily business that required their presence on both sides of the border would be permitted to travel back and forth.

Besides the supervision of border controls, the CIC team was charged with clearing officials in towns along the border for Military Government positions. Lists of suspects sent down from higher headquarters generally proved helpful to the Agents. Occasionally the demands of security caused an upset to the community. In one town, the only doctor available for miles around was on a suspect list received by CIC, and the agents had no recourse except to remove the man, leaving the area without a physician.

After the initial weeks of occupation, border control work became routine. Coordination with Czech Army units patrolling the opposite side of the line was easily effected. There were no insurmountable language problems since almost all the Czech guards spoke German. But, in July, the Russians arrived to occupy the Czechoslovakian area across the US Zone. Although it was not until August that the Russians made themselves particularly evident, certain immediate effects of their occupation were felt.

Sudeten Germans who had been living in Czechoslovakia decided that it was high time to return to Germany, and the Czechoslovakians were eager for these people to move. CIC interposed no restrictions to the re-entry of the Germans provided that they could prove their citizenship. Individuals who lacked passes and "suspicious acting" civilians were detained for careful interrogation.

For the most part, CIC control of the border from May to November 1945 was unmarked by major incidents. Paul Braden, one of the agents who served on the CIC team, remarked, in retrospect

that "border control was a good mission for CIC. It required men intelligent and flexible enough to use their own judgment."[127]

103d CIC Detachment: Suggested Training for the Occupation

The German surrender occurred while the 103d Infantry division was carrying out semi-occupational duties in Innsbruck, Austria. The 103d CIC agents remained at Innsbruck, although 10 of the 14 men were transferred on paper to the 970th "slash team"88. Under command of Lieutenant Dugald W. Hudson, Team 970/88 and the 103d CIC acted as a single unit operationally.

Lieutenant Hudson immediately found that his agents could profit from additional training and drew up a list of suggested training procedures. He felt that all non-linguists should be given a six weeks' intensive course in written and oral German. Although some of the agents picked up the language while carrying out their assignments, they did not learn the grammar and could not become reasonably fluent linguists in this manner.

The detachment commander also noted that the "average agent does not have much information at his fingertips regarding Nazi organizations and organizational structure, especially regarding the German Intelligence Service." As a remedy for this lack of knowledge, 103d CIC agents were given reading material on the German organizations and were tested periodically to insure that the material had been studied.

Shortcomings in professional knowledge of "investigative techniques and equipment" were apparent among the agents. Lieutenant Hudson suggested that at least one man from each CIC detachment in Germany take a training course in installing and operating speaker phones and successfully installing wire taps. Other technical training that was considered important involved the use of cameras with telescopic lens, a familiarization course in the classification of fingerprints, examination for secret writing on documents and comparison of handwriting for the purpose of making identifications.

In making these suggestions, Lieutenant Hudson was coming to grips with an important problem: the adjustment of men used to performing investigations "on the run" to the careful procedures of occupation investigations. To supplement the additional training of his agents, Lieutenant Hudson recommended that the TOE be enlarged to include civilian type vehicles "due to the fact that military vehicles are very conspicuous when used on certain missions where discretion is necessary," a speaker phone, and additional hand cuffs.[128]

128 CIC Monthly Information Report from 103d CIC Detachment, dtd 1 June 1945 (CONFIDENTIAL)(Box 25096, Kansas City Records Center).

The Case of the Threatening Notes

On 26 July, an Agent of the 103d CIC was faced with a situation that required exercising his best investigative abilities. Tacked up next to the billboards displaying the military government rules and regulations for the town of Gennach were eight to ten handwritten notes stating that certain CIC informants were traitors, low grade persons, whores and swine.

The investigating agent hastily placed the entire town under a strict curfew with the cooperation of Military Government. He then began to question an 18-year old boy who had first brought attention to the notes by telling the agent that there had been a threatening message pinned on the door of his family's house. The agent found no reason why the boy, a former Hitler Jugend member, or his family should have been threatened. But comparison of the youth's handwriting with the script on the notes eliminated the possibility that the boy himself had written the notes in an effort to confuse CIC.

The CIC agent brought the notes to the local school teacher who examined them and concluded that they had been composed by a young person, probably a teenager. The letters were almost drawn, which ruled out the likelihood of composition by an adult who would be prone to write more hurriedly and with more individuality than was displayed in the script on the notes.

Fifty young men from the town were soon given handwriting tests. Not one of the specimens matched the handwriting on the notes. But the CIC Agent did not admit defeat. The following day, as he left the site of the billboards, the agent noticed a young lad who lowered his head when the Agent glanced at him. The Agent crossed the street towards the youth who started to walk away hastily. This heightened suspicion, and the agent decided to question the boy.

After a brief interrogation, the agent determined that this boy, another former Hitler Jugend member, was a friend of the youth who had first drawn CIC attention to the notes. When asked to provide a sample of his handwriting, the boy wrote in Latin letters. The Agent decided to let the case wait for several days.

The boy was later retested on his handwriting and, caught unawares, composed the sample in his usual German script. Many of the words and letters checked with the letters on the denouncing notes. The boy was questioned at length without success, but three days in jail and close interrogation drew out the admission that he had composed the notes. His friend, the

youth who had reported the incident, had posted the notes, carefully remembering to place one on his own house to serve as a "blind." Both the boys were turned over to Military Government for disposition.[129]

Trapping a Black Marketeer

The urgency behind Lieutenant Hudson's need for civilian vehicles was demonstrated in the investigation of Joseph Weis, a German who had been heard to make derogatory remarks about the Americans. In order to make the investigation as detailed and discreet as possible, a German-speaking agent was equipped with civilian clothes and a civilian car. It was learned that Weis had been selling black market gasoline, and the best means of striking up an acquaintance with the man seemed to be by posing as a prospective buyer. The agent followed this course of action. When encountered by the agent, Weis was extremely cautious and questioned the undercover agent at length about his previous history. The agent, who had formerly served as a POW interrogator before joining CIC, had an extensive knowledge of enemy order of battle and was able to concoct a likely account of activities as a member of the Wehrmacht. He also produced a discharge paper as authentication. Weis fell for the cover story.

While Weis and the agent were conversing, an American soldier approached the German. Weis procured some gasoline from this soldier and immediately sold it to the Agent. The conversation between the two men was then resumed. Before leaving, the Agent had obtained enough information from Weis to show that he was not really anti-American, but "merely a pessimistic sort and of no counterintelligence interest, having joined the Party in 1942 to save his hotel business." Since CIC was not concerned with black market matters at this time, the case was turned over to Military Government.[130]

No More Civilian Cars

Although the use of a civilian car had aided the covert agent in effecting his disguise as a German, this was one of the final times that a 103d Agent was permitted such a vehicle. Lieutenant Weimer, the new commanding officer, reported at the end of July that "the problem of using civilian cars has been cleared up by the Army order forbidding their use. The division commander has ordered that all civilian cars be turned in and this order specifically included CIC."

---

129 Monthly Information Report from 103d CIC Detachment, dtd 1 August 1945 (CONFIDENTIAL) (Kansas City Records Center).

130 Ibid

There was good reason for the 103d CIC Agents to find this prohibition a severe curb on their operations. For several months, Agents dressed in civilian clothes, driving civilian cars, and carrying German discharge papers had circulated in the towns in the division area posing as natives. They had been able to keep their true identities well hidden and were always believed to be Germans. The most successful technique for gathering local rumors and sentiments was to pick up hitch-hikers along the road and engage them in conversation. At other times, an undercover agent would obtain ration stamps at a Military Government office and, while eating in a local restaurant, strike up conversations. Beer halls, barber shops, and street cars were also utilized for this type of news gathering. But the ban on CIC use of civilian vehicles was feared by the 103d CIC as a serious curtailment of these profitable undercover ventures.131

Chapter 3

CIC IN THE NORTH

CIC detachments that were attached to American forces which were mopping up in northern regions of Germany remained in this sector for the most part until the boundaries of the British Zone of Occupation were fixed and US troops within this area were transferred or redeployed. The United States did retain occupation responsibilities in and around the port of Bremerhaven, a sector designated as the Bremen Enclave since it stretched southward to include the city of Bremen.

29th CIC Detachment

On 19 May 1945, when the 29th Infantry Division was assigned occupational duties in the city of Bremen and vicinity, the 29th CIC Detachment under command of Captain Ellis O. Mayfield accompanied the combat troops. Agents were assigned down to Regimental level and immediately began the task of apprehending the wanted persons in their areas.

To aid in the CIC mission, MII personnel were attached to each team, bringing the overall strength of the detachment to four officers, seven agents and seven attached personnel.

At the outset, the most pressing problem was to set up a reliable informant system which would keep the detachment aware of activities within the area at all times, and to aid in the apprehension of persons in automatic arrest categories. Many Germans, eager to associate with the Allied occupation, appeared at CIC offices to volunteer information. To the agents fell the task of weeding out the opportunists from among the people who actually wanted to help the occupying forces and work for the future of Germany.

The area proved to be saturated with personalities of counterintelligence interest, but locating them was a far harder problem than merely knowing about them. Since many of the refugees who had been bombed out of their homes had moved to farms and small villages where they were not known, CIC requested refugee lists from all the burgermeisters to enable agents to check the names against available black lists.

Since the area encompassed by the Bremen Enclave Military District had been liberated by British forces that failed to keep records of investigations among the civilian population, CIC Agents had to start operations without prior information.

Each team maintained card indexes of personalities in their respective areas, giving them fingertip knowledge of the trustworthy and unscrupulous civilians around them.

The 29th CIC Detachment held firm to a policy that prohibited Agents from revealing themselves as members of a "Geheimstaatspolezei" (Secret Police). The men were instructed to introduce themselves as representatives of the American Occupational Authority and no more. But despite the efforts to cloak the true CIC mission, the public soon became aware of the detachment's aims. This knowledge, contrary to previous theories, failed to hamper the work of the Agents.[132]

Where to Find the Nazis

SS men attempting to conceal their identities by wearing civilian clothes frequently confessed when confronted with an intense CIC interrogation. Nazi party leaders were often uncovered after Party lists were confiscated; the German penchant for neat orderly records proved valuable to CIC time and again.

There was no particular stratum of society that CIC could isolate as largely responsible for carrying out the programs of the Hitler regime, nor could the blame be traced to only a few doorsteps. Agents of the 29th CIC included among their arrestees a physician and nerve specialist who was believed to have been responsible for the extermination of patients in an asylum; a former member of the embassy in Rome who was considered a "fanatical Nazi;" Bremen's chief salesman of "Kultur Propaganda;" a school teacher and organist who had been a Party group leader; the chief cook for IG Farben Works who had been denounced as a brutal guard for the SS; a female SD agent; and a butcher who had beaten a captured airman. By the middle of June, 175 persons had been arrested or detained by the CIC Agents, almost all on incontrovertible evidence.

Each arrest was potentially a clue to further arrests. A captured Gestapo official turned over a list of his agents to the CIC interrogators, who forwarded the document to the Counter Intelligence Branch, G2, of the division where the personalities could be indexed for wide distribution among American counter-intelligence units.

Other names were brought to CIC attention as a result of

132 Report from CIC Detachment 29, Detachment History During Operations in the Bremen End, dtd 23 June 1945 (CONFIDENTIAL), Box #25094, Kansas City Records Center)

planned investigations. On 16 June, agents entered the Marine Lazarett, a hospital in Wesermunde, and discovered that many of the patients were people in the arrest category. They had been issued false Soldbuchs to disguise their past records.

Other CIC Duties

Even as the CIC agents were occupied in uprooting the most fanatic remnants of the Hitler regime, other security missions were delegated to the detachment. Civilians had to be cleared to work on military installations and vital civil structures such as grain elevators; surveys were required of telephone systems essential for communication among civilian officials; and countersabotage surveys for the regiments serving within the 29th Division had to be accomplished to prevent hostile Germans from venting their rancor upon US installations and equipment.

The Watch for Resistance

A major CIC concern was keeping track of the various organizations, resistance and pro-Allied, that had sprung up in the Bremen area following the German surrender. Most notorious of the resistance groups was the Wehrwolf. Many instances of this organization's activity were reported but CIC investigations pointed consistently to a single conclusion: None of the aims of the Wehrwolf had been carried out, and there was no present indication of underground activity.

CIC also found danger signals being flashed from another quarter. The Bremen area was noticeably infiltrated by Communists, and reports were delivered to CIC offices of several well organized groups and their leaders who were interested in promoting Communist political ideas and policies. Agents conducted complete investigations of all these cases and made sure that the offenders complied with the Allied Military Government regulations concerning political activity.[133]

29th CIC Detachment continued to apprehend Nazi "big shots" and "small fry" through the month of July at a rapid rate. Denunciations by responsible civilians of the most dangerous individuals provided CIC with the bulk of names, but records and confessions obtained from interrogations still could be exploited.[134]

---

133 Report from CIC Detachment 29, Detachment History During Operations in the Bremen End, dtd 23 June 1945, (CONFIDENTIAL), (Box #25094, Kansas City Records Center)

134 Personality Index from Hq 29th CIC Detachment, 19 May to 31 July 1945 (UNCLASSIFIED), Folder 18, Box 25094, (Kansas City Records Center)

On 21 October, after six months of service in the Bremen area, the 29th CIC Detachment was formally inactivated, and its members were assigned to various teams operating out of the 970th CIC.[135]

79th CIC Detachment: Atrocity Uncovered

Members of the 79th CIC Detachment under command of 1st Lt Richard M Gonzales who had followed their division from Alsace through Belgium and Holland during the early months of 1945 [136] themselves located in the vicinity of Dortmund for the first months of occupation duties before they moved to the Third Army area in Czechoslavakia.

On 10 May, the day of the German capitulation, 79th CIC Agents operating in Bochum heard that the bodies of eight women and six men had been discovered in a nearby bomb crater. Investigation disclosed that the victims all were Russians who had been executed by members of the Volkssturm. The CIC Agents acted quickly and soon had gathered a total of eleven persons, one of whom was the man who had given the order for the massacre and three of whom were among the actual murderers.

The interrogation of a former Kriminalkommisar of the Gestapo, shed light on the cause of the atrocity. Orders had been given to execute all foreign workers who were under investigation before the arrival of Americans to eliminate the problem of transporting the prisoners to the rear.

also stated that all Gestapo personnel had been provided with false identity papers, a fact which was proven on 14 May when Agents of the 79th CIC reported that they had apprehended and forwarded through Prisoner of War channels 46 Gestapo agents. Most of these Gestapo agents possessed white Kennkartes, and they had been instructed to list their professions as merchants. Among the arrestees were some personnel who had participated in a mass killing of political prisoners in Dortmund just prior to the Allied liberation of the city.

The Sterilization Courts

Another aspect of the Nazi regime was revealed to 79th CIC agents with the apprehension of on 18 May in the town of Frendenberg. When the "Law of Heridity" was promulgated by Hitler in 1935, had recommended that special courts be established to order sterilization for various categories of physically and mentally unfit persons.

---

135 Historical Data Card, 29th CIC Detachment, (UNCLASSIFIED)
136 Ibid

CONFIDENTIAL

acknowledged his own role in the formation of these courts and admitted that he had served as a special judge in this pseudo-judicial system. He further stated that political prisoners may have been sterilized by SS Doctors in concentration camps, since the courts usually complied with the recommendations of these practitioners. Following the interrogation, was forwarded to a POW camp for internment.

A Method for Snaring SS Men

On 28 May, Agent Herbert Boksen, in a routine check in a bank in the town of Neheim-Husten, discovered that a part of the salary of every SS man from the town had been credited to his bank account, complete with rank. This seemed to be a standard SS policy. From the examination of other papers held in the bank, Agent Boksen surmised that it would be possible to obtain the station and organization responsible for the deposits.[137]

CIC in Bremerhaven

In the key port cities of Bremerhaven and Bremen CIC agents functioned along with security personnel from the US Navy. A port CIC detachment, consisting of two officers and eight agents, was at work in Bremerhaven; while five officers and fifteen agents handled security in and around the docks of Bremen.

Among the critical matters affecting the security of dock areas were the following:

1. Physical barriers and dock perimeter fencing
2. Adequacy of gate and perimeter control personnel
3. System for issue of passes
4. Shore leave policy
5. Control of harbor craft
6. Control of fishing
7. Countersabotage precautions [138]

Until the fall of 1945, shipping operations in the port of Bremerhaven were extremely limited, and CIC faced few problems of travel control. A tight check on all fishing vessel personnel was maintained, since the boats often remained at sea for several days at a time.

---

137 Monthly Information Rpt from Hq 79th CIC Det, dtd 1 June 1945 (CONFIDENTIAL), (Box 25095, Kansas City Records Center)

138 Weekly Intelligence Summary Nr 2, dtd 24 July 1945, from Hq USFET, Office of the AC of S, G2 (SECRET) (Central Records Facility).

The fisheries were located on the north side of the Bremerhaven harbor, and CIC worked with the German harbor captain to maintain security of the area and the fishermen. During the early days of the Occupation, many Germans, not knowing what to expect from the Allied forces and "sick of the war and its aftermath," tried to leave the country. One of the means most accessible to these would-be refugees could have been the fishing boats. CIC could not prevent the boats from sailing, since fish became the main source of food for the hungry populace, but they could and did establish controls. Each boat was inspected at the fishery, and only a limited number of persons were cleared to sail on the vessel. A bulletin board containing the names of all persons allowed to man the fishing boats was maintained, and a careful record was kept of the individuals out in the fishing waters at all times. When the fishermen returned, they were required to report to the office and have their names checked off.

When a fisherman signed out, he had to indicate the length of time he expected to be gone. If CIC discovered that a vessel was more than 18 hours overdue, the Agents were prepared to dispatch search draft. But there were no major security breaches. At one time, when a fishing boat failed to report in at the required time, CIC sent out a patrol after the vagrant, but discovered that no intent to elude the authorities was involved. The pilot was a "wrong way Corrigan" who had become hopelessly lost in the waters of the North Seas.[139]

In addition to scrutinizing persons boarding and leaving the fishing craft, a Navy patrol spotchecked the vessels for proper papers as they sailed out the Weser River.[140]

Protecting the "Europa"

One of the most important "installations" at Bremerhaven during the summer of 1945 was the one-time German luxury liner, "Europa," which was undergoing repairs on a dry dock prior to re-commissioning as a troop transport for the US Navy. A CIC Agent was given the specific assignment of handling any counter-intelligence matters that might arise in connection with the liner. So important was the vessel considered that as the date for its trial run neared, a Marine detachment of two officers

139 Interview with former Special Agent Daniel C. Canfield, Wichita, Kansas, at the NCICA convention, Hotel Waldorf-Astoria, New York, N.Y., on 7 August 1955.

140 Weekly Intelligence Summary Nr 3, dtd 2 August 1945, from Hq USFET, Office of the AC of S, G2 (SECRET), (Central Records Facility).

and ninety-six men was established as a guard.[141]

Late in August a series of fires broke out on the "Europa." Sabotage was immediately suspected, but investigation revealed that they had been started by a "psychopathic US Navy seaman," and were not of counterintelligence interest.[142]

Despite rumors that circulated claiming the "Europa" would never sail from Bremerhaven, on 11 September the ship departed from Southampton, England, to be used in the redeployment of US Forces, as scheduled.[143] But the apprehension later proved valid when the "Europa" failed to perform as a fully seaworthy craft.[144]

Security of the Dock Area

Since the port of Bremerhaven handled many thousands of tons of American military supplies and lend lease food, security of the dock area and the harbor remained vital. A perimeter fence fifteen feet high was constructed around the docks, and lookout posts were set up at frequent intervals.

In the beginning weeks of Occupation, control of the Bremerhaven port was divided between the British, the US Navy, and the CIC. Responsibilities were eventually delineated among the agencies at work. The British, for example, maintained supervision over the German Navy in clearing the harbor of mines, but CIC handled the security of the laborers from an office established in the old customs building. Before a dock worker was permitted to begin his day's work, he had to clear through the CIC office enroute to the dock. All dock workers filed Fragebogen with CIC; and insofar as possible, CIC attempted to judge a person's suitability for work on the basis of "who he was rather than whom he had been forced to be." Almost all the laborers had been at least nominal Nazis during the Hitler regime. CIC had to determine which were nominal Nazis and which had joined the Party out of sincere conviction.

144 Interview with former Special Agent Daniel C. Canfield, Wichita, Kansas, at Hotel Waldorf-Astoria, New York, N.Y., on 7 August 1955.

The 970th CIC Team assigned to Bremerhaven also was responsible for selecting municipal government officials and for general security in the port city. Although agents of the 29th CIC were also present for several weeks in Bremerhaven, their duties revolved primarily around the 29th Infantry Division, leaving the small band of agents in the port detachment to handle the CIC mission in Bremerhaven without assistance.

For the most part, the Port Security Detachment had to proceed by trial and error. They received no specific directives or card files, although their reports were sent to the G2, 29th Infantry Division. Since there was so little coordination of the port detachment with 970th CIC, supplies, paychecks, and other administrative matters were handled personally by one of the agents who travelled to Frankfurt from time to time.

Personnel from the port security team were rotated back to the States during the summer and fall of 1945, and the individuals sent to replace them were often picked up at replacement depots. Some of the worst of these hastily recruited fill-ins were characterized by one CIC agent as "drunken no-goods, generally lacking qualifications for CIC and bent on having a good time for themselves."

Not until November 1945, when CIC in Germany was re-organized on a regional basis, were some of the serious liaison and administrative problems ironed out. Up to this time, the port security detachment had been on its own to "sell itself" to local commanders. Public relations was, for this period, one of the biggest problems that CIC had to overcome. But when Bremen was designated a region and Bremerhaven a sub-region, administrative and operational matters were given some direction. Channels of communication were opened, and the port security agents began to fit into the overall picture of American counter-intelligence in Europe.[145]

The Man from "British Intelligence"

One day, late in November 1945, the Military Government public safety officer at Wesermunde told members of a nearby CIC team that an automobile assigned by the civilian motor pool to an operative of British Intelligence had not been returned. It was already several days overdue.

Special Agent James M. Olsen and other CIC agents went to the motor pool where records showed that the missing vehicle, a Mercedes, had been charged to a

145 Interview with former Special Agent Daniel C. Canfield, Wichita Kansas, at the NCICA Convention, Hotel Waldorf-Astoria, New York, N. Y. on 17 August 1955.

A local address in Wesermunde was given as his current residence. A Military Policeman stationed at the motor pool said that had been accompanied by a girl on several previous occasions when he had requisitioned a vehicle.

The agents checked the address that had given and established it as the home of a family named the parents of the girl with whom the intelligence man was travelling. Questioning the girl's parents disclosed that had been living in Wesermunde for about three weeks before his disappearance. They knew nothing of the whereabouts of their daughter and willingly supplied a picture of the 19-year old girl who appeared to be an attractive brunette. Further conversation with the indicated that they were convinced that was working in the area for British Intelligence and was a man of importance.

The agents next checked at the British liaison offices in Bremen where they were assured that Intelligence had no man of that name or alias on any assignment, open or covert, in the area.

Since the family had stated that moved continually in his duties from Hamburg to Bremen and Wesermunde and that he was expected back at any time, travel check points were alerted. Within a day, the Mercedes, and the girl were apprehended and brought to the CIC office. Both individuals were greeted cordially but they were soon separated.

The agents chose to question first. Maintaining a tone of deference, they asked his mission in the area (which was under the jurisdiction of US Army forces), his unit, his reporting office, and other details which he should have been able to supply readily. answers were vague. He hinted at a top secret assignment and continually dodged the CIC agents' straightforward questions by darting off on tangents.

Before the "pleasant conversation," the agents had checked credentials," which consisted solely of a pass issued by the British Field Security Police at Flensburg, authorizing him to be out after the 2100 hour curfew. possessed no duty orders issued by that or any other office. In the course of the questioning, when an Agent reached for a telephone on the pretext that he wanted to verify the validity of the pass, hastily interrupted and said that he was actually working out of London. Nonplussed, the agent prepared to put through a call to London (which was a fairly simple procedure at that time). Again, shifted his story to stall the Agents.

Only fifteen or twenty minutes had elapsed, but the CIC interrogators were convinced that was a fraud. But just

who he was and what were his aims were another matter.

The agents left and went to the room where his girl friend was being held. It did not take long for them to find out that she had known only for the short time he had been in Wesermunde. She obviously had been thoroughly entranced by his tall tales of secret ventures, and her relation to the 30-year old seemed to be a "good case of teen age infatuation for an older man." She was furious and indignant that the CIC Agents could doubt the man's integrity.

Convinced that the girl had no real knowledge of background, the agents realized it would be futile to play her against the man, claiming that she had "spilled." In fact, such an approach might have completely backfired. Instead the agents returned to interrogate further. As they began to pick holes in his conflicting accounts, became increasingly evasive, and yet he never showed indignation or raised his voice. In a completely detached manner, he glided from one story to another, ignoring inconsistencies with a shrug of his shoulders as if the agents were the real culprits.

Acting on a hunch, the agents checked their files on a complaint of stolen credentials that had been recently lodged by the United Seaman's Service at Wesermunde.[146]

The pilfered credentials belonged to the assistant manager of the club and were almost identical to those carried by US Army officers. On some pretext, a man fitting description had stayed at the club, and his actions were such that when the assistant manager found his credentials missing, he suspected this guest. He had revealed his suspicions to Military Government who in turn relayed them to CIC.

Using the "when-did-you-stop-beating-your-wife" technique, the Agents asked bluntly where he had placed the stolen credentials. The surprised adventurer blurted out:

"I flushed them down the toilet."

But the Agents retorted:

"No, they were too valuable for you to go through the trouble of stealing them merely to throw them away."

---

146 This organization was the USO to the Merchant Marine and provided rooms, meals, and recreation ashore for crews of American and British ships docking at the port.

And they continued to press to reveal where he had hidden the credentials. He named a place in his room at the home of his girl friend. The agents shook their heads, telling him that the credentials were useful in his personal possession, not in his room. Again named an improbable location.

Disgusted with the evasiveness of the impersonator, the agents used threats and, in substance, warned him that he was to be given one last opportunity to indicate where he had placed the credentials. Taylor replied very evenly:

"The credentials are under the floor mat of the car I was driving."

Leaving him under guard of other CIC agents at the office, the interrogators hurried to the motor pool, spotted the car, and removed the floor mat. The credentials were there. had already torn out the identification photograph of the assistant manager of the Seaman's Service but had not yet substituted his own picture.

Back at the office, the agents complimented for his single trace of honesty and continued the questioning to learn his true identity. insisted on his original line: he was a member of British Intelligence. He claimed to have made several secret submarine trips to the Continent from England during the war and to have been dropped twice by parachute behind enemy lines.

It was at this point that the agents asked to describe in detail one of the missions he had performed. claimed that he had parachuted behind the German lines near Rheims and made his way back to Paris, thence further westward and through the German lines to the American forces. The city of Paris, he affirmed, was still in German hands, and the date of this escapade was September 1944. The agents had him repeat the account, then lowered the boom. The impersonator was told that Paris had fallen to the Americans on 25 August 1944 and that if he had come through the city in September, he would have encountered no German forces.

This was the thrust that punctured entire cover. He then began to admit what he said were "truths" and gradually a new story developed. The man's correct name was and he was a German citizen. He had travelled widely as a seaman to South America, Panama, and the United States. He had acquired a good command of the English language and some French, but early in the war, the authorities had determined him to be politically and emotionally unstable, and the Gestapo arrested him and shipped him with a labor battalion to work in

occupied Norway. He escaped from Norway, crossed the border into Sweden and went to the British Embassy in Stockholm. There he persuaded the British he could do Intelligence work for them in Germany and was flown from Stockholm to London. After checking into past, the British sensed his instability and sent him to the Isle of Man for internment with other German nationals for the duration of the war.

He remained on the Isle of Man until the fall of 1945 when all internees were loaded on boats and brought to the port city of Flensburg in Germany. It was late October when reached his native land, and he immediately contacted the British Field Security office at Flensburg offering his service. He then received the after-curfew pass which the agents had found in his possession. Until the CIC Agents picked up he had moved freely about the Flensburg, Hamburg and Bremen area.

With this confession from CIC took him to the civilian jail and internment center, where he was lodged in the temporary custody of Military Government.

The next morning, CIC received a call that had been sprung from the jail by his girl friend, who had seduced the cooperative MP guards. The two had escaped together, taking along a Thompson sub-machine gun, and two clips of ammunition. Road blocks were immediately notified and the German Police alerted to relay the news to their informants.

Early the following morning, the German Police were tipped off by one of their contacts that had been in a house at the south end of the city with the girl. He still had his tommy gun.

Military Police were notified and arrived at the house ahead of CIC. By the time the agents arrived at the scene, the shooting was over. had answered a call to come out of the house and surrender by firing a burst from the tommy gun. In the ensuing exchange, he emptied the two clips in wild, unaimed rounds fired from a first floor bedroom window. The Military Police could not return heavy fire, since there were innocent people trapped in the ambushed house.

After the frantic shooting, there was a pause, two well-spaced individual shots, and then silence. The Military Police entered the house to find the girl stretched out on the floor, a bullet hole neatly placed through the center of her forehead. had apparently shot her as she walked through the bedroom door.

[redacted]

As for he had turned the gun on himself and, placing it under his chin, blown the top of his head off. Judging from the workings of the Tommy gun, the agents concluded that had kept two shells out of a clip before embarking on his shooting spree. When the clips were emptied, he had apparently inserted one shell in the chamber and shot the girl, then loaded the last shell and pulled the trigger on himself.

But, even in death, had left the CIC Agents with a parting teaser. In one of his pockets was a scrap of paper containing some strange coded writing. This was sent to the cryptographic section at Frankfurt and the case of alias was considered closed.[147]

Special Investigations Squad at 970th CIC

During the early days of the occupation, Allied counterintelligence realized that there was a widespread use of the Wehrmacht uniform by members of the German Intelligence Service and SS in order to conceal their real identities. To counteract these disguises, the 970th CIC stationed at Hq, USFET, set up a special investigative squad which was used to infiltrate confidential informants into prisoner of war enclosures where they could detect automatic arrestees who had taken a military disguise.

The operation proved a great success. In the period from 24 June to 7 July 1945, one CIC informant uncovered 25 German Intelligence and SS personalities in a single POW enclosure. Another undercover informant found a man who was able to lead CIC investigators to a cache of SS records and files that listed approximately 43,000 members of the SS.[148]

CIC at SHAEF: Security Preparations for the Potsdam Conference.

In June 1945, two weeks before the scheduled Potsdam conference between the heads of the four nations that were to occupy Germany, counterintelligence officers at SHAEF in Frankfurt were alerted to accompany the group under Major General L. Parks that was to make preparations for the American staff in Potsdam.

147 Letter from former Special Agent James M. Olsen c/o A. Landauer and Son Inc, 214 Jackson St. Wausau, Wisconsin, to Historical Section, Fort Holabird, Md, dtd 21 February 1955, (UNCLASSIFIED).

148 Annex "C" to Weekly Intelligence Summary Nr 2, Hq USFET, Office of the AC of S, G2, for week ending 24 July 1945 (SECRET) (Central Records Facility)

The CIC personnel selected for this special assignment were Col H. G. Sheen, Lt Col James F. Foothorap, Maj Thomas A. Gagen, and two CIC Agents, Daniel W. Montenegro and Edmund X. Klipa,[149] one of whom was a German linguist; the other spoke fluent Russian. For almost a week, these men remained in Frankfurt while preliminary arrangements were made with the Russians for the arrival of General Parks and his party. Poor weather also hampered the group from flying out of Frankfurt on schedule.

Finally, about one week before the date of the Potsdam Conference, the party embarked for Berlin. At Tempelhof Airport, the Americans were met by a delegation of Russian officers, and after a flurry of saluting and official greetings, they were parceled into cars for the trip to Potsdam.

The party proceeded along a carefully picked route through Berlin which was obviously not the most direct way to Potsdam. Apparently, the Russians had specially prepared the route to prevent the Americans from viewing the true nature of the occupation of Berlin.

The Americans arrived at dusk at the wire-surrounded enclosure where the conference was to be held and where all the members of the delegations would be housed. The Russians escorted the group to their rooms, stating that dinner would be served later.

At about midnight, the promised dinner was held and the Americans were treated to a lavish banquet complete with a bountiful supply of vodka. The following morning, the CIC agents set about their mission of checking the security arrangements with the Russians.

The Russian security officers took the Agents about the entire site of the conference. They pointed out that the houses around the enclosed area had been completely cleared, that the area was blocked off, and that all the delegations could be housed within the enclosure. Both security groups toured the barbed wire perimeter fence and inspected the guard positions. When the CIC agents stated that they wanted American guards present, the Russians countered with the proposal that Red Army guards should man the posts. The eventual solution was a plan for having guards from both armies.

149 Letter Order No. F-991, from Hq SHAEF, dtd 17 June 1945 (RESTRICTED), (Personal records of Lt Col James F. Foothorap).

The Russian security officials who accompanied CIC were not drawn from the top level, for they could make few decisions without first consulting higher officers. They apparently had been selected because they spoke English. They proved to be friendly but unyielding in their dealings with the Americans.

This Russian inflexibility was grossly displayed during the succeeding days. The Americans had planned to bring about 100 vehicles with supplies by the land route to Potsdam. The Russians meticulously counted the number of trucks and made all those in excess of one hundred turn back. In many other official dealings, the Russians proved technical to the point of obstructionism, and managed to tie up many negotiations with red tape.

On the return to the enclosure at Potsdam, the agents discovered that the Russians had blocked off the road along which they had made their exit. Russian guards, unable to understand English at first stood menacingly around the jeep and refused to let it pass, until at last the agents made clear that they were with General Parks' party.

After supervising the arrangements for several days, Colonel Sheen and Lieutenant Colonel Isothorap returned to Frankfurt. Security responsibility was left in the hands of Major Gagen and a group of about 15 CIC agents who had arrived with the supply convey.150

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Part I

CIC ORGANIZATION

Initial planning for the military Occupation of Germany had been made on the basis of expected conditions. By March 1946, the real conditions could be seen and understood; the situation in Germany required a tightening of the Occupation forces for a long haul. Mass redeployment of troops that had fought in the European Theater of Operations Campaign was virtually at an end and the individual military units that remained were settling into more or less permanent stations.

Gen. Joseph T. McNarney, who had assumed in November 1945, was both Theater Commander and Military Governor of Germany. To assist in the occupation mission was a Political Adviser from the State Department, Ambassador Robert Murphy, who was attached to the Theater Commander. The official functions of the Political Adviser included furnishing advice regarding the general U.S. civil policy for Germany, U.S. relations with other countries, and the processing of political intelligence. Much of this was of immediate interest to CIC.

The third key official at the top of the structure was the Deputy Military Governor and Commanding General, Office of Military Government for Germany, Lt. Gen. Lucius D. Clay. Under the Theater Organization Plan of 1 March 1946, the individual offices of Military Government that administered the three laender areas (Bavaria, Wuerttemberg-Baden, and Greater Hesse), the equivalents of American states, were separate military commands under the direction of the Theater Commander. This left the Office of Military Government for Germany (OMGUS) as a strictly policy forming and supervisory group, a situation that was "extremely unclear and....leading to great confusion."[1]

Accordingly, on 1 April 1946, an amalgamation of the individual Military Government Offices and OMGUS was effected, and there was a substantial separation of Military Government responsibilities from the over-all theater occupation responsibilities. The European Theater then consisted essentially of a headquarters and two subsidiary commands, one the military occupation forces, the other the military government. The commanding general of the theater headquarters was responsible for administering both the military forces and military government. He himself was mainly engaged in the former activity and his deputy in the latter. The main mission of the military forces was the security and support of military government.[2]

2 Frederiksen, Op Cit, p 31.

[redacted]

This redefinition and shifting of Military Government command lines simplified the Occupation picture somewhat. No major changes in Theater organization occurred until 15 March 1947 when United States Forces, European Theater (USFET) was nominally replaced by European Command (EUCOM), with Gen. L. Clay designated to relieve General McNarney as Commander in Chief EUCOM and Military Governor (US). By November 1947 a clear distinction was made between ground and service forces who were grouped under U.S. Army Europe (USAFEUR) and personnel assigned to Military Government. This arrangement made possible the eventual transfer of the governing function to the State Department and its representative, the High Commissioner for Germany (HICOG), an office which was established on 21 September 1949.[3]

The Basic Pattern of CIC Organization

After the initial months of Occupation, during which CIC agents had been attached to the Divisions, Corps, and Armies as well as "slash teams" that were under operational control of area G2s, the establishment of CIC on a regional basis with operational and administrative headquarters in Frankfurt set a pattern which weathered later changes in CIC of Germany.

CIC organization in 1946 was designed to give the fullest possible geographical coverage of Germany. Headquarters of the 970th CIC Detachment was located at Frankfurt. In addition to the direction of CIC efforts throughout the U.S. Zone of Occupation, the 970th Headquarters operated the extensive Central Registry which contained dossiers on all persons who had come to CIC attention in Germany.

Regional and Sub-Regional offices with their subordinate field offices and resident agents formed a network that gave CIC coverage of the U.S. Zone as well as the Berlin and Bremen enclaves. Headquarters for each region were established as follows:

Region I-------Stuttgart
Region II------Frankfurt
Region III-----Bad Nauheim
Region IV------Munich
Region V ------Regensburg
Region VI------Bamberg
Region VIII----Berlin
Region IX------Bremen

There was no Region VII during this early period of CIC organization. The basis for location of CIC sub-regional headquarters were the Military Posts that

3 Frederiksen, Op Cit

[redacted]

had been established in the U.S. Zone of Germany. Within the area of each Military Post was a sub-regional CIC office as well as a seat of Military Government. This arrangement permitted close lateral liaison between CIC and the Military Posts and provided for the exchange of counterintelligence information of mutual interest at these lower levels. CIC Regions embraced several Military Posts; command channels from the Regions led directly to the 970th Headquarters and then on to the Counter Intelligence Branch and the Director of Intelligence.[4]

Organization of 970th CIC Headquarters

The functions at the headquarters of the 970th CIC Detachment were placed under three sections, S-1, S-3, S-4, for administration, operations, and supply, respectively.

The S-1 Section was responsible for the administration of all 970th CIC Detachment personnel. All administrative reports from the Region levels were consolidated by this section, and all requests for personnel to fill the requirements of the 970th CIC were made by this section to the Theater G1.

The S-4 Section was charged with supplying all units of the 970th CIC Detachment. In effect, the S-4 operated a theater "sub-supply depot," procuring Special investigative equipment from the CIC Center at Fort Holabird. Because of the failure of T/O and E 30-500 and the List of Special Investigative Equipment authorized for CIC to provide the necessary personnel and equipment for the operation of a static detachment as large as the 970th, a modified list consisting of cells of existing T/O and E's of other organizations was authorized.

In addition to the supply function, the S-4 Section was responsible for the operation of the 970th CIC Detachment Headquarter's motor pool, billets and messes.

Operations of the 970th CIC Detachment were handled and coordinated by the S-3 Section located in the EUCOM Headquarters building in Frankfurt. The Chief, S-3 Section, was directly responsible to the Commanding Officer of the 970th Detachment for all phases of operations and, through the Commanding Officer, for keeping the Deputy Director of Intelligence, EUCOM, informed on all matters pertaining to counterintelligence with the Command. This mission entailed the receiving, recording, coordination and dissemination of all counterintelligence information that was channeled up to the 970th CIC from the Regional offices. Final recommendations, based on existing Theater directives, were prepared by

4 Organization Chart of 970th CIC Det as of May 1947 attached as Appendix 1, NOTE: Although, by 1947, some changes in Regional designations had been made, the organizational structure remained essentially the same.

[redacted]

[redacted]

the S-3 Section on all counterintelligence cases before they were submitted to an action agency. To carry out its functions, the S-3 Section was divided into two sub-sections: Case Direction and Central Registry.

All counterintelligence information emanating from subordinate echelons of the 970th CIC Detachment was received at the Case Direction Section where it was evaluated, checked against information already on file, recorded and passed on to other interested agencies. To expedite the processing of this information, the Case Direction Section was sub-divided into the internal, and external desks.

Among the activities handled by the internal desk were the following: active subversions, security control, operation "Mesa" (the location, exploitation, and protection of scientists), war crimes and automatic arrestees, political subversion, and a historical section (which collected information on VIPs among former Nazi officials, searched for data on the German Intelligence Service, and screened repatriates for counterintelligence information).

The external desk kept abreast development involving the Russians and their satellites and involved separate divisions responsible for covering Soviet, Czechoslovakian, Hungarian, Yugoslavian, Bulgarian, Roumanian, Polish, Ukranian, White Russian, and Jewish activities. The activities of each group were broken down into specific categories: for example, the Soviet Activities section gathered information on MVD, MGD, Courier liaison to German Communist Party, Soviet Reparations Mission, Soviet Repatriations Mission, Soviet Displaced Persons Propaganda, Soviet Army Intelligence, Soviet Illegal Wireless Transmissions, Soviet Mass Briefing of Returning PWs.

The other major sub-section of S-3 at 970th CIC Headquarters was the Central Registry. Organized to catalogue and preserve all information of counterintelligence value, the Central Registry maintained files that were elaborately cross-indexed to make possible the compilation of details on an individual or an organizational case on the basis of even meager leads. Among the other duties of the Central Registry were the operation of the network of teletype installations that linked all echelons of the 970th CIC, control of photostat facilities and photographic laboratories and Top Secret Control.[5]

Organization of a Regional Detachment

Regional headquarters of the 970th CIC Detachment was charged with certain administrative and supply functions, an arrangement designed to leave Sub-Regions,

5 Hq CICC, Holabird Signal Depot, Balto., Md, Memo to Chief, CIC, Subj: "Liaison with the 970th CIC Det and the EUCOM Intel School (26 April - 26 May 1947) sgd C. E. Read, Maj, Inf, dtd 5 Jun 1947 (Conf) (Central Records Facility).

[redacted]

[redacted]

Field Offices, and resident agents a maximum amount of time to attend to operations. Each Region had S-1 and S-4 sections, mirroring on a limited scale the responsibilities of the parent section at 970th Headquarters. The S-3 section, which coordinated operations, was composed, at a typical Regional headquarters, of a Production group that concentrated on target spotting on long range projects, an Eastern Internal Desk, Western Internal Desk, a Records and Research unit and a Reports Section which prepared weekly, top secret, arrest, and spot reports.[6]

Sub-Regional and Field Organization

Under the "Standard Operating Procedures for Counter Intelligence Corps, United States Forces, European Theater," which was issued in June 1946 and continued to govern CIC operations in Germany into 1948, the ground level of CIC activities took place at the Sub-Regional and Field Offices. Kreis (county) Field teams and Special squads could be formed at the discretion of the Sub-Regional Chief "and/or in accordance with specific instructions from the Regional Chief" to insure maximum counterintelligence coverage for each area.

The Sub-Region chief was charged with responsibility for "all functions of the Counter Intelligence Corps within his Sub-Region, paying particular attention to the direction of operations." The Sub-Regions were restricted to investigations within their own territories unless specific clearance was obtained to extend an investigation to another Sub-Region. But headquarters of the 970th CIC Detachment authorized "maximum latitude for lateral communications between..... (lower echelons).....to maintain operational efficiency."

Each Operations Officer at Sub-Region level was required to maintain a Records and Research Section responsible for a master "Personality" file, a master "Arrest" file, and a reference library, and other reference information necessary for the operational efficiency of the field agents.

Subordinate to the Sub-Regions were the "Resident Agents," each of whom was assigned to a Kreis (county) where he kept abreast of the local counter-intelligence picture and maintained liaison with local officials. The Resident agents were required to check German Police blotters daily for any cases of counterintelligence significance.[7] Weekly meetings of all Resident agents were held at the Sub-Region office to exchange information and to brief the field operatives on new EEI's.

[redacted]

In this manner, the 970th CIC coordinated the collection of intelligence by the agents in the field with its processing at several higher echelons.[8]

Major Changes in CIC Organization

In an effort to determine the most effective organization for the long term occupation of Germany, CIC underwent changes from 1947 through 1949 that were designed to streamline operations and to economize on personnel. The concept of providing target coverage rather than strictly geographical coverage also prompted some major revisions.[9]

Redesignations

The 970th CIC Detachment, which had been constituted as a Table of Organization unit, was redesignated as the 7970th CIC Group in June 1948. This new CIC detachment was listed as a Table of Distribution[10] unit with control of strength under Headquarters, European Command, whose personnel requirements were subject to annual change. In the fall of 1949, a request was initiated to restore CIC in Germany to its Table of Organization and Equipment status, primarily to enable it to receive a personnel allotment on a more permanent basis direct from the Department of the Army. This request was approved and the change became effective on 10 November 1949, after European Command General Order 102, dated 4 November 1949, had redesignated the detachment as the 66th CIC.[11]

New Alignment of Lower Echelons

While the Counter Intelligence Corps was being realigned in the European Command structure, the CIC detachment attended to certain changes in its own internal organization. By September 1948, steps toward a major reorganization of channels and coverage had been implemented when Region III adopted an experimental plan. The Regional operations office was deleted in the flow of operational reports from Sub-Regions to headquarters at Frankfurt. The result was that 7970th CIC Headquarters assumed direct operational control of the four

[redacted]

Region III Sub-Regional offices. The trial plan was successful, and the new system was expanded to other Regions. By 1 October 1948, the two Sub-Regions of Region IV were transferred to headquarters operational control. Sub-Regions of Region IV were added a month later, and by December 1948, one Sub-Region of Region VI came under Headquarters direction.[12]

This gradual reorganization was completed on 15 April 1949, and the CIC picture in Germany took on a new appearance.[13] No longer was there a lengthy chain of Regional, Sub-Regional, and Field offices. Instead, the 66th CIC Detachment served as a headquarters for 12 CIC Regions with areas of primary responsibility in the U.S. Zone of Germany, the U.S. Sector of Berlin, and the Bremen Enclave. These functioned as the basic CIC field units and no smaller units based on geographical definitions were permitted. Most of the new Regions were commanded by lieutenant colonels with two majors assigned to cover the positions of executive and operations officer.[14]

When the former Regional headquarters had been completely phased out administratively as well as operationally, the CIC coverage corresponded with the original Sub-Regional boundaries, except in regard to the new Region X which had been fashioned out of two former Sub-Regions. Under the new alignment, CIC Regions and their headquarters were as follows:

Region I	Stuttgart
Region II	Heidelberg
Region III	Frankfurt
Region IV	Munich
Region V	Regensburg
Region VI	Nurnberg
Region VII	Bayreuth
Region VIII	Berlin
Region IX	Bremen
Region X	Bad Wildungen
Region XI	Wurzburg
Region XII	Augsburg

This over-all reorganization of the field echelons was accompanied by the standardization of job titles, investigative units, and utilization of operational personnel. Although there had been general schemes of regional organization

[redacted]

[redacted]

during the previous years, each Region headquarters had been given the prerogative of establishing a set-up deemed most suitable to local conditions. This wide jurisdiction had resulted in various solutions to such problems as control, management of agents, and staff titles, and these often conflicting solutions caused delays in operational matters and rendered such administrative details as replacement and transfer difficult.

Under the new standardization, which came into effect during the summer of 1949, investigative personnel at Region level were divided on a fourfold team basis--Political Team,[15] Counter Espionage Team, General Investigation Team and Visa Screening Team. These teams served as the "primary working tools" of the Regional commander. Eliminated from the picture were the case officers at Regional level who had formerly often duplicated the work done at headquarters. In their place were team commanders charged with the primary responsibility "to supervise team members, guiding and stimulating them to better work." The team commander, whenever possible, was to handle personally some key informants and work on high level cases. He had to know, in general, everything that occurred in his specialized field of activity and to approve all reports before they were sent on to headquarters.

The teams were charged with clearcut missions that were standard throughout all the Regions. The Political Team was assigned targets dealing with "right and left wing political activity, all Zones of Germany." The Counter Espionage Team had a four-faceted target area to cover:

1. Non-German national groups within the U.S. Zone
2. All foreign missions
3. Potential and suspected espionage
4. Exploitations of positive intelligence from sources located in territory under U.S. Control.

To the General Investigative Team fell a variety of targets, grouped as follows:

1. All security matters pertaining to personnel and installations information and to include suspected sabotage.
2. All screenings other than visa.
3. Surveillance of scientists.
4. Apprehensions.
5. Active subversion (other than political).

15 This team later became known as the Counter Subversion Team to distinguish this coverage from the political coverage, which was a State Department responsibility. (Interview with Lt Col F. E. Jorden, Inf, who was with the 66th CIC Det at the time.)

[redacted]

[redacted]

6. Any special projects or missions assigned the Region not falling within the fields of activity listed above for the Political or Counter Espionage Teams.

The Visa Screening Team was established only in those Regions where the visa load was particularly heavy. When the volume of visa work was low, no permanent Visa Screening Team was set up, and agents from the General Investigative Team were temporarily assigned to the control of the Visa Officer to handle cases as they arose.[16]

This organization of CIC for field operations at Region level was considered more effective than the original and varied approaches to the problems of providing thorough counterintelligence coverage for a given geographical area. Except for the change of title of the Political Team to Counter Subversion Team, this system was still in effect at the close of 1950.[17]

Field Resident and Day Offices

Although, under the broad standardization of CIC in Germany that was completed by September 1949, there were no echelons beneath the Regional offices, some provisions had to be made to insure the continuance of adequate CIC area (as opposed to target) coverage.

As a result, Regions were permitted to establish field offices and resident agents. A Field office was defined as "a permanent CIC office, maintaining a Charge of Quarters and files of its own activities" and could be placed "in those areas within a regional boundary which, because of geographical separation and/or because of high CIC interest, require the physical presence of three or more CIC agents in order to provide adequate area coverage, local liaison and/or appropriate target coverage."[18]

Each Field office was placed under the direction of a Field office commander, generally the most qualified resident agent assigned to the area. The commander was assigned a sufficient number of additional resident agents to fulfill the mission of his office. In addition, any member of a Regional Team who happened to be located in the area on a particular mission came under the direct administrative command of the Field office for the duration of his assignment. The team agent had to keep the Field Office commander informed about his operations, and process reports and information through the Field office to be forwarded to the

[redacted]

team commander at Regional headquarters. But the Field Office commander was denied authority "to approve, disapprove or hinder the flow of information from the team agent."

A Resident office was similar to a Field office in mission; the distinction between the two hinged around the fact that only a single agent staffed the Resident office.

The least formal of the CIC offices was the so-called Day office which was generally established in the same building as the local Military Government representative or other U.S. Agency. No CIC personnel were assigned to the Day offices, but resident agents and Field Office commanders were responsible for making periodic visits to these offices to further their mission of providing area coverage and maintaining liaison.[19] By the end of 1949, CIC had in operation 11 Field offices, 30 Resident offices, and 24 Day offices.[20]

New Internal Organization at Headquarters

While readjustments were being made at lower echelon levels in 1949, the internal organization of the headquarters of the 66th CIC Detachment took on a somewhat new appearance.[21] The function of each section or office was comparable to that of the corresponding section of any standard military installation, but there were some notable features of the 66th CIC under the reorganization.

A staff position of Inspector was created, and quarterly tours of inspection for the 12 Regions were supervised and coordinated by this office. The inspections were performed by teams composed of staff members of the detachment headquarters, one each from administrative, operational, supply and automotive sections.

The S-1 Section handled all matters pertaining to personnel, both civilian and military, for all 12 Regions as well as headquarters. There were no longer S-1 sections internal to the organization of the Regions.

The S-4 took over the assignment of vehicles to all Regions and the issue of investigative equipment and photographic supplies for the entire detachment. This supply section continued its control over supply, mess, and motor pool for the detachment headquarters.

21 Chart showing internal organization of 66th CIC Det attached as Appendix 3.

The organization of the S-2/S-3 Section was considerably changed under the new plan. Headed by the 66th CIC Operations Officer and his assistant, this section was divided into seven sub-sections:

1. Case Section - Previously broken down into desks on the basis of nationality groups and geographic areas, the Case Section was reorganized to place greater emphasis on fields of investigation and to align collection efforts of the 66th CIC more nearly with those of both higher and lower echelons. Four desks were created to handle, respectively, countersubversion, counterespionage, security, and positive intelligence.

2. Technical Specialist Section - This section was "responsible for the supervision and control of the informant program."

3. Screening Section - The primary responsibility of this section was the supervision and control of the loyalty and integrity investigations conducted in the U.S. Zone of Germany, for the Displaced Persons Commission, under the provisions of the Displaced Persons Act of 1948. But the section also assisted the Commission in the completion of investigations conducted in the British and French Zones of Germany and in Austria and Italy. A further responsibility was the dissemination of information from the Central Registry to the U.S. Consuls and other interested agencies.

4. Training Section - Responsible for the formulation, promulgation, and supervision of training policy in accordance with directives of higher headquarters and with operational needs, for all personnel assigned to the 66th CIC Detachment.

5. Reports Section - Responsible for the preparation for such operational publications as the Bi-Weekly Counter Intelligence Summary Orientation and Guidance Report, and the CIC Target Survey.

6. Central Registry - This was the central file of the 66th CIC Detachment. By the end of 1949, under two indices, the Central Personality Index of 1,350,000 cards, and the Impersonal Files which contained 42,000 titles, information from some 275,000 dossiers was available to the detachment and other governmental agencies, subject to the approval of detachment headquarters or the Intelligence Division.

7. Services Section - Included in the duties of this section were Top Secret Control, the Photographic laboratory, and the Drafting Section, which prepared charts, posters, and other illustrative material.[22]

Movement of Headquarters, 66th CIC Detachment

Accompanying the streamlining of CIC organization throughout Germany was the physical transfer of the headquarters of the 66th CIC Detachment from Frankfurt to the modern Wallace Kaserne in Stuttgart. Logistical planning for this shift had begun as early as April 1949. During the period 1 to 10 September 1949, the actual move was completed by motor transport. The headquarters remained constantly operational over these 10 days, although it had to be maintained on a two echelon basis.[23]

Commanders of the CIC Detachment in Germany

From the time of its inception until June 1950, the CIC Detachment in Germany had eight different commanding officers. Lt. Col. Norman Hearn assumed duties as the first commander of the 970th on 10 May 1945. He was succeeded in July by Lt. Col. H. E. Wilson who, in turn, was replaced by Lt. Col. Richard D. Stevens on 31 October. From December 1945 until April 1946, Lt. Col. Harold E. Marr, Jr., was acting commander, and Col. C. M. Culp took command from April to June 1946. Col. J. L. Inskeep served as the 970th CIC's commanding officer from June 1946 until January 1948, although Lt. Col. Louis M. DeRiemer was acting member for six months (April - October 1947) during this period. Col. David G. Erskine headed CIC in Germany during its period of major revisions; designated commanding officer in January 1948, Colonel Erskine remained in this position until November 1950.[24]

Other CIC Detachments

Although the 970th CIC (and later the 7970th CIC Group and the 66th CIC) was the principal detachment in Germany throughout the occupation, CIC maintained small units with the 1st Infantry Division and the United States Constabulary. Their missions were essentially the same as CIC had carried out during combat: to perform security work and investigations as requested by the division G2.

During a typical year, 1949, the 1st CIC Detachment closed 37 investigations, gave 14 security lectures and accomplished 36 security inspections of battalion units. In addition, the agents performed three special guard missions and four other special missions. Liaison was maintained with the 7970th CIC Group and other agencies.

The seven members of the detachment also participated in seven tactical field exercises that were held by the 1st Infantry Division in 1949.[25] The 427th CIC assigned to the United States Constabulary was organized into teams and sub-teams, and the agents of the detachment provided security for all Constabulary units in Germany.[26]

In 1949, activities performed by the 427th CIC included 34 investigations of personnel on duty with the Constabulary, 147 security lectures, 1,561 surveys "conducted to determine the security of Constabulary troops, installations, material or communications or to determine compliance within the Constabulary of the provisions of AR 380-5," and 21 "search and check operations" in conjunction with Constabulary troops.[27]

[redacted]

Part II

PERSONNEL AND TRAINING

At the outset of the Occupation, the 970th CIC Detachment had an authorized strength of 300 officers and 1,100 agents[28] but losses in strength were felt almost immediately as wartime agents piled up enough points for return to the United States. The steady depletion of CIC personnel through 1945 was noted with concern by counterintelligence staff members and commanders alike,[29] and the reorganization of CIC on a regional basis in late 1945 was prompted as much by personnel as by operational considerations.

The loss of experienced CIC agents was a serious deterrent to CIC operations; the new agents which CIC received from replacement depots and troops already in the Theater often proved more of a hindrance than a help.[30] By March 1946 when new CIC agents trained in the Zone of the Interior began to arrive in the Theater, one detachment commander noted that they had come without prior training in occupation duties. Schooled in "detective type" work during a five week course, the new agents had little or no perspective on the situation which was facing the security officials in Occupied Germany.[31]

The Need

The requirement for a CIC agent, once the long range nature of the Occupation had been recognized, was summarized in the report of an officer who visited the 970th on a liaison trip from the CIC Center at Fort Holabird, during April and May 1947.

Under the heading "intellect and maturity," the report stated that "the present day CIC agent should be of more than 'just average' intelligence. He must be of sufficient intellect to thoroughly comprehend the complex political and economic situation which exists in the European Theater during the present quad-powered, partitioned, occupation of Germany." According to the observer, the fact that a CIC agent was, in many localities, the sole representative of the United States Army made maturity and judgement prime requisites. In dealing with informants, for example, it was necessary that an agent inspire confidence or his "people" might come to fear compromise of the information they had

[redacted]

[redacted]

volunteered. He reported the opinion of many counterintelligence officers in Germany was that a number of agents who were simply "bodies" filling vacancies could be sacrificed in favor of a lesser number of qualified personnel.

Tact and diplomacy were cited as two traits essential to a CIC agent in Germany; the absence of these qualities in some of the agents had led to some "embarrassing situations" for CIC.

The observer pointed out that the CIC mission also clearly required qualified linguists; the minimum need was "sufficient knowledge of the language so that he (the agent) may protect himself against misleading information by an interpreter." But there was no adequate substitute for an agent who could speak German fluently, and, in highly sensitive assignments, for qualified agents who could speak local accents in order to maintain their covers.[32]

The demand for agents of maturity and intellect, tact and diplomacy, and at least a basic familiarity with the German language was considerable. In addition, training in such investigative techniques as interrogation, use of informants, report writing, and basic principles of conducting an investigation, was needed to turn an individual who possessed the character and personality qualifications into an effective field agent.[33]

The Supply

The authorized strength of the 970th did not fluctuate widely during the Occupation of Germany. On 18 April 1947, almost two years after the surrender, the detachment was allotted 318 officers, 167 warrant officers, and 607 enlisted men under T/O & E 30-500, and an additional allotment in non-T/O Grades of 22 officers, 33 warrant officers and 225 enlisted men, making an aggregate of 340 officers, 200 warrant officers and 832 enlisted men. This total of 1,372 spaces was close to the figure of about 1,400 spaces with which the 970th CIC had started operations on 10 May 1945.[34]

[redacted]

[redacted]

But the agents that CIC had in Germany by 1947 simply could not all measure up to the standards of quality either desired or previously obtainable. There was no single doorstep to which the unsatisfactory personnel situation could be traced. Limited sources of manpower for the Army from a nation which was relaxing in a post-war wave of unconcern was the fundamental factor. Men of the caliber demanded by CIC operations in Germany were not entering the Army in sufficient numbers.

Young, inexperienced boys were sent over to the 970th CIC for short periods of duty. By the time these agents had gained the experience and understanding of the Occupation mission, their tour of duty often had ended, and only a small number chose to remain in the service.

Three general factors have been cited as contributing to the poor quality of personnel in the 970th CIC at this time: immaturity, inadequate linguistic background, and a lack of technical training for intelligence. The problem was not the adequacy of the training which these agents received at the CIC Center, but the "raw material," the agents, themselves, who could not adapt to the demands of counterintelligence operations in Germany.[35]

The inadequacy of new agents coming to CIC in Germany was not the only factor contributing to the unfavorable personnel situation: agents who had remained in Germany after the war often used their familiarity with the conditions and citizens of the occupied country to their own advantage; some became lazy in carrying out their assignments and allowed informants to perform investigations, prepare reports, and virtually conduct operations which had been assigned to CIC. The one bright aspect of the picture was that CIC possessed a sizeable nucleus of hardworking, competent and experienced agents on whom headquarters and Regional commanders could rely. The effectiveness of these agents was maximized at all levels. Regional commanders shifted their key personnel about to meet special demands and occasions. Many of the best agents in Germany were sent to Berlin where counterintelligence work often proved the most difficult and involved, requiring the "know how" of men with considerable Intelligence background.[36]

The "top quality" CIC agents, of which there was a substantial number during 1947-1948, were capable of carrying out complex assignments, but they could not cover the entire counterintelligence field. As a result, the deficiencies among the less satisfactory counterintelligence personnel were bound to take their toll on CIC operations.

Survey of the Personnel Situation

Shortly after the assignment of Maj. Gen. R. L. Walsh as AC of S, G2, for the European Command in May 1947, General Clay ordered him to make a thorough survey of CIC. Since "high principle and talented men" in all echelons of CIC ranks were accomplishing important work, and there was a need to maintain proved sources of contact, it was decided that the realignment of CIC should be arrived at through steady rather than drastic changes. Constructive criticism was sought by General Walsh from all Regional commanders.

One of the initial suggestions concerned plans for the poor quality CIC personnel. Reports indicated that approximately 20 percent of the agents were unqualified for counterintelligence duties, and the European Command gave directions for the removal and transfer of incompetent personnel. This program was tied up somewhat by administrative delays because the normal personnel assignments originated in Washington.

A major measure designed to improve the personnel situation came during June 1947 in the form of an order from General Clay requiring CIC agents to don uniform indicating rank and to live in military kasernes, former German Army barracks. This order was aimed at separating operational necessities from luxuries; the "need to live independently of military control, extensive use of civilian clothes, living in private homes, and operating their messes" were all cited as CIC prerogatives which had been abused.[37]

In the opinion of the Operations Officer at the time this order did not substantially interfere with CIC operations.[38] Reasonable latitude was given so that during the normal working day, the field agent was permitted civilian attire when operational missions would be jeopardized by the wearing of a uniform with rank. An exception to the requirement that off duty time be spent in uniform was made for those agents whose place of duty was in a small town where the change into and out of mufti would be apparent. Agents were also permitted to wear civilian clothes in the evening for duty, with the approval of the Operations Officer.[39]

39 CIC History 1945-1948, (Conf) (Cen Rec Fac).

[redacted]

[redacted]

The enlisted agents were billeted in kasernes with other troop units, but they were usually grouped together in a separate wing or corner. They were required to eat in enlisted mess halls instead of the separate CIC messes which had previously been utilized.

This change of status hurt morale among the enlisted CIC agents at the outset.[40] There was some nostalgis for the "good old days," but the less experienced agents realized that their duties permitted them to "live openly." CIC clerks, who had previously been allowed to wear the CIC civilian uniform with "US" insignia on the collar, were not generally involved in operations where the indication of their rank could possibly compromise a mission.[41] The order had the immediate advantage of reaccustoming some agents to the fact that they were basically soldiers and members of the military Occupation forces.[42]

Another measure designed to improve the quality of the performance of the agents was the "swoop inspection," conducted by teams of officers from the 970th headquarters at lower echelon CIC offices. This system of unannounced internal inquiries kept agents properly prepared at all times. There was no chance to prepare for these surveys, which covered all matters that an Inspector General might consider. Personal relationships, complaints, investigative procedures, files and operations were all scrutinized.

Security of personnel and information within CIC was a constant problem that was partially remedied by these inspections. Breeches such as the careless handling of documents had been committed too often for an organization whose mission was to protect security. In one instance, an agent left a list of highly classified EEI's in his parked jeep. When he returned, the papers had disappeared. Other security slips had been made through lack of discretion in revealing information to unauthorized sources.

The hampering of morale within CIC brought on by the internal inspection system was a decided disadvantage. But it had to be weighed against the unquestionable gains of standardizing operations and improving agents' behavior.[43]

[redacted]

An Attack on CIC in Germany

Even as the 970th was putting into effect these self-corrective measures, some former agents, returning to the United States, voiced their criticism of the CIC situation in Germany; one man, in particular, chose to list his complaints about affairs in the European Command in a document submitted to the Secretary of the Army about 1 January 1948. Entitled "Black Market Activities and Other Irregularities in Germany," this undated, unsigned report consisted of 50 pages of allegations concerning personnel policies, and conditions in Germany. It was supplemented on 28 January by another document labled "Wholesale Irregularities in the Counter Intelligence Corps in the European Theater." Like its predecessor, this report was unsigned and undated by the former agent who had submitted it.[44]

The charges against CIC were contained in the first three pages of generalizations which included "moral corruption, professional incompetence, indifference, and laziness of most of the agents and supervisory officer personnel all due...to local rivalry and complete lack of coordination of five different and overlapping Intelligence agencies." Following these broad allegations was a report on certain indiscreet and illegal operations of a CIC warrant officer and the citations of 47 cases which were to support the general allegations. The remainder of the report dealt with discussion and recommendations regarding:

a. Selection and training of personnel
b. Replacement of inefficient commanders
c. Tightening of discipline
d. Institution of a special inspection service
e. Supervision of CIC by Director of Security Group, Intelligence Division, Washington, D.C.

On 4 February 1948, Orville J. Taylor, a Special Assistant to the Secretary of the Army, started a two months tour of the Occupation forces in Germany at the request of Secretary of the Army Royall "to personally examine among other things, miscellaneous criticisms re security, crime record, immorality, drunkenness and general demeanor and conduct of the Army of Occupation by various critics, male and female."

A substantial part of Mr. Taylor's survey concerned the role of CIC and the criticism which had been leveled at its personnel. In general, Mr. Taylor concluded that the former agent's report "has only limited foundation, is presumptuous in the knowledge and experience which it apparently claims on behalf of the reporter...is susceptible of proof in a few particulars only, is a mass of glittering generalizations emanating from the fantastic imagination of which the reporter

44 Exerpts from CSGID 201, [redacted] Secret) (Cen Rec Fac).

3719

[redacted]

must be possessed." This withering blast at the charges of the former agent was concluded with the observation that no facts had been brought to light which were not known "to those excellent and efficient officers in command of CIC who are doing a magnificent job in study and research to the end of correcting such weak spots as may be present in this organization and in making of it a strong and effective arm of the Army."[45]

In the press release of Mr. Taylor's remarks which was distributed on 6 May 1948, the need for continual scrutiny of all intelligence personnel was stressed "because of the tremendous temptations for wrongdoing and because of possibilities of damage to the security, interest, prestige, or operational effort." It was noted that the requisite of high principled agents had not always been met, a failure that was largely attributed to "the immediate need of large numbers of linguistically qualified personnel and of personnel familiar with the background attitudes and culture of inhabitants." The emergency selection of these agents had inevitably accounted for the "presence of some individuals with ulterior motives and questionable ethics."

But the observations of Secretary Royall's investigator relative to CIC in Germany were ended with the statement: "I am satisfied that there has been a year-to-year, month-to-month, week-to-week, and almost day-to-day improvement and correction, where necessary, of the organization."[46]

The investigation of the CIC situation by Mr. Taylor was coupled with a tour of the 970th by the CIC Chief, Brig. Gen. E. A. Zundel, in February 1948. At this time he reviewed the allegations lodged against CIC by officers from the Inspector General's office, European Command. These inspections brought the personnel situation into sharp focus, and General Zundel observed that, "despite the fact that more than 50 percent of perspective CIC candidates were rejected prior to field duty, some undesirable personnel passed through the 'preventative screening'." But the CIC Chief noted that "this fact is recognized and authority is granted to all field detachment commanders to relieve personnel from CIC without further reference to the Chief, CIC, for inefficiency, character deficiency, undesirable mental attitude, lack of desire, or failure to perform CIC duties properly or for infractions of discipline and good order."[47]

45 Draft of Memo from Orville J. Taylor, Special Asst to Sec of the Army, to Kenneth C. Royall, Sec of the Army, dtd 29 Mar 1948, (Conf) (Kansas City Rec Cen).

46 Rpt to Sec of the Army Kenneth C. Royall from Orville J. Taylor, Special Asst to the Sec of the Army, from D/A, Public Info Div, Press Sec, dtd May 6, 1948, (Uncl) (Kansas City Rec Cen).

47 Draft Memo from Brig Gen E.A. Zundel, Chief, CIC, to CofS for the Dir of Intel, 26 Feb 1948, (Conf) (Kansas City Rec Cen).

[redacted]

Despite the series of inspections during the early months of 1948, CIC operations proceeded without undue hampering. By 1949, the quality of the average individual agent had improved perceptibily[48] and the over-all detachment strength reached 361 officers, 107 warrant officers, 760 enlisted men, and 163 civilians.[49]

Although the personnel picture for CIC in Germany was far brighter than during the early days of the Occupation when replacement depots had been combed for likely agents, the "top quality" had diminished somewhat. New security rulings which made for stiffer clearance requirements, particularly in the matter of foreign birth, eliminated some key agents, and a general Theater policy to curtail the use of civilians cut into the CIC ranks. Some agents who had been permitted "to Civilianize" on the job after the war left CIC in Germany.[50]

The Use of European Personnel

In carrying out its mission in Germany, the 970th CIC had to use indigenous personnel as informants, linguists, assistants in visa screening investigations, and in other capacities where an intimate knowledge of the country, its people and customs was essential.

Outlined in the CIC Standard Operating Procedures of 1946 were the conditions upon which indigenous personnel could be utilized by CIC: "German civilian personnel will not be used in any administrative or operational capacity, except upon specific authorization by this Headquarters. Such personnel are normally hired only as manual laborers, such as cooks, servants, housecleaners, and garage attendants. In certain instances they may be hired as interpreters etc., and be used under the control of a CIC agent as an informant or undercover agent. Extreme caution will be exercised to insure that such personnel have the appropriate security clearances and do not have access to any classified information other than what those individuals connected with operations may have produced themselves."[51]

[redacted]

[redacted]

It often was necessary for a CIC Operations Officer to fall back on the "escape clause" in this statement because many key operations hinged upon the use of German informants.[52]

In some areas, CIC also employed European personnel as intelligence "leg men." The Sub-Region of Widen near the Czechoslovakia border, where language problems were particularly abundant, had several Polish nationals on the payroll as full time employees. These Poles had served with the Office of Strategic Services (OSS) or the equivalent British Intelligence organization during the war and were well versed in Intelligence procedures. They also could speak several languages.

The Poles' association with CIC was kept in the open. They were issued Post Exchange cards but had no credentials that identified them as members of Intelligence. Although they were not briefed on operational matters, these men were used to drive undercover cars with the regular CIC agents, to translate and interpret for the nonlinguists in the Sub-Regional office, and to confirm or refute information listed on personal data forms by potential immigrants to the United States. In screening visa applicants, the Poles could question the displaced persons closely; for example, if an applicant listed employment at a certain factory, the Polish interrogator could ask him for details of the factory's location and check the displaced person's description against his own knowledge of the area.

The Poles were also sent on missions to various Displaced Persons camps in the Wieden area to bring CIC information which would have been difficult or impossible for the agents to procure themselves. But the Poles were warned that if they got into trouble on any assignment, CIC "had never heard of them."

Assistance to the CIC agents in Weiden was also provided by the local Kripo (German criminal police). As a means of insuring liaison, CIC paid the salaries of two detectives on the police force. However, CIC neither selected nor knew which men on the Kripo were receiving this sponsorship.

Since liaison with the German police was essential to CIC operations, there was usually at least one member of the local police force who "belonged" to CIC.[53]

Training

CIC during the Occupation of Germany never operated a permanent zone-wide school for the training of its agents. For the most part, the agents had to receive their grounding in the special problems of Germany through courses at the Regions to which they were assigned and through on-the-job training.[54]

Although there had been some local recruitment of CIC agents from among the troops in Germany, the new agents generally came to the Theater after completing the basic investigative course at the CIC Center at Fort Holabird.[55] The problem which beset the CIC commanders in Germany was not the adequacy of the training that these men had received in the Zone of the Interior but the quality of the personnel![56]

Early in the Occupation, the European Theater Intelligence School (later the European Command Intelligence School) at Oberammergau established vacancies on a quota basis for CIC agents.[57] The men selected to attend this school received area background and language training.[58] But it often developed that the agents who could best profit from the Oberammergau training could not be spared from their duty assignments.[59]

In May 1947, a survey of the training needs for each potential CIC agent stressed that "language training should be given a high priority on the training agenda...and should not be considered as something that can be covered in the agent's field training program." Another "prime essential" was instruction in the "phases of geopolitics...dealing with the political and economic tendencies (in Germany) during the present century to enable the agent to evaluate intelligently the information he receives."

Some of the investigative subjects which were taught at Fort Holabird were pointed out as requiring supplementation for the special conditions of Germany. The case with informants was typical: "The instruction in the recruitment of informant nets should stress the proper approach to a likely prospect; the time

involved in determining whether an individual should or could be recruited as an informant; testing a prospective informant for dependability; preparation of a cover story for the informant to assist him in recruiting his supplementary chain; means of compensation for the informant; treatment of the informant so that his continued loyalty will not be dimmed by the agent's attitude toward the informant; means of preventing the "burning out" of an informant; methods of exploiting the informant to the fullest extent without jeopardizing the informant or the mission of the agent; methods of eliminating an undesirable informant without incurring his disfavor...and methods of using informants to assist in the performance of a mission without divulging...the primary mission. All instruction now given which tends to lead the potential agent to believe that his informant net should be recruited among the lower strata of society should be eliminated and stress placed on the use of informants in the middle and upper strata...."

Deficiencies of the agents in Report Writing and other fields were noted and considered correctable only through "the procurement of a higher grade personnel."[60] In addition to grading the CIC students on their academic performance, the instructors made evaluations of their potentials as CIC agents, based on their conduct, attitude and participation in the academic activities.

Although CIC quotas permitted few agents to attend the Oberammergau Intelligence School, those who were sent in 1947 took the seven weeks long "Occupational Intelligence Transition Course," designed to acquaint the CIC agent with conditions in the U.S. Zone. Among the subjects studied at some length were Naziism, Eastern Europe (largely concerned with the Soviet Union and the Communist Party), Legal Investigative Procedures, and Military Government.[61]

Since most of the agents did not attend the Oberammergau Intelligence School, the individual Regions had to give incoming agents an introduction to their future duties. There was no unified concept as to what this "introduction" should contain, and the program in Region I in 1949 can be cited as representative. The new agents assigned to Region I received a brief orientation as to the CIC mission, regional structure and area, and then were sent to the file room for several weeks of reading. After completing this study, they were assigned for a tour conducting investigations under an experienced agent with the General Investigative Team. After this seasoning period, the new agents' qualifications were weighed

61 The full curriculum of the European Command Intel School's course for CIC agents is included as Appendix 4.

[redacted]

and they were selected for duty either with one of the Regional teams or in one of the Field offices.[62]

Instruction in the German language based on the "Berlitz conversational method" was also provided to agents at the Region level. Under provisions of the Troop Information and Education program, CIC units were authorized use of the native Germans as hired as language teachers. CIC vetted all these instructors, since they taught inside the CIC kasernes, and paid them out of the funds allotted by the Information and Education Division. When operational duties permitted, the agents received their language schooling during the daytime, but classes were also held during off duty hours.[63]

By the end of 1949, additional training at unit level included "a required amount of military training and marksmanship, recruit training, administrative training, and other training as specified in current directives."[64]

In 1950, the training at Region level was supplemented by special courses established at 66th CIC Detachment headquarters. Each course was attended by one agent from each of the 12 Regions. A five-day school in general investigative subjects was held from 14 to 18 February and a 10-day school in countersubversion, from 17 April to 27 April. Later in the year, an eight-day course in counterespionage and another course in general investigations were given. But these courses did not represent an effort to begin a permanent school for CIC agents newly arrived in Germany.[65]

Part III: Mission, Operational Policies, and Channels of Communication

[redacted]

[redacted]

Part III

MISSION, OPERATIONAL POLICIES, AND CHANNELS OF COMMUNICATION

The initial planners for counterintelligence operations in Germany had composed a mission for CIC without knowledge of what security conditions would prevail. The actual conditions required continual revision of specific CIC responsibilities as new threats to security arose and older ones disappeared. By 1949 the basic mission had envolved to the point where it could be described as follows:

"The basic mission of the 66th CIC Detachment is to protect the U.S. Zone of Occupation in Germany against espionage, sabotage and subversion, and to discharge such other investigative duties as may be assigned by the Commander-in-Chief, EUCOM. The detachment is responsible for all counterintelligence operations of a zone-wide nature... The 66th CIC Detachment is an information gathering agency as well as an investigative agency. The primary function of its operating personnel is the collection, collation, evaluation and classification of information of counterintelligence interest for further analysis and dissemination by higher headquarters."[66]

In the fulfillment of its basic mission, the 66th CIC Detachment was charged with the following specific responsibilities:

" 1. Discover, prevent, and counter the activities of foreign intelligence services, secret police and dissident or resistance groups.

" 2. Protect U.S. interests against sabotage and investigate sabotage incidents.

" 3. Detect, prevent and neutralize subversion.

" 4. Prevent the reorganization of ex-enemy intelligence services, security and secret police and para-military organizations.

" 5. Support and assist the U.S. occupational government agencies as directed.

" 6. Conduct investigations when so directed.

" 7. Conduct security investigations when so directed.

---

66 Hq European Command and Hq US Army Europe, Annual Narrative Rpt from 66th CIC Det, 10 Nov 49 - 31 Dec 49, RG 207.03 A 52-345 (Secret) (Departmental Rec Br, AGO, Alexandria, Va).

[redacted]

[redacted]

" 8. Perform interrogations and render reports with regard to scientists within the U.S. Zone.

" 9. Conduct security surveys of U.S. installations.

"10. Conduct background investigations.

"11. Furnish spot reports and coverage on any situation, incident or personality of potential security interest.

"12. Report positive intelligence information coming to CIC attention in pursuit of its normal mission.

"13. Collect and evaluate positive military order of battle intelligence outside the US occupied areas of Germany as directed."

It was on the basis of these requirements that CIC formulated primary operational objectives at headquarters.[67]

Operational Objectives

The four desks under the Case Section at headquarters were given specific objectives in addition to their role in the over-all mission of the 66th CIC. The Counter Subversion Desk, in 1949, had as primary objectives, "Activities and personalities of left wing political parties, with special emphasis on the Kommunistische Partei Deutschland (KPD) and its counterpart in the Soviet Zone of Germany, the Sozialistische Einheitspartei Deutschland (SED)."

Attention of the Positive Intelligence Desk was centered on gathering order of battle information with regard to Soviet ground forces stationed in the Russian Zone of Germany.

The Counter Espionage Desk had, as primary targets, the detection and neutralization of Czech and Soviet espionage agents and nets that had been established in the U.S. Zone.

The continuing primary objectives of the Security Desk included hidden arms caches within the U.S. Zone, as well as gliding and glider pilots and scientists, who had been listed by the Joint Intelligence Objective Agency.

Besides the objective of the desks in the Case Section, the 66th CIC had as a primary goal in 1949, the screening of applicants for immigration to the United States

67 Ibid.

[redacted]

[redacted]

under the Displaced Persons Act of 1948. Under control of the Screening Section at Headquarters, a total of 61,122 visa applications had been screened by all units of the 66th CIC Detachment by the end of 1949.[68]

CIC Operational Policies

In May 1947, the Counter Intelligence Corps Center requested clarification from CIC in Germany on certain practices and policies which were followed by agents in Europe. The answers provided by the 970th CIC furnished a good view of CIC operations in general, near the midpoint of 1947.

Arrests

CIC was allowed to arrest "any person in the European Command against whom there is sufficient evidence to support a charge of espionage, sabotage, or subversion and any person within the automatic arrest categories, except such persons as enjoy diplomatic immunity." But the power of arrest became increasingly curtailed as the Occupation progressed. While initially the mere charge of "security suspect" was sufficient grounds for holding a person, by 1947, CIC was required to possess evidence that could be reasonably expected to stand up in court. The agents were required to clear with Military Government the arrest of any prominent German and had to have a "very strong case" against an American or Allied civilian employed by the Army.

At most Sub-Regional offices, the Commanding Officers required agents to submit the names of potential arrestees for their approval in advance, except under emergency conditions when a fugitive or suspect might escape during the time between request and approval.[69]

In the instructions governing arrests, each Sub-Regional chief was designated as responsible for the collection of prisoners at a central location in the Sub-Region and the evacuation of these prisoners to an Internment camp. Spectacular or over-dramatized arrests were discouraged, and all arrestees were permitted to contact their families or kin within 24 hours of arrest unless this contact would endanger the security of an operation.[70]

[redacted]

Such restrictions resulted in a tremendous decrease in the number of arrests made by the agents as compared with the denazification period. Automatic arrest categories, which still included the leadership corps of the Nazi Party, members of the SS down to low noncommissioned officer levels, and former agents of the Gestapo and SD had been fairly well depleted of arrestees. With the exception of rare swoop operations designed to break up underground organizations in one synchronized seizure, CIC made "only a handful of arrests."

Limitations on the length of time any arrestee could be detained were fairly loose. Warrants and Habeas Corpus had not been introduced in Germany in 1947, and it remained for intelligence authorities to keep a close check on detention reports to see that prisoners were held only during the period of investigation and preparation for their trials. A special arrangements with the Russians, known as the Clay-Sokolovsky Agreement, specified that citizens of the United States and the USSR would be turned back by arresting authorities of either country to their own countries within one week of the apprehension. But no CIC prisoners could be held incommunicado more than 24 hours unless special permission to do so had been received from 970th headquarters.

Surveillances

Within Germany, the "loose" type of surveillance was most generally used by CIC with an agent trailing a suspect by automobile or on foot. Due to the shortage of CIC personnel and the fact that Germany was a foreign country, a great deal of the routine surveillances were performed by informants. The CIC agents, however, had to be thoroughly familiar with surveillance methods so that they could brief their "shadows," mingle with them to give further instructions, and take over the surveillance at a crucial point when a break in the case was expected.

Surveillances of houses and offices, generally from a building across from the target area, were common, since CIC agents could enter houses in Germany without a search warrant to establish their coverage. Used to a lesser extent were technical surveillances through telephone taps and microphones planted in strategic places.

Covert Operations

[redacted]

[redacted]

Interrogations

In the interrogation of German civilians, CIC agents were strongly advised to assume a friendly rather than a militant attitude. The reasoning behind this advice was based on several observations:

"Use of psychology in interrogating Germans is enormously important because of their generally uniform behavior. They all tend to feel very sorry for themselves, thus paving the way for disarming them by clever sympathy; they love to be flattered with their success in obtaining positions of importance; and their characteristic of dog-like obedience makes it possible for the interrogator to shift from them to someone higher, thus eliciting from them (in their innocence) the true story of their past. Their obedience also invariably makes them succumb to any order to tell their story and once they are started talking one of the important battles of interrogation is won. Rare indeed are the Germans of the 'I-ain't-sayin'-nothing-see-my-lawyer' school. Once they have become confused the injection of firm orders will often start the obedient German on the way to 'breaking.' Thus the militant approach may be held in reserve for certain types of Germans and for occasional psychological opportunities which present themselves during an interrogation."[71]

Informants in Germany

The informants that CIC utilized in Germany did not differ in type or employment from the informants used by any intelligence agency anywhere in the world. During the first ten months of the Occupation, when the agents were concentrating primarily on rounding up automatic arrestees, the average CIC informant was a denouncer, who would reveal the names and addresses of local Nazis. CIC, in general, had little difficulty finding these denouncers; in almost every community, there were malcontents from the Nazi regime who were only too glad to assist the organization which they believed to be the "American Gestapo." When opportunists

71 Ltr to CO, CIC Center, Baltimore, from Hq 970th CIC Det sgd J. H. Ratliff, Capt, MI, for Earl S. Browning, Jr, Maj, Inf, S-3, Subj: Directives and Information Requested by Training Division, Holabird Signal Depot, dtd 28 May 1947, (Secret) (Cen Rec Fac).

[redacted]

and embittered individuals failed to come forth in a given area, CIC could usually locate a churchman or an individual who had been blacklisted by the Nazis.[72]

But when the American forces in Germany settled into a long range occupation role, it became apparent that CIC would have to maintain informants in every sphere of activity which even remotely affected the security of the Occupation. This meant that CIC needed coverage not only of German groups and organizations, but also of the Displaced Persons camps which had become breeding grounds of Soviet espionage.

Wherever possible, CIC selected its informants from the higher economic and social levels. Business and professional people with a good educational background could often be used with more flexibility than informants drawn from the lower classes. But again the governing factors in the selection of an informant for a particular assignment were the conditions that the assignment entailed.

The CIC agents found that there were some informants who were sincerely interested in working for the Americans and that the idea of helping to build a new Germany attracted sincere idealists. Frequently, the motive of the "ideological" informant was a negative one: an intense hatred of the Communists and the Soviet Union rather than any particular fondness toward the American Occupation. The average German liked the Russians "not at all."

But the run-of-the-mill informant chose to assist CIC because of the compensation he knew would accrue from his efforts. Living conditions for the Germans during the early years of the Occupation were lean, and the thought of obtaining food, coffee, cigarettes, soap, and other precious commodities lured many potential informants to the CIC offices.

In selecting informants, CIC agents had to adopt the rule of thumb of the "right man for the right job." At times, this meant that former Gestapo agents and other individuals with Nazi backgrounds had to be utilized, since they were the only ones who could develop the desired information.

When an individual informant who had been of considerable service to CIC found himself in jeopardy as a result of giving aid to American Intelligence, CIC made every effort to help the erstwhile informant to emigrate to the United States or South America. But CIC could issue no blanket guarantees to its key informants that they could be extricated from the difficulties which might develop.

In dealing with informants, CIC agents usually maintained direct contact. Only the tried-and-true informants could be met in safe houses; the less trusted

72 Interview with former Special Agent Paul Funk at NCICA convention, Hotel Waldorf-Astoria, New York, N.Y., 6 Aug 1955.

[redacted]

One criticism of CIC operations in dealing with informants was made in a Bremen hospital by a Communist Party leader to a man who later reported the comments back to CIC. This leader stated that CIC agents were rotated too speedily for any continuity of operations. After a given CIC agent had built up a circle of informants, he was frequently transferred or replaced by another agent who had never worked with the particular informant net. The breach in continuity of operations gave a decided advantage to the group under surveillance.

[redacted]

Channels of Communication

[redacted] Although the 970th's collection effort was largely directed from the headquarter's Operations Officer's desk, there was a staff section at Theater G2 which supervised the activities of CIC in Germany. Variously labelled the Counter Intelligence Branch and the Operations Branch during the reorganizations of the Theater Command structure, this staff section controlled CIC target selection in specifics only.[81]

[redacted] Members of the 66th Detachment in 1950 had criticized the lack of guidance from the staff section, whose members seemed to have no uniform or purposeful concept relative to how G2 should employ the capabilities of CIC. CIC targets were selected for the most part by case personnel at 66th CIC headquarters, with Theater G2 only confirming its interest in these targets. Frequent requests for collection guidance were unanswered by G2 or replied to with vague instructions.

[redacted] Since CIC was in no position to evaluate the over-all intelligence requirements of the Theater command, this situation has been characterized as "leading to effort," and as a result, certain target emphasis by the 66th may have been out of proportion to the actual needs of the command.[82]

[redacted] Despite the lack of clear cut collection requirements from Theater G2, a constant and heavy flow of reports was maintained by CIC in Germany.[83] These reports were "processed" at CIC headquarters only insofar as CIC's case personnel could review, collate and check them against CIC files and dossiers. The large volume of "raw" reports that were sent to Theater G2 could have been cut

80 Interview with former Special Agent Daniel C. Canfield, at the NCICA Convention, Hotel Waldorf-Astoria, 7 Aug 1955.

83 Interview with Lt Col Earl S. Browning, Jr, at the Pentagon on 26 Sep 1955.

considerably, if CIC had been better informed on the intelligence needs of the command. Limiting the volume would have allowed the G2 analysts at Theater headquarters to concentrate their attention on important reports rather than having to screen piles of relatively insignificant material.[84]

Intra-CIC Dissemination

Within CIC, itself, communication and dissemination of information was a two-way affair. Target lists and leads were sent down from headquarters to the regions where Sub-Regional and Resident agents were told to participate in those targets which pertained to their area of coverage.

Prior to 1947, the 970th headquarters had organized key agent personnel into a unit known as the Production Group. These agents were given wide jurisdiction, since their principal mission was to locate potential targets and to work on long-range counterintelligence projects. Early in 1947 officers of the 970th CIC concluded that the Production Group tended to develop an elite group within the detachment that hurt CIC morale and was wasteful of the limited number of experienced agents. The Production Group was soon phased out.[85]

But CIC target coverage continued to be extensive. The regions had special squads, composed of experienced agents and good linguists, who handled penetrations, neutralizations and other assignments on a zone-wide basis.

More information was dug up at Regional and lower levels than the requirements of headquarters specified, and these echelons were allowed to develop new findings to the point where a case became clearly indicated. At this point, headquarters was notified and a request was made for full scale coverage, including personnel and funds to carry out a major investigation.[86]

Although lateral communication between regions was permitted by CIC headquarters, situations had developed in the early years of the Occupation where the tendency of some Regional commanders to rule their areas as autonomous units had throttled this lower echelon communication. Cases of informants passing the same information to several CIC regions were not unusual, and coordination of operations was seriously impaired. With the revisions of CIC

84 Interview with Maj William Fedor, Army Intel School, Fort Holabird, 26 Sep 1955.

86 Interview with Lt Col LeRoy C. Pierson, Ibid.

[redacted]

operations in 1947, lateral communications among lower echelon units was strongly encouraged, and this policy helped to remedy the previously unsatisfactory set-up.[87]

Communications from Sub-Regional and Resident agents that were intended for CIC headquarters always passed through Region, but there was considerable exchange of information between Resident agents and Sub-Regional offices on matters which were strictly local in character.[88]

Reporting

CIC in Germany carried out its information gathering and reporting mission like a newspaper office. Three major forms of written communication were used by Resident agents and Sub-Regional agents to forward collected information.

Spot reports were prepared on meetings, border incidents and similar matters of immediate interest. These reports were sent to Region and then CIC headquarters when the subject covered was of sufficient significance to zone-wide CIC operations. Since dissemination of information to other American agencies such as State Department was an integral part of the CIC mission, a standard question to be answered on spot reports was "Who else has been notified?" The spot reports required a follow up from the original source.

Agent reports were the standard form of communication and were used, in ordinary circumstances, to report the results of investigations and other CIC actions by agents in the field.

A third form of report was the sub-regional weekly summary which pointed up indications on trends, security problems, and cases of interest to Regional headquarters. These weekly summaries were based on reports prepared by the Resident agents on the situation in their respective Kreise. Once a week, a meeting was held at Sub-Region of all these Resident agents for the exchange of information.

In addition to the written reports which CIC agents prepared, communication from Sub-Regional offices could be made via the extensive teletype system of the 970th. Telephones were also utilized for hasty communication between Sub-Region and Region. Classified information could be transmitted over telephones through the use of codes that were frequently changed to prevent compromise. Key CIC

87 Interview with Lt Col Earl S. Browning, Jr, former Opns O of the 970th, at the Pentagon on 26 Sep 1955.

88 Interview with Lt Col LeRoy C. Pierson, Ibid.

[redacted]

personnel were given code names in order to baffle potential wire tappers and these aliases were switched at short intervals.[89]

From Region to Headquarters

The reports which were received at Regional offices were passed on to headquarters with an indorsement and, at times, a Summary of Information attached. Armed CIC couriers gathered the reports from Regions and took them by train to CIC headquarters.[90]

In addition, headquarters was kept informed by the Regions through Weekly Reports that covered principal counterintelligence news which could be reported under protection of a "Secret" classification. On 26 December 1946, a letter from 970th headquarters ordered the Regions also to prepare tri-weekly Top Secret summaries dealing with highly sensitive cases. Among the topics considered in these summaries were "Soviet Intelligence Which Affects U.S. Interests in the U.S. Zone of Germany," "Intelligence Activity of Other Countries Which Affects U.S. Interests in the U.S. Zone of Germany," and "Pro-Soviet German Activity Which Affects U.S. Interests in the U.S. Zone of Germany."[91]

Processing the Reports at Headquarters

Reports from the Regions arrived at the headquarters Operations Section and were parcelled out to the various desks for processing. Typical of the headquarters' handling of the reports was the procedure at the Counter Subversion Desk in 1950.

Each of the case officers assigned to the Counter Subversion desk specialized in a particular element of the German political spectrum. CIC coverage was divided along Left and Right Wing lines, the predominant backing of the parties determining to which political wing they were allotted. When a case officer received a report, he studied its contents and drew up an initial check sheet, indicating what to extract from file checks of dossiers that pertained to the subject matter to the report. He also suggested possible cross references of the material to other dossiers.

89 Interview with Lt Col LeRoy C. Pierson at the Pentagon on 26 Sep 1955.
90 Interview with Lt Col Franklin E. Jordan at Fort Holabird on 6 Oct 1955.
91 Top Secret Tri-Weekly CIC Region I Rpt from Hq CIC Region I, 970th CIC Det, dtd 29 Apr 1947, (downgraded to Conf) (Cen Rec Fac). Examples of other Tri-Weekly and Weekly CIC Reports from Regions in Germany are contained in the Central CIC Files, (Cen Rec Fac).

[redacted]

The Case noncommissioned officer who worked with the Case Officer was responsible for the "look up" on the dossiers that had been indicated. He also could follow through on other file material which he believed to bear on the information in the report. When the raw material had been assembled, the Case Officer would draft a complete report and, when necessary, submit new EEI's for collection in the field. From this point, the cycle of information gathering and reporting would begin again.

Counter Subversion team commanders at Region level received reports and requests directly from the Counter Subversion Desk at headquarters. Similarly, spot reports forwarded from Region received immediate, direct replies from headquarters containing the information required for further investigation.[92] The well-defined channels of communication within the 66th CIC Detachment which had been achieved by 1950 enabled CIC to perform political reporting of a highly professional character.[93]

Publications at Headquarters

Some of the problems that beset the 970th during the first two years of Occupation could be traced to the lack of firm direction from headquarters. In an effort to raise the level of knowledge and technique among the agents, headquarters began to publish an Orientation and Guidance Report. Issued periodically, this Top Secret publication was intended to help the less qualified and experienced personnel discharge routine CIC responsibilities, freeing the highly qualified agents for sensitive operations.[94]

These Orientation and Guidance Reports covered current operational missions in detail, providing background material to fill out the picture for the agent. They eventually were divided into six sections: Political Subversion, Active Subversion and Security Control, and Eastern, Western, Southern and Northern European Activity.[95]

Another publication designed to establish and enforce uniform operations and discipline within the 970th was the Standard Operating Procedures, Operational,

[redacted]

[redacted]

which was first issued in June 1946, and was completely revised in March 1948 and again in November 1949. Field CIC personnel were given detailed information in this secret publication on such subjects as investigation, liaison, informants evidence, correspondence, and the preparation and use of files.[96]

Both the SOP and the Orientation and Guidance Report contributed significantly to the centralization and standardization of CIC operations in Germany that was initiated in 1947.[97]

In December 1948, the Operations Section at the detachment headquarters first prepared a CIC Target Survey to expedite efficient coverage in the Regions. Classified Top Secret, this publication contained the specific targets of the detachment within the major field of activity, the priorities assigned by headquarters, and a list of Regions to which each target pertained. Revised in June 1949, the Target Survey came to include, as an annex, the priorities for CIC coverage requested by the Research and Analysis Branch, Intelligence Division, which were to be used in conjunction with the EEI's in the Orientation and Guidance Report.

A new publication was issued from headquarters on 18 March 1949 when the Bi-Weekly Counter Intelligence Summary made its first appearance. Prepared by the Reports Section, this publication replaced the Bi-Weekly Counter Intelligence Reports which previously had been drawn up by each Region.

Classified as Secret, the Summary contained from 30 to 50 mimeographed pages of carefully edited and condensed items, culled from bi-weekly Regional reports for their timeliness and counterintelligence interest. Each item was given a headline caption, a Region credit line, and an evaluation. The Bi-Weekly Counter Intelligence Summary was divided into sections as follows:

General Summary
Political--left wing, right wing
Soviet--intelligence activity, counterintelligence
European--Czech, Polish, Yugoslav, and/or other
Security--internal security, US Zone counterintelligence, rumors
Annexes--screening statistics, case statistics, personalities
Special articles

One hundred twenty-five copies of each Bi-Weekly Summary were published; 48 were distributed to field echelons of the detachment for information, guidance, and training; 58 went through EUCOM to non-CIC agencies; and the remainder were retained by headquarters.[98]

Central Registry in the Communication System

Since CIC's reporting function in Germany was performed like a newspaper service, the role of the Central Registry was similar to a newspaper's 'morgue' where records are maintained.

By 1950 the files in the Central Registry had considerable information and dossiers on all persons and organizations that had come to the attention of counterintelligence agencies. Among the subjects on file in the Central Registry were: subversion, sabotage, espionage, Naziism, criminality, U.S. interest, war crimes, border violations, and black market involvements.[99] The Central Registry proved to be one of CIC's greatest assets in Germany. Without it, the Corps would have been unable to operate with any significant degree of success. It came to be utilized, under CIC control, by all U.S. intelligence agencies in Germany.[100]

Berlin Document Center

Besides the CIC Central Registry, the members of the CIC had access to records at the Berlin Document Center. Early in the Occupation, a Military Government officer in Berlin, upon receipt of a message that valuable papers were stored in a Munich paper mill,[101] hastened to Munich where he discovered a great quantity of water soaked documents which proved to be the individual records of the members of the Nazi Party and its auxiliaries.

The records were shipped to Berlin, and the Document Center was established for the specific purpose of sorting out and indexing the papers. The file in Berlin made it virtually impossible for Military Government registrants to falsify Fragebogens, and gave CIC an invaluable source for background checks. The

records indicated the "careful Nazi search for evidence of loyalty, including investigation of ancestry which was convincing proof that few were forces to join the Nazi Party; that, in fact, it was difficult to become a member.[102]

CIC also gained valuable help from local police files which, due to the German penchant for official records, provided extensive background reports on individuals, particularly in reference to criminal activities.[103]

Part IV: Major CIC Operations

[redacted]

[redacted]

Part IV

MAJOR CIC OPERATIONS

To chronicle all CIC operations during the Occupation of Germany would require a multi-volumed history. During the years of the "cold war" in Europe, the activities of CIC reached into many fields, from the gathering of positive intelligence about the USSR and its satellites among the Baltic and Balkan countries to the investigation of black market activities within the U.S. Zone. Throughout this period, CIC had to maintain a close watch over the maneuvering of foreign espionage agents and the Communist Party of Germany (KPD) which often served as a thinly-veiled front for subversion.

Certain aspects of the CIC operations in Germany were performed without major variations during the period from 1946 through 1950. Relatively few investigations, other than those involving American military and civilian personnel, were undertaken personally by CIC agents. The obvious barriers of language, customs, and appearance ruled out direct investigation by the American agents in many operations. The bulk of the information relative to the attitudes of the German people, the economic, political, social, and labor situations, the development and spread of unfavorable propaganda, and the organization and objectives of subversive or potentially subversive groups was received through widespread informant networks that reached into all levels of the German society. The role of individual agents was primarily the directing of informants' activities towards the established targets and the checking and evaluation of the information which was produced against the data received from other sources.

In matters dealing with the internal security of the Occupation forces, CIC agents handled all phases of investigations. A thorough screening of all indigenous personnel who were to be utilized by the Army in positions which could involve access to classified information was a key responsibility. Frequent security surveys of vital installations within the U.S. Zone had to be performed in order to keep commanders advised about the adequacy of their safeguards, and Army personnel were kept abreast about the security requirements through lectures and demonstrations given by CIC agents.

Somewhat more specialized missions given CIC in Germany included the screening of "War Brides" and, later, Displaced Persons seeking admission to the United States. Although these activities could be classified as "routine," the number of cases involved taxed heavily the limited group of CIC agents available to handle them.

While the largely quiet struggle against Russian espionage was a most persistent and time-consuming CIC mission, the position of American troops as occupiers of a once hostile country could not be forgotten. On the whole, the

[redacted]

[redacted]

U.S. Zone appeared to be "unusually apathetic and docile;" to what extent this lack of resistance to the Occupation was due to a sense of futility cannot be determined. But the presence of an alert American security force certainly deterred those Germans whose will to "carry on the fight" had not been crushed by defeat. In those instances where latent Naziism was demonstrated, CIC took quick action to apprehend the guilty persons. But a greater proportion of CIC effort was expended to prevent hostile acts from being committed, by dissolving conspiracies before they had jelled. Meetings were broken up, contraband arms were confiscated, and suspect underground leaders were kept under close and constant surveillance.

The scope of CIC activities inevitably resulted in a huge case load for the 970th CIC and its agents. During a typical three-month period, January through April 1948, the 1100 agents of the 970th CIC turned out 24,000 cases of all varieties, a performance which was lauded as "an outstandingly high production average for any investigative agency...attained not through use of E. Phillips Oppenheim methods, but through the intelligent exercise of routine controls, the exhaustive searching of available documents, and the vigorous exploitation of informants as well as a complete disregard for the conventional 40-hour week enjoyed by the bulk of the Army."[106]

Section 1

DE-NAZIFICATION

Although counterintelligence operations in Germany were geared for a long haul by mid 1946, there were still numerous "mopping up" operations to be completed.

Automatic Arrests

The prime CIC mission still remained the apprehension of former Nazis who were on automatic arrest lists. Many Nazis had slipped through the original CIC screening operations; the vastness of the undertaking, the shortage of CIC agents, and the confused CIC structure before the reorganizations of late 1945 all contributed to the situation. But more significant than any of these factors was the inherent difficulty of trying to locate persons who had taken advantage of the upheavals and dislocations in Germany which followed the war.

Records furnished by the Berlin Document Center proved invaluable in the search for individuals who had gone into hiding in the small villages. CIC in Stuttgart furnished local German police with the names of former Nazis. Prime considerations in determining the importance of a wanted individual were Party rank and position.

The majority of informants who wished to expose former Nazis went directly to the German police, although some denouncers came to CIC. Neighbors did not hesitate to inform on suspicious persons in their home areas, a habit which has been attributed to the "German instinct for legality." The average German did not consider the ethical basis of his action so much as the legal principle behind it. But the informants provided a number of false leads; one estimate placed the number of suspects actually proven to be Nazis as low as 10 percent.[107] The actual motive for denunciation ranged widely, but the hope of rewards such as food, cigarettes, and soap was usually present.

In the actual arrest procedure, CIC agents generally accompanied the German police. Suspects were apprehended at their homes, and H-Hour was generally designated as 0300 hours, a time at which the individual was most likely to be in bed, surprised, and unprepared to offer resistance or attempt to escape.

The search for former Nazis was not bounded by any set deadline. CIC had to trace down the merest rumors concerning the whereabouts of individuals like Martin Bormann who seemed to have vanished entirely. In late 1947, high on the

107 Interview with Lt Edward H. Quarles at BOQ, Ft George G. Meade, Md, on 26 May 1955.

3750

list of Nazis still at large were Gertrude Scholz-Klink and SS Obergruppenfuehrer August Heissmeyer. Frau Scholz-Klink had been the leader of Nazi women, carrying the title of Reichfrauenschaft while Heissmeyer had been the director of several special schools of the Nazi Party and had been directly responsible to the chief of the SS, Heinrich Himmler. For some time, it had been believed that these two individuals had been killed in the bomb-proof shelter of the Chancellory near the end of the war. But, in August 1947, a CIC agent in Stuttgart was informed of persistent rumors that Scholz-Klink was still alive and had been recognized by some of the townspeople.

Other CIC contacts were tapped. The rumors seemed to swell. But a CIC informant assigned to discover the source of the rumors was stymied for several months. In early January, the first break in the case occurred. The informant discovered that a woman in Stuttgart had been visited by a "Mr. and Mrs. Stuckenbrock," whom she believed to be, in reality, Frau Scholz-Klink and a Bernhard Rust, former Reichsminister of Science, Education and National Culture.

On the basis of this scant lead, CIC instituted a widespread dragnet for the couple. Cities in Southern Germany were combed for clues. The closest CIC could come to the heart of the case was determining several places in the French Zone which had been visited by the daughter of Scholz-Klink. Investigations of these residences failed to produce any additional leads to Scholz-Klink, herself.

On 27 February 1948 a CIC informant who had been assigned to the case reported that a woman believed to be Scholz-Klink had visited a former Franuenschaft official in Internment Camp No. 75 near Stuttgart. Through an informant in the internment camp, this report was verified and CIC was told that Scholz-Klink was living in Castle Bellingen, near Tuebengen, in the French Zone of Occupation.

This was the most precise information CIC had acquired, but a search of the designated castle failed to reveal even a trace of the missing woman. CIC hurriedly returned to the internee-informant to recheck the date. This time the agents learned that the informant had overheard Scholz-Klink describe the house in which she had been living. The description matched the appearance of a small house located on the grounds of another Castle near Tuebingen.

After midnight on 28 February CIC agents, accompanied by French and Stuttgart police, went to the house and knocked loudly upon the door. At first, there was no response. Finally, after prolonged rapping, a woman answered, but told the agents that she would not open the door. When the woman was informed that a party of police officers was outside, she realized that any further stalling would be useless. The door swung open, revealing a woman garbed in disheveled peasant's night clothing. Her face was haggard and lined; her hair

[redacted]

spread in disorderly fashion over her shoulders. She appeared to be a woman of 60, far older than Scholz-Klink who was only in her mid-forties. But, based on photographs of Scholz-Klink, a CIC agent recognized the woman despite her appearance.

Without pausing to confirm Scholz-Klink's identity, the agents inquired about her husband. Scholz-Klink, unaware that she had been spotted, pointed out a room in which a man was still sleeping, undisturbed by the noise about him. Expecting to find Bernhard Rust, the agents were surprised when the man in the bed did not match Rust's description. Instead, "Mr. Stuckenbrock" was August Heissmeyer, who, when awakened and questioned, admitted that he had been Scholz-Klink's husband since 1940.

The agents returned to Scholz-Klink and began a brief interrogation. The woman violently denied her identity until confronted by a photograph of herself. Both prisoners were subjected to a careful search. Frau Scholz-Klink possessed several pieces of fine jewelry, and the cash assets of the two amounted to about 1,200 Reichmark. More important was the search of Heissmeyer. This revealed, hidden in the lining of his vest, a brass cartridge containing a glass ampule of potassium-cyanide poison. A further search of the house disclosed two knapsacks packed with heavy clothing and other necessities, evidently kept in readiness for a hasty departure. The speed with which CIC had acted once the agents had caught the trail of Scholz-Klink had prevented the couple from burying themselves even more deeply from counterintelligence view.[108]

"Axis Sally" is Caught

Among the Americans who had sided with the Nazi Regime during the war was Mildred Gillars, known to American troops who had heard her broadcasts for the German Rundfunk as "Axis Sally" and "Berlin Gerty." Gillars had come to Germany in 1934 and had remained there throughout the war, presenting her services to the Nazi propaganda machine. Her broadcasts consisted of programs designed to weaken the morale of the American forces in the European Theater; among the titles of her talks were "Home Sweet Home," "Christmas Bells," and "Easter Bells."

Representatives of the Department of Justice in Berlin were assigned the task of gathering data on which to prosecute Gillars for treason. The problem, by the Spring of 1946, was to locate the woman. On 4 March 1946, Berlin Region

108 Interview with Lt Edward H. Quarles, at BOQ, Ft George G. Meade, Md., on 26 May 1955; also, "Case of Scholz-Klink," 7970th CIC Group, as reported in CIC History, 1945-1948, Section III, Germany, (Uncl) (Cen Rec Fac).

[redacted]

[redacted]

CIC was asked by the Justice Department men to accomplish the job. Rumors had been intercepted that she had been seen in Berlin-Wedding on 1 March.

CIC agents started on the case. Indications soon developed that Gillars was indeed in the Berlin area, residing illegally without identification papers under an assumed name and securing her livelihood from black market activities. As a means of obtaining money, Gillars was purported to be selling her property which she had formerly distributed in the homes of her friends who lived in almost every sector of the city.

The CIC men working on the case felt that as soon as places could be found where such property was stored for safekeeping or for sale, the trail would lead directly to Gillars.

A neighborhood check was run at Gillar's former residence in Bonnerstrasse. The agents discovered that Gillars had left there in May 1945, just before the fall of Berlin. Several manuscripts, phonograph records, pictures, and Gillars' American passport were found and retained for trial evidence. But there were no clues as to the woman's whereabouts.

The next step was to interview former colleagues of Gillars from her Rundfunk days. These interrogations disclosed that Gillars had visited some of these ex-colleagues since May 1945 and picked up or deposited items of property which she intended to sell. From the questionings, CIC learned certain aspects of the woman's strategy, behavior and habits. Gillars made a point of never revealing to her acquaintances data on her residence or even the names of other people she visited.

By this time, it became apparent to CIC that Gillars might have to be caught in the act of calling upon a person holding her property, and German police were placed in the homes of all her friends.

The fact that Gillars lived in Berlin was further substantiated during CIC's investigations by reports that she had been in restaurants, beauty shops, and other stores. The places she most commonly visited were purported to be in the Kurfurstendamm area. Accordingly CIC decided to intensify its coverage of this district. With thoroughness agents combed the commercial shops in Kurfrustendamm until an antique store was located which contained a piece of furniture believed to belong to Gillars.

A witness familiar with Gillars' furnishings was brought to the store and definitely established the piece in question as Gillars' property. The name and address of the person who had left the piece for sale was determined from the dealer, and this person was picked up for questioning. It was obvious that this seller knew Gillars' address but considerable "coaxing" was required to make him reveal it.

[redacted]

On 15 March, a Special agent and a member of the Zehlendorf Kriminalkommissariat Liaison went to Gillars' apartment. When they arrived, Gillars was not in and the two men waited. After three hours, the erstwhile "Axis Sally" returned to her apartment and was immediately placed under arrest.[109]

Gillars was eventually tried, convicted of treason, and sentenced to 20 years imprisonment for her activities on behalf of the German Propaganda Ministry. In a press interview following her arrest, Gillars remarked, "I will take off my hat to U.S. investigators. They certainly knew a lot about me."[110]

Section 2

INTERNAL SUBVERSION

The work of rounding up former Nazis proceeded slowly and painstakingly with occasional dramatic discoveries as in the Scholz-Klink and Heissmeyer case. But the vigilance against the rebirth of German nationalism had to be continuous. In general, the attitude of the Germans was "resigned" and "not too friendly," and as the winter of 1946-1947 approached, the civilians became apprehensive. The storehouses of basic supplies had been emptied, the lands were not yet producing new foodstuffs and famine was feared.[111]

Two major CIC cases that developed in the late fall of 1946 could be classed as signs of Neo-Nazi subversion.

The "Deutshe Ringpfadfinder Case"

In August 1946, a local German official appeared at the CIC field office in Hof, Region VI, and showed an agent several letters which he had received from a Munich resident by the name of Karl Jochheim Armin. From his writings, it appeared that Armin was unhappy with the present situation in Germany and wanted to revive an old organization, known in the 1930's as the Swarze Front.

The CIC agent forwarded these findings to Region IV, so that agents in the Munich office could open an investigation of Armin's activities. By October 1946 it had been determined by CIC that Armin was a former inmate of the Dachau Internment Enclosure, but that he was now free and residing in Munich. CIC also discovered that Armin was currently co-chief of an organization entitled "Die Vergessenen," composed of former concentration camp inmates who had been confined for criminal rather than political reasons.

Through a background investigation conducted by a German private detective agency, it was learned that despite Armin's claim to have been placed in concentration camp for political activities, he had been sentenced six times between 1933 and 1946 for theft, embezzlement, illegal possession of weapons, fraud, violation of traffic laws, forgery of documents, and concealment of stolen goods. In addition, Armins had served nine days in jail in September 1946 for failure to obey a Military Government order to cease his activities in "Die Vergessenen," for which Military Government had not granted a license.

This brought the records of Herr Armin up to date. Although nothing of counterintelligence interest appeared in the man's past, CIC decided to keep him

111 Interview with Lt Edward H. Quarles at Fort George G. Meade, Maryland, 26 May 1955.

[redacted]

[redacted]

under periodic surveillance. By early November, agents discovered that Armin was organizing a youth group known as the "Deutsche Ringpfadfinder" (German Boy Scouts). Armin applied to Military Government for a license for this group, but the request was denied and Armin was told to discontinue his youth activities, under pain of legal action. CIC soon learned that Armin intended to disregard this order.

At this point, the agents decided to insert a penetration informant into the organization. A reliable informant, briefed by CIC, gained membership in the Ringpfadfinder without difficulty. On 12 November CIC received the first report from the informant; the organization consisted of about 180 members of ages ranging between 10 and 24 years, broken down into groups of from 10 to 20 youths each. The leaders of the groups had weekly meetings in a small beer hall near the Munich railroad station. Financial support for the organization was gained from the sale on the black market of items which were obtained by Ringpfadfinder members through petty thievery.

The undercover CIC informant gained the confidence of Armin, who told him that, since the license for the group had been denied, he planned to carry on without Military Government sanction. He intended to select about 40 members from the organization, with the minimum age of 14 years to form an elite group known as "The Assault Commandos." Their special mission would be to beat up enemies of the Ringpfadfinders, with their number one target the Youth Commissioner of Munich.

It was clear to CIC that any pretensions the group might have had of being a Boy Scout movement were fast disappearing and the Ringpfadfinder was becoming an underground, subversive organization. On the night of 19 November, the penetration informant attended a meeting of the top leaders of the movement when plans were discussed to ready the group for armed battle against the Occupation troops on the theory that the time was approaching when there would be a revolution, hunger strikes, and the inevitable collision between the Western Powers and Russia. Armin revealed his plan for a secret laboratory for preparing bombing materials and forging papers.

The informant noticed that several of the leaders at this secret meeting were armed with small caliber automatic weapons, and were told by the "weapons ordnance man" for the Ringpfadfinder, a man named Alois Lechardt, of a quantity of weapons and blasting material concealed by the gang. This arsenal, alleged Lechardt, consisted of machine guns, rifles, hand grenades, fragment bombs, and bazooka shells which were buried near a restaurant in a Munich park. Lechardt further claimed there were about 20 Stuka bombs concealed near Augsberg.

[redacted]

(U) On 23 November the activities of the Ringpfadfinder rose above the petty thievery scale. Four armed members of the organization attempted a burglary on a factory office in Munich. The men were surprised by a German watchman, several shots were exchanged, and the next day, police, acting on descriptions of the would-be robbers, rounded them up. Among the prisoners was Lechardt, the "weapons ordnance man" of the Ringpfadfinder.

CIC decided that this would be an ideal opportunity to determine the location of the weapons caches, and the informant, whom Lechardt still thought to be a loyal member of the group, contacted the prisoner in jail and secured a detailed drawing from him of the hiding places. CIC agents immediately attempted to locate the caches from the map; they were unsuccessful, but they did learn that Armin's men were also trying to find the arsenals.

The penetration informant, who continued to develop reports for CIC, learned that Armin possessed about 100 blank detective identity cards, carrying a fictitious organization's name and signed by a "J. Johnson." Armin apparently distributed these cards to his most trusted lieutenants and sometimes sold them to men he hoped to bring into the organization. The card holders, posing as detectives, were able to raid black marketeers operating in Munich and to relieve them of their merchandise. This contraband was then resold on the black market for the benefit of the Ringpfadfinder.

On 7 December, German police arrested a man in Munich for the possession of two of these false identity cards. Under CIC interrogation, the prisoner admitted that he was a member of the Ringpfadfinder. He also stated that Armin had moved his headquarters to a new office and was operating under a cover name. The CIC web around the Ringpfadfinder drew closer when the penetration informant discovered that Armin and his gang were preparing an open letter to be sent to all important German and American authorities. In the letter was a broadside attack against the United States program for the German youth and a vicious denunciation of the chief of the Military Government-sponsored youth program in Munich. Armin apparently intended this to be the first of a series of letters, criticizing German and American agencies.

The movement was kept under close surveillance for several more weeks. On 14 January 1947, in another attempt to locate the cached weapons, a CIC agent took the "weapons ordnance" man Lechardt and another imprisoned member of the gang with him. After considerable digging, the arsenal was located. One of the bombs and all of the hand grenades were tested and found to be "alive" and usable.

CIC decided to use the weapons as bait in a trap for Armin. The agents intended to bury the weapons at a place where their penetration informant could lead Armin and his men, so that the conspirators could be arrested with the most

[redacted]

incriminating evidence in their hands. But at this critical moment in the case, the Ringpfadfinder members discovered that the informant had been working for CIC. His cover was blown.

CIC still had a chance to close in on the Ringpfadfinder. Prior to his compromise, the informant had learned that Armin and his associates had planned a major robbery on 15 January. At 1730 hours on that day, a truck which was to be used to take the men to the scene of the robbery was scheduled to arrive outside Armin's residence. A CIC agent appeared at the rendezvous at the appointed time and, when the men went inside Armin's house, managed to remove the distributor cap from the truck engine. The Ringpfadfinders returned to find their vehicle stalled and had to call off the robbery.

The next morning, CIC decided that it was time to arrest the gang. Since their informant had been compromised, further undercover penetration of the movement would be difficult to arrange. Besides, Armin was undoubtedly becoming suspicious of the mysterious turn of events against the Ringpfadfinders. CIC had gathered sufficient evidence to prove conclusively the subversive nature of the organization before a Military Government court. On 16 January, CIC agents, reinforced by German police raided the Ringpfadfinder's headquarters and arrested Armin and his six top aides.

Using information which had been provided by the undercover operative, CIC had little difficulty in obtaining confessions from all the prisoners. Armin, himself, admitted to a series of robberies, possession and knowledge of weapons, and anti-American activities.

All members of the organization were turned over to the Military Government court in Munich and were tried in September 1947 on counts which included conspiracy to organize a subversive, anti-occupation group. Armin was sentenced to 10 years imprisonment with lesser punishments meted out to other principals of the defunct Ringpfadfinder. Only one of Armin's key lieutenants managed to evade the tribunal; he had escaped to the Russian Zone before he could be arrested.[112]

The Spruchkammer Bombings

Another case of Neo-Nazi subversion began on the night of 21 October 1946, when CIC agents in Stuttgart received a phone call from the German police headquarters, informing them that, a half hour previously, two explosions had occurred within a 10-minute period and that sabotage was indicated.

112 "Deutsche Ringpfadfinder Case," prepared by the 7970th CIC Group, undtd, (Uncl) (Cen Rec Fac).

3758

[redacted]

CIC teams were dispatched to the scenes: one a Stuttgart Spruchkammer[113] Building; the other, an American Military Police jail. Initial investigation of the Spruchkammer building revealed that a bomb of an undetermined type had been placed outside one of the Spruchkammer rooms which was used to store records. Considerable damage to the room had been effected, but the documents were intact and no casualties had occurred since the room was empty when the bomb exploded.

After surveying the damage, CIC men interrogated, unsuccessfully, persons who had been in or near the scene at the time of the explosion; no clues as to the person or persons responsible for the blast were gained. A search of the grounds about the building yielded only a few metallic fragments which were turned over to a German ballistics expert for testing. If the culprit had left any footprints in the vicinity, they were impossible to locate because a heavy rain had soaked the ground after the explosion.

While the agents at the Spruchkammer Building were faced with a discouraging lack of evidence, CIC agents at the Military Police jail were not faring much better. Inspection of the scene of this second blast indicated that the explosives had been placed on the ground against the corner of the jail which was at the intersection of two busy streets. Little material damage had been caused by the blast and the inmates of the jail had remained quiet. A careful search of the surrounding area produced several metallic fragments similar to the pieces which had been discovered at the Spruchkammer Building, but interrogation of persons in the jail and the vicinity of the building netted no concrete clues or leads.

The morning after the explosion, while agents in Stuttgart were still puzzling over an investigative plan, another call was received from the German police. CIC was informed that at approximately 1900 hours on the previous evening, an explosion had occurred in the nearby town of Backnang at the local Spruchkammer building. Again, the small metallic fragments were scattered about the grounds, little damage to the building had occurred, and no casualties were inflicted. Several suspects, whose names had been supplied the police as being anti-American, were interrogated. All had unshakeable alibis.

The same day, a report was received by CIC from the ballistics expert to the effect that the metallic fragments found at the scene of the three explosions were pieces of a German .75 millimeter high explosive shell which, from the quantity of fuse that had been found, had evidently been rigged as a grenade. This was the only lead that CIC had to follow. The agents alerted all their informants in the Stuttgart area to join the search for any information which might bear on the case and publicly offered a reward of 100 cartons of cigarettes

113 The Spruchkammer was a German de-Nazification board, administered and operated by Germans.

[redacted]

for any clue that would lead to the arrest and conviction of a perpetrator. The German police, at the same time, held out a reward of 25,000 Reichemark for the apprehension of persons responsible for the blast.

Almost from the start, CIC had surmised that all the explosions were caused by the same person or group. The time interval between explosions had been sufficient for a single group to perform all three bombings, and there were definite similarities in modus operandi and sabotage materials. The manner in which the bombs had been placed, the type of targets selected, and the apparent aim of causing little material damage and no casualties suggested that the explosions were intended as demonstrations, presumably against the Spruchkammer proceedings.

The CIC dragnet was spread over a wide area. Army civilian censorship was placed on the alert for any suspicious communications that might give a clue to the men behind the bombings. Suspicious characters of strong nationalistic tendencies who had been brought to CIC's attention prior to the explosions were reinvestigated. CIC and German police offices were flooded with reports from well-intentioned Germans who were anxious to see the criminals brought to justice.

But all leads ended in blind alleys. On the night of 27 October, six days after the original explosions, CIC agents were upset to hear of a fourth bombing, this time the Esslingen Spruchkammer Building which was about 15 miles from Stuttgart. Immediate investigation of the scene revealed the same pattern as before; the metallic fragments left by the exploded bomb matched those of the previous blasts. But this time, two sets of footprints were found that led away from the scene, and trained police dogs were secured to follow the tracks. One set led to the Esslingen railroad station, and the other ended at the home of an individual who was able to account for every minute of his time during the period of the explosion. The agents were no nearer a solution to the case.

A number of false and frustrating leads followed for the next couple of days. At one point, the agents felt that a major break in the case had come when a farmer found two .75 millimeter shells buried beside a tree outside Stuttgart. Investigation revealed that the explosives had been placed there by an individual who was intending to use them in clearing a field of stumps. Other clues, equally unproductive continued to come to CIC's attention, but the agents moved no closer to a solution.

[redacted]

[redacted]

[redacted]

At about the same time, the Chief of Police in Stuttgart received a letter from an individual claiming that he was acquainted with the mother of a man named Siegfried Kabus whom he regarded as a suspect in the bombing case.

[redacted]

Choosing to close an inescapable trap on Kabus, the agents persuaded Hummel to rejoin the Kabus organization. He was equipped with a false letter obtained from the Spruchkammer which classified him as a man accused of pro-Nazi sympathies because of his activities in the Waffen SS. Hummel then approached one of Kabus' confederates and asked to be readmitted to the organization. He was informed that Kabus was in Munich "for a rest" and would contact him at a latter date.

Immediately, the other source to Kabus was tapped. The man who had written to the Chief of Police was called in for questioning. He explained that, although he did not know Kabus' mother personally, he could bring CIC his girl friend who was acquainted with the woman. The informant's girl friend agreed to work with CIC, provided her identity was protected. She was given some money to aid Kabus' mother financially and thus gain her confidence.

The girl proved effective. She informed CIC that Kabus had an "unusual attachment" to his mother and that they met several times a week. She also had discovered that Kabus had met someone recently whom he did not trust and expected to be betrayed by this man. He had planned to leave Stuttgart for a while.

CIC could afford to wait no longer. They had hoped to gain more information about Kabus' confederates before making the arrest, but the news of the man's imminent departure from Stuttgart convinced them to act quickly.

On the night of 19 November, teams of CIC agents surrounded the house in Stuttgart where Kabus had been living. On a signal from the raid commander, the men, with guns drawn, broke into the house through doors and windows. Ranged along a dining room table were Kabus and some of his collaborators, taken completely by surprise. They were caught in the act of manufacturing more of their homemade bombs.

Later interrogation revealed that the conspirators were planning two more bombings. CIC had managed to act at an opportune moment. When the round-up of all members of the gang was complete, a total of 12 persons had been apprehended. The arsenal spread among the houses of the collaborators included 11 pistols with 200 rounds of ammunition; 4 German .75 millimeter shells, two of which were complete with fuses; several lengths of delayed action fuses; and a number of detonators.

An agent who participated in the arrest of Kabus did not consider the man to be a representative voice of Germany. He was a Nazi fanatic whose avowed intention was to intimidate the Spruchkammer in the hope that the Americans would take over the de-Nazification proceedings since he considered it "a criminal disgrace for Germans to be the servile tools of an enemy who had conquered them by foul means."[114]

Another Fanatic

CIC agents in Stuttgart encountered few other diehards like Kabus. On one occasion in early 1947, the CIC office received a report on a man who had been seen walking the streets in broad daylight wearing an SS colonel's uniform. An agent was dispatched to the man's home where he found a one-armed individual who arrogantly demanded an explanation for the arrest of a man of his importance. When questioned about the uniform he had worn, the man stated it was specially

114 "Stuttgart Bombings" from 7970th CIC Group, as reported in Basic CIC History, 1945-1948 and Interview with Lt Edward H. Quarles at Fort George G. Meade, Md, on 26 May 1955.

tailored for him after the Occupation had begun. The interrogating agent succintly summed up the case by stating the man was "nuts."[115]

German Communist Party Subversion

Under the Four Power agreements concerning Germany, the German Communist Party (Kommunistische Partei Deutschland), commonly known as the KPD, was one of the four parties authorized to resume political activities throughout the four zones of Germany.

As the U.S. Forces in Germany settled into a long-term Occupation role, it became clear that counterintelligence coverage of the KPD, which was again being used by the USSR to further the aims of International Communism in Germany, was essential. CIC's concern with resurgent communism in Germany began in different areas at different times. Late in 1945, an agent in the port city of Bremerhaven began to receive many reports from informants about the German Free Trade Union which was operating in the dock area. The head of the local Socialist Democratic Party in Bremerhaven, who also served as chief of the Military Government labor office there, and an anti-Communist leader presented considerable data to CIC, revealing a positive Communist attempt to gain control of the port workers through this union. When this information was passed on to the CIC Operations Section in Frankfurt, the agent in Bremerhaven was reminded that CIC efforts were to be directed towards de-Nazification and not surveillance of Communist activities. At this early date, the capabilities of the Communist against the security of the American Occupation had not been recognized.[116]

KPD Background

KPD had never been a large party; even at its peak in 1932, when Germany was in the throes of a severe depression, it had numbered only 400,000 members. But it had commanded a support at the polls far out of proportion to its numerical strength during the days of the Weimar Republic and had to be recognized as a significant political entity.

By 1946, it became apparent to the Soviets, who maintained more than a passing interest in the activities of the Communist Party in Germany, that the KPD would never regain the relatively strong position it had held during the last years of the Weimar Republic. Besides, in the Soviet Zone, the Socialistische Partei Deutchland (SPD) was fast out-pacing the KPD in popular support, and the Russians, in classical Communist fashion, forced the merger of the SPD with the

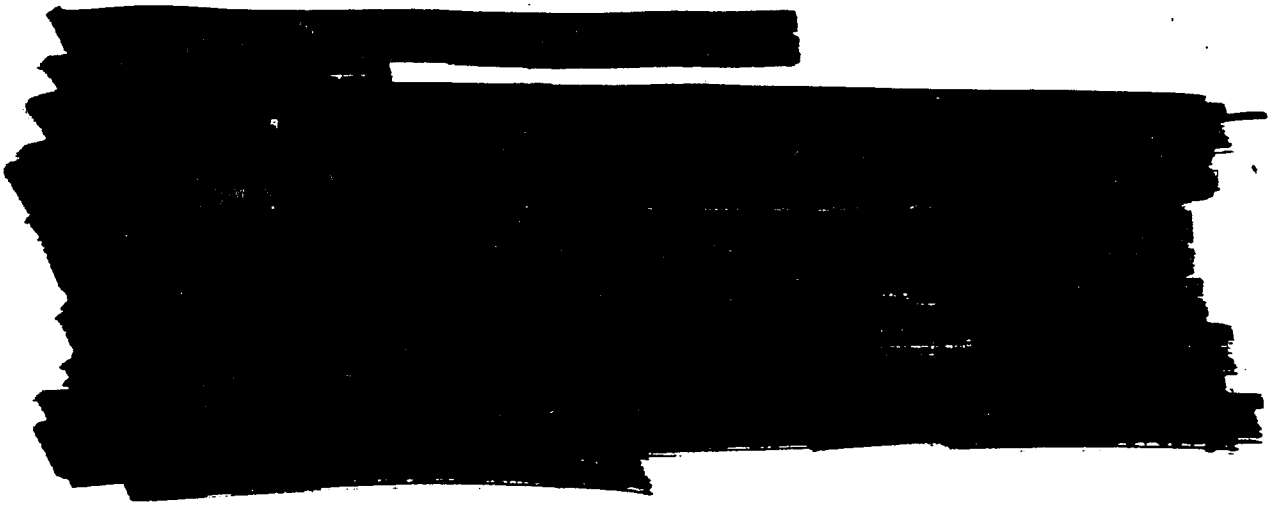
115 Ibid.

116 Interview with former Special Agent Daniel C. Canfield, Wichita, Kan, at NCICA Convention, Hotel Waldorf-Astoria, on 7 Aug 1955.

KPD, purging the more independent elements of the SPD until those that remained were mere puppets of the Communists. The resulting party, the Socialistische Einheitspartei Deutschland (SED), became the Communist Party of Germany and the KPD, in the Western Zones, was completely controlled by the SED from East Berlin. The SED, in turn, was under the direct guidance of the Soviets in Berlin.

But KPD popularity in the Western Zones failed to soar, despite the aggressive tactics of its members. Postwar membership dropped below 200,000 in these zones, and in the Bundestag elections of 1949, the KPD was barely able to command the five percent of the total popular vote which entitled it to representation in the West German legislative council.

The Soviets apparently realized that the KPD did not represent a sufficiently strong enough political force to gain control or even exert a significant influence upon the West German government. As a result, the purpose of the KPD in West Germany was largely to subvert, to propagandize, to disrupt and to confuse the German government and its citizens at every possible turn.[117]



CIC Notes KPD Weakness

Continued coverage of the KPD under Operation SUNRISE indicated to CIC that, while the Party was entrusted with the mission of supporting the Soviet objective of destroying the West German government and forcing the withdrawal

117 Interview with Maj William Fedor, Army Intel School, Fort Holabird, 16 Sep 1955.

118 Interviews with Lt Col Earl S. Browning, former CO Region IX and former Opns O of the 970th CIC Det, at the Pentagon on 26 Sep 1955; and with former Special Agent Daniel C. Canfield, Wichita, Kan, at the NCICA Convention, Hotel Waldorf-Astoria, New York, N.Y., on 7 Aug 1955.

[redacted]

of Allied forces from Germany, there was little evidence that the KPD possessed either the means or the potential to accomplish these ends through violence. No leads pointed to ammunition-storage points or hidden weapons caches. The KPD had no underground comparable to the apparatus it had maintained during the Hitler regime. Its most significant potential for violent action was in provoking mass demonstrations and labor unrest.[119]

The Propaganda Mill

Members of the KPD proved to be tireless propagandists, even from the early days of the U.S. occupation of Germany. Among the papers that CIC came across in its initial coverage of the KPD was the following declaration signed by the "Communist International, U.S. Zone:"

> We are to take notice of the fact that with the Allied Occupation, Germany, according to the Allies, is freed from Nazi tyranny and its people restored to liberty. A despicable trick without parallel to force democracy, of which the democratic-capitalist countries are so loud in their praise, on the German people. This new born German democracy cannot come near doing what a national socialist people's state accomplished in its beginnings, although the selfish policies of its rulers were nefarious. Germany, as presently constituted, is a helpless slave state of the democratic-capitalist powers.....
> The final result of the second World War shall not be the triumph of one country over another but the destruction of all national states.
>
> **********
>
> I. We aim at the equalization of the masses to avoid unjust differentials in life and to raise the living standard of the masses of the nations.
>
> II. Destruction of nationalist economies.
>
> III. Nationalizing (Communizing) of the national wealth for all people on earth.
>
> IV. Combatting absolute dictatorships.

119 Interview with Maj William Fedor, Army Intelligence School, Fort Holabird, 16 Sep 1955.

3765

[redacted]

[redacted]

V. Elevation of the standard of living by communizing nationalist-totalitarian finance of all levels.

VI. Sufficient basic countries for existence for all people according to the status of civilization."[120]

In such *garbled* phrases, the Communist in Germany tried to spread the "word" to the German people and undermine the U.S. Occupation.

Strikes: A KPD Weapon

CIC discovered that the fomenting of strikes was a favorite Communist device in the KPD effort to disrupt the American Occupation. A good example of the use of this tactic occurred in the late winter of 1947.

Food and coal shortages which had persisted through the winter helped to create a situation ripe for subversion, and the KPD planned a campaign of strikes based on such issues as insufficient food for the workers, political conflicts of U.S. and Soviet policy, and criticism of German Civil Administration.

CIC informants in Bremen, which bordered on the British Zone, intercepted letters designated for the KPD in Hanover. Included in these messages was a report on plans for an overt protest against the dismantling of docks in Wilhelmshaven to be used as reparations to the Soviet Union. The KPD realized that this protest would have no effect on the proposed reparations, but intended to win the support of the dockworkers by creating the impression that the Party was a nationalistic group, and not subservient to the Russians. Other plans for strikes in the Ruhr area were disclosed in the messages: again, an attempt to hide the fact that the KPD had anything to do with the unrest would be made by having people who were members of non-Communist trade unions play leading roles in the demonstrations.

Strikes engineered by the KPD were often used as the basis for a Party membership drive. Great masses of propaganda material, several radios, and several public address systems, were assembled to aid the Communist in hawking the Party's line to the Germans in the strike area.

But the inescapable feature of even local strike movements was the fact of coordination from Berlin. In a CIC intercepted letter routed from Hanover back to the Bremen KPD was included the following paragraph:

120 Ltr from Secret Central Administration, Communist International (Germany), dtd 1 Apr 1946 (Secret) in file No. 137891, Operation Sunrise, (Secret) (Cen Rec Fac).

[redacted]

[redacted]

"We have come to the conclusion that 25 or 26 February will be the best date for a few sporadic strikes. However, we will have to wait for an OK from Berlin. I will inform you of this matter completely. See to it that the transmitters are brought here immediately. The loan in Wilhalmshaven is good. Be careful in the organization itself, don't let it be known that the protest meetings were organized by us. See to it that more people from other parties are included."

The fact that the KPD was covertly involved in triggering demonstrations and strikes was further justification for CIC's extensive penetration of the Party at all levels and in all areas within the U.S. Zone. As the Special Intelligence Summary of 30 April 1947 concluded:

"Unrest in Germany over the food situation has been noted for a long time, and the KPD has used the situation to KPD advantage by encouraging strikes and demonstrations. This course may be legitimate from a political viewpoint, but it is worthy to note that, whereas the other parties appear to understand and abide by their moral obligations to the people, the KPD is anxious to exploit the situation not so much for the benefit of the people as for the benefit of the KPD. The complaints and basis for the strikes have been primarily the food and coal situation during the winter months. In many cases, the KPD has been the overt instigator of agitation, and it is believed that KPD influence has been active in all cases. The KPD is certainly responsible and is the inspiring factor in most cases of the demonstrations and strikes reported."[121]

KPD and the Youth Groups

The German Communists were eager to find valuable spots in labor for penetration; they also hoped to use the German youth movements as a vehicle for increasing the Party control over the younger elements in the German political scene.

The United States program of orienting the German youth in the basic principles of democracy, allowing the young people to form their own ideas and opinions, had been stated by General Clay to be the "most important contribution to the growth of democracy in Germany." In the pattern of KPD attempts to undermine the Occupation, it seemed more than likely that the Communists would attempt to upset this program.

Although there were some uncoordinated attempts to establish Communist youth groups in the U.S. Zone, the greatest danger came from the placing of

121 Annex B-2, Pro-Soviet German Activities, "KPD Activities in Strikes," in Special Intel Summary No. 33, from Office of the Dep Dir of Intell, Hq European Command, dtd 30 Apr 1947, (Secret) (Cen Rec Fac).

[redacted]

[redacted]

young Communists in youth organizations already accredited by Military Government. The U.S. Occupation authorities prohibited political parties from controlling, directing or giving financial aid to these groups. But reports of KPD activities designed to assume control among properly licensed organizations were received from CIC informants in many cases of the U.S. Zone.

In February 1947, Region I CIC agents heard of a meeting planned by a Karl Weingart, an adherent of the KPD, to which invitations had been sent to such Military Government recognized groups as the Boy Scouts, Trade Union Youth, Falcons (Social Democratic Youth), and the Naturfreunde (Friends of Nature). CIC informants who had attended the meeting reported that some of the visitors became aware of the fact that the Communists were attempting to run the meeting, and one youth strongly criticized Weingart for not inviting the Protestant and Catholic youth groups to attend. This same spokesman pointed out that he recognized among the groups represented several that had not been authorized by Military Government.

Although Communist attempts to organize the youth on such pretexts at local level were significant, CIC coult not overlook zone-wide efforts to establish KPD functionaries among the German youth. In the Soviet Zone, a well-established organization known as the Free German Youth (Freie Deutsche Jugend or FDJ) was the only authorized youth group and was controlled behind the scenes by the SED.

A movement under the same name was founded in the U.S. Zone. At a Congress of the Free German Youth of Land Hesse held in January 1947, a U.S. Army captain who headed the Youth Activities Center in Griesheim acted as host to the meeting and addresses were given by the Frankfurt oberburgermeister and the Regierungsdirektor to the Youth Affairs Department of the Hesse Ministry of Culture. While these non-Communist guests were present, the meeting was confined to greetings and general discussion of the aims of the organization, but when these "outsiders" had left, the tenor of the speeches and remarks became more overtly Communist. One of the delegates rose and spoke in phrases laden with unadulterated Party material: "It is in direct connection with the demands of the FDJ that we must reject the decadent western dancing and the western culture, because it makes one unpolitical, shallow, weakens the power of spiritual conception, defiles the working force as expression of work, the ethical measure of human existence, and, in a word, simply belongs to the outmoded world of capitalism."

An interesting twist was given to this part of the meeting when the representative of the Hesse Ministry of Culture was attacked by one speaker for not helping the Free German Youth in its effort to procure a license from the Military Government.

[redacted]

[redacted]

Since militant German youths within the U.S. Zone were clearly working for the KPD under the transparent guise of providing "culture" for the young Germans, CIC coverage of the Left Wing had to include these activities.[122]

KPD Schools

One area in which the linkage between the Communist efforts in the East and West Zones was most apparent was in schools run by the Party. It was a matter of record that the SED conducted training schools for its functionaries and that these schools were attended by KPD leaders from the British and U.S. Zones.

The U.S. Zone graduates from these schools frequently returned to become KPD Kreis secretaries and instructors to spread the Communist gospel. Surveillance was maintained on known SED graduates and it was noted that in many cases, they returned to the U.S. Zone for periods ranging from a month to a year before being sent to the highest level training schools in the USSR.

CIC probings into the Communist school apparatus included the gathering of information of curricula, instructors, and selection of students as well as the location of Party schools.

Although the presence of these schools to train workers for efficient management of the Party might, in itself, represent no violation of Military Government strictures, CIC had to determine whether the material taught in these schools could prove detrimental to the best interests of the United States occupationsl mission.

Finding from reliable sources pointed to the fact that the students were largely drawn from the younger KPD members who had shown more than a passing interest in the Party and aspired to Party leadership. The general pattern of the KPD was to establish an echelon of schools, starting with elementary schools, operated at Kreis of Unterbezirk (sub-district) level, and progressing to advanced schools at Land level. In addition, the KPD maintained a network of evening and correspondence schools.

Typical of the KPD schools was an elementary unit operated in Fuerth, Bavaria, at sub-district level. Courses at this school lasted seven days with emphasis placed on political ideology and history of Marxism and Communism. Classes consisted of 28 to 30 students who were quartered in private homes and attended instruction from 0800 hours to late afternoon. The school staff was

122 Annex B-1, Pro Soviet German Activity, "German Communist Party Activities in Youth Groups," in Special Intel Summary No. 33, from Hq EUCOM, Office of the Dep Dir of Intel, dtd 30 Apr 1947, (Secret)(Cen Rec Fac).

3769

[redacted]

composed of seven teachers, believed to be KPD functionaries, and was headed by the KPD secretary of sub-district Nuernberg.[123]

KPD and Clubs

A popular facet of German life that the KPD hoped to find suited for its subversion campaign was the hundreds of hobby and sports clubs which had long been a national tradition. By infiltrating members into these groups, the KPD could extend its propaganda to a wide audience.

[redacted]

"Dear Comrades:

I would very much appreciate it if you could let me know if any magazines for small animal breeders, especially rabbit breeders, are being published where you are?....

Here, in the British Occupied Zone[124] a rabbit publication is being planned. We working men, however believe that a nation-wide publication of an anti-fascist nature for rabbit breeders must appear. I was elected the director of thirty eight rabbit breeders clubs.... We have over six thousand members, about 90% of whom are workers and employees. It would therefore be very good if you could send me material so that I should know I am conforming with your policies. I assume that you do not underestimate the significance of these clubs because if the rabbit breeders see that we are interested in them, they might under certain conditions commit themselves for us. I expect therefore a quick reply from you.

With Communistic greetings,

(Signature)

123 Annex C, Pro-Soviet German Activity, "KPD Schools in the United States Zone," in Special Intel Summary No. 34, from Hq EUCOM, Office of Dep Dir of Intel; dtd 30 Jun 1947, (Secret) (Cen Rec Fac).

124 Since the Bremen Enclave in which Bremerhaven was situated was surrounded by the British Zone, this Communist leader would have had ready access to this Zone.

By managing to get himself elected as chairman of Rabbit Breeders clubs throughout the British Zone, this Bremerhaven leader had suddenly found himself in a position where he could affect a sizeable number of people with Communist propaganda![125]

It was against maneuvers such as this that CIC had to be constantly alert and watch the growth and backing of the groups in Germany which had been formed, originally, for recreational purposes.

KPD Couriers

The passing of communications by a courier system was one of the established techniques of International Communism: CIC agents in Germany found that keeping track of suspected couriers was an important aspect of the surveillance of the KPD.

The port of Bremerhaven was a particularly sensitive spot, and the CIC mission from the Bremerhaven Field office included interviewing the captains of every American ship that put into the harbor. These interviews were designed to determine if any incident of counterintelligence interest had occurred on the voyage and to find out if possible Communist couriers were among the seamen.[126]

The seaman stated that he had arrived in Bremerhaven on an Army transport and that he had been asked by the New York Communist Party to deliver some packages of Communist literature to the local KPD leader. When he had tried to pass the gate around the dock area, a Military Policeman had informed him that he could not take the bundles without a permit from the Provost Marshal. The seaman, on his first mission to Germany, became confused by this demand, and turned over the packages to some German repatriates from Spain, giving them instructions to take the bundles to the Communist Party headquarters in Berlin.

The seaman revealed that he was a member of the New York Communist Party and active in Party affairs in the United States. He was advised by the KPD man that, in the future, he should notify the local KPD of his arrival so that

125 File on Potrykus, Folkert, No. 65653, (Secret) (Cen Rec Fac).
126 Interview with CWO A.E. Wolfe at Fort Holabird, on 21 Sep 1955.

arrangements could be made for the removal of packages from the ship and out of the dock area by some KPD members who were working in the port.

[redacted]

Information gathered on the seaman during the subsequent trips confirmed the previous report and an additional fact was discovered: the seaman had a special room which he kept locked at all times. No duplicate key to this room was deposited with the Captain, in direct violation of ship regulations.

CIC felt that the time had come to make an on-the-spot investigation. By arrangement with the ship's master, all hands were given port leave with the exception of several officers. An agent boarded the ship and was taken to the steward's "secret" room. He picked the lock and the door swung open on a private library of about 10,000 pamphlets and books. This material this seaman-courier had been transporting consisted of Communist literature printed in many languages. The question of how some Communist literature had been getting into Bremerhaven was clearly answered.[127]

The Case of [redacted]

Not all the couriers for the KPD were as incidental to the Occupation forces in Germany as the [redacted]. In the early winter of 1945, a CIC informant in Bremerhaven brought word that a prominent member [redacted] had been operating secretly with German Communist contacts to set up labor unions which could be manipulated by the KPD in the U.S. Zone. The informant was able to produce a slip of paper, signed by the American, [redacted] on behalf of the [redacted] approving the creation of a laborers union in Bremerhaven.

About this time, the Civil Service Commission in Washington was requested to review the security standing of [redacted], a former CIO leader. Considerable question as to the man's Communist background appeared among the testimony but a letter from his superior on the [redacted] stated that he was

127 Dossier of [redacted] File No. 137779 (Conf) (Cen Rec Fac); also interview with former Special Agent Daniel C. Canfield, Wichita, Kan, at NCICA Convention, Hotel Waldorf-Astoria, New York, N.Y., on 7 Aug 1955.

128 Interview with former Special Agent Canfield.

[redacted]

"industrious, intelligent and loyal," with "no indication that he was a party member or that he has any leanings or desires to be one."[129] On 31 October 1945, the Review Board of the Commission cleared [redacted] in light of the testimony of two members of the [redacted]

(C) One year later, in October 1946, a letter from the Assistant Adjutant General, USFET, to the Chief, Overseas Branch, Personnel and Training Division at Washington reopened the question of [redacted] suitability for the important position he held in the reconstruction of the German economy. Examination of [redacted] case history lead to "substantial doubt concerning his loyalty to the United States," and the recommendation that [redacted] be declared "ineligible" to hold his position was supported by allegations that the man had been a member of several "front" organizations as well as a member of the Communist Party. Informants had attested to [redacted] adherence to the Communist Party line, and one former member of the Manpower Commission had stated that it was generally believed that [redacted] was a courier for the KPD. The reason for this belief was that immediately after [redacted] visit to a given area, the local branch of the KPD started agitation along the latest Party lines. In addition, it was held that Army personnel who had previously testified on Wheeler's behalf were, "by and large" members of various Communist front organizations, themselves.[130]

In January 1947, a Character and Loyalty Investigation Committee was appointed from the staff of the office of the Military Governor, United States (OMGUS) to evaluate the unfavorable reports that had been lodged against [redacted] This panel arrived at the conclusion that [redacted] "is loyal and suitable for employment by the United States Government." It was notable that the committee refrained from passing on the question of whether [redacted] had been a Communist or Communist sympathizer in the past.[131]

The [redacted] case came out in the open during the summer of 1947. On 10 July, U.S. Congressional Representative George A. Dondero (Republican from Michigan) named [redacted] as one of several Communists who held significant posts with the Occupation.[132]

---

129 Ltr from Frank J. McSherry, Manpower Div, OMGUS, to Arthur R. Fleming, Civil Service Commission, dtd 17 Oct 1945, [redacted] (Secret) (Cen Rec Fac).

[redacted]

[redacted]

The question of what to do with [redacted] was eventually settled by [redacted] himself. Upon the termination of his contract with the [redacted] in November 1947, [redacted] left Berlin and travelled to Prague, Czechoslovakia, with the avowed intention of teaching at the University of Prague. Three months later, in February 1948, the "bloodless coup e'etat," which saw the Communist regime come into power in Czechoslovakia, took place. Whether [redacted] flight to Czechoslovakia had been planned with foreknowledge of the impending coup was and remains a mystery. But the man has never returned to the United States.

One sequel to the [redacted] case came to CIC in an issue of the [redacted] dated 14 April 1950. [redacted] wrote an article for this Communist organ in which he claimed to have come to Czechoslovakia "to study and get to know the structure of a planned economy in a country which in respect to its advanced industrial development most closely resembles my own country."

In the same article, [redacted] took a parting shot at CIC, the organization which had spotted his activities on behalf of the KPD in Germany: "The powers of CIC are not secret. In fact, it is a criminal organization which does not stop short of using any means, employing for its dirty work, murderers and Gestapo agents and, in order to hide these facts, tries to put on a mysterious face."[133] In the police state of Czechoslovakia there was no voice that would be raised to contradict [redacted]

133 Prague News Letter, A Survey of Czechoslovak News and Comments, dtd 14 Apr 1950 (Translation) [redacted] DOB 22 May 1908 (Secret) (Cen Rec Fac); and interview with former Special Agent Daniel C. Canfield, Wichita, Kan, at NCICA Convention, Hotel Waldorf-Astoria, New York, N.Y., on 7 Aug 1955.

Section 3

EXTERNAL ESPIONAGE AND SUBVERSION

(U) The primary threat against the security of the U.S. Zone of Germany and the rehabilitation of the German nation under American direction came not from dissident elements among the native populace but from the Soviet Union.

(U) The division of Germany into areas under the control of Western Powers and Russia made it a logical ground for intense Soviet subversive activities. East Germany, under sway of the powerful Red army, fell swiftly to the Communist Party while Communist groups in West Germany lost little time swinging into action. Week after week during the summer and fall of 1945, Intelligence Summaries from USFET G2 noted the increasing strength of the Communist Party (KPD) with such observations as: "The Communist Party is at present the best organized of the four parties," "The Communist Party..../ is /the most active political group in Germany," and "Communist activity continues as a dominant political feature."[134]

(U) For the Soviet Union, this sudden burst of activity by German Communists fitted neatly into the normal sequences of Russian penetration and subversion. The first stage in most Soviet coup's involved the creation of a propaganda machine "for the purpose of stirring up dissatisfaction with the existing order of things," and the West German Communists with their avowed aims of the eradication of Naziism and rehabilitation of the German people could clearly further the Soviet cause.

(U) Early Soviet attempts to perform espionage and subversion in the U.S. Zone of Germany fell into three general types. The first involved flooding the area with low level agents who could supply small bits of information which, when compiled from many sources, rendered a full picture of the American Occupation. The second espionage technique involved the extensive exploitation of legitimate Russian liaison, reparations, and repatriation personnel for medium level intelligence gathering. The third technique was the infiltration throughout the U.S. Zone of large numbers of Soviet-indoctrinated persons, including returning prisoners of war and displaced persons, together with a steady flow of Communist propaganda.

(U) This last type, more nearly subversion than espionage, was aimed directly at fomenting unrest and labor troubles and breaking down respect for the occupying forces. The propagandists served to magnify uncertainties in United States policy

134 Compiled from Weekly Intel Summaries, 2 through 10, published by Hq USFET, O of the AC/S, G2, ranging in date from 24 Jul 1945 to 20 Sep 1945, (Secret) (Cen Rec Fac).

3775

(U) and to import and distribute Communist propaganda material, while other Soviet workers of the third type were active in black market and illegal currency operations, bribery of American and German personnel, and organization of disaffected groups.

(U) The over-all effect of these groups was to impede the restoration of German economy and to foster a contempt for law and order, all of which were distinct aims in the Soviet timetable of subversion.[135]

(U) A detailed accounting of the CIC's struggle against Soviet espionage and subversion in the U. S. Zone is not possible within the scope of this history. But some of the aspects in this struggle can be indicated to show how CIC acted to maintain security within Germany.

An Early Attempt

(U) Although CIC agents in Germany were largely engaged in de-Nazification investigations during 1945, a possible Soviet agent cropped up among the arrestees of the CIC team situation in Traunstein, Southern Bavaria.

(U) On 3 November, an alleged German national was arrested after he had been found posing as a CIC agent. Upon interrogation, he claimed that he had been a lieutenant in the Luftwaffe, and Obersturmfuhrer of the Waffen SS, and a member of the Jagverbande Skorzeny. But apparently that was not the whole of his story.

(U) While confined in a civilian internment camp at Altenstadt, this man tried to become appointed camp commander. While on supply trips outside the compound, he represented himself as an American colonel, and people noted that he seemed more fluent in the Russian language than in German.

(U) On 15 December 1945, the man escaped from solitary confinement, in which he had been placed following his escapades. The significant fact to CIC was that prior to his escape, this prisoner had asked another inmate, who had been working for a Soviet liaison officer, the location of the nearest Russian official. The prisoner was not recaptured and CIC could only surmise that a Russian agent had been within their midst.[136]

[redacted]

Operation BINGO

(U) The first major overt move that CIC made against the Soviet espionage rings in the U.S. Zone of Germany occurred on 22 July 1946. Code named Operation BINGO, this was a coordinated swoop operation designed to apprehend low grade espionage suspects.

(U) Maximum security precautions were taken for this "Top Secret" raid, in which a total of 407 agents were arrested and placed under interrogation. Initial evidence gained from the questioning of the prisoners confirmed the American Intelligence concern about the tie-in of Russian liaison officers' activities in the U.S. Zone with Soviet espionage. Many of the apprehended suspects were released after interrogation without charges; a smaller number were turned over to Military Government for trial under criminal charges.[137]

(U) Since BINGO was specifically designed to pick up low level Soviet agents and not tamper with the more critical Soviet espionage apparatus, an evaluation of the operation labeled it from 70 to 80 percent successful. Notice had been served upon the key Russian operatives that CIC was not prepared to sit back while the Soviets flooded the U.S. Zone with its agents, and CIC had confirmed some of its impressions of Soviet espionage techniques.[138]

Report from Berlin

(U) Although Soviet espionage methods were not everywhere identical, a report from Berlin summarizing U.S. counterintelligence findings from July 1945 to July 1946 was prepared to illustrate what seemed to be key Russian concepts and methods.

(U) The report observed that "the western world may have tended generally to over-rate average Soviet intelligence techniques," and went on to claim that "the vast majority of Soviet soldiers and officers are ignorant of Western European customs and even geography. As a consequence, the average Soviet commits what we consider certain security errors in his handling of German agents."

(U) The Russians apparently subscribed to a course of planting vast numbers of untrained agents--many of them under pressure--in the U.S. Zone. This use of mass informants had one appreciable advantage to the Soviet: it was possible for an exceptionally skilled operator to escape detection in the smoke screen created by many low-grade agents. There was the possibility that the numerous low level agents, through their clumsiness, would attract the attention of CIC, while the more skilled operatives might be overlooked or relatively unhindered.

137 Hq, USFET, Special CI Rpt No. 20, undtd, (Secret) (Cen Rec Fac).
138 Ibid, No. 22.

[redacted]

[redacted]

(U) The Soviets extensively employed petty thieves and common criminals as informants. In general, the lower the caliber of the informant, the more likely he was to be given some routine "public opinion" mission such as: "What do the Germans say about the American military government?"

(U) At least one case was on record in Berlin by July 1946, where a Soviet case officer had instructed one of his higher level agents to be recruited by CIC for an assignment against the Russians, with the obvious intention of playing him back as a double agent. But American intelligence had found no evidence of Soviet attempts to redouble an already doubled agent.

(U) A favored Soviet technique, and one that received much publicity in Western newspapers, was abduction of individuals, even for routine questioning, from one of the Western Zones. In the initial days of the Occupation, armed MVD agents appeared in broad daylight in uniform to snatch their victims. Strong American protests to these actions led to a slight modification in Russian tactics. The abductions continued, but were performed only at night or by the MVD agents in civilian clothes. In the face of strong U. S. opposition to these continued MVD operations, the Russians again changed tactics by sending agents in police uniform to make the arrests and by increasingly attempting to entice their victims out of the American sector, instead of abducting them on the spot.

(U) Soviet Intelligence operatives were aided in their activities in Berlin by aggressive Communist tactics instriving for the domination of local police, press, and education groups. After the Communists had wrested virtual control of the Berlin police, the MVD assigned special liaison officers to the German police presidium. This situation had three-fold benefits for the Russians. It gave them a camouflage for unauthorized arrests in the U. S. and British sectors, an investigative agency to obtain intelligence on persons in any part of Berlin who had come to the Russians' attention, and a source of trained Germans to serve as Soviet agents while still wearing the German police uniform.[139]

(U) But Soviet penetration techniques also took more direct forms. In the course of a two-week period in August 1946, CIC in Berlin encountered four cases where a Red Army officer in uniform or civilian clothes had presented himself to the United States Consulate, Military Police, or a CIC agent, and requested contact with the Counter Intelligence Corps or the Counter Intelligence Branch. The cover story was either that the suspect was a deserter, that he was awaiting court martial, or that he was fed up with the Soviet Union. In all instances, the suspect made the suggestion that he possessed valuable intelligence information and would be willing to give it to the Americans.

---

139 Ibid, No. 20.

[redacted]

[redacted]

(U) The apparent scheme behind these actions was to gain information about American counterintelligence techniques, personnel, and EEI's. There also was a possible Soviet motive of establishing a basis for protest and propaganda, if CIC displayed any interest in the information. But CIC was directed, in general, to convey to these phony deserters the impression that the United States was not interested in intelligence concerning the Soviet Union and that the Americans' concern was solely with the Germans and those agencies attempting to develop discord among the Allies.[140]

Soviet Military Missions: Centers of Espionage

(U) The Russian military missions in key cities of the U.S. Zone of Germany were soon recognized by CIC as centers of Soviet espionage and they became automatic intelligence targets. Since these missions were allowed privileged communications, they proved extremely difficult to penetrate, but CIC kept a surveillance of the Russians and attempted to catch the military mission personnel off guard. For example, the Russians were required by USFET circular 136 dated 27 September 1946 to wear uniforms whenever on the street or in public places.[141] If they chanced to appear in mufti, CIC could detain them, under threat of reporting the Russians to their superiors, and extract some information from them. But the opportunities for such questionings were few and far between. The Russians rarely did anything alone. They seemed to move in pairs, partly to have constant witnesses to attest to their actions and partly so that individuals could not commit the very misdemeanors for which CIC was on the alert.[142]

Catching the Russians Off Guard

(U) CIC agents in all parts of the U.S. Zone participated in counterespionage activities. Some of the experiences of Region I agents can be recounted as typical of CIC actions against the Russians.

(U) Although the Stuttgart Region was not the focal point of Soviet espionage, there were two authorized Russian groups in the Region that proved troublesome to CIC: a refugee camp consisting solely of Russians and under Russian administration and management, and a Russian military mission.

(U) The official purpose of the refugee camp was to feed, clothe, and house Russian refugees in Germany prior to their repatriation. Because of existing

[redacted]

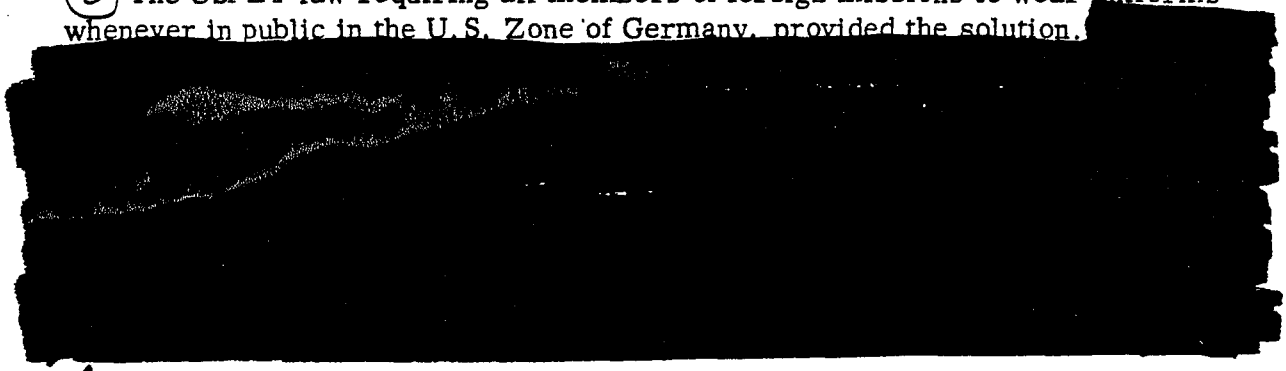
theater directives, CIC was compelled to turn over all Russian nationals they encountered in Displaced Persons camps and elsewhere to this camp. In many cases, this was equivalent to a death sentence since some of the Russians taken to the camp had fled the Soviet Union.

On one occasion, two CIC agents visited the Russian camp to locate a man suspected of spying on the U.S. troops in Stuttgart. They were met by the camp commander, who doubled as a member of the Russian military mission, and were barred from access to the suspect. One of the agents remained at the camp, attempting to convince the commander, while the other slipped away, only to return several minutes later with three jeeploads full of Military Police. Entering the camp with guns drawn, the CIC agents managed to find their man.

Baiting a Trap

At least one member of the Russian Reparations Mission in Stuttgart during early 1947 was a known espionage agent. Of this, CIC was certain. The problem that confronted the CIC agents was how to neutralize the man.

The USFET law requiring all members of foreign missions to wear uniforms whenever in public in the U.S. Zone of Germany, provided the solution.



On the evening of 17 April 1947, the Russian, dressed in a blue civilian suit and carrying a camera, was observed by CIC agents leaving his quarters with his mistress. They permitted him to walk for some distance before they stopped him and asked for his kennkarte (identity card). The Russian was unable to produce the identification and was greatly disturbed when he was informed that his wearing a civilian suit was an offense against a USFET regulation. The agents told the man that he would have to be turned over to the Russian Mission at Frankfurt. This further upset the Russian, and he begged the agents not to report the matter as he would be in "hot water" if the incident became known to higher headquarters in Berlin and Moscow.

At this point, the agents treated the Russian in a friendly manner. Holding a decided advantage over the man, they were able to elicit considerable information about the Russian's mission in Stuttgart, his activity in Berlin, and the

[redacted]

organization of which he was a member. He admitted that he would have to file a complete report of his observations in the U. S. Zone to his chief in Berlin on his return, that the Russian liaison officer to the Stuttgart Military Post was a MVD officer who was "very severe" in his views, and that the Reparations Missions in the U. S. Zone maintained a courier system for transmitting information back to Berlin.

After 45 minutes of questioning, the Russian was released. Before CIC let him go, however, the agents secured a signed statement from the man that he had been arrested by American Counterintelligence for wearing civilian clothes and that he had made statements concerning his organization. This statement was presumably held by CIC as a protection against any possible misrepresentations the Russian might make about having been unlawfully detained.[143]

Keeping Track of the Russians

As part of the quiet struggle against Soviet espionage, CIC in Stuttgart placed all desk clerks at Allied hotels under instructions to report the presence of any Russians when they arrived.

One day, a call was received at the CIC office that two Russians, accompanied by an American Military Government officer, had checked into a hotel. An agent was sent to check. When he arrived at the hotel, he went directly to the room, asked for and received the Russians' credentials, indicating that they were members of the Military Mission. All their papers were in order.

The agent had scarcely returned to his office when the telephone rang. The caller was an incensed Military Government officer who berated the agent for daring to offend such important visitors to Stuttgart. The CIC man took the tongue lashing calmly and replied that Russians were no doubt used to such checks, which probably took place all the time in Moscow, and that the visitor had accepted the paper screening as a matter of consequence.

CIC continued its scrutiny of new Russians arriving in Stuttgart.[144]

Soviet Satellite Intelligence

CIC agents in Germany discovered that espionage efforts within the U. S. Zone were not limited to the Russians. A favored device of the Soviets was to

[redacted]

(U) use intelligence nets of its satellite nations to develop information.[145] When Czechoslovakia fell under the Communist sway, it became apparent to CIC that Czech agents already established in the U.S. Zone would be utilized by the new regime.[146]

(U) The chief of Czech Intelligence, a man named Rejoin, held dual citizenship in Czechoslovakia and Russia. He proved a hard taskmaster for his operatives, and many Czech agents voluntarily confessed after crossing into the U.S. Zone with refugee groups. Data on other agents expected to enter West Germany was secured from these defectors, and the denunciations formed a pattern which made the job of rounding up these additional agents easier.

Operation LITHIA

(U) The mass of leads which were gained from interrogations of the Czech agents had gone through the collation stage when it became apparent that CIC was gaining a good enough picture of Czech espionage in the U.S. Zone to make a zone-wide counterespionage operation. Code named LITHIA, the operation developed slowly, since much peripheral material was gathered that did not pertain to its principal aim. So widespread was the information which had been uncovered that the collection effort developed to a point where a swoop on the Czech agents might not have been successful, if possible at all.

(C) The central core of information of Operation LITHIA revolved around an

146 Interview with Lt Col Earl S. Browning, Jr, Opns O, 970th CIC Det from Jan 47 through Aug 49, at the Pentagon on 26 Sep 55.

[redacted]

(U) Advance notice of the intended swoop was withheld from the field CIC agents until the last possible moment. For example, Region V men were called into the office one night in November 1948 at about 2000 hours. They were informed that a swoop was to be made as soon as Top Secret orders arrived via teletype. The agents sat around the office waiting for the message that would send them into action; some finally went to sleep on desk tops. At 0300 hours, the message came through. It consisted of the names and addresses of the Czech agents in Region V who were to be rounded up. The CIC men were sent out in teams to perform the arrests; by the following morning, all the target personalities who were still in the area had been apprehended. Some of the Czech operatives had left prior to the swoop, although not from foreknowledge of the operation. Security of Operation LITHIA had been excellent, and the leads proved to be absolutely accurate. In one case, a CIC team went to a designated address to apprehend a female agent only to discover that the woman had been taken to a hospital suffering from pneumonia. The men immediately drove to the hospital where they discovered that the woman was bedridden and incapable of being moved. Some last minute changes in address such as this were inevitable in an undertaking as extensive as Operation LITHIA, but the degree of success attested to the extent of CIC penetration of the Czech intelligence nets.

(U) The apprehended agents were shipped from all regions to Region IV, Munich, where they could all be subjected to interrogators especially selected for this assignment.[147]

(U) In March 1949, 11 of the Czech espionage agents were sentenced by a military tribunal to terms ranging from one to 20 years.[148]

Neutralization Versus Conviction

(U) In the effort against Soviet-inspired and directed espionage, CIC generally preferred to neutralize and defect agents rather than to bring them to trial. In this respect, the culmination of LITHIA differed somewhat from other counter-intelligence operations in Germany.

(U) Targets for possible defection or neutralization were picked by the 970th headquarters, but permission always had to be obtained from the Theater G2 before any major attempts were made. Defections required careful planning and could be made only when all doubts about the target's intentions had been

[redacted]

removed. In one case, against CIC advice, British Intelligence defected a Soviet agent in Bremen and gave him asylum in England. Shortly after, the man became the center of considerable diplomatic concern when he claimed that the English had "kidnapped" him.

Among the more effective defections that CIC engineered was that of the German General Von Einsiedel, a grandson of Bismarck, who had been captured by the Russians at Stalingrad. Heavily indoctrinated while in captivity, Von Einsiedel returned to East Germany after the war as a propagandist for the National Kommitee Freies Deutschland (NKFD). During frequent propaganda trips to the U. S. Zone to peddle the Communist line, he was kept under surveillance by CIC agents. After studying Von Einsiedel's activities, CIC caught the general on a technicality and found a basis for defecting him. Although he was only tacitly on CIC's side after the defection, Von Einsiedel had been effectively neutralized as a pro-Soviet propagandist.[149]

The great disadvantage of bring Soviet and satellite espionage agents to trial was that considerable CIC operational techniques and information would be aired in public. Secret trials were prohibited, and from a counterintelligence standpoint, the value of a conviction was not necessarily greater than the value of neutralization. Even if a known agent was not prosecuted, his usefulness to Soviet Intelligence was at an end once CIC had neutralized him.[150]

Section 4

DISPLACED PERSONS

From the start of the Occupation of Germany, the vast numbers of displaced persons within the United States Zone had proved a serious menace to the security of the American forces and the area in general: Within the various Displaced Persons camps were people of many nationalities: homeless, hungry, demoralized, and frequently intent on wreaking revenge upon the nation that had disrupted their lives.

UNRRA organizations tried to alleviate the conditions of the displaced persons by establishing camps where the individuals could be clothed, fed and sheltered. But many of the displaced persons refused to submit to any forms of authority. Vagrants wandered along the roads, looting, stealing, murdering, raping. Sometimes personal gain was the motive, but often the crimes were committed shearly from vengeance.

Repatriation Trains

The tangle of refugees and displaced persons in Germany from many European countries was gradually unravelled after the war. As individuals were gathered into nationality groupings, repatriation trains were formed to carry them back to their homelands.

Frequent journeys were made to Soviet satellites such as Poland, and the repatriates were provided with several months food rations and other supplies by the United Nations Relief and Rehabilitation Administration (UNRRA) officials. Some of the erstwhile refugees developed into "professional repatriates," who gathered their UNRRA food, travelled to their home countries, and, shortly later, returned to the U.S. Zone of Germany to make another try for the free provisions.

A serious security threat was posed by these professional repatriates, who tended to branch out into smuggling items from Germany to their native lands. CIC participated with Constabulary troops and German police in periodic shakedowns of the repatriation trains, since there was counterintelligence interest in the possibility of the trains being used as transportation for espionage agents.[152]

Refugee Influx After Czech Coup

Despite repatriation trains and other measures designed to return displaced persons in the U.S. Zone to their native lands, the flow of refugees in Germany

152 Interview with Capt Alex M. Brand, Army Intelligence School, Ft Holabird, Md, on 28 Sep 1955.

[redacted]

was a two-way affair. While Poles, Russians, Hungarians, Rumanians and many other nationality groups left Germany, Sudeten Germans who had been living in Czechoslovakia during the heyday of the Third Reich and internees from England and other countries were among those who came back to post war Germany. This influx of refugees was swelled considerably in February 1948 after the Communist coup d'etat in Czechoslovakia.

Czechs streamed across the border into Germany following a radio announcement by General Clay that refugees would be granted asylum in the U.S. Zone. The burden fell on the U.S. Army post commanders to provide food and quarters for the new arrivals, and all Army requisitioned buildings in towns near the border were hastily converted into shelters for the Czechs.

To Region V CIC fell the major problem of screening the refugees as they crossed into the U.S. Zone. The assignment proved too much for the region to handle alone and emergency requisitions were sent to other CIC regions for interrogation teams to help with the screening. More than 50 additional agents were sent to Region V and spotted in houses all along the border where they could process the refugees who were brought to them by border patrols.

The screening program involved such large numbers of people that CIC detained for more than cursory interrogation only those individuals of interest to intelligence. Agents were also kept busy procuring buildings for the processing to take place: CIC literally went into the real estate business.[153]

Operation RUMMAGE

The presence in Germany of thousands of Jewish refugees and former concentration camps inmates posed a special counterintelligence problem. Plans for the creation of a national state in Palestine for the Jewish people had started soon after the war but had become entangled in difficulties of defining the bounds of the projected state of Israel.

While the negotiations proceeded on the thorny problem of separating Arab from Jewish land, a steady stream of Jews from all over Europe moved illegally to Palestine. Most of these refugees had been drafted into the several illegal armies which had formed to fight for and defend the right of the Jewish people to a national homeland.

The 970th CIC came into the picture when it was discovered that secret draft orders were being issued in the name of the yet-to-be-created government of Israel

153 Interview with Lt Col LeRoy C. Pierson at the Pentagon, 26 Sep 1955 and Interview with Capt Alex M. Brand, Army Intelligence School, Ft Holabird, on 28 Sep 1955.

[redacted]

to the Jewish people still in Germany. The "draftees" were told to report to a certain Displaced Persons camp in the U. S. Zone of Germany which served as a gathering point for the perspective journeyers to Palestine. Trucks arrived at this camp, picked up the Jews, and smuggled them out of Germany, by devious routes to Italy. In Italian ports the emigrees boarded leaky freighters that were often unseaworthy for the trip across the Mediterranean Sea to Palestine.

(U) CIC's mission in regard to these illegal proceedings was to keep track of the movements of the refugee groups through surveillance and penetration. When Jewish attempts to purchase German weapons stocks were discovered, surveillance had to be extended to the shipment of arms to Palestine.

An interesting phase of Operation RUMMAGE developed near Deggendorf. Training activities for the young Jews in this area included a course of instruction given on a barge in the Danube river. The purpose of this training was to enable the young men to operate the illegal freighters that were plying the Mediterranean. As in other phases of RUMMAGE, CIC only observed and reported these activities. The agents made no attempt to break them up.

Operation RUMMAGE was ended with the birth of the state of Israel in May 1948, an event which brought an end to the covert preparations that CIC had been watching.[154]

CIC and Displaced Persons Investigations

In the years preceding June 1948, CIC had tried to restrict its dealings with displaced persons strictly to matters relating to counterintelligence. But this picture changed radically after Congress passed "an act to authorize for a limited period of time the admission into the United States of certain European displaced persons for permenent residence and for other purposes." The measure passed both houses of Congress and became public law on 25 June when it was signed by President Truman.

Before the legislation had been approved by Congress, it had become apparent that one provision of the bill could seriously effect CIC operations in Europe. In the initial wording, this provision read:

"No eligible displaced person shall be admitted into the United States unless there shall have first been a thorough investigation and written report made and prepared by such agency of the Government of the United States as the President shall designate, regarding such person's character, history, and eligibility under this Act."

154 Ibid, Brand.

3789

[redacted]

[redacted]

Realizing that the investigative burden would more than likely fall upon the heavily taxed members of CIC in the European Command, Colonel Forney, Chief of the Counter Intelligence Branch in Washington, sent forward a memo stating in part:

"There are some six hundred thousand or more displaced persons in existing DP camps, and it is entirely probable that a large majority of them will apply and will have to be investigated. The investigative load will be enormous. It appears highly probable that unless some action is taken to prevent such a contingency the Army will be designated to conduct the investigations. This supposition is based on the fact that the Army in Europe is now screening visa applicants for the State Department. The screening process now in practice is proving a serious burden to the European Command, although both the scope and number of such investigations is on a very modest scale compared with what will be required under S 2242.

"If the Army is designated to conduct these investigations, a serious problem will be presented in recruiting and training personnel within the Army Establishment. A rough estimate is that at least 1,000 investigators, linguistically qualified interviewers, and clerks would be required. In addition, no really satisfactory investigation can be made of persons in DP camps since their backgrounds lie in areas which cannot be reached."[155]

The assumptions in this memorandum proved well founded. Under Executive Order 10003 issued by President Truman on 4 October 1943, it was clearly stated that "the Department of State, the Department of the Army, and such other agencies of the government as the Displaced Persons Commission may request, shall in accordance with arrangements agreed upon between the Commission and any such department or agency, furnish the commission such assistance as it may need in carrying out its responsibilities under Paragraph 1, this order."

Accompanying this Executive Order was a supplementary letter from the President addressed to the Chairman of the Displaced Persons Commission in which the role of the Department of the Army was cited as furnishing "all the foregoing assistance (i.e., investigations, and reports) to the Commission in all overseas areas affected by the DP program except that the Commission will look to the Department of State for such assistance in any area where the Department of the Army is unable to furnish it."[156]

In Europe, it was apparent that CIC was the only agency which had the machinery for these investigations; but the already short-staffed 970th was

[redacted]

[redacted]

desperately in need of additional personnel to handle this new time consuming mission, and the sources of experienced investigators were limited. Some attempts to secure additional personnel ran into trouble from higher headquarters, as a letter from the Director of Intelligence, European Command to the Director of Intelligence, General Staff, Department of Army indicated:

"You will remember first that you indicated you understood General Clay's point that he wanted the screening done by the CIC. We then made a number of estimates of the additional American and indigenous personnel which would be required and some of the figures were very high. When General Clay found out we were trying to get additional personnel for CIC for this purpose he was quite concerned and told me that he expected us to do the job with the thousand or so personnel CIC now has here. Afterward, I again worked with CIC to get some conservative figures to present as an appeal and General Clay has now, again, said the CIC will do the work with the personnel it has here, with such additional personnel as can be made available in the Theater to assist them, and with an increase in indigenous personnel. We are now endeavoring to find enlisted personnel, who, through interpreters, can assist with the neighborhood checks, which is the most time-consuming operation for the personnel. How well this will work out we don't know, but we will do our best."[157]

While the effort to procure CIC agents to handle the Displaced Persons screening mission was being carried out at higher headquarters, the 7970th CIC Group prepared an operational SOP for the program. Under the heading "Personnel," provisions were made for a Regional Visa Section staffed by "no less than one officer or warrant officer with one enlisted assistant." This severe shortage of CIC agents made it essential that indigenous personnel be utilized in all phases of the Visa Section operations which did not infringe on other CIC matters.

The Regional Visa Section officer was responsible for "the speedy and efficient handling of registration forms, maintenance of the message center records, and the review of completed CIC work sheet." He was to be aware of the causes for denying visas to applicants and to be available to investigating officers to counsel them in their investigations.

Wherever possible, the Visa Section was to be separate from the operational offices of CIC, and no indigenous employee, whether used as an investigator or linguist, was to be issued credentials or any type of documents that revealed his employment by CIC. Although it appeared necessary to risk that derogatory information would fall into the hands of indigenous interpreters during the course of interrogation, the SOP stated that "where the derogatory information is of

157 Ltr (Copy) from Maj Gen R. L. Walsh, Dir, Intel Div, Hq EUCOM, to Lt Gen S. J. Chamberlin, G2 Army, Washington, dtd 24 Sep 1945, (Uncl) (Cen Rec Fac).

[redacted]

[redacted]

current CI interest, the interrogation should be brought to a close and the investigation resumed so that subsequently developed information will not be compromised."[158]

DP Screening Becomes "First Priority"

The volume of the investigative load which the Displaced Persons program dumped upon an already busy CIC in Germany was enormous, and CIC had to work quickly and efficiently to prevent this new responsibility from smothering its other operations.

Due to difficulties encountered by other organizations which had to cooperate in implementing the provisions of the Displaced Person Act, the screening program got off to a slow start. In the original plans, it was anticipated that approximately 10,000 screenings could be accomplished each month so that the goal of more than 200,000 new entrants to the United States could be reached in about a year and one half.

CIC had adjusted to this rate by committing from 60 to 70 percent of its agent personnel to the program. But the delays in preparing the machinery for the complete handling of the program meant that CIC had only to employ 30 percent of its personnel in the Visa Screening. For the most part, agents of lesser experience were assigned to the Visa Screening teams because of the routine and relatively simple investigations involved.

A typical CIC processing of a displaced person's application ran as follows: The Regional commander received from the local consulate an application prepared by a displaced person for emigration to the United States. This application included a completed personnel data form which would serve as the basis of the CIC investigation.

The personal data provided by the displaced person was then screened and analyzed before being submitted to verification through checks at the following points:

1. CIC Registry (for persons 13 years of age and over)
2. Local Intelligence and criminal files
3. Neighborhood interviews
4. Berlin Document Center (for persons 25 years of age and over)
5. Provost Marshal criminal file

158 Ltr from Hq 7970th CIC Group, EUCOM, Subj: "Procedure for Investigations of Immigrants," dtd 8 Nov 1948, (Conf) (Cen Rec Fac).

[redacted]

[redacted]

Through these checks, the investigating agent could make a fairly accurate appraisal of the validity of the statement. But, due to the confusion which clouded many displaced persons' pasts, it was necessary for CIC to interview each applicant and compare the accounts he made under pressure of interrogation with the statements on his personal data form.

The CIC role in the screening of displaced persons went no further than fact finding. CIC made no decisions regarding acceptance or rejection under the program. The information that had been uncovered was presented, without comment, to the Displaced Persons Commission representative. However, in any cases where derogatory information sufficient to eliminate the alien appeared, CIC stopped the investigation, reported the matter to the Commission, and awaited further instructions regarding the possible reopening of the case.[159]

One factor that CIC was particularly concerned about in the Displaced Persons program was the desirability of including persons who had been of considerable value to Army Intelligence and "whose removal from the Theater was indicated because of compromise or extreme danger to the individual." CIC was assured that these persons would be accepted provided that they could qualify as displaced persons.[160]

As the principal investigative agency in Germany, CIC became responsible for the processing of a large share of the 12,500 persons per month permitted to immigrate to the United States until the total of 205,000 was met in the middle of 1950.[161]

Section 5

GENERAL INVESTIGATIONS

The mission of maintaining security within the U.S. Zone of Germany presented CIC with a variety of miscellaneous investigative duties. Special operations, demanding the participation of CIC agents, arose from time to time, and the CIC men had to be taken off other assignments to participate in them.

Activities of the Special Squad

During the first two years of the Occupation, headquarters of the 970th maintained a group of agents designated as the "Special Squad" to handle miscellaneous special investigations and "hot projects."[162]

The Special Squad had no files of its own and, as a rule, the agents were not assigned to lengthy or coordinated investigations. Typical of the spot assignments carried out by members of the Special Squad was the transfer back to Germany of war criminals who had been apprehended in France, Belgium, and other countries. Special Squad agents usually retained custody of these prisoners until they were safely lodged at the Uberrurssel Interrogation Center.

In February 1947, Special Squad agents were dispatched to conduct a series of security checks at U.S. installations in various European countries, including lands behind the Iron Curtain. This mission had resulted from a conference between high officials from USFET G2 and the State Department in which it was agreed that the security measures in effect at U.S. embassies, consulates, and other buildings could bear inspection.

[redacted]

The Special Squad gradually developed into a unit for the use of the AC of S, G2, at USFET headquarters. Indicative of the more routine investigations that G2 headquarters assigned to the Special Squad was the probe of a strike of waitresses in Frankfurt. The strike had been occasioned by the restaurant manager's decision to search all his employees for a quantity of stolen butter. One girl protested that decision and refused to be searched. The rest of the

162 See this Chapter, Part I.

[redacted]

waitresses, siding with the girl, went on strike. The Special Squad found no Communist influence behind the action.[163]

By early 1947, the Special Squad's usefulness to CIC in Germany had waned considerably, and it was phased out during the reorganization of the 970th Headquarters that was taking place at this time.

Operation "GRAB BAG"

One of the most dramatic CIC activities in 1946 was an operation entitled "GRAB BAG." Intelligence information during the early months of 1946 had indicated that a "tin can" fleet of the Hungarian navy, totalling some 375 vessels which had anchored in the Danube River between Passau and Deggendorf might be the nexus of a widespread smuggling ring and an important link of an "underground railway" that was being utilized by former SS troops escaping from Germany.

The ships were inhabited by several hundred members of the Hungarian navy and their families who had fled from the Black Sea near the end of the war and sailed up the Danube for safety behind United States lines. This mothball fleet became the subject of considerable discussion between U.S. and USSR officials; the two nations could not agree on such matters as which nation should take the vessels as reparations, whether the ships should be dismantled, and who should have the responsibility of moving them. The crews were left on board to keep the vessels in repair, and the Hungarian naval personnel maintained their own administrative set up.

Since the ships and their crews represented a serious security hazard and Intelligence sources had reported illegal activities, the Theater commander directed that the Hungarians be interned and processed for repatriation as prisoners of war.

The operation which developed was coordinated by the Theater G2 and code named GRAB BAG. It involved troops that were in training for the District Constabulary, elements of the 1st Infantry Division, 90 Wasserschutzpolizei from the Inland Waterways Division who were brought secretly from the Rhine River, 120 CIC and 20 Criminal Investigation Division agents.

At 0500 hours on 21 May 1946, members of the Constabulary initiated the raid. They sealed off the 25 mile stretch between Passau and Deggendorf and acted quickly to prevent the destruction of any loot or escape of any persons aboard the boats. The Wasserschutzpolizei sealed off the boats from the river side, and with all members of the fleet bottled up, CIC and CID men boarded the

163 Interview with Capt Alex M. Brand, Army Intelligence School, Fort Holabird, 28 Sep 1955.

3795

[redacted]

[redacted]

ships to carry out the search, accompanied by troopers of the Constabulary units, who served as guards, and members of the Wasserschozpolizei whose technical knowledge of vessels proved a considerable asset.[164]

Coordinated with the search was a thorough screening of 1,949 individuals discovered aboard. Of this number, 232 persons were arrested and held for further interrogation, including Admiral Trunkwalter, erstwhile commander of the flotilla, and two of his chief assistants.

Uncovered in the search operations were considerable amounts of clothing, including Wehrmacht and Hungarian army equipment; small arms and six machine guns; machine pistols and an anti-aircraft gun in working condition but without ammunition; seven radio transmitters which could be put into operation in minutes; explosives, including land mines; and one counterfeiting net for forging various documents and producing processing papers. Of the 397 ships that the investigators searched, 26 had to be impounded because the mass of materials on board precluded a thorough search during the raid.

The security of the entire operation had been well guarded from the start, the raid and search completed, and a potential source of counterintelligence trouble neutralized.[165]

Operation SPARKLER

On 10 September 1946, CIC agents in Germany were assigned to serve as jewelry specialists for 48 hours.

At the request of Military Government, the 970th Detachment entered on Operation SPARKLER, a coordinated raid of 373 specified targets in the U.S. Zone, to recover precious stones and metals which had been transported to various banks and businesses by the Nazi Government shortly before VE Day and had not been declared to Military Government authorities as required by regulations.

In addition to this primary objective, the apprehension of individuals who had harbored the gems was an additional aim of Operation SPARKLER. Working closely with officials from the British Field Security detachments, Military Government Property Control and Public Safety, U.S. Constabulary, and German police, CIC performed preliminary reconnaissance of all targets before the Operation was started, so that those targets which had been destroyed by bombing or removed to other locations could be eliminated from the raiding plans.

164 Hq US Forces, European Theater, O of the C/S, G2, Weekly Intell Summary No. 45, dtd 24 May 1946, (Secret) (Cen Rec Fac).

165 Ibid, No. 46, 31 May 1946.

[redacted]

The results of Operation SPARKLER were deemed "highly successful," for within the allotted 48 hours, CIC succeeded in accounting for the disposition of a major portion of all precious stones and metals in the United States Zone of Germany. Of the total of 373 widely scattered localities designated by Military Government as targets, 245 proved remunerative and the estimated value of materials uncovered was as follows:

Diamonds.....	$ 946,688
Gold	$ 496,510
Silver	$ 768,231
Platinum.....	$5,093,600

These figures were supplemented by the untotaled values of such precious metals as palladium, ruthium, iridium, and cadmium which were also discovered. CIC confiscated property only when concurrence was received from local Military Government representatives. In other cases, the agents carefully inventoried the articles and delivered copies of these records to Property Control officers.

Aside from the speed and efficiency displayed by the CIC agents taking part in Operation SPARKLER, the "careful and businesslike manner" in which each target was checked drew commendation. There was not a single instance where subsequent accusations were made against any member of CIC concerning the improper transfer of valuable wealth of inventory, impolite treatment of persons interviewed, or any type of misconduct.

A sidelight of Operation SPARKLER which was of interest to counterintelligence officials came after study of these results of the undertaking. In no case were there indications that the stored valuables had been earmarked, for use by subversive groups.[166]

Operation PAPERCLIP

A great deal of the German war might had been dependent on the research and inventions of German scientists, who were widely recognized as pre-eminent in such fields as physics and chemistry. The Russians lost little time in scanning the rolls of scientists in their zone of occupation for potential use by the Soviet Union. It soon became apparent that the Russians intended to extend their quest for scientists to the U. S. Zone.

Among the Soviet moves to attract scientists to Russia was the establishment of a "recruiting office" in Frankfurt which was under the direction of Soviet

166 Hq USFET, G2, Weekly Intell Summary No. 67, Annex "A" to Part "C", Counterintelligence, dtd 25 Oct 1945, (Secret) (Cen Rec Fac).

[redacted]

repatriation officers. CIC kept this office under surveillance and gathered leads which showed that German technicians and scientists were being directed to this office to obtain employment by the Soviets.[167]

In October 1946, instructions were received by the USFET command from the Joint Chiefs of Staff to institute a program for "the denial and exploitation of scientists and technicians of the U. S. Zone of Germany and Austria."

The field work for this program was assigned to the 970th by the Theater G2 and consisted principally of two activities: location and surveillance of the key specialists.

The operation was variously labeled at its outset as MESA and FLYPAPER and eventually code named PAPERCLIP, and the mission outlined by the G2 to CIC as follows:

1. To report any specialists designated by the Operations Branch, G2, as potential candidates for emigration to the United States.

2. To investigate and report any cases which came to the attention of G2 or CIC of individuals earmarked for exploitation in the United States who were contemplating migration from the U. S. Zone in Germany or who were approached by representatives of other nations.

3. To report the presence of any specialists whom the United States desired to neutralize but not employ and whose residence was known so that restriction could be imposed upon them by G2 through local Military Government authorities.

CIC Regional offices were supplied with the names of scientists that fell under this program, and instructions were given, denoting the EEI's which the Theater G2 had requested. The report filed on each scientist was to show: 1) age and educational institutions attended, 2) professional affiliations, 3) lists of works and publications by the scientist concerned, 4) type of research with which the scientist had been connected during the war years, 5) a statement as to party affiliations, and 6) a brief appraisal of the scientist from the view of the agent submitting the report.

The initial list of scientists was supplemented from time to time, and CIC agents in the field kept "undesirables" under surveillance to prevent them from defecting to the Soviet Union. The agents persuaded a large number of the

167 Special Intell Summary No. 31, Hq USFET, G2, dtd 26 Feb 1947, (Secret) (Cen Rec Fac).

[redacted]

German scientists and technical experts to emigrate to the United States, and PAPERCLIP was considered a highly successful operation.[168]

Operation ANYFACE

The Chief of the Ukrainian Partisan Army (UPA), the strongest Anti-Soviet group in Russia, was a man named Stefan Bandera, who ranked at the top of the Soviet list of wanted persons. He was alleged to have escaped to Germany after the war. When his importance to the Russians had been noted by American Intelligence, the 970th ordered its subordinate echelons to start Operation ANYFACE, with the aim of denying this key figure to the Soviets. The Operation was named after the Dick Tracy comic strip character; the elusiveness of the mystery man Bandera more than justified the monicker ANYFACE. Although, in the years 1946-1948, all CIC units had to submit monthly reports on the progress of Operation ANYFACE, Bandera's whereabouts were never discovered.[169]

CIC and the Black Market Investigations

In Germany, the black market grew steadily during the occupation years until it was far too large for investigators of the Criminal Investigation Division of the Military Police to handle. Considerable concern was expressed at high USFET levels that a serious intelligence problem was posed by the rapidly spreading illicit dealing, and, on 28 December 1946, the Theater commander directed, through his G2, that CIC investigate and report all black market activities which came to its attention during the primary pursuit of its mission. Such activities were defined to include the evasion of price and rationing controls, and traffic in articles supplied for the use of U.S. Forces, contrary to German laws and Military Government ruling.[170]

In performing its investigations, CIC concentrated on the large scale individual operators and the operators of illegal rings. Close cooperation was maintained with other law enforcement agencies and, when feasible, all CIC collected evidence was turned over to Military Government, German police, or the Criminal Investigation Division for arrest and prosecution of the offender.

After two months of investigations in this field, CIC was able to draw certain conclusions. The centers of black market activity were the centers of population

168 Interview with Lt Col Earl S. Browning, Jr, Opns Officer, 970th CIC Det, from Jan 47 through Aug 49, at the Pentagon on 26 Sep 55.

170 CIC History, 1945-1948, Section III, Germany, (Uncl) (Cen Rec Fac).

(U) and displaced persons camps. Some activity existed in rural areas, but consisted largely of illegal slaughtering, trading food stuffs for clothes for farm tools, or small scale bartering for personal property.

(U) The main commodities that figured in investigations were currency, scrip, gold and silver, drugs and narcotics, automobiles, liquor, cigarettes, government property, counterfeit, ration stamps, and post exchange items.[171]

(U) For many CIC offices, already hard pressed by heavy case loads, the black market investigations proved frustrating. It was difficult to locate the "big operators" behind black market dealings, although the "smallfry" could be spotted easily enough. Many of the "big swoops" which CIC participated in were unsuccessful in getting to the heart of the black market dealings.

(U) In addition, the assignment of countering black market operations was often dangerous far beyond its value, and it placed CIC agents face-to-face with some of the worst criminal elements in Germany. One instance of the danger involved in these investigations was experienced by two CIC agents in Stuttgart.

A Narrow Escape

(U) The greatest center of black market activities in Stuttgart was a Jewish refugee camp where homeless displaced persons were quartered in a block of houses operated by UNRRA (United Nations Relief and Rehabilitation Administration). The members of this camp were allowed to circulate freely in Stuttgart, a fact which accounted for their great success in black market dealings.

(U) Word reached CIC of one member of the refugee camp who allegedly would sell anything "from a pin to a Cadillac" in exchange for American dollars. At the time, it was strictly forbidden for any civilian to possess American currency, and two agents were selected to investigate the case.

(U) The agents chose a woman informant to accompany them to the refugee camp, and, after providing her with several dollars, sent her inside to negotiate with the suspected black marketeer. After a few moments, the woman came back to the waiting car with lingerie that she had purchased. Without hesitation, the CIC men entered the building in order to arrest the man. In a dirty apartment, the refugee and his wife were located and informed that they were under arrest. Without warning, the woman began to cry out at the top of her lungs in an unintelligible language. The shrieks alerted all the people nearby, and the small apartment was rapidly jammed with refugees who poured in from every conceivable opening. When these people learned what the agents had come for, they began to assault

171 Intell Summary No. 3, from Hq, USFET, G2, dtd 14 Mar 1947, (Secret) (Cen Rec Fac).

[redacted]

the CIC men with their fists. One agent glanced out into the camp street and saw that it was thronged and blocked by refugees. The agents drew their guns but could not fire for fear of creating a panic.

Both CIC men realized that the refugees could kill them, bury them, and leave no traces of what had occurred. Fortunately, the UNRRA police stationed nearby heard the commotion and arrived just in time. They forced their way through the milling refugees and formed a protective cordon around the beleaguered agents, enabling them to make their way to safety. The CIC men were never able to locate the man they had sought in the confusion. Nor did they attempt to search the apartment. There was no question of the man's guilt if they could have located him.

As a result of this incident, a Standard Operating Procedure was established by CIC forbidding any arrests within the refugee camp. Future CIC investigations of black markets in Displaced Persons camps were carried out with far more organization. The raid on a refugee camp in Heidenheim serves as an example.

A raiding party consisting of tactical troops, Military Police and Constabulary personnel was coordinated under the direction of CIC. The force was divided into 20 search teams with a CIC agent heading each team.

At the appointed date, the troops, accompanied by armored cars, moved into the camp at 0300 hours. By 0400 hours, the entire area to be searched was ringed by about a thousand troops posted with fixed bayonets, and the search teams entered the buildings. Every apartment in the refugee camp was systematically covered. All inhabitants were subjected to a careful search. The raid uncovered thousands of dollars and black market items ranging from livestock to food and soap.

The planning and execution of the raid had been so precise that the black marketeers were taken completely by surprise; the only fatality resulting from the raid was one refugee who tried to bolt from the area and was struck by a soldier's bayonet. Some 60 persons who had carried on extensive black market operations were found and jailed as a result of the raid.[172]

A Routine Black Market Investigation

Most of the CIC investigations of black market activity did not follow such dramatic courses as the Stuttgart affair or the Heidenheim raid. A typical example followed the theft of over 1,200 watches from the Butzbach Ordnance Depot.

172 Interview with Lt Edward H. Quarles at Fort George G. Meade, Md, 26 May 1955.

[redacted]

[redacted]

CIC investigators received a tip that led them to a former German employee of the depot. Under questioning, the suspect admitted that he hid in the storeroom where the watches were kept, and intentionally allowed himself to be locked in when the other employees went home. Later in the night, he gathered the watches, broke the lock on the door, and carried his loot outside. He then distributed the watches to men who could push them on the black market in exchange for goods and Reichmarks.

CIC was able to round up men involved either in the buying or selling of the watches, and some of the watches were traced as far as the Netherlands border. A month after the thief had been apprehended, more than 900 of the missing watches were recovered.[173]

[redacted]

Section 6

POSITIVE INTELLIGENCE

Twelve miles from the border that separated the U. S. Zone from the Soviet Zone of Germany was the largest Russian Army maneuver area in East Germany. When Col. David Erskine became EUCOM Acting Deputy Director of Intelligence in 1949, he decided that CIC was the logical agency to gather information through its sources on the number and disposition of Russian troops in Thuringia and this mission was carried on until 1954.

Operation DEVOTION

In March 1949 the Soviet Desk at headquarters received this positive intelligence mission which was code named Operation DEVOTION. No additional funds or personnel were supplied for the new operation; as a result, CIC took some of its key informants off their normal assignments and sent them across the border in quest of the information.

Positive Intelligence Teams were created in Regions VI, VII, X, XI, and Berlin, and agents were dispatched from all these areas. A favored practice was the so-called "pyramid coverage" in which agents from two Regions and Berlin were sent to the same point. Three separate reports were gathered and compared so that CIC could be certain of the accuracy of the information which was being brought in.

As the border controls tightened under stress of the Cold War, it became difficult for CIC to send informants into East Germany from any regions other than Berlin. Informant nets were established to replace individual forays for intelligence, and contacts in the Soviet Zone passed information back to the U. S. Zone. CIC recruited men whose business took them across the interzonal boundaries to serve as informant net organizers, and these men were paid for their own efforts and the work of their sub-sources.

This relaying of information proved a slow process for obtaining order of battle information, and, when CIC had to answer urgent requests, a wire was sent to Berlin for a fast spot check of a given area. An informant was immediately dispatched into the Soviet Zone, which lay all around the four-power island of Berlin, and within 24 hours, the desired information was procured.[174]

---

174 Interview with Lt Col LeRoy C. Pierson, former Chief, Positive Intelligence Desk, Hq 66th CIC Det, at the Pentagon, 26 Sep 1955, (Conf).

[redacted]

The intelligence which CIC received on the Russian forces was compiled into mimeographed workbooks which contained detailed information on certain targets. The workbooks were classified "secret" and had a limited distribution to intelligence agencies.[175]

CIC in Germany continued to obtain Russian order of battle until June 1954 when this mission was transferred to another agency.[176]

Looking Forward

On 27 June 1950, United States forces were committed to help the Republic of South Korea repulse the invasion from North Korea. This was the first flame in the Cold War. Whether other flames would burst out was a matter of speculation but CIC in Germany, like all Army units, had to adjust to the possibility that the battle in Korea might trigger a full scale war.

U. S. ARMY INTELLIGENCE CENTER
FORT HOLABIRD, BALTIMORE 19, MARYLAND

ACSIH-GC 250/58/M 8 April 1959

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Section 1

CIC'S FIRST MONTHS IN JAPAN

When the Japanese Empire surrendered to the Allies on 14 August 1945, there were four regional and 66 area CIC detachments operating in the Philippines and Okinawa, in addition to 36 combat detachments attached to ground units. The 441st CIC Detachment, activated on 17 August 1944, exercised central control of operations and personnel of these units, which, on the date of surrender, consisted of 196 officers and 874 enlisted men.

Two alternate plans had been drawn to guide CIC operations, and all other military intelligence activities, in occupied Japan. "Olympic" had been formulated for a full-scale military invasion, while "Blacklist"[1] had been written as a guide if the Japanese should surrender the homeland without combat.

"Blacklist" Proves Prophetic

Some of the statements in "Blacklist" proved to be quite prophetic. The plan noted: "The surrender of Japan will alter the general mission of Counter Intelligence operations. In addition to insuring military security by denying information to the enemy, Counter Intelligence personnel will be confronted with the problem of suppression of organizations, individuals and movements whose existence and continued activities are considered an impediment to the lasting peaceful reconstruction of Japan."

CIC Training School Works Overtime

Upon surrender of the Japanese, tasks of unit consolidation and training, and the quick completion of pending cases in the Philippines and Okinawa necessarily proceeded simultaneously with the immediate implementation of "Blacklist." While units attached to tactical groups quickly revamped their organization, a large proportion of 441st personnel was sent to a brief CIC Training School session at Manila for orientation on the Japanese occupation. Where personnel could not be spared from assignment for the school, they studied in the field. Officers and men read Joint Army-Navy Intelligence summaries, Allied Translator and Interpreter Service (ATIS) research documents, specific intelligence studies and map-talk supplements.

To fill gaps in personnel, the Manila School worked overtime. A special three-day basic course was run for 32 Nisei students who had arrived from the Zone of the Interior. All had CIC assignments awaiting them upon graduation on

1 That portion of "Blacklist" dealing with counterintelligence is attached as Appendix 1.

15 August. Fourteen enlisted men, gleaned from theater replacement depots, entered the school on 28 August for an "Abbreviated Agent's Course."

308th CIC Detachment Moves Into Yokohama

Some CIC detachments, particularly the 308th, attached to Eighth Army, had no time for extra indoctrination and training. Except for closing out prominent cases, the 308th abandoned all normal operations in the Philippines, to prepare for water shipment to the Tokyo-Yokohama area. On arrival, a temporary office was set up in the G-2 Section of Eighth Army headquarters in the New Grand Hotel in Yokohama.

The 308th and 306th CIC Detachments, attached to Sixth Army, supervised the moving in and setting up of tactical CIC units throughout the islands. Twenty-two CIC combat unit detachments were attached to the two armies, although under administrative control of the Advance Echelon of the 441st CIC Detachment, commanded by Lt. Col. Jennis R. Galloway.[2]

Armies Relieved of Counterintelligence Functions

As communication channels were improved and the 441st became better organized, combat detachments were gradually relieved of counterintelligence duties. The 441st assumed responsibility for the counterintelligence situation in northern Honshu on 16 October 1945, and took over Hokkaido on 1 November, in both instances relieving Eighth Army personnel of these duties. The Sixth Army was relieved of counterintelligence work in the southern part of Honshu, Shikoku, and Kyushu on 1 December.[3]

The northern half of Japan, formerly under Eighth Army CIC, became the Sixth CIC Region of the 441st with headquarters in Yokohama, and the territory

that had been covered by Sixth Army CIC was designated the Fourth CIC Region with headquarters in Kyoto. Under the Regional offices, Area and Metropolitan units were established as the 441st strove to organize a large network of offices throughout Japan.[4]

Regional commanders determined personnel requirements of the Area and Metropolitan units under their command. Personnel were assigned the Regions by the headquarters of the 441st. Regional commanders were authorized to reassign personnel to subordinate offices and to transfer personnel from one office to another as circumstances required.

Regional offices coordinated all investigations of their Area and Metropolitan units, evaluating and correlating information prior to forwarding to 441st headquarters. Files on investigative activities were maintained by the Regions for the use of subordinate units.[5]

Command of CIC Changes

Before the unit was fully organized in Japan, the 441st underwent a change in command. Colonel Galloway was rotated back to the Zone of the Interior and Col. (later Maj. Gen.) A. W. Stuart assumed command on 10 October 1945.[6]

At headquarters level, the 441st was divided into five sections: Adjutant, Assignment, Investigations and Operations, Supply, and Plans and Training.

It was the responsibility of the Investigations and Operations Section to supervise and coordinate the investigation and reporting of all matters within CIC jurisdiction.

However, it was the Plans and Training Section that fell heir to the biggest difficulties which may confront a detachment in a period of transition. Aside from

4 "Representative Hist of CIC Activities in the Occupation of Japan" (Sep 1945 to 1948), p 6-8, (Uncl) (Kansas City Rec Cen, Box C3743) NOTE: In October 1945, during the transition from combat unit detachments to Area and Metropolitan Units, CIC operated 13 Area Units: one in Kyushu, one in Hokkaido and 11 in Honshu. The following Metropolitan units were in operation: 80th (Tokyo), 81st (Yokohama), 82d (Hakodate), 92d (Kobe), 93d (Shimonoseki), 94th (Fukuoka), 95th (Yawata), 97th (Nagoya), and 83d (Sapporo).

preparing periodical reports, controlling confidential funds and supervising a training school, the section was charged with general planning for efficient operation of all units in the field. In this capacity, the section recommended and initiated new investigative techniques and procedures for all field units.

Although the sections at headquarters were shuffled frequently and the Regions and subordinate offices were relocated and redesignated on several occasions, the skeleton of the 441st CIC Detachment's organizational set-up established in the first few months of the Occupation was to remain.[7]

Counterintelligence A Separate Staff Section

Responsibility for counterintelligence and general security functions for the Occupation rested ultimately with a special staff section, the Civil Intelligence Section (CIS).[8] Formally established on 2 October 1945, by General Order No. 13 from Supreme Commander, Allied Powers (SCAP), the Civil Intelligence Section was designed "to advise the Supreme Commander, Allied Powers, on policies relating to civil public safety agencies in Japan and Korea and to conduct such investigations relating to compliance with orders and instructions to the Japanese government as may be directed."[9]

Brig. Gen. Elliot R. Thorpe was designated Chief of CIS and Chief Counter Intelligence Officer, U.S. Army Forces, Pacific. The Civil Intelligence Section controlled, in addition to the 441st CIC Detachment, two other field agencies, the Civil Censorship Detachment (CDD) and the Public Safety Division (PSD).

With the creation of CIS as a special staff agency, positive intelligence and counterintelligence were set up completely independent of one another. It was not until May 1946, that these two operations were placed under a single staff section, the Office of the AC of S, G-2.[10]

CIC Assigned Various Activities

While those at the top were making organizational plans and setting up policies, the first CIC agents in Japan were engaged upon a number of special tasks, some of which were not too closely related to CIC's recognized mission. Apprehending war criminals; deactivating the Japanese intelligence framework; unearthing caches of weapons, money and precious metals; gathering historical material to show Axis connections; investigating Nazi agents in Japan; and ferreting out U.S. citizens suspected of treason while prisoners of war or residents of Japan during the war were among the mission performed.

In original planning, CIC was designated the action agency for apprehension of major war criminals - those appearing on a list of Class "A" suspects compiled by General Thorpe, Colonel Galloway, and Maj. Robert M. Hollings of the Operation Section of CIS.

As it developed, CIC had physically arrested only two of the top Japanese war criminals before a Supreme Commander Allied Powers' (SCAP)[11] directive ordered the Japanese Government to apprehend war crimes suspects.[12]

CIC Seeks Tojo

On 11 September, the day that the list of Class "A" suspects was finished, a radiogram from General MacArthur's headquarters directed the arrest and imprisonment of Gen. Hideki Tojo, former Prince Minister, former Chief of the Imperial General Staff and the number one war lord of the Japanese Empire. In spite of Tojo's resignation as Prime Minister on 18 July 1944, he was considered the one man above all others responsible for Japan's aggression and brutality.

Maj. Paul Krause and Agent James Ward of the Yokohama 81st Metropolitan CIC Detachment, and Capt. William T. Hiraoka, Lt. John Wilpers, Jr., and Lt. James Wood of the 308th CIC Detachment, proceeded to Tokyo from Yokohama to contact an informant who had learned Tojo's whereabouts. At 1600 hours, the contingent arrived at the general's residence - a small, one-story, Japanese-style

11 SCAP, although an abbreviation of General MacArthur's title, also came to refer to the collective Occupation command. These four letters became a synonym for "Occupation Authorities," and the various Occupation agencies were called SCAP agencies.

12 GHQ, FEC, MI Sec, Gen Staff, "Opns of the CIS," Vol IX of Opns of the Intell Service in the SWPA," Part I, Chap II, p 35, (Secret) (Cen Rec Fac); and "Representative Hist of CIC Activities in the Occupation of Japan (Sep 1945-1948)," p 53-54, (Uncl) (Kansas City Rec Cen, Box C3743).

home under guard by several native policemen. Seven newspapermen, four photographers and several U.S. Army enlisted men, the last group acting on a tip that they had received privately, were in the vicinity. Several newspapermen had attempted to interview the long-sought war lord, but had been ejected by Tojo's two private secretaries. Two minutes after the agents' arrival, the secretaries were told through the locked front door that officials from CIC wished to speak to Tojo. The secretaries soon returned to ask the agents if they possessed official credentials. When told that the Americans did indeed have credentials, the two returned to their master with the information. Tojo then sent word that he would receive only those officers in charge.

A minute later, he appeared at an open window on the opposite side of the house. Apparently expecting to be apprehended by more lofty representatives of the Allied Command, Tojo asked Major Krause several times if he were under official arrest. Tojo was answered in the affirmative and told that he should get ready immediately to leave for Yokohama. Tojo agreed and closed the window. Twenty seconds later, a shot was heard inside the house.

Action - A Little Too Late!

Major Krause and Lieutenant Wilpers broke the lock on the front door and entered the house. Wilpers kicked in the door to Tojo's room, and found the former military leader in an over-stuffed chair, bleeding from a self-inflicted bullet wound just below the heart.

The general was still conscious and leveled his pistol at the arresting party; after a command to drop the weapon, Tojo did so. Lieutenant Wilpers picked up the .32 caliber Colt automatic and, this relic, along with a loaded .25 caliber Bedguque automatic pictol, an unsheathed hara-kiri knife and documents which included Tojo's "Last Statement," were confiscated.

Tojo's secretaries were placed under guard, the room of the general sealed off, and civil police were ordered to maintain a guard on the house. Major Krause left the premises to obtain medical aid for the still-breathing Tojo and Military Police to replace the civil police.

Fifty-eight minutes after the general had shot himself, a Japanese doctor arrived on the scene. Tojo refused treatment, but Wilpers ordered the doctor to do everything in his power. An hour later, a U.S. Army doctor, Capt. James B. Johnson, arrived. By 1920 hours, Tojo was on his way to Yokohama in an Army ambulance under CIC guard.

Tojo's recovery and eventual trial as a war criminal are matters of public record.[13]

An Admiral is Next

The only other Class "A" war criminal on SCAP's list with whom CIC became involved was Shigataro Shimada, retired admiral of the Japanese Navy and a member of the Tojo cabinet. Following vocal orders from the Commander-in-Chief, personnel of the Tokyo CIC unit, Metropolitan unit 80, proceeded to arrest the admiral on 15 September 1945.

Once again, Major Krause directed the arresting party which included Capt. James K. Reitz, Lt. Alexander S. Duncan, Lt. Hugh F. Daly and Lieutenant Wilpers.

In an effort to prevent a second "Tojo incident," two squads of Military Police, a doctor, and an ambulance accompanied the CIC agents. The group arrived at the Shimada residence in Tokyo at 1620 hours. No forceful entry was made, but the group identified itself and gave the admiral 15 minutes to get ready for the trip to CIC headquarters in Yokohama. Granted a request for a few extra minutes to eat a light supper, Shimada appeared at 1650 hours and by 1800 hours was in Yokohama.

Shimada was thoroughly interrogated by the Allied Translator and Interpreter Service and interned in Omori Prison to await trial.[14]

---

13 The story of Tojo's arrest has received a number of treatments in the press with each account possessing its own peculiar variations. This presentation of the story is drawn from the running account kept by one of the CIC agents while the arrest was in progress - probably in recognition that complete details would be of interest later. The agent's account, not now available in its original form, was reproduced entirely in "Selected CIC Investigations, Case No. 15, Apprehension of Hideki Tojo," a narrative prepared by the 441st CIC Detachment in compliance with a request for details on outstanding CIC cases, dtd 4 Feb 1948, from Brig Gen E.A. Zundel, Chief, CIC. The cases submitted by the Far East Command, together with similar narratives from other theaters, were to have formed the basis for a history of CIC to be written by two civilians authorized by the Army especially to do this job. This history was never completed. However, all 20 cases forwarded from the Far East Command are to be found in - GHQ, FEC, MI Sec, Gen Staff, "Opns of CIS," Vol IX of "Opns of the Intel Service in the SPA," Chap IX, (Secret) (Cen Rec Fac).

14 "Representative Hist of CIC Activities in the Occupation of Japan (Sep 1945-1948)" p 54-55 (Uncl) (Kansas City Rec Cen, Box C3743).

Kempei Tai Found Insolvent

Since a primary element of CIC's mission is the neutralizing of enemy intelligence, another early activity involved the tracking down and dismantling of the Japanese Empire's all-purpose intelligence agency, Kempei Tai. In addition to being the closest Japanese parallel to CIC, the Kempei Tai handled functions which Americans allot to agencies such as FBI, Provost Marshal, Military Government and civil police.

By the time the occupation forces arrived in Japan, the Kempei Tai had for the most part disintegrated without help from the outside. The brigadier general who had commanded the organization committed suicide and the majority of high ranking officers under him followed his lead. Generally, the personnel of the organization who preferred to remain alive had quit their offices and become lost in the crowd. In some cases, CIC uncovered Kempei Tai agents, and utilized them as informants.[15]

War Cache Policy Devised

CIC was aware of the probability that groups of Japanese, either with or without official sanction, had hidden large caches of materials and equipment which might be used to sustain elements planning a revolt against American Military Government. However, there was also an awareness that investigations for hidden stock piles might lead CIC on numerous searches and seizures that were actually the responsibility of local Army units.

It was decided that reports of caches of (1) all types of armaments, weapons, ammunition and explosives; (2) tangible wealth such as precious metals or jewels; and (3) large stocks of food were to be investigated by CIC only to the extent of determining actual existance and location to a degree sufficiently definite to warrant sending out troops to conduct the necessary search and seizure. Only under unusual circumstances was CIC to investigate reports of material not in the above three categories.[16]

Searches, organized after preliminary CIC investigation, yielded a fortune in diamonds, platinum, gold and silver buried in secluded areas by Japanese military leaders prior to the Occupation. One cache of 11 crates of platinum was uncovered in a chicken coop on top of a mountain 160 miles from Tokyo. A CIC agent with the searching party made a quick check of records of this hidden fortune.

15 "Representative Hist of CIC Activities in the Occupation of Japan (Sep 1945-1948)" p 51-3 (Uncl) (Kansas City Rec Cen, Box C3743).

16 GHQ, US Army Forces, Pacific, 441st CIC Det, Advance Echelon 24 Dec 45, Subj: Hidden Caches of Japanese Material, /s/ Alan S. Griemer, Capt, Investigations Officer, (Conf) (Kansas City Rec Cen, Box 25103).

He noted a reference to jewels and questioned the custodian of the cache about them. In a few minutes, the custodian produced a bucket full of diamonds, and when asked why he had not previously surrended the gems, he pleaded no criminal intent. After all, no one had asked him about diamonds.[17]

"Butcher of Warsaw" Turns Himself in to CIC

In dismantling the structure of Japanese aggression, CIC sought information on representatives of Nazi Germany who had held diplomatic positions in Tokyo. The prize catch, Gestapo Police Attache to the German Embassy, Col. Josef Albert Meisinger, turned himself in to Metropolitan unit 81 (Yokohama). The man who had been "The Butcher of Warsaw" in the early days of the war was interrogated for five consecutive days by Yokohama CIC agents. Eventually, Meisinger was returned to Germany for final disposition.[18]

CIC also investigated Gestapo agent Gerhard Kahner whose activities in Kobe during the war placed him in a class with Meisinger. Kahner, in collaboration with the Kempei Tai, had been directly responsible for the imprisonment and torture of 12 persons, one of whom had died as a result of cruelties inflicted. Kahner had accused 11 Germans and one American citizen of engaging in espionage activities for the United States. He beat confessions out of the "agents," but nothing was ever proved and there was a complete lack of even circumstantial evidence. A Japanese warrant officer, formerly with the Kempei, testified that his organization had not investigated or suspected any of the persons before Kahner's allegations. The warrant officer recalled that Kahner had frequently stated his theory of counterespionage - "In investigating spies, one must torture and beat people in order to get the truth."

Information gathered on Kahner was forwarded to the SCAP War Crimes Section.[19]

CIC Looks Into German-Japanese Relations

In the early months of the Occupation, the Special Operations "desk" of the 441st CIC Detachment compiled a collection of documents written by Nazi diplo- which tended to unravel the complexities of German-Japanese relations from 1936 to 1945.

---

17 Operational Hist of Theaters, "CIC Hist, 1945-1948, Japan," (Uncl) (Cen Rec Fac).

18 "Representative Hist of CIC Activities in the Occupation of Japan," (Sep 1945-1948), p. 55, (Uncl) (Kansas City Rec Cen, Box C3743).

19 GHQ, FEC, MI Sec, Gen Staff, "Opns of the CIS," Vol IX of "Opns of the Intel Service in the SPA," Chap IX, Selected CIC Investigations, Case No. 9, Gerhard Kahner, Gestapo Agent, (Secret) (Cen Rec Fac).

Three major documents were included in this collection: "The Nazi Party and Japan;" "Japanese Policy from 1936 to 1945 Under the Aspect of German-Japanese Relations;" and the personal statement of Maj. Gen. Eugen Ott, former German ambassador to Japan. The remainder of the collection was made up of remarks by Ott and H. G. Stahmer, Ott's successor, on the two first-mentioned papers, written by former German diplomats. This series of documents offered insight into the early German-Japanese negotiations, the effect of the 1939 German-Soviet Non-Aggression Pact on these relations, the eventual feeling in Tokyo that the Germans were invincible, the failure of the Japanese to attack Russia, and the internal tension of the Axis.

Although it was off the beaten path of its mission for CIC to collect historical material, the collection of these documents afforded Intelligence Division, the State Department and authorities concerned with the prosecution of war criminals valuable insight into the complex relationship between the two major enemies of the Allied Forces in World War II.[20]

The Confessions of Doctor

In addition to rounding up fragments of the Japanese war machine, CIC in the first months of the Occupation began investigation of several "shady" characters with international reputations whose devious paths during the war led to Japan.

One was who first came to the attention of American authorities through his own actions. Either fearing discovery by Allied Intelligence or wishing to hop on the winners' bandwagon, authored "A Report To The Allied Commission Concerning My Secret Activities in Japan During World War II," and forwarded the document to the Allied Commission on 2 September 1945. Concurrently with this action, the wife, presented the 308th CIC Detachment with a copy of the statement.

During interrogation by CIC, and his wife volunteered their services to the Allies for "intelligence work." The doctor desired to obtain a monopoly on the importation of Swiss publications into Japan. felt he would have access to certain individuals whose knowledge and movements would be of interest to the Americans. Further, suggested that his wife be given employment with whatever organization was being set up to control foreigners in Japan, so she could have access to files providing information on the whereabouts of such persons. Both the seemed to put much emphasis on information concerning foreign nationals.

CONFIDENTIAL

The Outlines His Personal History

in his report had outlined his wartime activities. Coming to Japan to accept a the doctor watched his job disintegrate, as a result of unfavorable Gestapo reports. claimed he had sought connections with the German Embassy and had infiltrated Nazi ranks to obtain intelligence for the British and French. A review of report gave CIC the impression that his principal occupation had been selling information to the highest bidder.

bold request and some questionable features of his report caused CIC to open a background investigation on 21 September 1945.

Among the first persons interviewed was in Tokyo, who answered yes to the direct question: "Did work for Gestapo Chief in Japan?"

and another German national, both told interviewers that while working for German Intelligence in 1926 had been given a mission to the USSR. Caught by the OGPU and sentenced to death, had been loosed on the espionage stage once more in an unorthodox German-Russian trade of captured spies. The had then giving an account of his Russian experiences. econded CIC's impression of by calling him the "lowest form of wine" - a man who could be purchased by the highest bidder.

On 25 October, CIC's investigation had progressed sufficiently to warrant the arrest of on the ground that he had been a paid operative of the Gestapo. Concurrent with arrest, a search of the home uncovered letters and documents linking him to high Nazi officials, including Propaganda Minister Josef Goebbels and the infamous Meisinger. Two days after arrest, was interrogated at Sugamo Prison by CIC.

The proved remarkably adept at dialectic maneuvering, due no doubt to the fact he had undergone interrogation by the notoriously efficient OGPU. He began by stating he would gladly tell of his great devotion to the ideals of the United States and Great Britain. He dwelt on trivia to avoid giving facts which might implicate him - a tactic which CIC recognized as that of an experienced professional spy. spent much time telling of a certain spy in Russia. Cross-examination revealed that the spy had been in the USSR in 1904.

When confronted with CIC's knowledge of his wartime Gestapo connections, discounted his activity by stating again he had been gathering information for the Allies.

CIC Seeks British Contact

CIC attempted to locate British contacts to whom claimed he passed information. Particularly sought was a formerly with the British Information Office in Tokyo. On 2 January 1946, a cable from the British Foreign Office informed CIC that had been located and had stated that had transmitted information which had not been valued too highly. It was also reported that the British Naval Attache had received data from but had considered him unreliable.

Accepting as factual trip to the USSR as a spy, CIC nevertheless was stuck on one question. Why did the Gestapo employ, in an undercover status, a man who was publicly known to have been a German espionage agent, and whose name was probably on file in intelligence offices around the world? It seemed likely had come to Japan in a "free lance" status with the tacit approval of the German government, but had been given no financial assistance. Forced to sell information by the pound, rather than working on a steady salary, apparently had broadened his market to include all takers.

On 1947, his wife and children were deported to Germany as objectionable persons.[21]

A Rose by Any Other Name...

To American and Australian fighting men in the Pacific, the most familiar radio voice was that of the infamous "Tokyo Rose." Calling herself "Ann" (short for announcer), but given her reknowned nom de kilocycles by GI's, American-born had broadcast enemy propaganda from Radio Tokyo.

Many Allied soldiers were familiar with the greeting: "Good evening, my dear boneheads! This is your favorite enemy, Ann, broadcasting the 'Zero Hour' over Radio Tokyo, to listeners in Australia and the South Pacific..."

Initial investigation of "Tokyo Rose" was begun by the 80th Metropolitan unit of the 441st early in the Occupation. The essential elements of information, usually evasive at the start of an investigation, seemed patently clear in this instance. Investigation had to reveal whether "Tokyo Rose" had made her broadcasts with deliberate intent to lower troop morale or had been forced to do so by the Japanese authorities. If the former proved the case, then "Tokyo Rose" could be tried for treason against the United States.

---

21 GHQ, FEC, MI Sec, Gen Staff, "Opns of the CIS," Vol IX of "Opns of the Intel Service in the SPA," Chap IX, Selected CIC Investigations. (Secret) (Cen Rec Fac).

CONFIDENTIAL

Under the surface, the investigation was not so simple. It was generally conceded that several individuals might have been "Tokyo Rose." From the outset, however, was closely associated with the broadcasts, and her life and activities in Japan called for scrutiny by CIC investigators. Between September 1945 and February 1948, many persons, including Allied prisoners of war and Japanese nationals, were interviewed in connection with the case.

was stranded in Japan at the outbreak of the war, having failed, allegedly, to obtain papers necessary to leave. To support herself, she took various odd jobs in Tokyo and, in August 1943, became a part-time typist at Radio Tokyo.

Three prisoners of war, had been ordered under threat of physical violence and torture to write and conduct an hour and a quarter program for Radio Tokyo designed to lower the Allied troop morale. The officers decided to control the program to minimize the propaganda effect. They needed an announcer who would not inform on them and who could not possibly give the program a fatal "sentimental" touch. suggested The prisoners felt that unfeminine voice and manner would arouse no sentimental feelings, and that she might possibly develop into an entertaining personality. Above all, it was felt that she would remain loyal to them when she became aware of their intention to "tone down" the effect of the program.

accepted the job in November 1943 and within a few weeks learned of the prisoners' motives. Later statements of revealed that she not only cooperated with them, but began to furnish news items from America which she secured on her own initiative from the Domei News Agency.

After June 1944, when physically collapsed, began to write her own material. In April 1945, she became the wife of a Portuguese citizen.

was taken into custody on 17 October 1945 and remained in prison until October 1946 when voluminous correspondence on her case was exchanged between Japan and the United States.

By early 1946, the Far East Command came to the conclusion that it did not have enough evidence to warrant a military trial and that the ultimate decision in her case had to rest with the Department of Justice. was released and allowed to return to her home in Tokyo.

- SCAP was notified in March 1948 that the Department of Justice had decided to re-examine the case. After investigations by Justice Department representatives in Japan and FBI agents in the United States, formal charges were pressed against although the evidence uncovered by the most recent investigations had not done much to alter the story CIC had pieced together in 1945. In September 1948, "Tokyo Rose" was transferred to the United States to await trial.

Convicted, sentenced and turned down an appeal, she was jailed on October 1949 for treason against the United States.[22]

The One Who Wrote Poems

Among the group of prisoners of war liberated in Japan were a number who required CIC investigation. Many had been placed on General MacArthur's War Criminal List as a result of alleged subversive activity in Japanese camps. Prominent among these was

who held a position with a civilian construction company on had been taken prisoner when the fell on 1941. From the first, had been a trouble-maker. In an effort to ingratiate himself with the Japanese, he openly exhibited a pro-Japanese sentiment - at the same time claiming to have allegiance to no nation, being a "citizen of the world."

"An Ode to President Roosevelt"

On his own volition produced a considerable amount of treasonable literature - including two books the Japanese exploited for propaganda purposes. One of the volumes contained an opus titled "An Ode To President Roosevelt." One stanza will suffice.

> To One of faith, in whom we placed the same
> Giving Power and Glory to YOUR name.
> Believing that then you would be,
> A Good example of Humanity.

22 GHQ, FEC, MI Section, Gen Staff, "Opns of the CIS", Vol IX of "Opns of the Intel Service in the SPA," Chap IX, selected CIC Investigations, Case (Secret) (Cen Rec Fac)

Washington, D.C., 1950, pp 382-388 (Conf) (Cen Rec Fac).

At Camp Bunka, like the other prisoners there, was supposed to write propaganda and work for Radio Tokyo. Allegedly he also was put in charge of prisoners; was friendly with Japanese in charge of the camp; received special privileges; was insubordinate to American officers; and cooperated whole-heartedly with the Japanese propaganda program which other prisoners, led by were trying to sabotage. Prisoners interrogated by CIC felt that had informed on the officers who were undermining the broadcasts. Many declared that tales to Japanese authorities had resulted in the removal and possible execution of who resisted the Japanese program more strongly than other prisoners.

Thirty-Nine Interviewed by CIC About

Among 39 men whose testimony was recorded by CIC, were enlisted men present in the mess hall at the time of the incident; high-ranking officers who had contacts with at the Manila and Taiwan prisons; fellow broadcasters from Bunka; a Japanese Army sergeant stationed at Bunka; and Kaji Domoto, a Japanese civilian, who succeeded the Only and gave testimony that reflected favorably on claimed that many improvements at Bunka could be attributed to the efforts of

According to his own testimony and that of others, was extremely upset emotionally during his stay at Bunka. His confusion over whether or not to act with the group that was "fixing" the broadcasts was greatly complicated when "fell in love" with a lieutenant in the group.

When was replaced by Domoto, an American-born Japanese, as head of Bunka, things took a turn for the worse for Domoto sympathized with the prisoners' objectives and, in a general meeting, denounced as a "stool pigeon," and privately told others that was an informer for the Japanese.

Just before the surrender, placed under arrest. Liberating American troops took him into custody and CIC's investigation began.[25]

During December, was diagnosed by psychiatrists: "Psychopathic personality (emotional instability and sexual psychopathy)." So serious was his

25 Hq CIC Metropolitan Unit #80, Summary Rpt, Title: Date: 5 Feb 1946, Office of origin: H2 441st CIC Det, Case Classification: Treason (TREASON) (Cen Rec Fac) (X7134682).

condition that it was believed at times was not totally responsible for his actions.[26]

statements regarding CIC's initial questioning are available. In a letter to the Commanding General, Eighth Army, labored through 51 pages in an attempt to clarify his position. "Some CIC officers came, after several days, and took me into a small room where they questioned me about . I am loyal to my officers: and I always represent things as they should have been, when people's reputations, honor and integrity are questioned. The CIC men used a disrespectful, accusing tone in reference to asking me what did I know about 'that guy,' etc., 'Did he broadcast?' etc. It was apparent that their interpretation or attitude toward what we did was decidedly unfavorable. I felt that there was a possibility of public scandal and that everyone was in jeopardy. I refused to make any derogatory statement about any officer."

Then, about a later interrogation - "Then a man from CIC came and questioned me... (He) showed me a sentimental note of apology I wrote in the Bunka Camp, made innuendoes, veiled threats, and left me practically irrational. He questioned me about the Japanese taking the mess officer to the stockade on Corregidor and about the radio activities. The man came two or three times, and I told him, I believe, that I did everything wrong and asked him to write a statement for me, if it was my last, as I want the record to read that I did the best I could, regardless."

And later - "different men came from CIC (three of them) and asked many questions: and when I started to talk, I began to remember where I had been since taken prisoner of war on Corregidor. They told me to write. At first I could not connect happenings in sequence, and a great deal I have pieced together from what others told. As the truth is, the period following our capture, and some months at the Bunka camp are confused and vague in my mind. They were at the time, so the memory is likewise. I do not want to escape responsibility, as I understand it goes hand in hand with freedom."[27]

Conduct Characterized as "Unbecoming a Soldier"

Contrary to claims that he never made derogatory remarks about officers, testimony characterized conduct at Bunka as "unbecoming a soldier." stated that attempted to undermine the

authority of the officers, and went so far as to suggest to the "front office" that officers be removed entirely and writing be left in the hands of enlisted men.[28]

The SCAP Legal Section gave CIC's evidence close scrutiny, but in view of the probability that had been mentally defective during his capture, recommended that no charges be preferred.[29]

Although the Army continued to collect evidence against it was not until 3 September 1949, when he was discharged after another enlistment, that definite action was taken. Immediately upon discharge, was arrested by the FBI and arraigned on the charges of treasonably dealing with the Japanese in time of war.[30] He was convicted on 11 February 1953, and given a life sentence and $10,000 fine. The United States Court of Appeals reversed the verdict on 28 August 1954, ordering the case sent back for retrial, on the ground that the trial should have been held in New York, but at the place of original arrest.

On 14 March 1955, in Baltimore, Maryland, was set free by a Federal judge who ruled that had been denied his Constitutional right to a speedy trial, and that it was impossible to give a fair trial at such a late date.[31]

CIC Seeks SCAPIN Violators

Early in the Occupation, CIC became charged with a responsibility peculiar to the situation in Japan.

SCAP's policy for controlling the Occupation had developed into a procedure of directing the Japanese Government to accomplish and enforce the physical operations American authorities deemed necessary. SCAP directives to the Japanese Government became known by the short title of "SCAPINS" (SCAP Instructions).

CORREGIDOR VET AS HAW HAW OF PACIFIC) (Cen Rec Fac).

31

Rec Fac).

To determine the degree of compliance with SCAPINS, the American agency most closely related with the purpose of the particular directive maintained a surveillance of Japanese enforcement.

In the early days of the Occupation, GHQ turned out SCAPINS faster than surveillance agencies could be organized to check Japanese accomplishments of the orders. Situated in offices scattered throughout Japan since the first weeks of Occupation, CIC drew the responsibility of working with skeleton staffs of such organizations as Civil Information and Education, Military Government and the Provost Marshal to determine SCAPIN violations. Eventually CIC was limited to surveillance of SCAPIN's emanating from the Civil Intelligence Section.

As far as CIC was concerned, the most important SCAPINS were issued on 4 January 1946. Number 550 was titled "The Removal and Exclusion of Undesirable Personnel from Public Office," and Number 548, "Abolition of Certain Political Parties, Associations, Societies and Other Organizations." These directives, generally classified as the "purge directives," were aimed at reduction of militarists and ultra-nationalists in the Japanese population.[32]

32 "Representative Hist of CIC Activities in the Occupation of Japan" (Sep 1945 to 1948), pp 37-40, (Uncl) (Kansas City Rec Cen, Box C3743).

Section 2

ORGANIZATION OF THE 441ST CIC DETACHMENT

As an operational unit of the Civil Intelligence Section, the 441st CIC detachment, as did detachments in all theaters, "contributed to the successful operation of the U.S. Army through the detection of treason, sedition, subversive activity, disaffection and the detection and prevention of enemy espionage and sabotage."

"The Eyes and Ears of the Occupation"

In Japan, however, "this mission was further developed into that of detecting and reporting to the proper authorities conditions inimical to the Occupation, where subversive activities were involved." It was by the collection and transmission of "spot reports" - news flashes from sensitive areas and points of future difficulty - that CIC earned the title, "Eyes and Ears of the Occupation."[33]

CIS Placed Under G-2

On 3 May 1946, Civil Intelligence Section was placed under jurisdiction of the AC of S, G2, Armed Forces, Pacific (AFPAC). With this move, counter-intelligence and positive intelligence were merged under a single staff section, ending, from the G2 point of view, an "obviously artificial division" that had "severely crippled" intelligence operations for four years - first in the Southwest Pacific Area (SWPA) and then in AFPAC.

At the direction of Brig. Gen. Charles A. Willoughby, the new chief of the Civil Intelligence Section, as well as the AC of S, G2, AFPAC, immediate and sweeping changes were made to tighten the control exercised by CIS over CIC.[34]

Charged under the specific directives of General Willoughby with the strengthening of CIS operations was the deputy chief of CIS. At the time of the transfer to G2, Col. Harry I. T. Creswell held this position. From 10 June to 1 October 1946, Col. W. S. Wood was deputy chief and after Colonel Wood's departure was Col. Rufus S. Bratton.[35]

CI Division Organized in 1949

On 15 June 1949, the Counter Intelligence Division was instituted and placed in the organizational chart between CIS and the 441st CIC Detachment. The Counter Intelligence Division performed intelligence processing, formerly the duty of CIS. Colonel Bratton, Deputy Chief of CIS since 1946, was given the additional position of Director, Counter Intelligence Division.[36]

Four CIC Commanders From 1946 to the Korean War

Concurrent with the assumption of control of CIS by the G-2 Section, Lt. Col. Wayne E. Homan was appointed chief of the 441st CIC detachment. In July 1947, when Colonel Homan assumed direction of the CIS Operations Division, former Deputy Commanding Officer of the 441st, Lt. Col. L. L. Martin became acting commander. In January 1948, Col. Russell G. Duff, Colonel Homan's predecessor in the CIS position, was given command of the 441st. Colonel Duff was reassigned in September 1949, and from that date until early in 1952, Col. L. G. Smith commanded CIC in Japan.[37]

Name Headquarters for Captain Norton

After December 1945, CIC maintained its headquarters at the former Kempi Tai Headquarters building in Tokyo.[38]

On 7 December 1947, this headquarters was officially given the name Norton Hall in honor of Capt. John Norton, a West Point graduate, who commanded the 11th CIC detachment during the war. Norton and four agents of his command were killed on 13 August 1945, when the B-29 carrying them to Okinawa preparatory to the flight to Japan crashed in landing.[39]

Headquarters Divided into Three Branches

By the beginning of 1946, headquarters, 441st CIC detachment was composed of three branches: Administration, Plans and Training and Operations.

39 Ibid, p 5.

Until November 1946, the only investigative portion of the Operations Branch was the Investigations Section, which was responsible for coordination and supervision of all investigations in the field. As such, the Investigations Section acted as the connecting link between CIC field units and the chief of the Civil Intelligence Section.

The Operations Branch was split into two investigative sections in November 1946, with the creation of the Special Projects Section. The new section succeeded a special unit which had operated as the "Hongo House Group." The mission of the "Hongo House Group" had been to counter the efforts of Soviet Intelligence in Japan, and the group had been headed by Maj. Thomas Sheehan, formerly with the Office of Strategic Services in Germany.

With the advent of the Special Projects Section, the Investigations Section's largest fields of activity became security investigations of personnel and installations along with SCAPIN surveillances.

Broadly speaking, the Investigations Section handled those cases dealing with rightist activity, while the Special Projects Section concerned itself with the many-sided aspects of communism: both Japanese and foreign varieties. Any cases concerning or believed to be concerned with communism were directed immediately to Special Projects. Initiating and coordinating the majority of the Special Projects Section's cases was the "CP Desk," a division concerned with the doings of the Japanese Communist Party (JCP). Lt. Col. Robert M. Reese, a veteran of CIC operations in the Southwest Pacific Area, and former commander of Tokyo's Metropolitan CIC Unit, headed the Special Projects Section.[40]

Two Sections Combine in 1948

On 1 May 1948, the two investigative sections of the Operations Branch were combined into the Special Investigations Section in an attempt to make the detachment more efficient. The change decreased report processing time to a point where the 441st CIC was forwarding reports to CIS twice daily. By centralizing control of reports, the detachment found the confusion and inefficiency inherent in the old procedure for routing of operational correspondence was eliminated.

From the beginning, sections of the Operations Branch were sub-divided into "desks," meaning that a specified officer within the section handled all cases within certain classifications.

Several months after the centralization of operations under the Special Investigations Section, it was deemed necessary to make one further change.

40 "Representative Hist of CIC Activities in the Occupation of Japan," Sep 1945 to 1948, pp 25-29, (Uncl) (Kansas City Rec Cen, Box C3743).

Up to mid-1948, the investigation of the Soviet Mission and the colony of Soviet nationals in Japan had been in the hands of the Special Investigations Section at headquarters[41] with almost all of the field work accomplished by the Tokyo-Kanagawa District.[42] In mid-1948, the Tokyo office set up a new "desk," the Foreign Section, to handle cases involving Russian nationals.[43] Near the end of July, orders were published designating this unit, now referred to as the Zed Section, as a section of Headquarters, 441st and naming Maj. Jack Y. Canon as Chief.[44]

In actuality, the Zed Section worked directly for General Willoughby and CIS although maintaining case coordination with 441st headquarters. Investigations were also coordinated with similar operations in Hokkaido which were under the supervision of Maj. George G. Gargett, commanding officer of the Sixth CIC District. Shortly after its formation, the Zed Section mission was broadened to include all sensitive investigations of special concern to General Willoughby.

One of the major problems created by the establishment of the Zed Section was the ill-feeling that arose between men of the Tokyo-Kanagawa District and the agents of the new group.[45]

During the years of the Korean War, the Zed Section was deactivated and the investigations of Russian nationals returned to the Tokyo office.[46]

Plans and Training Section has Varied Duties

The Plans and Training Section was responsible for a number of activities, some verging on the administrative and others semi-operational. Duties included: the dissemination of all regulations and field manuals to field units; over-all planning for operation of all field units; preparation and publication of all periodic

reports required by higher headquarters; preparation of the counterintelligence portion of the monthly CIS Periodic Summary; and the operation of the CIC Training School.

On 20 February 1948, the Plans and Training Section was redesignated the Policy and Reports Section and a Training Section created to take over operation of the CIC Training School and the general military training of enlisted men within 441st Headquarters and the Tokyo office.[47]

CIC Widely Distributed in Japan

The wide geographic distribution of CIC units in Japan gave CIC a greater coverage for surveillance purposes than any other agency of the Occupation. In November 1947, for instance, while the Military Police maintained 34 detachments, CIC was manning 61 posts - with less than one-fifth of the Military Police strength.

In maintaining so many offices, CIC was thinly spread throughout the islands and active in areas far removed from the main cities. Especially during the first few years of Occupation, coverage of events of interest to GHQ outside metropolitan areas rested almost completely with CIC. The coastline of northwest Honshu and western Kyushu, along which Koreans were frequently smuggled into Japan, were covered only by CIC units.[48]

In the early days of the Occupation, the 441st's far-flung units operated directly under two regional headquarters, the Fourth and the Sixth, which had counterintelligence jurisdiction over areas corresponding to territory under control of the Sixth and Eighth Armies respectively. On 31 December 1945, the Sixth Army was relieved of its occupational duties and CIC began to reorganize along the lines of jurisdiction of the I and IX Corps - the two components of Eighth Army. In September 1946, the Sixth CIC Region was redesignated the Second CIC Region and headquarters was established in Sendai in northern Honshu. Second CIC Region's area of jurisdiction corresponded to that of IX Corps.

Meanwhile, in the I Corps Area, the First CIC Region, supplanting the old Fourth Region, was established with headquarters remaining in Kyoto.

47 "Representative Hist of CIC Activities in the Occupation of Japan," Sep 1945-1948, p 27-28, (Uncl) (Kansas City Rec Cen, Box C3743), and "Functions List," attached to Inter-office Memo, Subj: G-2 Functions and Organization Folder, From: CIC, To: CIS, undtd, (Secret) (Kansas City Rec Cen, Box C3743).

48 Inter-office Memo, From: 441st CIC Det, To: Lt Col Homan, Subj: Draft of CIC 15 Minute Brief, 1 Nov 1947, (Uncl) (Kansas City Rec Cen, Box C3743).

Concurrently with redesignation of the Regions, Metropolitan and Area CIC units became things of the past. A network of 30 Area offices, each designated numerically, was established. Generally the jurisdiction of an Area office extended over a prefecture, and Area headquarters were located in the prefectural capitol.[49]

Thirteen Area offices were originally under First Region: Area 1, Kagoshima; Area 2, Kumamoto; Area 3, Kokura; Area 4, Yamaguchi; Area 5, Kure; Area 6, Takamatsu; Area 7, Okayama; Area 8, Kobe; Area 9, Osaka; Area 10, Kyoto; Area 11, Tsu; Area 12, Nagoya; and Area 13, Kanazawa.

The 17 Area offices under the Second Region were: Area 20, Nagano; Area 21, Shizuoka; Area 22, Katsuyama; Area 23, Yokohama; Area 24, Chiba; Area 25, Tokyo; Area 26, Urawa; Area 27, Maebashi; Area 28, Isohama; Area 29, Utsunomiya; Area 30, Niigata; Area 31, Fukushima; Area 32, Yamagata; Area 33, Sendai; Area 34, Akita; Area 35, Morioka; Area 36, Hachinohe; and Area 37, Sapporo.

Most Area offices maintained sub-detachments in the territory of their jurisdiction. Area 37, with eight sub-detachments, easily outstripped the other offices in number of subordinate units. Area 4 was next with four.[50]

Several Changes Made in Area Designations

On 21 January 1947, Area 23 in Yokohama became part of Area 25 which, in turn, was redesignated the Tokyo-Yokohama District. Directly responsible for counterintelligence coverage of this highly-sensitive area, the newly-designated district, reporting directly to 441st headquarters, joined the two Regions in becoming a main field unit of the 441st.

At the same time, jurisdiction over Area 21 at Shizuoka was transferred from Second to First Region, and the office redesignated Area 14.[51] In 1948, the Shizuoka office again became Area 21 and returned to Second CIC Region.[52]

51 "Representative Hist of CIC Activities in the Occupation of Japan," Sep 1945-1948, p 19, (Uncl) (Kansas City Rec Cen, Box C3743).

52 Inter-office Memo, From: Col Bratton, To: General Willoughby, Subj: Relationship CIC to Tactical and MG Units, 21 Jun 1948, (Conf) (Kansas City Rec Cen, Box C3743). (A chart accompanying this IOM lists CIC Areas as of that date.)

Generally, CIC Area offices were instructed to locate their headquarters in the prefectural capitol. With Area 36, this principle was violated, since the capitol, Aomori, had been almost obliterated by war-time bombings. In October 1947, after operating since late 1946 in Hachinohe, Area 36 headquarters moved to Aomori.[53]

Districts Replace Regions in Late 1948

In September 1948, the 441st CIC detachment's system of office distribution underwent another major revision. First and Second Regions were each subdivided into three districts. Districts one through three were located in the First CIC Region Area and four through six were subdivisions of the Second Region.

The First District was the island of Kyushu; Second District the island of Shikoku and the southern tip of Honshu; and the area of the Third District was that of the 25th Infantry Division in south central Honshu. That area of north central Honshu under the jurisdiction of the 1st Cavalry Division comprised the Fourth District while the 7th Infantry Division Area of northern Honshu was designated the Fifth District. Sixth District covered the whole of Hokkaido.

Headquarters for the Districts were: First, Kokura; Second, Kure; Third, Osaka; Fourth, Camp Drake; Fifth, Sendai; and Sixth, Sapporo.[54]

53 "Representative Hist of CIC Activities in the Occupation of Japan," Sep 1945-1948, p 19-20, (Uncl) (Kansas City Rec Cen, Box C3743).

54 In late 1948, the 441st maintained 54 area dets and sub-dets. They were: Under 1st Dist - Fukuoka, Saga, Oita, Kumamoto, Nagasaki, Miyazaki and Kagoshima ares Dets and Tsushima and Sasebo Sub-Dets; Under 2d Dist - Tottori, Okayama, Shimane, Hiroshima, Yamaguchi, Kagawa, Tokushima, Ehime and Kochi Area Dets; Under 3d Dist - Toyama, Ishikawa, Gifu, Aichi, Fukui, Shiga, Mie, Nara, Wakayama, Osaka, Kyoto and Hyogo Area Dets and Nanao and Maizure Sub-Dets; Under 4th Dist - Tochigim, Ibaraki, Gumma, Nagano, Saitama, Chiba, Shizuoka and Yamanashi Area Dets; Under 5th Dist - Aomori, Iwate, Yamagata, Myiagi, Fukushima and Niigata Area Dets and Hachinohe and Hirosaki Sub-Dets; and Under 6th Dist - Wakkanai, Kushiro, Asahigawa, Haokodate and Sapporo Area Dets. (See: GHQ, FEC, Office of the AC of S, G2, "Historical Rpt," for 1 Jan 1949-31 Dec 1949, Chap III, Part IV, plate #37 (Map of locations of CIC Offices in Japan, dtd 4 Oct 1948) (Secret)(Departmental Rec Br, AGO, Alexandria, Va.))

On the same status as the six districts, 441st Headquarters maintained the Tokyo-Kanagawa CIC District, covering the areas of those two prefectures, under the same arrangement as the old Tokyo-Yokohama District.[55]

After 1 October 1948, Regional offices no longer functioned in the CIC command echelon. Their responsibility was limited to liaison at Corps level and certain staff inspection duties delegated by the Commanding Officer, 441st CIC detachment. On 18 August 1949, the Regional offices were discontinued and their former liaison responsibilities taken over by liaison officers attached to I and IX Corps of the Eighth Army.[56]

During 1949 and 1950, the functions of the District CIC offices were: coordination of all field investigations within their area of jurisdiction; maintainance of master files on all investigations within the district; forwarding of all required investigative reports to 441st headquarters; maintainance of liaison with Division G-2, Provost Marshal units of tactical organizations, Civil Affairs and Japanese authorities; and supervision of confidential funds. Area detachments conducted field investigations within their zones of jurisdiction; maintained files on all investigations conducted in the area; forwarded to District headquarters agent reports covering all investigative activities; maintained liaison on the prefectural level; and organized and maintained an informant network.[57]

As had been the case when Regional offices were in operation, all personnel were assigned to the Districts from 441st headquarters, and then "farmed out" by the District to fill openings in Area offices.[58]

58 GHQ, FEC, Hq, 441st CIC Det, "Det Order #133," "Redesignation of Units and Command Responsibilities," 5 Aug 1948, (Uncl) (Kansas City Rec Cen, Box C3743).

The last major organizational change before the outbreak of Korean hostilities occurred in September 1949. The Tokyo-Kanagawa District was discontinued and the Tokyo and Kanagawa CIC Areas were established. Operational control over these two areas went to 441st headquarters.[59]

441st Works to Limit Jurisdiction

In the helter-skelter of the first months of the Occupation, CIC became tied up in a number of unusual operations. Later, under the watchful eye of General Willoughby, the 441st took steps to limit the range of CIC activities by determining definite jurisdictional boundaries.

In many rural areas of Japan, CIC was the sole representative of the Allied Occupation. There had developed a practice of local CIC offices establishing and dictating policies to prefectural and municipal branches of the Japanese government. In some instances, these verbal directives had exceeded the limits of SCAP directives.[60] On 26 June 1946, an order from CIC headquarters directed the cessation of these extra-curricular activities. In part, the order read: "While the zeal of the officers responsible for this practice is to be admired, nevertheless, it is desired that before local CIC officers put out directives whose scope and purview are of such moment as to be considered on a policy-making level, drafts thereof be submitted through this office to G2/CIS for approval.

59 GHQ, FEC, 441st CIC Det, Gen Order No. 3, Sec One, "Tokyo-Kanagawa District" and Section Two, "Establishment of Areas," 9 Sept 1949, (Uncl) (See: GHQ, FEC, Office of the ACofS, G-2, "Historical Rpt" for 1 Jan 1949 - 31 Dec 1949, Supporting Document #51) (Departmental Rec Br, AGO, Alexandria, Va) NOTE: In May 1950, the 441st CIC Det maintained 53 Area Det and Sub-Det. They were: Under First District - Shimane, Yamaguchi, Fukuoka, Sagem Oita, Kumamoto, Nagasaki, Miyazaki and Kagoshima Area Detachments and Tsushima and Sasebo Sub-Detachments; Under Second District - Hyogo, Tottori, Okayama, Hiroshima, Kagawa, Tokushima, Ehime and Kochi Area Detachments; Under Third District - Toyama, Ishikawa, Gifu, Aichi, Fukui, Shiga, Mie, Nara, Wakayama, Osaka and Kyoto Area Detachments and Maizuru Sub-Detachment; Under Fourth District - Tochigi, Ibaraki, Gumma, Nagano, Saitama, Chiba, Shizuoka and Yamanashi Area Detachments; Under Fifth District - Aomori, Iwate, Akita, Yamagata, Miyagi, Fukushima and Niigata Area Detachments; Under Sixth District - Wakkanai, Kushiro, Asahigawa, Hakodate, and Sapporo Area Detachments. (See: GHQ, FEC, Office of ACofS, G-2, "Historical Rpt (Part I)" 1 Jan 1950 - 31 Oct 1950, Chap III, Part II, plate #18 (Map of Locations of CIC Offices in Japan, dtd 23 May 1950) (Secret) (Departmental Rec Br, AGO, Alexandria, Va).

60 "Representative Hist of CIC Activities in the Occupation of Japan" Sep 1945-1948, p 37, (Uncl) (Kansas City Rec Cen, Box C3743).

This, especially with regard to those matters in which one common rule or criterion should be applied universally throughout the entire country."[61]

Headquarters Publishes SCAPIN Guide

Since the 441st's case load included many investigations that were not within even the broadest interpretation of CIC's mission, the Office of the AC of S, G2, in a letter to the commanding officer of the 441st, dated 1 October 1946, issued instructions designed to limit CIC activities within proper jurisdictional boundaries.

All CIC units were advised to review open cases in the light of CIC/CIS jurisdiction. If the investigation did not come under categories outlined in War Department directives, theater regulations or specific instructions from the G2, CIC was to halt the investigation and turn facts over to the agency responsible (i.e., Military Police, Military Government, Civil Information and Education, etc.)

Since many investigations outside the CIC mission involved SCAPIN violations, a bound booklet of all CIS - promulgated SCAPINS, the only ones with which CIC was concerned, was published and distributed to all units in November 1946.[62] In regard to the distribution of this SCAPIN Guide, Lt. Col. Wayne E. Homan, Commanding Officer of the 441st, informed General Willoughby: "A good 75 percent of the trouble we have gotten into in the past has been because we were trespassing on some other agency's territory." Homan noted further: "Where the other agency was not aware of this (trespassing), bad feeling resulted. When they were aware of it and were willing for us to go ahead, it was usually for one or two reasons: (a) the case was too hot for them to handle and they were willing for us to stick out neck out, or (b) the job was impossible to accomplish and they were willing for us to take the blame for failure, rather than assume it themselves."

Colonel Homan concluded: "We have now reviewed all cases in the field and have eliminated those that have overstepped the boundary of our authority. This should give us more time to complete our job."[63]

63 Inter-Office Memo, From: CO, 441st CIC Det, To: Gen Willoughby (Thru: Col Bratton), Subj: CIC Activities, 12 Nov 1946, (Conf) (Kansas City Rec Cen, Box C3743).

After publication of the SCAPIN Guide, when alleged violations of SCAPINS over which another agency exercised supervision came to the attention of CIC, facts and information immediately available were transmitted, through channels, to CIS and from there to the agency responsible.

In an emergency, when the agency of prime jurisdiction was not available, CIC was authorized to take that action deemed immediately necessary. At the earliest possible moment, however, CIC contacted the responsible agency and turned over the investigation.

Realizing that some incidents, while not wholly under CIC jurisdiction, might contain elements requiring CIC investigation, G2 issued instructions that CIC was to concern itself only with those elements within its jurisdiction. Other portions of the incident were to be handled by the proper SCAP agency. In an instance where an investigation involved a criminal act and disaffection, CIC, therefore, was authorized to collect only those facts having to do with disaffection.[64]

CIC Instructed Not to Act on SCAPIN 550

Prior to the imposition of rigid limits on the matters within CIC's investigative jurisdiction, an equally important, but less knotty, problem of jurisdiction was eliminated. CIC field units, without specific instructions from headquarters, 441st, had been taking direct action to remove public officials holding positions in violation of SCAPIN 550, "Removal and Exclusion of Undesirable Personnel from Public Office."

On 5 August 1946, CIC ceased to be even an unofficial action agency for violations of SCAPIN 550. Removals from office, unless accomplished voluntarily by the Japanese government, became the duty of the Compliance Branch, CIS, G-2.[65]

By the end of 1946 a more integrated CIC resulted from the clearing up of most problems of jurisdiction. CIC was no longer concerned with the seizing of textbooks and the purging of teachers (a Civil Information and Education Project), blackmarket investigations (under the jurisdiction of the Provost Marshal) and the freezing of organizational funds (the responsibility of the Office of the Civil Property Custodian).

SOPs Coordinated Into CIC Policy Guide

To assure all CIC units that they were operating in an approved manner, texts and documents pertaining to CIC responsibility and mission were collected in a bound volume, the CIC Policy Guide, and distributed to field offices in November 1946. This more for the first time supplied field units with a coordinated Standard Operating Procedure.[66] Under one cover were what Colonel Homan referred to as "the tools of the trade."[67]

Meanwhile, machinery was established in the Policy and Reports Section of 441st headquarters to continually supply each holder of the Policy Guide with revisions and new directives published after initial issuance.

In subsequent months, the Policy Guide grew into a bulky, awkward manual, tending, as a result, to defeat its purpose. Since many letters and orders in the Policy Guide were outdated and no longer pertinent, Capt. A. M. Wilcox was assigned the task of reorganizing and condensing it. By 1 August 1948, the

volume was cut to about one-half its former size and contained condensed versions of those CIC directives still effective.[68]

Headquarters Works to Coordinate Field Activities

Concurrent with attempts to establish definite boundaries for CIC activity, steps were taken by headquarters to better coordinate CIC units in the field. Until 20 August 1946, field units had frequently opened investigations on their own initiative, sending reports to headquarters only when the investigation was completed. It was possible that headquarters would not know of a particular case until the complete report from the field was received. In the same vein, field units frequently instituted investigations upon the request of a local tactical unit or Military Government team without notifying headquarters.

In such circumstances, it was possible for an explosive situation to arise and even to pass before headquarters was aware of any danger. It was also possible for neighboring Area offices to investigate the same case, unknown to each other or headquarters. This situation, it was felt, called for immediate action.[69]

First steps were taken on 20 August 1946. All units received a letter from headquarters outlining "uniform practice in regard to the forwarding of investigative reports" from Regions to Detachment headquarters. Among other things, Regions were advised that in particularly important investigations, headquarters was to be immediately informed of all developments. Regions desiring coverage of leads in areas outside their jurisdiction were ordered to route Essential Elements of Information (EEIs) through headquarters where they would be transmitted to the proper office in the field.[70]

This directive was only a beginning. The next step was taken on 3 October 1946, when a letter from headquarters outlined new practices to be "effective immediately." All CIC Area units were to submit through Regional offices to headquarters, lead sheets on pending cases except those opened at the request

CONFIDENTIAL

of headquarters. In future cases not emanating from headquarters, lead sheets were to be submitted in a similar manner. The lead sheet was to indicate the agency requesting the investigation.[71]

Area office compliance with the directive of 3 October 1946 made it possible for headquarters to keep an accurate tabulation of field investigative activity. To insure that this tabulation was kept current, headquarters, on 12 February 1947, ordered that units notify headquarters within 24 hours after a case was opened.

EEIs Determined at CIS Operations Division

In February 1947, the process for determination of EEIs of investigations originating in the field was fully outlined. It was recognized as a virtual impossibility for field units to establish completely the EEIs of an investigation.

Therefore, headquarters, upon notification of a new case, forwarded available information to the CIS Operations Division. Here the EEIs were determined and disseminated to investigating units.

Under this system, field units had a measuring stick by which to gauge work required to complete a case and all energies could be directed toward gaining data of definite value to higher headquarters.[72]

Priority System Revised

A revised system of case priorities, established on 25 February 1947 further enabled area units to operate in accordance with the desires of headquarters and CIS.

Under the original priority system, set up in April 1946, the Area detachment which opened the investigation assigned it one of three priorities, without direction

Homan, Lt Col, Commanding, (Kansas City Rec Cen, Box C3743).

from headquarters. The April 1946 communication merely outlined the definition of each priority "for the guidance of all units."[73]

The new system, as explained in a letter to all field units, provided that all priorities would be established by CIS. Priority I was given to cases requiring immediate action by CIC to comply with requests from the Chief of Staff or the AC of S, G2, as well as those investigations which would lose intelligence value if not undertaken immediately. Only Chief of Operations, CIS, had the power to allot priority I.

Priority II cases involved a time element too, because completion was essential for action or study by CIS. Priority III cases were those deemed important enough to require an interim report four weeks after dissemination of the initial lead sheet. All other cases were Priority IV.[74]

To insure operational efficiency in subordinate units, headquarters in 1947, instituted the "tickler" system which called for review of pending cases at headquarters every 30 days.

Report Writing Standardized

To further coordinate field activities, a uniform and approved system of report writing was developed. A six-class course in report writing, taught by Maj. Clarence Reed, an instructor on TDY in Japan from the CIC School at Holabird Signal Depot, was given many of the detachment's investigative personnel.[75]

Coordination Completed by Mid-1947

By mid-1947, the work of consolidating and coordinating the 441st CIC detachment's operations was virtually completed. Field units had been told precisely how to operate in the manner desired by headquarters and CIS. The SCAPIN Guide set limits on what was to be investigated. The CIC Policy Guide told subordinate CIC units how to get the information desired. The procedure for EEI dissemination made it possible to tell field units what data to collect to

complete investigations. The priority system was utilized to tell units what to collect first. The standardized report writing procedure told them how to report what they found.

Staff Visits Aid Field Units

To further guarantee that field units were aware of what was expected of them, headquarters in late 1946 began a series of staff visits. In October 1946, Colonel Homan personally visited the two Region offices. Important and outstanding cases were discussed with Regional commanders and Colonel Homan put in motion the review of all pending cases called for by previous directives.

A major concern of both Regional commanders was liaison with the Corps in its area. Colonel Homan visited Corps G2s and briefed them on what they could expect (and what they could not expect) from CIC.

Colonel Homan wrote, in reporting his visit to I Corps G2: "I used the illustration of the FBI which is a central-controlled police agency (national) but must work with and for the U.S. Attorney in each judicial district. I said we considered the situation comparable, since the U.S. Attorney for the FBI and the tactical commander for CIC are action agencies; that we are merely the investigative and reporting agency." Colonel Homan also discussed with his Regional commanders the problems of liaison with tactical units below Corps level. A major difficulty appeared with the realization that most Division G2s were not trained intelligence men and often were burdened with additional duties. It was agreed that Division G2s should be completely informed on "goings-on" within their area, but that CIC should be reluctant to seek or accept direction from these lower levels.[76]

Staff visits and inspections continued throughout the Occupation at fairly regular intervals. To illustrate the nature of these visits, the field trip of Lt. Col. Bazil L. Baker to seven Area offices of the Second CIC Region in May 1948 has been selected as an example. Colonel Baker's reports to the Commanding Officer of the 441st upon his return indicates that he was concerned with both administration and operations. Billets, messing facilities, office facilities and motor vehicles were inspected, all from the standpoint of both maintainance and adequacy. Colonel Baker also checked the day-to-day administration of each unit.

76 Hq, 441st CIC Det, GHQ, AFPAC, Memo, Subj: Visit to First CIC Region (I Corps), To: Gen Willoughby (Thru: Col Bratton), 21 Oct 1946, (Secret) and Hqs, 441st CIC Det, GHQ, AFPAC, Memo, Subj: Visit to Second CIC Region (IX Corps), To: Gen Willoughby (Thru: Col Bratton), 14 Oct 1946, (Secret) both /s/Wayne E. Homan, Lt Col, Commanding, (Kansas City Rec Cen, Box C3743).

Operations were reviewed with particular regard to informant networks and operational files. In one instance, where an Area commander was felt not to have a sufficient grasp of what CIC operations should entail, the officer was invited to join the visiting party to see what was being done in other Areas. At CIC Area 34 in Akita, this officer was able to learn the steps necessary for penetration of the Japanese Communist Party by informants.

One Area office, particularly strong in operations, was found deficient in administration because the commanding officer spent his whole effort in attaining operational efficiency. Operations in several offices had suffered repeatedly from frequent change of commanders. At Area 35, Morioka, Colonel Baker was able to make many helpful suggestions to a commander who had had the misfortune to take over a fairly slipshod unit a few days prior to the staff visit.[77]

Spot Report System Instituted

As both political groups and labor unions became more active, CIS and the G2 recognized the great importance of being instantly aware of sensitive areas and possible points of future trouble. Obviously the system whereby Area detachments gave headquarters information only on cases as they were closed, was not sufficient to keep GHQ informed of the latest happenings. Even the more efficient measures later instituted were not considered adequate to cover extreme emergencies.

At the direction of General Willoughby, a system of spot intelligence reports was initiated in August 1946. All unusual occurrences which might have an immediate or potential effect on the Occupation were to be reported as soon as possible to headquarters and then transmitted to CIS.[78]

As the system of spot-reporting developed, CIC's came to be the rough equivalent of a news-gathering agency, not unlike a press wire service. CIC units throughout Japan covered incidents out of the routine which might have an effect on the operations of SCAP, subordinate commands or any phase of the over-all Occupation program. Generally, spot reports were concerned with riots, strikes, political or religious conflicts, threats of assassination, and

77 Inter-Office Memo, Subj: Rpt of Field Trip, From: Lt Col Baker, To: CO, 441st CIC Det, 18 May 1948, (Conf) /s/ B.L.B. (Lt Col Baker) (Kansas City Rec Cen, Box C3744).

mass demonstrations. Eventually, occurrences reported came to include sabotage, fires, explosions, spreading epidemics and wide-spread food poisoning.

These rapidly-transmitted reports gave information on who was involved in the incident, where it occurred, when it took place, how and why it happened, what corrective action was taken or what action was contemplated, and what time higher headquarters could expect another report.[79]

The directive establishing the spot report system stated:

> "It is considered that the above requirements do not alter the current CIC mission. They do, however, require that emphasis be placed on speed of reporting 'incidents' and emphasize the absolute necessity of maintaining close contact with and obtaining the cooperation of other U.S. agencies (e.g. - Provost Marshals, MG units, tactical units) and local Japanese authorities as well as making increased use of informants."[80]

CIC became the "pulse takers" - "the eyes and ears of the Occupation" - as a result of their efficient, speedy reporting of unusual occurrences. From the beginning, the Tokyo office was equipped with mobile radio equipment, although out-lying areas used the telephone for spot reporting.[81]

Teletype Network Established

By the end of 1946, CIC had taken the first steps toward setting up a teletype network. Conferences with AFPAC and Eighth Army Signal officers had ironed out most details.[82]

Teletype machines were installed in the Investigations Section at headquarters and in 10 major cities in Japan.[83] In other locations, teletype facilities of the

81 "Representative Hist of CIC Activities in the Occupation of Japan" Sep 1945-1948, p 42, (Uncl) (Kansas City Rec Cen, Box C3743.)

82 Hqs, 441st CIC Det, GHQ, AFPAC, Subj: Progress of CIS Since Its Transfer to G-2, To: CIS/G-2, 31 Dec 1946, (Conf), /s/ Wayne E. Homan, Lt Col, Commanding, (Kansas City Rec Cen, Box C3744).

83 CIC offices in the following cities were equipped with teletype facilities - Yokohama, Osaka, Kyoto, Sendai, Nagoya, Kure, Kobe, Okayama, Kokura, and Sapporo. (See: "Representative Hist of CIC Activities in the Occupation of Japan" Sep 1945-1948, p 42, (Uncl) (Kansas City Rec Cen, Box C3743).)

Eighth Army were made available to CIC offices. By 15 March 1947, the network was completely functional. During March, 113 on-the-spot reports were transmitted by this means.

With the teletype network, a problem arose over the sending of Japanese names, since Japanese words, when not accompanied by the corresponding kanji characters, were subject to misinterpretation. CIC sought a means whereby kanji could be sent by teletype. Capt. Junichi Buto, formerly with the Office of Strategic Services in the China-Burma-India theater, solved this problem. Using the Arthur Rose-Innes "Beginners' Dictionary of Japanese and Chinese Characters"[84] as a key, each kanji character was given a numerical designation dependent upon its location in the dictionary.

All CIC units were immediately supplied with the Rose-Innes dictionary. After April 1947, no misunderstandings with regard to Japanese names sent by teletype were encountered.[85]

1949: About 5,000 Spot Reports Processed

Figures on spot report volume for the year 1949 indicate the tremendous task accomplished by CIC. During the year, approximately 5,000 spot reports were transmitted from the field and processed at headquarters. September proved to be the peak month with about 520 reports processed and forwarded to the Counter Intelligence Division. In December, more than 210 reports concerning labor activities were processed in contrast to about 60 such reports in August. Communications classified as dealing with foreign activity were more consistant, ranging from 70 to 130 per month. Spot reports on complaint cases numbered under 10 in February and March, but shot up to 95 in June. Spot reports involving political activity ranged from 15 to 40, except for September when there were 90 such items. The remainder of the communications were categorized as miscellaneous with the number usually hovering around 120, except in August when 220 such reports were transmitted and processed.[86]

The Problem: Is Spot Reporting a CIC Mission?

Initial establishment of the spot report system contemplated no alteration of the CIC mission. Nevertheless, observation of all meetings and demonstrations with the rapid transmission of minutely-detailed reports on these incidents was considered by some a non-CIC function - or at the least, an inefficient use of CIC personnel. It was General Willoughby's demand that he receive from CIC advance information on riots and meetings and detailed periodic communications while these incidents were in progress; so a considerable quantity of CIC personnel were tied up satisfying the request.

Lt. Col. Joseph Wright, formerly Operations Officer for the Tokyo-Kanagawa District, recalls one instance where 25 CIC agents were required to cover a Tokyo movie studio riot in the precise manner desired by the G2. The actors, spurred by their Communist-led union, had taken possession of the studio, boarded it up, and started a riot inside. Japanese Police, reinforced by members of the 2d Cavalry Regiment, surrounded the plant. The actors utilized wind machines to blow ashes at those who came close to the building.

CIC was present with five radio vehicles to report the event. Just when the riot was reaching its peak, Japanese communications workers, in sympathy with the actors, refused to accept CIC's phone calls from the scene, thereby halting coverage. General Willoughby had demanded a report on the riot every 30 minutes and CIC was determined not to disappoint him. Although the riots were taking place nine miles outside of town and radios could not reach headquarters at that range, vehicles were spotted along the road back to Tokyo, and on-the-spot communications relayed into headquarters.[87]

Liaison With Other Agencies Essential

It was essential to the success of the whole Occupation that CIC maintain the cooperation of other military agencies - particularly Military Government, the Provost Marshal and all tactical units.

In the course of normal CIC activity, units of the 441st frequently gained information of events coming under the jurisdiction of other agencies. Most often this information was passed to the responsible agency in the form of a Summary of Information; however, until June 1947, in those instances where close liaison was in effect, the transmittal was often verbal. On 18 June 1947, orders directed the use of Summaries of Information only. CIC units were instructed to request reports of the action taken by the agency as a result of leads forwarded. The order

87 Interview with Lt Col Joseph Wright, Re: CIC During the Occupation of Japan, 1945 - 1950, Ft Holabird, 10 Aug 1955, (Conf).

stressed that CIC was not checking on the action agency, but only seeking information for the record. No steps which might jeopardize liaison were to be taken to gain the data.[88]

Much Information Forwarded to Military Government

The closest of liaison was maintained by CIC headquarters with Eighth Army Military Government. Frequent meetings and conferences helped to maintain a spirit of cooperation. The CIC Liaison Officer with the Eighth Army transmitted through the Eighth Army G2 to the Army Military Government staff that information felt to be of value to Military Government. Regional CIC offices, and later the District offices, supplied necessary information to the Military Government Regional commanders; liaison and reporting of pertinent data to Military Government units on the prefectural level were handled by CIC Area detachments.

Because of the 441st's nationwide coverage and its far-reaching informant network, it was inevitable that CIC would gather much information of value to Military Government. CIC was able to help Military Government keep tab on developments within the Japanese Government by furnishing information on officials and personalities. CIC frequently had reports of SCAPIN violations to channel to Military Government, and all Military Government commanders were given access to CIC files on ex-military personnel and rapatriates.

Information collected by CIC concerning labor activity was transmitted for use in Military Government's labor reports. Although CIC's concern with labor theoretically involved only a surveillance of subversive elements, in some prefectures it became the practice of Military Government commanders to obtain all the information for their labor reports from the local CIC Area detachment.[89]

...And Occasional Spats

Although CIC liaison with Military Government was generally untroubled, points of conflict were bound to arise. Indications are that in some instances, Military Government officials looked with jealousy upon "special privileges" granted CIC by the War Department and Theater as necessary for the accomplishment of CIC's mission. There were also instances where CIC was perhaps "oversecret" about certain administrative matters, resulting in misunderstandings.

---

88 Hqs, 441st CIC Det, GHQ, FEC, Subj: Investigative Info Passed to Other Agencies, To: All Units, 441st CIC Det, 18 Jun 1947, (Secret) (Kansas City Rec Cen, Box C3743.)

89 Inter-Office Memo, From: CIS, To: G-2, Subj: Relationship of Military Government and CIC Units in the Field, (prepared for G-2's transmittal to G-1 Function & Control Committee), 21 Sep 1948, /s/ R.S.B. (Col Bratton) (Uncl) (Kansas City Rec Cen, Box C3744).

One CIC Area commander refused to supply troop strength reports needed by the local Military Government unit to support CIC's drawing of rations. There were also complaints that CIC personnel were not displaying proper military courtesy in their contacts with Military Government officers. There was a feeling that agents, both in uniform and in civilian clothes, were often negligent in their personal appearance.

Apparently Military Government officers were also concerned with the possibility that CIC might be investigating them, particularly their individual blackmarket dealings. CIC units were urged to reiterate that they were not the agency responsible for criminal investigations.[90]

One struggle with Military Government came to a head in June 1947, when the Shikoku Military Government Region, then under fire from the Eighth Army Inspector General for questionable practices, sought to divert attention from itself by making charges against CIC.

The major accusation was that CIC had been investigating Military Government officers, presumably with an eye to black market activities. Actually CIC had investigated only one Shikoku Military Government officer - a lieutenant who was the subject of a complaint investigation initiated as a result of a Civil Censorship Detachment lead sheet which alleged that he was gathering information to write a book adverse to the Occupation. Concurrently, the Criminal Investigation Division was investigating the lieutenant's black market operations, a case that eventually led to a court conviction. CIC had no part in the Criminal Investigation Division investigation, but Military Government officials were convinced that CIC did.

Military Government further charged that CIC had been informed by the Shikoku Military Government Region that ammunition had been stolen but had done nothing with the report. CIC's investigation of the theft was limited to determination of whether the ammunition had fallen into subversive hands and a report of this investigation was made verbally to the Shikoku Military Government Commander. CIC was remiss in not reporting by Summary of Information, but the charges against CIC were unfounded.

There was also a charge that CIC Area 6 (Takamatsu) had repeatedly investigated Military Government affairs. In actuality, the only Area 6 investigation involving Military Government had been conducted after a request from the

90 Hqs, First Region (I Corps), 441st CIC Det, GHQ, FEC, Subj: Relationship Between Military Government and CIC Units in the Field, To: All CIC Area and Sub-Det Commanders, First CIC Region, 1 Aug 1947, /s/ C.N. Coleman, Lt Col, Commanding, (Conf) (Kansas City Rec Cen, Box C3743).

Takamatsu Region Military Government Commander and concerned an accident involving a Military Government vehicle.

CIC rendered interrogation assistance during the Inspector General's investigation of Shikoku Military Government, but only as specifically requested by the Inspector General. The CIC Regional Commander was "interrogated" by the Commanding General, I Corps, concerning the Military Government situation on Shikoku.

Headquarters, 441st detachment, searching for the roots of the charges, decided that the whole situation might have been a reaction to Case 200-300, Subject: "Utilization of Occupation Forces by Communist Party." This case was initiated when it was reported to CIC by Lt. Col. William A. Nunn, Commanding Officer of the Yamagata Military Government team, that his Labor Officer had been seen at a party with a known Communist leader and had given speeches to Communist-controlled groups. On the basis of this information, CIS had initiated an investigation throughout Japan, this being Case 200-300. All CIC Areas informed the Military Government officer in their prefectures of the initiation of the case. CIC, upon reflection, decided that possibly Military Government personnel, unaware that their commanders had been informed, had decided that CIC was conducting uncontrolled investigations of their activities. CIC was able to report that this investigation was the only one on file where Military Government personnel, other than those receiving purely loyalty clearances, had been under CIC investigation.

CIC Seeks Remedy

In an attempt to remedy the situation, CIC changed Commanding Officers in Area 6, although it was felt that this was somewhat unfair to the officer replaced. The change was accomplished in recognition of possible conflict on a purely personal basis. Region CIC commanders were ordered to consult within 24 hours with Corps Military Government chiefs to ascertain if there were any reason to suspect liaison problems in other prefectures. Although both Regional commanders made weekly visits to Military Government as a matter of course, they were instructed to make "an immediate call solely on this item of business."

Eighth Army Military Government was invited to send a liaison officer from each of their Regions to the next class at the CIC Training School. This offer was accepted enthusiastically.

As a physical means of improving liaison, Regional CIC commanders were directed to resurvey every unit in their command to determine if more CIC units could be billeted and messed with Military Government units.

In this manner, CIC took steps to alleviate a localized misunderstanding, to ferret out other areas where similar problems were existant, and generally, to improve relations with Military Government throughout Japan.[91]

No Major Liaison Problems With Provost Marshal

Unlike CIC detachments in many theaters, the 441st CIC detachment experienced no major liaison troubles with the Provost Marshal's Office. Because the 441st made it obvious to Provost Marshal units that CIC had no desire to compete with them in their areas of jurisdiction, relations remained cordial.

Lt. Col. Joseph Wright recalls a working arrangement whereby CIC agents on official business were given latitude by the Military Police "to be where they (as soldiers of the U.S. Army) were not supposed to be." Military Police were willing to go along with CIC as long as adequate justification for the operational latitude was presented.

Equally important, CIC made it plain to the Military Police and to the Criminal Investigations Division that if irregularities occurred in the operations of the 441st, or if individuals of the command violated existing regulations, CIC would not hesitate to "wash its own linen."

Such agreements formed the basis for a fine spirit of cooperation between the Far East Command's law enforcement agency and the 441st CIC detachment.[92]

Liaison With Tactical Units Begins Immediately

As early as September 1945, CIC was seeking to establish liaison with the tactical units stationed in Japan. Early in 1946, liaison with every tactical outfit became the assigned responsibility of a specific CIC unit. 441st headquarters maintained liaison with Eighth Army. The First CIC Region was charged with liaison with I Corps headquarters, British Commonwealth Occupation Forces, and the 24th and the 25th Infantry Divisions. Second CIC Region took the same obligations in regard to IX Corps, the 1st Cavalry Division and the 11th Airborne Division. CIC Area 25 (Tokyo) acquired liaison responsibilities with the Eighth Cavalry Regiment of the 1st Cavalry Division.

91 Inter-office Memo, From: 441st CIC Det, To: Col Bratton, Subj: CIC-MG Relations, 20 Jun 1947, /s/ W.E.H. (Wayne E. Homan), (Secret) (Kansas City Rec Cen, Box C3743).

92 Interview with Lt Col Joseph Wright, Re: CIC During the Occupation of Japan, 1945-1950, Bldg #332, Ft Holabird, 10 Aug 1955, (Conf).

The territory covered by the two CIC Regions correspond with the areas under the jurisdiction of the two Corps of Eighth Army, greatly easing the problem of liaison at this level. In connection with efficient liaison, Second CIC Region made a 24-hour physical move on 29 September 1946 from Yokohama to Sendai, location of IX Corps headquarters.

441st headquarters, on 14 August 1947, directed the appointment of liaison officers to various tactical organizations. Of prime importance was the Eighth Army Liaison Officer, because the Eighth Army had given irreplaceable logistical support to the widely-scattered CIC units.[93]

What Did You Do About It?

Agencies receiving CIC leads were requested to keep CIC posted on the progress and eventual outcome of the investigations initiated on these leads.

One of the many instances of CIC's providing information to other agencies began when the Yokohama office of Area 25 learned on 16 May 1948 that the master, first mate, and radio operator of a U.S. Tanker were all engaged in blackmarketing American cigarettes. The information was transmitted to Second Port Criminal Investigations Division detachment. Their investigation eventually led to the arrest of the three men.[94]

In another case CIC informants reported to Area 34 (Akita) on 12 February 1948, that huge stores of Japanese Army goods were believed hidden in a warehouse in Akita City. On the same day, Akita Military Government was notified and supervised a search of the suspected warehouse. Quantities of Japanese Army Quartermaster supplies valued at over three million yen were uncovered. Further investigation was conducted by Military Government in Akita to determine responsibility for the illegal stores.[95]

The major category of information turned over for action to tactical troops involved hidden arms and weapons caches. CIC determined the actual location of such caches with sufficient definiteness to warrant transmitting the information to a tactical G2 who sent out troops to conduct the search and seizure.

For example, information reaching CIC Area 33 (Sendai) on 28 July 1948 revealed that a considerable quantity of Japanese arms and ammunition, including mortar and anti-aircraft shells, had been hidden in caves and holes around the

base of two mountains on a peninsula southeast of Ishinomaki City. Initial evidence and leads were in the form of photographs of some of the material and two maps showing the locations of the caches. This information was furnished to the G2 of the 11th Airborne Division Rear, who supervised the confiscation.[96]

Section 3

PERSONNEL AND TRAINING

As of December 1945, several months after operations had begun in Japan, the 441st CIC detachment had an actual strength of 192 officers and 604 enlisted men compared to a Table of Organization authorization of 241 officers and 795 enlisted men.[100] By August 1946, revised authorized strength permitted the 441st a total of 344 officers, 286 warrant officers and 640 enlisted men. Actual strength of the detachment was 181 officers, 22 warrant officers and 726 enlisted men.[101] By July 1947, total personnel strength of the 441st had increased to more accurately reflect the Table of Organization.[102]

"Call Me Mister"

One of the biggest stumbling blocks to getting the personnel strength to properly reflect the T/O was the return to the Zone of the Interior for discharge of a great number of agents who had served their enlistment. The returning agents formed a more or less steady stream that became a rampaging flood in late 1946 when a revised discharge criteria made a number of men suddenly eligible for release. In one week in November, 78 enlisted men departed from the Far East and approximately 200 returned to the United States in December.[103]

Many Replacements Not Satisfactory

Basically there were two reasons by which the 441st CIC could obtain new personnel. The War Department furnished on requisition the bulk of the replacements, but a limited number were also obtained through a local procurement system.

Except for a handful of isolated cases, the CIC personnel coming from the United States had been given the usual counterintelligence schooling at the CIC

School, Holabird Signal Depot. Reports after the Occupation had been in swing for about a year indicate that the standards of CIC recruitment had suffered drastically. Among those received by the Far East Command in the first year, only 10 percent had completed college. Another 10 percent had received some college training. The ages of the new agents ranged down to 18 and most were under 22. The majority of the replacements had no previous CIC field experience. And then, altogether too many of the new agents became eligible for redeployment just about the time they had become seasoned investigators and of use to the 441st.

Among the officer replacements most had had at least two years of college, but with few exceptions, they had no investigative experience. About 10 percent were Regular Army officers and about 20 percent had some training in Japanese and customs.[104]

The root of the problem of suitable replacements from home was outlined by Maj. James T. Reitz from his position with the Military Intelligence Division in the Pentagon. Major Reitz, a member of the 441st until a few months after the war, wrote to Colonel Stuart: "As you probably realize, the replacement problem has been a rugged one, due principally to the enormous number of replacements required practically all at once and the fact that few people, if any, who are being inducted have the qualifications originally required for CIC agents. The services of these few are being bitterly contested for by a half-dozen investigative and intelligence agencies."[105]

Local Recruitment Instituted

General Thorpe told General Willoughby in early 1946 that the effectiveness of CIC in the Far East "will be seriously impaired if sole reliance is placed upon the War Department to furnish adequate replacements." Reminding the G-1 that counterintelligence was a command function, General Thorpe recommended that AFPAC institute a "limited recruitment program to insure a nucleus of qualified personnel to guarantee continued accomplishment of the CIC mission, regardless of the type of replacements furnished by War Department."[106]

GHQ, on 22 January 1946, initiated a letter to the various troop commanders in the Far East outlining the local recruitment program for CIC agents. The

letter noted that CIC needed 100 officers and 200 enlisted men and listed the qualifications for acceptance.[107]

In regard to the locally procured agents, the 441st in May 1946, noted that these men were "better qualified" than those received from the Zone of the Interior. In accordance with the provisions of War Department Circular 379,[108] the original authorization for world-wide local procurement, personnel within the theater who desired to transfer to CIC had to submit applications to the G-1. These applications were screened closely by CIC representatives and "for this reason only the best qualified personnel were selected."[109]

By mid-August 1946, the 441st detachment had locally procured 74 officers and 225 enlisted men. All had approached CIC with a view toward transferring into CIC, with the exception of three officers and 25 enlisted men obtained from the Allied Translator and Interpreter Service on the basis of a specific need for well qualified Japanese linguists.[110] It was estimated in November 1946 that by the end of the year, the 441st would have procured 27 percent of its total strength through its own efforts.[111]

On 30 March 1948, by which time it was felt in Washington that an adequate number of CIC agents were being trained to fill available slots, the War Department "strongly suggested" that direct procurement of personnel on a local level be discontinued. But the 441st had anticipated of the War Department. Local procurement in the Far East had ceased in November 1947.[112]

Special Unit Established for Linguists

Appended to the 441st CIC detachment was an organization composed entirely of CIC personnel fluent in the Japanese language. Established on 28 December 1946, this unit, the 319th Military Intelligence Company, was a "paper organization" in the true sense of the phrase. The organization was created to circumvent the ruling that Niseis could not be assigned to CIC. Prior to the creation of the 319th, these men had been with the Allied Translator and Interpreter Service (ATIS) and the great majority had been performing CIC agent duties. With the creation of the linguist company, their ATIS credentials, which emanated from the War Department, were called in and replaced by special CIC credentials issued by the office of the AC of S, G2, FEC. At the time of its implementation, the 319th MI Company was authorized a strength of 80 officers and 239 enlisted men.[113]

While the creation of the 319th MI Company cleared an immediate hurdle for the 441st CIC detachment, a problem of long-range consequence was created by the move. The personnel assigned to the 319th MI Company, when their tour of duty in Japan was completed, were lost to CIC and usually transferred to an MI outfit, because their records did not readily reveal counterintelligence investigative experience.[114]

A letter from Brig. Gen. E. A. Zundel, Chief of CIC, to the Commander-in-Chief, Far East Command, outlined the problem. "At present when CIC personnel are transferred from a CIC detachment to any other organization, this headquarters deletes their names from all CIC rolls and consequently has no means of following their subsequent careers. This results in the loss of many agents whom it is desired be retained in CIC. All personnel now serving in the Counter Intelligence Corps are doing so because of an expressed desire for such service; and the majority of them, except RA officers, have planned to spend the remainder of their military career in CIC. Therefore it behooves us to do all in our power to insure that their careers are not altered due to circumstances beyond their control."[115]

115 Dept of the Army, GS, USA, Intel Div, Office of the Chief, CIC, Subj: Transfer of CIC Personnel, To: Commander-in-Chief, FEC, 1 Mar 1948, /s/ E.A. Zundel, Chief, CIC, (Uncl) (Kansas City Rec Depot, C3743).

Nevertheless, the 319th Military Intelligence Company continued to function up to and into the Korean War. On 1 January 1950, assigned strength of the company was 31 officers and 248 enlisted men.[116]

What the Well-Dressed Agent was Wearing

For the first year and a half of the Occupation of Japan, Department of the Army civilians were authorized to wear Army uniforms with no insignia other than a triangular-shaped blue shoulder patch marked "US," designed to distinguish civilians from military personnel. To allow the freedom of movement essential to a confidential investigator, CIC enlisted agents were allowed to wear this civilian uniform. On 19 May 1947, a SCAP order directed that civilians no longer be permitted to wear uniforms and CIC was forced to seek elsewhere for means of retaining the cover of their agents.

Arrangements were completed with G2 to permit all enlisted agents who had served in a civilian capacity prior to 19 May 1947 to dress in civilian clothes to maintain their nonmilitary cover. The original authorized allowance was $125 with $144 per year accruing at a rate of $12 a month granted for maintenance and replacement.[117]

Officers and warrant officers, by Department of the Army policy, were not authorized to receive a civilian clothing allowance. All officers wearing "civvies" did so at their own expense.

Each CIC unit was authorized a specific number of enlisted persons eligible to wear civilian clothes. Provided that there was room in this quota, any enlisted agent, upon approval from his immediate superior, could apply to wear civilian clothing. The following questions had to be answered before the conversion was authorized: (1) Was the agent known to Allied personnel sufficiently that putting him in civilian clothes would be futile camouflage? (2) Could the change of clothing be adequately and logically explained to those Allied personnel familiar with the agent? (3) For what reasons would the agent have more influence on Japanese and Occupation personnel as a result of wearing civilian clothing?[118]

3869

In early 1948, General Willoughby called for a review of the justification and necessity for expenditures on civilian clothing for CIC agents. Alarmed by the fact that for the last six months of 1947, a monthly average of $3,400 had been spent for "civvies," the general called for closer scrutiny and control of the whole procedure.[119]

Maybe a Kimono!

General Willoughby continued to press for action on the matter and eventually questioned the whole purpose of having CIC agents in mufti. "I still do not know the real basis of getting into civvies out here. The agent is conspicuous as an American, whether he wears civvies or uniform. If he were to wear a kimono, the point might be arguable. Once in civvies, is he going to pose as a Japanese? Or a foreign national? What is the purpose and benefit to be derived?"[120]

Colonel Bratton replied: "It is true that an agent is conspicuous as an American, even though he is a Nisei wearing civilian clothes. It is intended that Nisei agents pose as Department of the Army civilian employees and not as Japanese Nationals. In isolated cases, a Caucasian agent might pose as a foreign national. CIC agents appearing as DA civilians have proved valuable in numerous instances where it was necessary to conduct surveillances on or have close contact with U.S. civilian employees. In the British Commonwealth Occupation Forces Zone, enlisted agents wearing civilian clothes can readily meet and talk to British and Australian officers; however, if these same men were wearing the Army uniform and enlisted rank insignia, it would become practically impossible for them to approach these officers concerning intelligence and administrative matters.

"It has been determined during recent months that the wearing of civilian clothes by some Nisei personnel does not facilitate operations dealing with Japanese civilians; instead they are afforded more prestige by wearing the Army uniform. For this reason, CIC Area Commanders have had many of these men wear the uniform. However, for the reasons outlined in the preceding paragraph, it is believed that the authorization for certain selected enlisted men to wear civilian clothing enhances the efficiency of these men in gaining counterintelligence information."[121]

121 Inter-office Memo, From: Col Bratton, To: Gen Willoughby, Subj: Purchase of Civilian Clothing, 5 Mar 1948, /s/RSB (Col Bratton) (Conf) (Kansas City Rec Depot, C3744).

New Program Reduces Clothing Expenditures

After a review of certain statistics, General Willoughby noted "inexplicable differences between population density (the basis for the number of agents assigned to an Area) and monetary expenditures for clothing." The general proposed a tentative list of nine metropolitan areas where agents would be allowed to wear "civvies" and recommended that agents in other Areas all work in Army uniform.[122]

Shortly thereafter, the use of enlisted agents in civilian clothes was limited to the nine metropolitan areas he had suggested. However, agents assigned to other Area detachments and already in "civvies" were allowed to continue use of their cover.[123]

Estimated expenditures for 1949 were drawn up on the basis of the new policy limiting agents in civilian clothes to metropolitan areas and requiring that agents receiving clothing allowances have at least nine months duty remaining in the Far East Theater. Under these regulations, the monthly average of clothing expenditures was expected to reach $1,573.50. It was assumed, based on past experience, that 20 percent of this total would remain unspent.[124]

CICTS Opens in Tokyo on 12 November 1945

On 12 November 1945, the first class of the Counter Intelligence Corps Training School (CICTS) in Tokyo was opened. The course was actually an extension of the old CIC Training School established in Melbourne, Australia on 3 August 1942. After island-hopping during the war, the school had finally settled more or less permanently on the top floor of CIC's headquarters in Tokyo.[125]

Class No. 24, as the first Tokyo group was designated, consisted of 29 enlisted men, most of whom only recently had arrived from the United States.

124 Inter-office Memo, From: Col Bratton, To: Gen Willoughby, Subj: Purchase of Civilian Clothes, 25 March 1948, (Conf) (Kansas City Rec Cen, C3744).

125 "Representative Hist of CIC Activities in the Occupation of Japan" Sep 1945-1948, p 62, (Uncl) (Kansas City Rec Depot, C3743).

The course was 15 days duration. At the conclusion of Class No. 24, nine of the key personnel of the school, including the commandant and his executive officer, were ordered to replacement depots for return to the United States and discharge from the Army. The school virtually had a new faculty for Class No. 25.[126]

The curriculum of the CIC Training School that had operated in the Southwest Pacific during the war was revamped to meet the needs of the Occupation. Combat CIC courses were dropped and in their place came courses pertaining to the social, political and economic situation in Japan. The Japanese court system was explained; studies on Japanese intelligence agencies were presented; and the structure of Japanese newspapers was taught.

Extensive courses in report writing, jurisdiction and limitations of CIC operations, and CIC investigative procedures were held over from the wartime school. As had been the case during the war, the CIC Training School presented a series of guest speakers on subjects related to the counterintelligence mission.[127]

Few other changes were made in CICTS subject matter until late 1946. At that time, a course in basic English, designed as a supplement to the report writing course, was instituted. Beginning in February 1947 with Class No. 41, 20 hours of instruction were devoted to English. A new eight-hour course in surveillance, which included a four-hour field problem, was also added. The entire school program was extended to four weeks.[128]

Cessation of Local Procurement Affects CICTS

Until November 1947, the classes at the CIC Training School contained many men locally procured from non-CIC assignments for work as agents. Since the four-week course was the only CIC training these men received, it was essential to begin at the most basic level.

Upon graduation of Class No. 49, on 1 November 1947, all future students, with the exception of guests from local tactical units, were graduates of the CIC School at Holabird Signal Depot. Local procurement of investigative personnel was discontinued after that date. Cut out of the course were such subjects as Searches and Seizures; Legal Aspects of Espionage and Sabotage; Observation and Description; Countersabotage; Counterespionage; Security and Basic Informants. In place of these courses, the CICTS was able to institute the study of matters

126 GHQ, AFPAC, 441st CIC Det, CICTS, Subj: CICTS Activities (1 Oct 1945 to 30 Nov 1945), To: CO, 441st CIC Det, GHQ, AFPAC, 10 Jan 1946, (Conf) (Kansas City Rec Cen, C3744).

128 Ibid.

pertaining especially to Japan. Included were field trips to CIS, G2 and the Civil Censorship Detachment offices, lectures by Japanese government officials, lectures by naval intelligence representatives, and studies of Japanese labor, economics, health and welfare, education, geography and natural resources. A letter from 441st headquarters to the CIC Center at Holabird dated 26 September 1947, outlined the proposed changes and noted that if the CIC Center placed more emphasis on certain other subjects pertinent to CIC world-wide, the school in Japan would be able to devote even more time to those matters that were peculiar to the situation in Japan.

It was felt that the 20-hour Basic English Course might be given at Holabird. The shortage of .38 ammunition in the Far East prompted a request that agents sent to FEC be qualified in the .38 weapon. Motor Maintenance and driving tests, Undercover Techniques, the Communist Party and Surveillance were other fields that were felt should be included in the stateside school.[129]

In December 1947, the Tokyo CIC Training School initiated a one-week Agent's Refresher Course. To attend, personnel were required to have spent at least a year with CIC field units in Japan and to have at least six months of their tour in the Far East remaining.

In November 1947, the school operated, for a brief time, a two-week administrative CIC course with the emphasis on counterintelligence investigative and administrative report forms and procedures.[130]

CIC Utilizes "Sleeper" Informants

A Friend of a Friend...

A Man Who Read the Newspapers. . . And That Was All

Informants were not always a source of "extremely valuable" information. There was always the danger that an informant would not over-exert himself seeking information, preferring to rely on sources more or less public, such as the daily newspapers. One such individual, a small businessman, was able to double-deal with the 441st for quite some time. Under some suspicion by his handling agent, this man was brought in for interrogation. The informant's business ledgers had fallen into CIC's hands. It was noted that the informant had printed all Japanese names, naturally enough, in Japanese characters. However, the names of the CIC agents who had supervised his work were written out in English, although these men were Nisei and their names could readily be written in Japanese. The agents interrogating the informant questioned him on this discrepancy. Flustered by his inability to supply any reasonable answer, the informant eventually was led to admit that he had been paid for information that was public domain and that he had not actively sought data that could not be gained through overt means. The question that led to his breaking had no relation

136 Interview with Lt Col Joseph Wright, Fort Holabird, 10 Aug 1955, Re: CIC During the Occupation of Japan, (Conf).

to his inactivity. It was a query to which he could not supply a suitable answer and so was used as a lever to his confession.[137]

Japanese Police Prove Extremely Helpful

The Japanese Police proved to be a prime source of information for CIC. Full cooperation between the individual Area office and the local police unit was an essential to complete CIC coverage.

137 Interview with Capt S. A. Koyama, Fort Holabird, 22 Jul 1955, Re: CIC During the Occupation of Japan, 1945-1950, (Conf).

Section 5

THE RIGHT AND THE LEFT

For the first few months of the Occupation, the agents of the 441st CIC detachment had been mainly concerned with rounding up and investigating an assortment of characters ranging from Hidiki Tojo to the self-styled poets and play wrights of the Bunka Prisoner of War Camp.

The majority of CIC's investigative activity in the remaining years before the Korean War can be divided into two unequal parts.

SCAPIN Violators and the Reds

By the beginning of 1946, surveillance of SCAPINS had become the prime CIC duty. Gradually throughout 1946, the emphasis shifted from violators of SCAPINS, which the command designed to hold in check the elements of the old regime, to the newly-reorganized and menacing Japanese Communist Party.

CIC's surveillance of SCAPINS generally involved the two known unofficially as the "Purge Directives." SCAPIN 548 dealt with "Abolition of Certain Political Parties, Associations, Societies, and Other Organizations," and SCAPIN 550 dealt with "The Removal and Exclusion of Undesirable Personnel from Public Office."

With the issuance of "The Purge" SCAPINS on 4 January 1946, the Japanese public rushed forward to furnish information to the 441st. Hundreds of unsolicited "tips" of varying reliability came into CIC field offices. The reason for the willingness of the general public to provide information to CIC is open to question. Perhaps it was a result of a feeling of relief after the downfall of the militarists. Some felt it stemmed from the Oriental tendency to wish to be on the winning side. At any rate, CIC was never short of information.[142]

Compliance Branch Established

The evaluation for cases involving "purge" SCAPIN violations was the Compliance Branch of the Civil Intelligence Section's Operations Branch. Established in January 1946, the Compliance Branch studied CIC and Civil Censorship Detachment reports and other information to determine whether or not prima facie cases of SCAPIN violations existed. When available evidence indicated probable violations, two alternatives were open. The case could be

142 GHQ, FEC, MI Sec, Gen Staff, "Opns of the CIS," Vol IX of "Opns of the Intel Service in the SPA," Part I, Chap III, p 34, (Secret) (Cen Rec Fac).

turned over to the Occupation Military courts for prosecution, or the Compliance Branch could draft appropriate memoranda to be forwarded through channels to the Japanese government directing them to remedy the situation. The Compliance Branch also recommended interpretations of policy and issued clarifications when questions arose as to the exact meaning of a SCAPIN.[143]

Investigations of Rightest Activity Gradually Decline

CIC's investigations of subversive activity of a militaristic and ultra-nationalistic nature slowly began to take a back seat by mid-1946. In their report for the last half of August 1946, Area 25 (Tokyo) observed: "It continues to be true that organizations investigated for subversive activity of a militaristic and ultra-nationalistic nature prove, generally, to be harmless... Cases involving suspected subversion by rightist groups continue to be far more numerous than cases involving radical activity. It is emphasized that the former category almost invariably results in information of a negative nature."[144]

Reporting for the last half of September, the Tokyo office further stated: "Large scale opposition to occupation policies is not apparent. Right wing or ultra-nationalistic activity is sporadic and disorganized so that none of the investigations into this type of activity in the Tokyo Area has yielded a positive result. All such investigations have resulted in a failure to substantiate the allegations."

In the same report, the Tokyo office predicted that the movements of the Communists and their many sympathizers "will continue and perhaps increase in the future..."[145]

By the end of 1946 and the first few months of 1947, the emphasis of CIC investigations had completely shifted from cases involving vestiges of the old regime to concern with the Japanese Communist Party.

Of the projects completed in the last three months of 1946, 371 were labeled "militaristic and ultra-nationalistic" and 550 were labeled "radical," of which 262 were less routine investigations of various Communist activities supervised by

the Special Projects Section during the latter part of November and the month of December.[146]

Communist Situation Grows "Steadily More Critical"

The statistics by this time show a large gap between efforts spent on investigations involving extreme rightists and the radical elements of the population. In the report of the Special Projects Section for the month of April 1947, note was taken in the great increase of investigations of Japanese Communist activity. "Within the last several months, the Communist situation in Japan has grown steadily more critical from the Special Projects Section viewpoint. With the failure of the Communist Party in the national elections held last month and the increasing opposition toward communism by the Japanese labor movement, the Communist trend is toward an open hostility to the Occupation forces. Communist leaders have frequently been reported as having delivered speeches with a recognizable avertone of criticism against the Occupation. For this reason, the CIC Areas have been directed to place many prominent Communist leaders on what amounts to a constant surveillance for the purpose of ascertaining any derogatory statements made against the Allied Occupation Forces and any subversive activity on the part of the Communist surveilled."[147]

Even though probings into radical and more particularly Communistic elements now claimed the greatest portion of CIC's efforts, cases concerning extreme right wing activities continued in a minor way throughout the years preceding the Korean War. Two cases have been selected to show CIC in action against these elements officially referred to as "militaristic and ultra-nationalistic."

CIC Searches for Remnants of Black Dragon Society

Among the early investigations falling into the ultra-nationalistic category was an attempt by CIC to piece together the history and post-war activities of the renowned Black Dragon Society (Kokuryu Kai), for many years the most powerful Japanese patriots' organization.

In the first few months of the Occupation, each Metropolitan and Area unit conducted a series of interviews in an effort to gain data on the Society. For instance, in Osaka, beginning on 24 October 1945, Metropolitan Unit 90 questioned

146 Hqs, 441st CIC Det, GHQ, AFPAC, Subj: Progress of CIS Since its Transfer to G-2, To: CIS/G-2, 31 Dec 1946, /s/ Wayne E. Homan, Lt Col, Commanding, (Conf) (Kansas City Rec Cen, Box C3744).

147 Hqs, 441st CIC Det, GHQ, FEC, Subj: Monthly Rpt of Activities, Apr 1947, To: Plans & Training Section, 1 May 1947, /s/ Robert M. Reese, Lt Col, Chief, Special Projects Sec, (Secret) (Kansas City Rec Depot, Box C3744).

the Deputy Mayor of Osaka City, the managing editor of a leading newspaper, a former special policeman; and a former municipal office holder and newsman concerning the Black Dragons. The Society's local history, its organizational set-up in Osaka at the war's end, and a list of past members were gleaned from these sources.[148] Similar inquiries were made in other zones.[149]

From these local investigations, the Special Activities Branch of the Operations Branch of the Civil Intelligence Section compiled an over-all report on the Society. CIS revealed that many CIC sources felt that the once-powerful organization was operating underground. One individual was quoted as saying that a member in China was sending information to Black Dragons through demobilized Japanese servicemen who were then urged to spread rumors in Japan of an impending US-USSR war. The hope was that such a conflict, if properly exploited, would afford Japan a chance to come back militarily.

However, in regard to the Society's restoration, the report concluded: "The chances for a revival of the Black Dragon Society are deemed minute." It was noted that such a revival would face, in the first instance, all the obstacles placed in the way of militaristic groups by SCAP. Based on the knowledge that in the pre-war years, the Black Dragon Society was completely dominated by a few powerful leaders, the CIS report further stated that "the would-be leaders (of a revival) would be faced with converting people who are for the first time permitted to hear more than just one side to an issue."

"The real danger," continued the report, "comes from the...demobilized and bewildered remnants of the Army... These returning servicemen will not prove a threat if Japan is permitted and manages to maintain a stable economy and political structure... In the absence of these factors a recrudescence of militarism may be expected, albeit under a new and more modern leadership."[150]

Possible Revival of "Dragons" in September 1947

One of the infrequent reports of a reinstitution of the Black Dragon Society came to CIC two years after the original inquiries. Based on scanty indications that a revival was taking place in Tokyo, a lead sheet on "The Reactivation of the Black Dragon Society" was disseminated on 6 September 1947. The leaders of the

revival, their war-time connections with the Society, and the Society and its political affiliations, future plans and sources of funds were to be determined by CIC investigations.[151]

Early investigation, including reports from informants and a questioning of various police officials, produced no signs that the organization was reactivating.[152]

It was 2 February 1948 before specific information reached CIC on the revival of the Black Dragons. Informants supplied the names of the two leaders, Minagawa Sanroku and Takagi Sakuma, neither important in the war-time version of the organization, and the basic scheme to be followed in the reinstitution. The organization reportedly planned to establish a hard core of Emperor-loving and patriotic men within the labor unions, stimulate anti-American sentiment by emphasizing the suppression of rightists by SCAP and prepare to take immediate action against the Communists as soon as the Americans left.

Society Peddles Military Equipment

Informants further pointed out that a considerable amount of money was being accumulated through the personal solicitation of former members of the Society and through the sale of property released from Japanese Army and Navy sources. The organization's new leaders had, for instance, obtained a mechanical shovel from the Chiba Naval Air Base and were attempting to market it at three million yen.[153]

After several more weeks of investigation, Area 25 unofficially summed up the situation much as the CIS report of 1946 had done. "Unlike in former days, since the people are now inclined to express their frank opinion about anything, it would be next to impossible for the Society to enjoy the support of the general public... (This) Society has (never had) immediate contact with the masses of people."[154]

154 CIC Area 25 (Tokyo), 441st CIC Det, GHQ, FEC, Rpt of Investigation, Subj: Reactivation of the Black Dragon Society, 20 Feb 1948, (Cen Rec Fac).

Meanwhile reports reached Area 25 that another "Dragon," Kanbayashi Torao, was attempting to market art objects and jewels that he had acquired in China. The Black Dragon Society expected to realize about 12 million yen from the sale of these items.[155]

On 26 April 1948, in an attempt to get the word "straight from the horse's mouth," Area 25 agents questioned Minagawa Sanroku, one of the leaders of the new organization. This man claimed he found it hard to believe that the Occupation authorities were interested in his organization. He vehemently claimed that his group was still weak and underdeveloped.[156]

For all their mechanical shovels and art objects, this attempted revival of the Black Dragon Society was stalemated "for lack of operational funds," according to an Area 25 report of 28 May 1948. Even such a modest attempt to reinstitute the former king-pin of the Japanese nationalistic societies had failed.[157]

CIC Scrutinizes "Current Events Club"

A typical CIC investigation of a suspected violation of SCAPIN 548, prohibiting the existence of militaristic and ultra-nationalistic organizations, was instituted by CIC Area Unit 45 in May 1946. Information was sought on the "Young People's Current Events Club" (Yamata Mura Seinen Jiji Doshi Kai) reportedly founded on 15 April 1945 in the village of Yamata, Ibaraki Prefecture.

The "Current Events Club" was brought to the attention of Unit 45 by a Japanese citizen who claimed to have been violently attacked by members of this innocent-sounding society. According to sketchy information received from the initial source, Matsuo Arase, a former naval lieutenant, had organized 300 men into a club with the aim of harassing Occupation troops, and at the end of the Occupation, of establishing a local government by force of arms. Initial CIC investigation revealed that many members of groups previously disbanded under SCAPIN 548 were in the "Current Events Club." Apparently the backer of the organization was Shunsuke Takao, a man of about 50, who had served in the Japanese Army in Manchuria in 1919, and had been a member of three SCAP-banned organizations.

On 21 May 1946, was interviewed by CIC. He stated that the villagers had originally looked upon the group with favor.

155 GHQ, FEC, MI Sec, Gen Staff, Civil Intel Section Periodical Rpt, Issue No. 28, dtd 15 May 1948, p 5, (Secret) (Central Rec Fac).

156 CIC Area 25 (Tokyo), 441st CIC Det, GHQ, FEC, Rpt of Investigation, Subj: Reactivation of the Black Dragon Society, 26 Apr 1948, (Secret) (Cen Rec Fac).

167 Ibid, 28 May 1948.

However, when it became evident that the leaders were using the full weight of their following to back questionable activities, the organization began to lose many members, and felt that more would have resigned but for fear of retaliation. It was the belief that the "Current Events Club" was actually a hard-bitten group of demoralized soldiers seeking to terrorize the village and force their demands on the municipal officials.

On the same day CIC contacted Keiichiro Hatsumi, who late in April had succeeded Arase as president of the club. This change in itself made the organization suspect, since it appeared that the club had felt its success would be jeopardized if reports reached SCAP that a former naval lieutenant was president. Hatsumi readily admitted that the "Current Events Club" contemplated taking over village government, but only if irregularities in the government were discovered. The change was to be accomplished by the forced resignation of officials. All intent to hinder the Occupation was denied.

On 22 May, ten of the organization's more prominent members were placed under house arrest to facilitate the investigation. Arase, the first man interrogated by CIC, steadfastly declared the purpose of the society was "the betterment of the community and the dissemination of education and democracy to the village of Yamata." However, Arase admitted his group had done little in regard to such high-minded goals, spending most of their time investigating alleged irregularities in the village administration. Arase said if irregularities were uncovered, the "Current Events Club" was prepared to take over the government by forcing the resignation of officials and installing acceptable persons - presumably themselves.

Takao Denies Responsibility for Club's Actions

Also on 22 May the organization's original backer, Takao, was questioned by Area Unit 45. Like the parent of a juvenile delinquent, Takao admitted having assisted in the founding of the "Current Events Club," but repeatedly denied any responsibility for its subsequent actions.

A review of the organization's records, on file at the municipal offices, showed a membership of 533, with 106 demobilized servicemen on the list. The leaders of the organization were all former servicemen. Arase was more than just an ex-naval lieutenant. He had been a Kamikaze pilot.

It was subsequently learned that both Arase and Takao had violated their house arrest to attend a meeting of the "Current Events Club." The Commanding Officer of CIC Area Unit 45 recommended the disbandment of the club as a violation of SCAPIN 548. As was customary in the breaking up of such organizations,

the names of the members were carried on the watchlist of Area Unit 45 so that a continuous check on their activities might be made.[158]

Number One Target: The Japanese Communist Party

The one greatest troublemaking group for the Occupation authorities was the Japanese Communist Party (JCP), described by the official history of the Civil Intelligence Section as a "menace to all duly constituted democratic authority... (as a result) of its varied and continued attempts to nullify, discredit and embarrass the program of democratization."

From the outset of the Occupation, it was recognized the Communists represented less of a political party and more of a fifth column, seeking to introduce an alien ideology into Japan.

In one respect, SCAP itself opened the doors to the Red deluge in 1945 with the release of all political prisoners of Japan's wartime regime. Even then it was recognized that this essentially democratic, and completely necessary, gesture was releasing a group of well-trained obstructionists upon the general public. The Communist leaders, all of whom had been imprisoned by Tojo's regime, wasted no time in reorganizing. In December 1945, the Japanese Communist Party began a program of anti-democratic activities which found unexpected support from disorganized sections of the post-war population.[159]

As noted earlier, late 1946 and early 1947 saw a gradual shift in the emphasis of CIC's investigations. As the Communists became better organized and consequently more vocal, concern with militaristic groups and individuals declined, and most of CIC's activity was directed against the Reds.

The Tokyo CIC office reported the status of Communist activity in August 1946. "While it is true that anti-American activity of great scope and scale is not evident, there are certain indications of a propaganda campaign directed against what is referred to as the 'colonization of Japan' by American capital. This has been a device adopted principally by leftist and labor groups, usually those identified with the Communist Party of Japan. There is continued evidence

158 GHQ, FEC, MI Section, Gen Staff,"Operations of the Civil Intel Section," Vol IX of "Opns of the Intel Service in the SPA," Supporting Document 27 (GHQ, AFPAC, MI Sec, Gen Staff, Civil Intel Section, CIC Monthly Info Rpt, 441st CIC Det, Jun 1946), (Secret) (Cen Rec Fac).

159 GHQ, FEC, MI Section, Gen Staff, "Opns of the CIS," Vol IX of "Opns of the Intel Service in the SPA," Chap IX, p 109, (Secret)(Cen Rec Fac).

that radical groups are attempting to gain the sympathy and support of workers' groups, Korean groups, and the general public by financial support, intimidation, public demonstration and similar devices."[160]

Politically the position of the JCP was that of an opposition group. CIC was soon aware that directives from the Central Committee of the Party, its supreme governing body, instructed lower echelons to take advantage of every possible opportunity to attack the government and convince the people the JCP was their only real friend. By creating chaos and confusion, the JCP hoped to undermine drastically the popular support of the Japanese government and assume power at the height of the confusion.

JCP Polls Over Three Percent of Vote in First Election

In the first election under the Occupation, the Japanese Communist Party elected eight members to the Diet and polled 3.7 percent of the popular votes, in spite of the fact that the Home Ministry registration figures showed only 16,144 JCP members.[161]

By January 1949, JCP strength was estimated at approximately 180,000, half of whom could be classified as dues-paying members; the other half as unofficial or "secret" members. In the latter part of 1948, the rolls of the JCP were considerably augmented by an influx of well-indoctrinated repatriates from Soviet territory and the entry into the JCP of many left wing Socialists not previously identified with communism. If anyone doubted the power of the Japanese Communist Party at this point, the elections of 23 January 1949 should have been the convincer.

Far exceeding even their own optimistic expectations, the JCP placed 35 condidates in the House of Representatives, receiving almost 10 percent of the popular vote.

Analysts with CIS sought to explain the Communist success. It was noted that the vast majority of the people of Japan existed in marginal poverty even though 1948 had seen an economic upswing. The JCP had successfully presented itself as the champion of the downtrodden. The JCP had successfully spread its influence and control far out of proportion to its numerical strength.[162]

Anti-Communistic Elements Appear in Mid-1949

The smooth ride of the Communists became somewhat rockier in the summer of 1949. At long last, there began to appear in strength anti-Communistic elements in the population. Several reasons were noted for this unfortunate time lag. Conservative parties apparently had feared being labeled ultra-rightist if they attacked the Reds too vigorously. The Social Democrats, although uncooperative with the Communists, had not been willing to risk, because of internal weaknesses, an anti-Communist offensive. Laborers, unused to union techniques, had found themselves from the beginning under the domination of Communist leaders and had been misled by the JCP's apparent championing of their cause.

After their election success, the JCP intensified agitation, aiming to reach a peak in August 1949 when government workers were to resign in mass in hope that Occupation authorities would be forced to take drastic remedial steps. The failure of this "August Offensive" and a firmer attitude toward the Communists on the part of the Japanese government signaled a downward trend for the JCP.[163]

Cominform Links Apparent in Early 1950

The JCP suffered further in the very first days of 1950 when the fiction that they were a "purely Japanese" party was publically demolished. On 6 January 1950, the Cominform "suggested" that the JCP take a firmer stand against the "imperialistic" Allied Occupation and forget completely about a peaceful revolution through the ballot box. The JCP promptly stepped up their anti-Occupation movement under a thinly disguised "peace" program and proceeded religiously to hue to the world-wide line.

If the Japanese people had begun to doubt and even actively oppose the JCP prior to May 1950, the sentiment against the JCP was increased by public censure by General MacArthur on 2 May.

On 30 May, the Japanese Communist Party inspired intensive rioting throughout the country. The Occupation authorities had the leaders of the demonstrations immediately arrested. On 6 June, SCAP issued instructions to the Japanese government requesting the dissolution of the JCP Central Committee and the "purging" of all 24 of its members. The following day, the 17 editors of the Communist organ "Akahata" were ordered "purged." In spite of a nationwide dragnet and continual investigation, the Japanese police, by the beginning of the Korean War, had apprehended only one of the "purged" individuals.

---

163 GHQ, FEC, MI Section, Gen Staff, Civil Intel Section Periodical Report, Issue No. 44, dtd 15 Sep 1949, p SPA-3, (Secret) (Cen Rec Fac).

At the time of the Korean conflict, the JCP was beginning to entrench underground to survive the wrath of SCAP. The JCP, in regard to popular support, was at its lowest ebb since the December 1945 revival.[164]

Orthodox Communist Holds Secretary General Position

The JCP had no president as such. The Secretary General came the closest to being "top dog," for he coordinated the work of the Central Committee, the Political Bureau, and the Secretariat. A man described as a was Secretary General of the JCP. When he was released from prison in October 1945, few Japanese, except ardent Reds, remembered him. It is small wonder, for had been imprisoned for 18 years.

Back in the public eye, a highly gifted orator, soon became the strongest power within the JCP.

was thoroughly Marxist in his philosophy, hueing to the orthodox line since his early twenties. Uncompromising in his aggressive promotion of the class struggle, took the position of prime exponent of revolutionist technique within the Japanese Communist Party.[165]

Holds Number Two Position

Number two man in the JCP was a member of the Central Committee, the Political Bureau and the Secretariat. had returned to Japan after 16 years in exile, becoming almost overnight a prime factor in JCP reorganization. Soviet-trained, and the only Japanese ever to serve on the Executive Committee of the old Comintern, was uniquely a "peaceful revolutionist."

Not only because of his associations in the international scheme of communism, but because he commanded the respect of many non-Communist liberals and intellectuals, was of great value to the JCP. An intelligence report dealing with stated that "in spite of his deviations, within the JCP he is too important for other members to oppose or ignore." This was true in spite of the ascendency of the and the advocates of more violent means.

164 GHQ, FEC, Office of the AC/S, G-2, "Historical Rpt" for 1 Jan 1950 - 31 Oct 1950, Chap III, Part I, pp 27-32, (Secret) (Alexandria Rec Depot, AGO, Alexandria, Va).

3892

CONFIDENTIAL

The intelligence report elaborated on a position. "Not only has seen more of the world than any of his Japanese Communist Party colleagues, but he has been outside of prison in contact with the world more than any of them. With his air of the detached philosopher, is in many respects in a far better political position than any member of the Central Committee. Not committed to a narrow interpretation of the class struggle, he can sway other political groups with logical arguments for a 'socialistic' type of government."

CIC was constantly seeking information on a possible JCP split over Marxist interpretation spurred on by basic differences between Numerically, had the upper hand. All but 14 of the 53 persons holding positions at Party headquarters were members of the more violent faction. The group was less entrenched in the all-important labor unions which the JCP utilized to spear-head its campaigns. CIC noted that however, had been far more successful in the rural areas. appeal also attracted a group of intellectuals to the JCP; on the other hand, had direct influence over important youth groups.

Never was it assumed by intelligence authorities in the Far East that action by would not result in essentially the same end as action by It was concluded: "To assume that ... would not be as willing as... ('mild' Communists in other nations) in championing the handing over of his country, Japan, to his spiritual fatherland would be only to perpetrate a misconception."[166]

Considered Third in Importance

Generally recognized as third in importance in the JCP was who was, among other things, cut a handsome swath between the two factions. Intellectually he belonged to the historically he had been aligned with from the early days of the Japanese Communist Party. His personal loyalty usually went to with whom he shared a prison cell in the years before the Occupation.[167]

In the subsequent pages, there will be considerations of CIC's investigations of JCP links with the Soviet-guided Cominform, of organized JCP espionage in Japan, and of mass demonstrations, riots and agitation perpetrated by the Japanese Communists.

CIC Probes for Links Between JCP and World-Wide Communism

On 6 October 1947, Moscow announced the revival, in the shape of the Cominform, of the old Communist Internationale, dormant since its official abolition in 1943. Although representatives of the JCP did not directly participate in the revival, it was known that the Japanese Communists had communicated with the Comintern before its 1943 demise. For one thing, and his wife had worked for the organization while they

CIC immediately initiated an investigation to determine the reaction of Japanese Communists to the revival of the Communist Internationale. Evidence was sought to show efforts by JCP leaders to participate in or maintain liaison with the new Cominform and any attempts of the Cominform to communicate with the Japanese Reds.[168]

By January 1948, fragmentary reports from Area 25 indicated the JCP members generally favored the Cominform.[169] A Japanese Communist Party directive dated 6 October 1947, and uncovered in Fukuoka by CIC units under First Region, exalted the existence of the new organization. "The Cominform will be revived. Our efforts have bloomed into flower. Without allowing the flowers to scatter, let them bear fruit. Fellow JCP members, rise up again and again to overwhelm all American ideals."[170]

In spite of considerable evidence to the contrary, in late January 1948 issued a statement to the effect that his party was interested solely in the liberation of the Japanese people and was not concerned with foreign issues. claimed the JCP was capable of dealing with the local situation "without the guidance or support of the Communist parties of foreign countries."[171]

Indications of Far East Cominform Received

A new angle to this investigation cropped up in December 1947 when CIC began to receive news of a Far East Cominform. Early reports indicated the JCP was not officially associated with this group but was showing an interest in future participation in its affairs.[172] While was proclaiming no interest in foreign matters, reports reached Second Region CIC from the Gumma Area

168 Hqs, 441st CIC Det, GHQ, FEC, Subj: Monthly Rpt of Activities, Oct 1947, To: Plans & Training Sec, dtd 1 Nov 1947, /s/ Robert M. Reese, Lt Col, Chief, Special Projects Sec, (Secret) (Kansas City Rec Depot, Box C3744).

CONFIDENTIAL

that the JCP had selected two Central Committee members as delegates to a Far East Cominform convention and was arranging illegal transportation for these men.[173]

Reportedly, two different conferences of the Far East Cominform had been held in Harbin, Manchuria, and in Vladivostok in November 1947. Investigations conducted in CIC areas in Japan indicated that no official representatives of the JCP had attended either of these meetings. However, effective liaison between the JCP and these conferences had resulted in transmittal of records of the proceedings to the Japanese Communists.[174]

By the end of February, the Special Projects Section announced that six names of JCP liaison men to the Far East Cominform had been uncovered. One was supposedly in Vladivostok already, three were in Hokkaido awaiting departure, and two had just recently been selected by the Central Committee. In addition, a Korean Communist, who had been arrested by the Japanese police, had been virtually designated as a key liaison man by JCP bulletins referring to his apprehension. A constant surveillance was kept on all individuals suspected of serving as links between the Japanese Communist Party and the Far East Cominform.[175]

Moscow Directive to JCP Intercepted

In late March 1948, the Tokyo-Kanagawa District, through an informant considered by his handling agent to be reliable, acquired the text of a Moscow directive to the JCP and Communists around the world. In CIC's evaluation of the report, it was stressed that the informant had not seen the original document. Generally the JCP was directed to agitate international disputes, foster conflicts by utilization of fanatic nationalists, cultivate persons of influence to obtain support or at least friendly neutrality, foster strikes, hinder food distribution and flood the market with counterfeit money.[176]

New EEIs to Investigation of JCP's Foreign Connections Established

In communications dated 11 and 13 May 1948, the Special Projects Section consolidated the investigation of JCP interest in foreign situations and its possible

direction from foreign sources. A new list of EEIs was established incorporating "the more salient and significant points of previous EEIs." Information was sought on the general reaction of JCP members to the establishment of the Cominform, attempts of the JCP to establish liaison with the Cominform, contents of communications concerning the Cominform, general Cominform organization, personalities involved, policies and purposes, and Cominform involvement in espionage, propaganda and the repatriation program.

Ties With Far East Cominform Appear Questionable

Concurrently with revision of EEIs, the Special Projects Section reported with less certainty than they had in previous months on the JCP's supposed contacts with the Far East Cominform.

"While numerous reports have been received from various CIC areas concerning JCP plans for sending representatives to the Far East Cominform, some even indicating that three such persons had actually departed from Japan, investigation has failed to substantiate the fact that the reported three or any other JCP members have left Japan for that purpose. Since the reports originated in scattered areas this seems to indicate that either (a) our informants have jointly cooked up a false story to impress us, or (b) all have access to a common source of information. It is entirely possible that the JCP has penetrated this fountainhead of information and has attempted to discredit our informants."[177]

CIC informants described as "not necessarily in close contact with official circles," reported a new Far East Cominform conference in Harbin scheduled for some time in June 1948. In subsequent months, lists of delegates were submitted to CIC by a fleet of informants. However, there were equally numerous reports that the individuals concerned were actually still in Japan at the same time that they were supposed to be at the Manchurian meetings.[178]

Throughout the remainder of 1948 and 1949, CIC continued to accumulate information on the possible existence of the Far East Cominform and its influence on JCP policies. The G-2 "Historical Report" for 1949 describes this data as "voluminous but entirely lacking in documentary substantiation." It was added, however, that the JCP adherence to the Soviet line indicated close liaison between the JCP and Moscow. But again substantiating evidence was virtually non-existent. The "Historical Report" admitted that research up to the end of 1949 had

177 Hqs, 441st CIC Det, GHQ, FEC, Subj: Monthly Rpts of Activities, May 1948, To: Plans & Training Sec, dtd 1 Jun 1948, /s/ Robert M. Reese, Lt Col, Chief, Special Projects Section, (Secret) (Kansas City Rec Depot, Box C3744).

178 GHQ, FEC, MI Sec, Gen Staff, CIS Periodical Rpt, Issue No. 30, dtd 15 Jul 1948, p 16, (Secret) (Cen Rec Fac).

established only the nature of the Soviet Cominform as an information organ. This was felt not enough to warrant the assumption that the Cominform was acting as a policy-making and policy-directing body in the Far East.[179]

Cominform Connections Proven in 1950

The Japanese Communist Party's close affiliation with world-wide communism was established as a fact in January 1950. On 7 January 1950, a Cominform press release from Bucharest accused certain Communists in Japan, particularly of a "bourgeois attitude" toward the Occupation and of being a "servant of Japan's imperial occupiers." Reportedly, the Cominform based its charges on a thesis, written in 1947, which advocated the establishment of a "People's Democratic Regime" through parliamentary means and under the conditions of Japan's occupation.

At first, branded the press release as "activity of the enemy aimed at smashing the unity of the Japanese Communist Party." Then there was apparently a serious reconsideration of the matter. submitted publicly to the charges and the JCP proceeded to step up the tempo of its subversion as if to show one and all they were certainly not bourgeoisie.

Party Changes Traceable to Cominform Criticism

Policy developments in the JCP and its subordinate organizations in early 950 were "directly traceable to Cominform criticism," according to the G-2 "Historical Report" for the period. The Eighteenth Expanded JCP Central Committee Meeting in January decided the JCP should conform to the larger international commitments of the Cominform by means of an over-all "peace policy" under which all Communist Party struggles could be united.

The portion of the G-2 "Historical Report" prepared by the Counter Intelligence Division stated: "The double aspect of this 'peace policy,' 'pro-peace and anti-war,' enabled the JCP to support at will the international Communist 'peace' line, or to cloak its increasingly violent attacks on Occupation policies under the guise of protest against 'militarization and colonization.' Thus, official JCP policy in the first ten months of 1950 was characterized by notable uniformity and close adherence to the aims of Moscow."

It was also noted that the untiring efforts to follow closely the Cominform's policies had resulted in two effects adverse to the JCP. There was an intra-Party

179 GHQ, FEC, Office of AC/S, G-2, "Historical Rpt," for 1 Jan 1949 - 31 Dec 1949, Chap III, Part I, p 31, (Secret) (Departmental Rec Br, AGO, Alexandria, Va).

cleavage on the interpretation of the internationalism demanded by the Cominform and considerable loss of prestige from the Party's obvious toeing of the Moscow line.

However, while establishing the fact of JCP subserviance to the Soviet Cominform, CIC was, by October 1950, still without conclusive proof of the existence of a Far East Branch of the Cominform through which supervision from Moscow might be channeled. A great mass of conflicting, slanted and misleading information on this subject circulated throughout Japan and appeared in the public press after the JCP's acknowledged adherence to the Cominform in January. A careful shifting and screening of data on the Far East Cominform at Counter Intelligence Division in early 1950 produced no confirmation. In fact, it was determined that much of the sensational "information" involving foreign sponsored underground groups, guerilla forces and uprisings was being peddled deliberately to all buyers by professional information networks.[180]

CIC Seeks Data on Possible Espionage Net Within JCP

The 441st CIC detachment was particularly alert for any indication that the Japanese Communist Party was operating an active espionage network. In early March 1948, Tokyo Area received reports that the JCP at its Sixth National Convention had established four so-called Liaison Bureaus. The Second Liaison Bureau was purported to have as its mission the collection of information concerning the Allied Occupation Forces in Japan.[181]

Although nothing more was heard about the Second Liaison Bureau, within several weeks there were reports of another JCP espionage net, called the Urban People's Department. On 24 March 1948, a lead sheet on this innocent-sounding bureau was disseminated to all CIC Area offices. CIC was to seek rosters of the organization, its office locations, evidence of nation-wide operations, the channels of communication, evidence of espionage against the Occupation, the types of information collected and the names of persons directing the espionage operations.[182]

181 GHQ, FEC, MI Sec, Gen Staff, CIS Periodical Summary, Issue No. 28, dtd 15 May 48, p 5, (Secret) (Cen Rec Fac).

182 The particular lead sheet on this case is not available. All memo dealing with the investigation, including those subsequently given as footnotes in this section, give the EEIs of the case. See: Dossier on the Urban People's Department in Cen Rec Fac.

Early reports from the Areas tended to conflict somewhat. Area 1, the office in Kagoshima, reported that the Kagoshima Prefectural Committee of the JCP had received no espionage orders from the Party's Central Committee.[183]

Area 29, Utsunomiya, received reports that the Urban People's Department was not conducting espionage. But it was noted that the JCP had set up in the towns, cities, and villages of Tochigi Prefecture a Citizen's Consulting Office. It was felt that this wide-spread network of offices could be ideally used to gather information from all over the Prefecture.[184]

From both Shiga and Saga Prefectures, a different story was reported. There the Urban People's Department was seeking information on the Occupation and was channeling the data through the main levels of the Communist command. Information from these Areas hinted at nationwide operations. Information on the Japanese police, local Military Government policies, public sentiment regarding the Japanese government and the Allied Occupation Forces, organizations and personalities bent on crushing the JCP, and possible violations of the Potsdam Agreement by the Americans was being sought by the bureau.[185]

Bureau Becomes Security Conscious

Yamagata office, Area 32, reported a secret meeting of delegates of the Urban People's Department in Tokyo. The main problem of the bureau seemed to be that certain members had betrayed the JCP "by working as informants for the organs of the Occupation in charge of communism." Yamagata CIC also obtained the organization chart of the Urban People's Department. The agency was divided into the ubiquituous "Liaison Sections," with Section No. 1 in charge of intelligence relative to the Allied Occupation Forces.[186]

The increased security consciousness of the bureau was also noted the following month by the Tokyo office. A speech of one of the bureau's leaders was quoted. "At present, the spies of the enemy are bribing Japanese Communist Party members and low-paid clerks working at headquarters with money and goods to obtain information and secret documents." Considerable shuffling of personnel within the Urban People's Department, designed to confuse CIC, was also reported.[187]

187 Ibid, Issue No. 31, dtd 15 Aug 1948, p 4.

Generally Evidence is Negative

However, reports from the Area detachments generally tended to correspond to this one from Nagasaki, Area 2. "The Urban People's Department is mainly charged with the responsibility of executing party propaganda and campaigns directed toward the ordinary citizens of Nagasaki, such as the anti-tax campaign, opposition to the introduction of foreign capital,. opposition to the Emperor, the anti-Ashida campaign and the like. In order to carry out these campaigns, the department is also charged with the responsibility of gathering certain information in order to be able to lay the groundwork preparatory to the execution of a particular program or campaign... There is no indication presently that members of this department or any other department with the Nagasaki District Committee are engaged in any espionage activity against the Allied Occupation Forces installations or personnel in Nagasaki. The members are aware of CIC's interest in their movement, and are particularly on the lookout for CIC informants within their ranks."[188]

Meanwhile, Yamagata CIC continued to receive reports of a more serious nature. Directives from an organization known as the Special Urban People's Department, which indicated that that agency was a nationwide JCP espionage net interested in all aspects of the U.S. Army Establishment, fell into CIC's hands.[189]

Reports of the Special Urban People's Department directives continued to flow from the Yamagata CIC office for the remainder of the year. Concluding that the data from the other Areas did not reveal evidence that the original Urban People's Department directed espionage activities for the Japanese Communist Party, CIS closed the investigation on 15 November 1948. At the same time, an investigation of the organization, which apparently had no relation other than the similarity of name to the older bureau, was directed throughout Japan.[190]

Plight of Japanese Worker Exploited by Communists

A mainspring for Communist agitation in Japan was the plight of the Japanese worker. Released from the grip of the totalitarian war machine, the workers of the country sought to better their lot by organization into unions which mushroomed almost immediately after the war. With the consent of the Occupation authorities, the government set up a wage scale based on the existing cost of living, with the monetary variations for different jobs. Had the spiralling inflation been brought

to a halt, this wage scale would have been sufficient; but such not being the case, the Japanese worker still found it difficult to provide for himself and his family.

At the outset of the labor unrest, the major demand was for increased wages to compensate for the rising cost of living. In these early disputes, an honest attempt was made to reach an equitable solution.

As the Occupation progressed, it became apparent to CIC that many Communists had wormed their way into the unions. The tactics of these trouble-making elements may be summarized under seven points:

(1) To gain entrance into the union as a member and reach a responsible position.

(2) To spread discomfort among the workers harping on their low standard of living as compared to that of management.

(3) To accuse the company of profiteering.

(4) To engage in strike agitation, presenting demands out of proportion to any inequities which might exist, thus forcing management to refuse them.

(5) To refuse to abide by the decisions of the arbitration boards.

(6) To denounce the political party in power.

(7) To promote strikes for political rather than economic objectives.[191]

In late 1946, a wave of strikes hit vital industries in Japan, and Communist agitators were found to be at the bottom of many of these actions. One of the several strikes linked directly to the Communists was in Kanagawa Prefecture where the Seamen's Union strike, terminated in September 1946,[192] was traced to the Seinin Kodo Tai (Youth Action Unit) of the union. This unit, at the completion of the strike, received a congratulatory note from Tokuda Kyuichi. Tokuda loudly proclaimed that the strikers had "conquered the government with the power of the general strike."[193]

SCAP Order Ends Threat in Early 1947

By mid-January 1947, with a general strike in the country a distinct threat, SCAP put out a "No Strike" order which was met with general compliance. CIC, seeking public reactions to the order, found many workers were displeased with the labor leaders for taking away valuable hours of pay for useless agitation. The general populace seemed to be relieved that the strikes had been cancelled.[194]

"Akahata" Announces "October Offensive"

In August 1947, "Akahata," Communist Party newspaper, announced plans for a large scale movement for wage increases to be spearheaded by the unions of the communications, railways and electrical industries. CIC learned three steps were proposed by the Communists for this new offensive.

Stage one, to be completed by about 20 August 1947, was to consist of getting labor's demands lodged with management. The next month the unions were to half-heartedly negotiate their demands with the owners. Between 20 September and 20 October, all participating unions were to separately and individually call a strike so that by mid-October a state of general strike would exist. The Communist program called for a general shut down through apparently independent actions, an effort to hide the fact that the strikes were actually coordinated and interdependent.

CIC compiled a collection of statements by various Communist leaders predicting great things for the coming offensive. Tokuda declared that if everything went as planned the new revolution would be well on its way by 7 November, the commemoration date of the Russian Revolution. In anticipation of SCAP demanding a wholesale housecleaning, Tokuda issued instructions for regional offices to conceal party funds, destroy documents and rosters, and prepare to go underground. An officer of the Youth Communist League was quoted as saying, "Blood will flow this fall, for whoever heard of a bloodless revolution?"[195]

In some industries, the JCP quickly had to acquire leadership of unions to institute the strikes, combatting labor leaders who firmly stood for democratic processes and proven union techniques. Quick infiltration jobs placed leadership of these unions in the hands of a violently radical minority.

Skilled party speakers traveled widely, lecturing and holding workers' forums. Everywhere there was talk of violence to condition the general public to the fact that fighting might be necessary to accomplish labor's ends. One

194 GHQ, FEC, MI Sec, Gen Staff, Civil Intel Sec Periodical Summary, Issue No. 12, dtd 15 Feb 1947, p 48, (Secret) (Cen Rec Fac).

195 Ibid, Issue No. 20, dtd 15 Sep 1947, pp 9-11.

speaker, Kasuga Shojiro of the JCP Central Committee, stated, "Some party members are explaining a peaceful revolution. This is a mistake. Marx and Lenin denied the advocation of a peaceful revolution. A forceful revolution will be boldly led. In our coming October struggle, the peaceful revolution will change to violent revolution if the United States uses force to oppose us."

Another Central Committeeman, Konno Yojiro, speaking publicly in Kumamoto Prefecture on 22 August 1947, stated that armed power would be necessary to accomplish the aims of the "October Offensive." Later in his speech, Konno was bold enough to suggest that help from the USSR be requested.

Confidential informants told CIC that the immediate purpose of the strikes, far from an increase in wages for workers, was to create sufficient chaos to allow the JCP to take control of the Japanese government and cause international confusion because of the certain involvement of the United States in the action. So confident were the planners of their eventual success that in Fukuoka Prefecture the Communists were reported to have selected candidates to replace local officials.

Not all reports painted so bleak a picture. First CIC Region reported that some of the Communists were getting cold feet, deciding that the offensive was not too well timed. The conditions upon which popular support of the action rested were changing. Most important, a timely arrival of food shipments from America had gone a long way in alleviating a food shortage which the Communists had been harping on for some months. The cautious elements of the JCP recommended that the "October Offensive" be postponed until February 1948 when winter weather was expected once again to create a food shortage.[196]

CIC Area 25 also determined that the instructions of the "October Offensive" must have been altered. The unions, now planning to strike at no prearranged time, were to begin action governed by three factors: (1) adverse living conditions due to accelerated inflation; (2) industrial readjustment following the institution of the Industrial Reconstruction Readjustment Law (expected to result in many lay-offs); and (3) disintegration of companies following the institution of anti-trust measures.[197]

"October Offensive" Dies on the Vine

The "October Offensive" lost momentum and petered out. While the strikes of February 1947 had been called off as a result of a SCAP directive, the Occupation authorities had wisely used more oblique tactics this time. Not only were

196 GHQ, FEC, MI Sec, Gen Staff, Civil Intel Sec Periodical Summary, Issue No. 21, dtd 15 Oct 1947, p 13, (Secret) (Cen Rec Fac).

197 Ibid, p 9.

large quantities of food released, but a concentrated program to educate the Japanese laborers in the proper practices of democratic unions had been instituted.[198]

CIC information on advance planning for the "October Offensive" had been voluminous and apparently complete. One member of the Japanese Communist Party paid CIC the highest of compliments. He was quoted as moaning, "In GHQ there is a group called CIC which makes our work in Japan most difficult."[199]

JCP Labor Program Suffers With Party in 1949-1950

Throughout the Occupation, the Japanese Communist Party continued to regard infiltration into labor unions, control over the labor movement, and agitation over matters pertaining to labor a prime activity. JCP labor policy became increasingly militant immediately following their important election triumphs in January 1949. But by September 1949, the mounting strength of the anti-Communist elements within labor and a public reaction against JCP-instigated violence brought about a rapid swing of labor organizations away from Communist leadership.[200]

The many blows felt by the JCP in 1950 directly influenced its strength among the unions. Police restrictions in Communist-led labor rallies and the "purging" of the Central Committee and "Akahata" put the crimp in JCP labor activity. The Civil Intelligence Section "Historical Report" of January to October 1950 summarized the situation in saying: "...by the end of October, the JCP found its control over organized labor vastly decreased, with a majority of its leading labor organizers and agitators among the ranks of the unemployed."[201]

JCP Tries for Support of Farmers

When the Communist Party decided to go after the support of the Japanese farmers, they chose to base their appeal on complete opposition to the SCAP program which enforced delivery of rice under a quota system and a fixed legal price. The farmers objected to selling at a lawful and established price then they had to buy fertilizer, equipment and other supplies from black market sources. Also, if the prices had to be fixed, the farmers would have preferred to have their agriculture associations instead of the government establish the levels.

198 GHQ, FEC, MI Sec, Gen Staff, Civil Intel Sec Periodical Summary, Issue No. 23, dtd 15 Dec 1947, pp 4-5, (Secret) (Cen Rec Fac).

199 Ibid, Issue No. 21, dtd 15 Oct 1947, p 13.

200 GHQ, FEC, O of AC/S, G2, "Historical Report" for 1 Jan 1949 - 31 Dec 1949, Chap III, Part I, p 27, (Secret) (Departmental Rec Br, AGO, Alexandria, Va).

201 Ibid, 1 Jan 1950 - 31 Oct 1950, p 35.

As soon as the quotas for 1947 were announced, the Communists began an all-out program of agitation to win support for the coming election. CIC was able to obtain photographs or copies of the JCP directives establishing rice delivery agitation. JCP directive 60 of 5 January 1947 stated, "The success of our struggle focuses on the reduction of quotas and the sabotage of individual deliveries." The document, in elaborating of the political objectives behind this activity, clearly indicated that it was part of the JCP effort to precipitate a nationwide crisis that could be exploited at the polls.

In the months before the 1947 election, Communist agitation on the rice delivery issue was reported by CIC in all but 11 of the 47 prefectures. Agitation was particularly heavy in the rice-producing areas of Hokkaido, Okayama, Fukuoka and Yamagata Prefectures. Those areas in which CIC noted a concentration of Communist activity were, by no mean coincidence, the fartherest from meeting their quotas of rice.

Reds Hit Vulnerable Points

CIC noted a marked uniformity in the Communist methods of aggravating farm issues. Speeches by Communist members at meetings of farmers' unions, personal contact with individual farmers, presentation of resolutions to government officials, and the sponsoring of mass demonstrations were the usual means employed.

Urging farmers to hold up rice deliveries, the Communists harped on the vulnerable point of the high cost of fertilizer and farm implements. Farmers were advised to hold 30 percent of their crop for sale on the black market, or to demand, before delivery, that the government furnish the vitally needed equipment at legal prices.[202]

To attain JCP domination of the farmers, the Communist members of the various agricultural unions and associations strived to attain leadership positions. Reports from CIC Area offices in March 1947 indicate that the JCP had reaped an uneven degree of success in their attempts to subvert the agricultural groups.

In Kagoshima Prefecture, only two of the 73 farmers' organizations were reported under Communist leadership. One-fourth of the associations in Nagasaki Prefecture were under JCP influence. In Tottori Prefecture the only important farmers' union was heavily dominated by the Reds.

---

202 GHQ, FEC, MI Sec, Gen Staff, "Opns of the Civil Intel Sec," Vol IX of "Opns of the Intel Service in the SPA," Chap IX, Selected CIC Invest, Case No. 22, Communist Party Activity in Rice Delivery Sabotage, (Secret) (Cen Rec Fac).

CIC in Osaka reported Communist members of agricultural societies were forming separate committees, seeking to promote internal disputes. The Communists felt if their actions were vigorous enough, eventually their committee would be able to acquire control of the whole organization.[203]

JCP Backs Down

Suddenly aware that they were inviting the wrath of SCAP by their actions, some of the Communists began to back down on the agitation of the rice delivery program. Fear of investigation and prosecution by the Occupation authorities was undoubtedly behind the order of 1 April 1947 from Ito Ritsu, the Central Committeeman in charge of farm agitation, to the Kumamoto Regional Committee. The local Reds were ordered to "round up reports of the Japan Farmers' Union and burn them."

The Occupation authorities also felt they might have a case for prosecution. On 12 April 1947, documents pertaining to the JCP's alleged sabotage of the rice delivery program were presented to the SCAP Legal Section to determine whether the marshalled evidence was sufficient to warrant trial in military courts.

The Legal Section believed there was no question that the directives, which purported to have emanated from the JCP Central Committee, were designed to sabotage the rice delivery program. The authors of the orders, the lawyers felt, could be justly apprehended and tried. However, it was concluded that CIC's investigation had failed legally to identify the true instigators of the plan to wreck the food program.

Unfortunately, further investigation by CIC failed to obtain the required evidence to link members of the Central Committee with the documents directing the 1947 farm agitation.[204]

JCP Continues to Seek Following in Rural Areas

Throughout the Occupation, the Communists, although concentrating their major effort on the ranks of labor, continued to seek support among the farming population. By August 1947, Tokyo Area and First CIC Region concluded that the JCP was gaining little backing among the rank and file of the farmers. In Kyoto, Communist membership had become a stigma; many farmers' groups formerly

203 GHQ, FEC, MI Sec, Gen Staff, CIS Periodical Rpt, Issue No. 14, dtd 15 Mar 1947, pp 43, 44, 50, (Secret) (Cen Rec Fac).

204 GHQ, FEC, MI Sec, Gen Staff, "Opns of the CIS," Vol IX of "Opns of the Intel Service in the SPA," Chap IX, Selected CIC Investigations, Case No. 22, Communist Party Activity in Rice Delivery Sabotage, (Secret) (Cen Rec Fac).

assertive in matters of the left were claiming no Communist connections. In the Second Region there had been more response to the Communist line and considerable criticism of the Occupation from agricultural associations.

In the subsequent months, CIC continued to conduct surveillance of malcontents and potential subversives in farmers' organizations and probe for indications that these persons had successfully gained leadership positions and were planning to thwart the government's programs.

Generally, the Japanese Communist Party was not as successful in gaining rural support as it had been in the ranks of labor.[205]

Broad Appeal in JCP Anti-Taxation Propaganda

One of the Japanese Communist Party's major instruments of propaganda - and probably the one with the broadest appeal - involved agitation against the Japanese Government's tax program.

In April 1947, the JCP Secretariat issued Directive 80, initiating a concerted nationwide campaign against increased taxation. JCP members were to organize disgruntled tax-payers from all walks of life, particularly attempting to coordinate the otherwise united labor and farming elements. The Communist Party believed a successful anti-tax campaign could be expected to attract the support of the masses to the "cause."

Although agitation against taxation initially produced only lukewarm results, the JCP stepped up the program in November 1947, and popular response was on the increase by the early months of 1948. Anti-tax demonstrations and round table discussions became the order of the day throughout the country. Generally an average of 500 persons took part in the rallies, but sometimes up to 15,000 were involved. Members of the JCP-dominated labor unions and agrarian groups led the majority of these demonstrations.

To attest to the seriousness of the situation, the Japanese Finance Ministry reported a deficit of 50 billion yen at the end of 1947. A large share of the amount was accounted for by non-payment of individual income taxes.

Early in 1948 the Japanese government clamped down on the tax agitation with numerous arrests of trouble-makers, reducing the program to a stand-still by the end of the year.

205 GHQ, FEC, MI Sec, Gen Staff, CIS Periodical Summary, Issue No. 19, dtd 15 Aug 1947, pp 5, 19, 28, (Secret) (Cen Rec Fae).

Tax Campaign Given Much Credit for Election Successes

But the JCP was not easily discouraged. Their campaign for the January 1949 elections again included anti-tax agitation. More than ever before, according to CIC reports, the elements of the class struggle were stressed. The workers were told they were robbed of hard-earned wages to support a Fascist government which failed to function in their interests. JCP communications hinted strongly that much of the money was given directly to already wealthy capitalists.

The anti-tax campaign spearheaded a membership drive which won many ordinary citizens to momentary support of the Communist cause. Taxation agitation was credited by American Intelligence as a major reason for the JCP election successes of January 1949.

A Civil Intelligence Section summary of the anti-tax program concluded: "Anti-tax agitation is setting an obvious pattern of incitement for other economic issues. By stirring other individual grievances and developing 'livlihood' movements, the JCP hopes to create a super 'united front' to be used in achieving the JCP ultimate goal, the control of Japan."[206]

206 GHQ, FEC, MI Sec, Gen Staff, CIS Periodical Summary, Issue No. 39, dtd 15 Apr 1949, p SPA-3, (Secret) (Cen Rec Fac).

Section 6

THE COLONY OF KOREAN NATIONALS

After the first year of the Occupation, the majority of CIC investigations, if not concerned directly with the activities of the Japanese Communist Party, had indirect and usually important connections with communism, both in Japan and on a world-wide level. CIC's prolonged investigation of the large colony of Korean Nationals in Japan was necessary since the discontented Korean minority, always a major source of civil disturbance, proved futile ground for Communist agitation.

Trouble-Makers From the Start

As early as the summer of 1946, First CIC Region declared, "Much of the crime in Japan has been attributed to Koreans."[207] Concurrently, CIC found the Japanese police showing reluctance to apprehend and prosecute Koreans, thereby openly inviting Koreans to enlarge their illegal activities.[208] Apparently the reluctance stemmed, not from fear of retaliation, but from a belief that activities of Korean nationals were not the jurisdiction of local police.[209]

Uniquely enough, some Koreans attempted to take matters into their own hands in assuming police power over their own kind. During the first week of September 1946, a Korean organization was observed in Hiroshima maintaining their version of peace and order among Korean nationals. Four instances of imprisonment and five cases of assault of men adjudged by the Koreans to be law violators were noted by CIC. The Japanese police had not been informed, and in one instance a policeman attempting to interfere was given a severe beating.[210]

Ideological Disputes Split Colony

This bellicose minority became more of a problem when an ideological struggle within the colony developed. The Korean minority had always been sensitive to changing conditions in their homeland. On 16 October 1945, Koreans from all over Japan met to proclaim their common cause and more specifically to free themselves from Japanese manipulation and control. Men of varying political beliefs joined together in the League of Koreans Residing Japan (Zai Nichi Chosenjin Renmei). Such a spirit of unity was possible because it was felt Syngman Rhee and Lyuh Woon Hyung, leaders in Korea of the right and left

3909

respectively, were working together for a unified Korea. But with evidence of an irreconcilable split in Korea, there soon appeared a similar division in Japan.

This internal struggle, originally apparent in Tokyo, had clearly reached national proportions by the fall of 1946. On 3 October 1946, the lines of battle were drawn.

The League of Koreans Residing in Japan had come under the control of leftists and pro-Communists, who were in the majority among the Koreans in Japan. Realizing they had no voice in the organization, the rightists convened on 3 October 1946 and established their own group, The Korean Settlement Corporation (Chosenjin Kyoryu Mindan).

Divided by political differences and racked by internal strife, the Korean minority in Japan came to mirror in minature the plight of the entire Korean nation.[211]

CIC did note scattered efforts to reunite the Korean population in the months that followed, but the powerful internal differences had overridden any general impulse to unite for the common good. One Korean who had tried to unify his people was quoted as saying, "Major differences in ideology would preclude the possibility of complete unification for some time to come."[212]

JCP Exploits Korean's Condition

The great discontent of the Korean nationals was seized upon by the Japanese Communist Party. CIC, beginning in October 1947, sought information on this maneuver. Frequent reports from informants indicated that the JCP was attempting to enlist young Korean Communists into JCP cells. There were also numerous claims that Koreans were performing extensive liaison missions to North Korea for the JCP. One informant in Kyoto learned that the Russians were making an effort to utilize the League of Koreans Residing in Japan as a medium for soliciting potential Soviet citizens.[213]

Later in 1947, CIC learned of JCP schools set up to instruct youthful members of the League and of regular liaison contacts between the League and the JCP.[214]

5,000 Riot in Osaka

One of the major riots involving Koreans took place in Osaka City on 23 April 1948, when 5,000 Koreans staged what was officially termed an "extremely disorderly parade." A mob of Koreans succeeded in breaking through a police cordon and stringing up a Red flag over the Osaka Prefecture building and in preventing the departure of the Prefectural Vice-Governor. For several days, a situation bordering on anarchy prevailed in Osaka and the neighboring city of Kobe.

Meanwhile JCP members circulated through the mob with handbills bearing the following sentiments:

Oppose the closing of Korean schools
Oppose suppression
Release our jailed victims immediately
Oppose oppression of the minority races
Long live Korean and Japanese Democrats
Expose the traitors to our race
Breakup our enemy, the Ashida Cabinet
Breakup the national parliament
Join the JCP

By 28 April a total of 1,558 Koreans, including some leaders of the League, had been arrested for participating in the Osaka-Kobe riots.[215]

The Osaka demonstrations served as a public pronouncement of the common cause of the League and the JCP. Japanese Communist Party Instruction 71, issued by the Central Committee on 19 March 1948, had ordered JCP and League activities combined. Korean problems were to be considered JCP problems also. A document emanating from Osaka JCP officials on the day before the big riots had outlined specific duties for JCP members in the demonstrations. Another Osaka JCP communication had been more general: "It is our glorious task to organize the Japanese reinforcements against the common enemy. You must make propaganda concerning the Korean oppression. Organize strikes and mass action against the common enemy and bring masses to protest rallies."[216]

The Special Projects Section at CIC headquarters, responsible for coordination of investigations of Korean activity, concluded, "It appears that the majority

215 Hqs, 441st CIC Det, GHQ, FEC, Subj: "Monthly Rpts of Activities, Apr 1948, To: Policy & Rpts Sec, dtd 4 May 1948, /s/ Thomas A. Harris, Maj, Chief, Special Projects Section, (Secret) (Kansas City Rec Depot, Box C3744).

216 GHQ, FEC, MI Sec, Gen Staff, CIS Periodical Summary, Issue No. 29, dtd 15 Jun 1948, p 15, (Secret) (Cen Rec Fac).

of those involved in the disturbances at Osaka are members of the Korean League, and the JCP members have been actively lending support and leadership whether the JCP itself is actually responsible for instigating the riots or not."[217]

By September 1948, CIC had uncovered the complete courier route utilized by the League of Koreans Residing in Japan for obtaining directives and propaganda materials from the government of North Korea. In addition, a source of information in Osaka came up with the news that directives to the League were also being transmitted by encoded messages from Radio Pyongyang.[218]

Rightist Koreans' Position Improves in 1949

Up to 1949, the plight of the right wing Koreans, represented at this time by the Union of the Greater Korean Republic in Japan, was acute. They were in the unfortunate position of a minority within a minority. Under the leadership of the sincere but incompetent Boku Retsu, the rightists found themselves numerically weak, financially insolvent and faced with the task of resisting leftist efforts to destroy them. Boku's ambassador in Japan, Dr. Chung Han Pum, marked an upsurge in rightist fortunes. Then, on 9 September 1949, an order from the Japanese Attorney General dissolved the League of Koreans Residing in Japan and its associate youth organizations. Properties and assets of the groups were confiscated and leaders placed on the "purge" list, prohibiting them from being active in any organization. The leftist Koreans were stuck without an association to voice their attitudes.

The right wingers bided their time while the initial shock of the dissolution died down. Then those Koreans known to be free of radical ideologies were invited to join the principal labor union. This action greatly increased union prestige in Japan. At the end of 1949, the organization was actively engaged in assisting the Republic of Korea Ambassador to register, mostly for information purposes, all Korean nationals in Japan. This registration, while meeting some leftist opposition, proceeded smoothly.[219]

In the G-2 "Historical Report" for January through October 1950, written after hostilities had broken out in Korea, a backward look was taken at the confused status of Korean nationals in Japan from the beginning of the year to the war's start. "The chaos among leftist Koreans following the dissolution of the powerful League of Koreans Residing in Japan and its affiliates; the ideological waverings of the rightist organizations and the influence of the Korean Diplomatic Mission in Japan, all acted to obscure the intelligence picture of the largest foreign minority group in Japan."[220]

Section 7

REPATRIATES FROM THE SOVIET ZONE

For many years after World War II, the Soviet Union, at a painfully slow rate, repatriated their Japanese prisoners of war. Beginning in November 1946, CIC and the command's positive intelligence agencies were involved in the interrogation and screening of these returnees.

CIC Informants Roam Dock Areas

Eight Army intelligence officers supervised the interrogations of all repatriates at the port of debarkation. CIC provided personnel to coordinate with Eighth Army in port interrogation and to cover port customs stations. CIC employed trusted Japanese informants to circulate through the crowds coming off the ships. The stray bits of information picked up by these men often put the finger on suspicious individuals for CIC. Those repatriates appearing to be of most counterintelligence value were interrogated by the CIC Area office nearest the eventual residence of the returnee. From the repatriates, many of whom were potential informants, CIC worked particularly to compile information on Soviet indoctrination and possible Soviet plans for large scale subversion of their prisoners.

CIC's part in the repatriation program was specifically defined in January 1948 when the 441st was charged with screening out three types of returnees: known or suspected Soviet agents; collaborators in Soviet-held areas; and potentially active Communist Party members. It was standard procedure in interrogating repatriates to question them on persons still in prisoner of war camps possibly falling into these classifications.[221]

Later Returnees More Indoctrinated

By the end of 1948, the returnees were bound to be more heavily indoctrinated with Soviet ideals than those arriving in the first shipments. The Russians not only had had more time to "brainwash" these men, but had probably saved until last those heavily indoctrinated. This trend continued into 1949. CIC found the prisoners of war returning in 1949 had been subjected to "the most intensified indoctrination program yet employed."[222]

222 GHQ, FEC, O of the AC/S, "Historical Rpt," for 1 Jan 1949 - 31 Dec 1949, Chap III, Part I, p 38, (Secret) (Departmental Rec Br, AGO, Alexandria, Va).

Statistics compiled by the 441st showed that in September and October 1948, repatriates signifying an intent to join the JCP had ranged from 9 percent to 35 percent on the various boatloads. By July 1949, the percentages varied from over 60 percent to nearly 80 percent. In eight boatloads of repatriates received that month the percentage of those "opposing communism and the USSR social structure" was well below 8 percent in each load.[223]

CIC Makes a Survey

Between the end of 1948 and the beginning of the Korean War, 329,505 Japanese were repatriated from Soviet zones. The general behavior of this group, as well as statistics on their political beliefs, indicated they had been steeped in Soviet propaganda.

In an effort to determine how far the Red indoctrination had sunk into the repatriates, CIC was given in 1950 the task of conducting interviews of 100 specially selected "Red repatriates" from the 1949 shipments. The men interviewed had signified an intention to join the JCP and had exhibited a militant and belligerent attitude upon their arrival in Japan. CIC interviews, supplemented by information received through more confidential sources, showed many instances where individuals had "cooled off" after a year at home. Of the total, 11 had joined the JCP, 16 could be classified as Communist sympathizers, and the remainder were anti-Communist. One of the last group exclaimed, "It is like a nightmare, the days we danced to the melody of 'soren-Bushi' (Soviet music). I feel as though I returned to the society of justice and respect and I am no longer a menace to anyone."[224]

The Case of

As might be expected, the repatriation docks were ideal places for one with cosmopolitan tastes in acquaintances. Intermixed in the jumble of humanity returned by the Russians were bound to be men with instructions from Soviet intelligence agencies. Such an individual was

At the end of the war, was under Russian lock and key in Karafuto. On 24 February and 26 March 1946, attempted to escape to Hokkaido. Both times the Russians nabbed him and brought him back to the prisoner of war cage. In April, was questioned by the Soviets and informed he could return to his homeland if he would promise to collect some information. On 10 July, he was briefed on his mission and included in the shipment of repatriates to Hokkaido.

3915

was to determine the uses being made of the largest buildings in Hokkaido, report on the economic situation, survey the transportation facilities, and gain information on various local publications. This information was to be collected within a month's time.

was given an address in Manchuria to which he was to send his information. The letter containing the data was to be given to some person returning to Karafuto and would be recovered by Soviet officials searching the passengers at their port of debarkation. The Russians told if they did not hear from him, he would be visited by a contact man who would pick up the information.

It is not recorded in available documents how came to CIC's attention at the port of debarkation, but his interrogation by agents from the Sapporo Area office was not particularly difficult. readily supplied the full story of his mission. He was instructed to return to his home and report immediately if a Soviet contact man paid him a call.[225]

Several months' surveillance by CIC revealed no evidence that was engaged in espionage activities. Nor was he contacted by a Soviet agent. Nevertheless, CIC continued periodical surveillance of and his name remained on the Civil Censorship Detachment Watch List.[226]

Twice Is Too Many

Repatriation channels afforded the Communists excellent "cover" for Party liaison personnel as well as espionage agents. was fresh from a series of conferences in North Korea on 18 December 1946 when he was detained by agents at the Sasebo Repatriation Port "for suspected illegal entry into Japan." The main trouble with was that records indicated that he had been repatriated once already.

The day following detention, First CIC Region initiated an investigation to ascertain all the facts surrounding his past activities. had been captured by the Chinese Communist Army in August 1940 while serving with the Japanese Imperial Army in North China. The Communists proceeded to give him a course of instruction in communism. Apparently got good grades at

3916

school, for he was eventually placed under the tutelege of and at the same time prepared propaganda pamphlets for dissemination to less advanced students.

In March 1946, was repatriated. Following instructions left him by he reported to the JCP headquarters in Tokyo. The Communists informed him that he was to have no formal party connections. was "assigned" to the National Federation of Repatriates and spent his time nullifying the efforts of "opposing parties" to attract repatriates.

was included in a plan to contact Russian military personnel in North Korea and, on 17 September 1946, left Japan on a hospital ship for Pusan, South Korea. Able to avoid incident in South Korea, proceeded across the 38th Parallel and made the required contacts. Passes from the Soviet Army and the North Korean Labor Party facilitated his movement in North Korea. On 12 January 1947, departed from Genzan, North Korea, through normal repatriation channels.[227]

Extensive investigation and interrogation were needed to piece together this information on On 26 May 1947, CIC obtained a written statement from testifying to the truth of his story. To furnish complete evidence on travels, First CIC Region obtained immunization records showing that he had received shots at his various ports of call. The immunization dates fortunately coincided with the dates of departure and entry as given in testimony.[228]

For security purposes, was not tried for his subversive activities, but only for illegal entry into Japan.[229] He was sentenced by Eighth Army Provost Court on 27 October 1947 to two years at hard labor.[230]

Section 8

SIX OTHER INVESTIGATIONS

Six prominent cases have been selected to exemplify 441st operations in investigations of other than political movements and organizations. These cases illustrate a wide range of investigative activity.

, The case of concerns a Caucasian woman who claimed American citizenship but acted in a most un-American manner. A suspected Communist courier, was the subject of a highly unusual surveillance. The case of the "Seven Persons" began with a Civil Censorship Detachment intercept of a letter in which a man named was termed a Soviet spy. A Japanese public official, asked too many questions, and CIC was brought in to find out why. Information relayed to CIC from China led to the apprehension of two nationalist espionage agents - and In the last case, a leak of classified information from the SCAP Government Section led CIC to a Department of the Army civilian with apparent pro-Communist sympathies.

Apparent Pro-Communist Reported to CIC

first came to CIC's attention through a lead submitted to the G-2 Section from the Office of the Inspector General, FEC. The c of the transport Marine Falcon had reported to the Inspector General that during her voyage from San Francisco on that ship, had constantly made utterances he felt could only be classified as pro-Communist. According to had "given the Russians credit for having all the answers."

CIC quickly learned that a Caucasian women who claimed American citizenship, had married a Japanese citizen, on 30 July 1939. During the war, she had remained in Japan with her husband. In October 1945, under a Swiss Protection passport, she had left Japan for her "native" America. One year later, on 15 October 1946, she landed in Yokohama from the Marine Falcon. It was never ascertained exactly how she had received passage to return to Japan.[231]

3918

Crew of Ship Quizzed

CIC sought out the of the vessel. He was persuaded to sign an affidavit that read in part: spoke in a general way, but at all times she had praises for the Soviet Union. However, at no time do I recall of her making any direct derogatory remarks regarding the United States."[232] CIC also talked to other members of the crew concerning The chief steward, the chief store-keeper, and the night pantryman remembered the woman and had gained the impression that she was pro-Communist.[233]

Six-Week Surveillance Inconclusive

On 18 November 1946, CIC instituted a surveillance of [234] an activity that was curtailed on 31 December when it became obvious to the agents on the case that the subject was aware of being followed. At the conclusion of this six-week surveillance, CIC was forced to report, "There is a cloud of uncertainty and indecision hovering over the many contacts was seen to make in the surveillance of her activities. Her frequent contacts were identified and placed under investigation, but no derogatory information concerning them was uncovered. During the six weeks, she had visited several Army installations and taken frequent trips by rail to Tokyo. At one point, on 7 December 1946, she entered the Tokyo Correspondents' Club carrying a three foot long package, but came out empty-handed. Nothing more about this incident was uncovered.

While no concrete counterintelligence information was uncovered during the surveillance, CIC did gain information to indicate that was utilizing Post Exchange and Commissary facilities to which she was not entitled.

Goes Calling

On 7 January 1947, the Marine Falcon returned to Yokohama and was granted permission by port authorities to board the ship to visit a member of the crew. CIC was notified of intentions. A check of the crew list revealed no person under the name she had given to the port authorities. CIC quickly established that her contact was actually a known radical. After a two-hour visit, left the Marine Falcon and was immediately apprehended by the Military Police.

3919

told the Military Police she was a newspaper correspondent. When asked why she did not carry the registration-identification required of newspapermen, she blamed "red tape in Washington" for holding up her application. An immediate search of her hand bag revealed several CIO publications, the personal card of a Pravda correspondent, and detailed notes on political affairs in Japan. After brief questioning, was released.

The cabin of the was searched with the result that labor pamphlets similar to those carried by were uncovered. The admitted he had passed some CIO literature on to the women. This information was transmitted to CIC with the Transportation Corps at the port of San Francisco with a request that the 441st CIC detachment be notified on all occasions when this man was a crew member on a ship expected to dock in Japan.

On 20 January 1947, the Military Police searched home. Newspaper clippings and diaries enough to indicate an ardent adherence to the Communist cause were confiscated. Many violations outside of CIC's concern were uncovered in the raid. Evidence that she fraudently used Post Exchange and Commissary facilities as well as indications that she was illegally using U.S. Army mail channels were obtained.[235]

CCD Establishes Mail Cover on

Meanwhile, on 25 November 1946, CIC had requested the Civil Censorship Detachment to maintain a mail cover on the subject to obtain information on her political activities.[236] Through this mail cover, CIC first learned of the woman's contacts with the Further investigation revealed, working under of this news service, had meticulously covered a hunger strike at a Tokyo electric plant, criticizing the conduct of the Military Police during the strike. Although she was not a registered correspondent it was learned that intended to write and disseminate a series of articles derogatory to the Allied Occupation.[237]

Citizenship Status Settled

Up to this point in the investigation, there had been considerable concern over the citizenship status of the subject. Although Fujikawa frequently claimed she was an American citizen, this fact could not be fully established by the CIC.

235 Hq, 441st CIC Det, GHQ, FEC, Subj: , 4 Mar 1947, (Secret) (Cen Rec Fac).

236 Hq, CIC Area 23, Subj: Request for Mail Cover, To: Civil Intel Sec, G-2, 25 Nov 1946, (Conf) (Cen Rec Fac).

237 Hq, 441st CIC Det, GHQ, FEC, Subj: 4 Mar 1947, (Secret) (Cen Rec Fac).

The problem was solved by a series of events that began on 19 May 1947 when two Criminal Investigation Division agents were called to her home to check on a reported burglary.

The investigators were drawn into a conversation with the woman who, for reasons that could never be uncovered, told them about inadvertantly voting in the Japanese elections of 20 and 25 April 1947. claimed she went to the polls to seek information for a book she was writing. She informed the Criminal Investigation Division agents that she had voted in complete ignorance of exactly what she was doing.

Prior to the elections, a notice had been published on several occasions in the "Nippon Times" and "The Stars and Stripes" to the effect that American citizens voting in the Japanese elections would be subject to loss of their citizenship.

CIC contacted and queried her on the details of her voting. The woman claimed she had registered on 9 April and then proceeded to cast her ballot on election day. She had been asked by a Japanese friend to vote and had done so "without giving it a thought."

Prior to her CIC interrogation, had called on Mr. V. A. Johnson, State Department representative in Yokohama, to explain that she had voted out of ignorance of the law. On 10 June 1947, Johnson requested CIC to obtain documentary evidence that could be used to deprive of her citizenship, whether she possessed it or not.

Affidavits were secured from election officials who recalled that a woman of description had voted. Her name was found on the list of registered voters. But most important, the signed slip of paper that had been exchanged at the polls for a ballot was uncovered.[238]

On 22 December 1947, Johnson reported to the Office of the AC of S, G-2 that the Department of State had approved loss of American citizenship. Regardless of the tangle over citizenship early in the investigation, it was now settled once and for all.[239]

CONFIDENTIAL

Political Status Settled Also

While her citizenship status was unraveled, political views also became patently clear. She appeared at nearly every labor demonstration held in Tokyo and frequently spoke to the mob in rather halting Japanese. To quote one CIC officer, "She made no bones about her Communist activity." Generally, although the Communists thought well enough of her, had a poor reputation with the Japanese public.[240]

While could have been apprehended for criminal offences, the policy as outlined by General Willoughby was to "lay off arrest." The Japanese police kept under surveillance in an effort to uncover other illegal activities.[241]

had one more flurry of publicity. On 3 May 1950, General MacArthur spoke out against the Japanese Communist Party in no uncertain terms. As an act of protest against the general, announced through the that she was joining the JCP to become the Japanese Communist Party's first "American" woman member.

On decision, quoted her as saying she had never renounced her American citizenship. The reporter had asked her if she ever intended to do so. replied she would if pressed; and then, the reported, "She trailed off in a series of qualifications that left the issue somewhat confused."[242]

CIC Watches Suspected CP Couriers

SCAP, through strict censorship, was able to keep Japan substantially free of outside Communist propaganda except for that sent into the country by radio. If was known, however, that Communist or Communist-sympathizing seamen, most of them on ships of U.S. registry, were smuggling Red-inspired literature into the islands. Gradually, through the combined efforts of the 441st and CIC in the Zone of the Interior, a master list of seamen suspected of acting as couriers was compiled. To maintain a world-wide check of the activities and movements of these alleged Communists, ports of call throughout the Far East and in the United States were forewarned of vessels enroute carrying seamen under suspicion. Extensive investigations and surveillances accounted for the activities of the

suspects during shore leave. All positive information uncovered was forwarded to authorities at the San Francisco Port of Embarkation and to the Director of Military Intelligence in the Pentagon.[243]

Crew Member of "SS Cleveland" Watched

On 18 July 1949, a crew member of the SS President Cleveland, suspected by intelligence authorities of being a courier for the Communists, landed with his ship at the Yokohama docks. The 441st was prepared for him. At 1340 hours, when left the ship, of the Yokohama office began what was intended as a surveillance of the suspect.

During the first few minutes, the seaman walked briefly with a Japanese woman, but could not get close enough to identify her. Observing closely moves, had to conclude that his subject was "testing for trail." When the subject suddenly called out to , the only other Caucasian in the crowd, and asked him the location of the Japanese Travel Bureau, the agent was certain the surveillance had been compromised. After escorting to the travel agency, called his office for relief. When relief arrived, he retraced the subject's steps, searching some of the localities where had stopped during the half-hour before their conversation. Meanwhile had been lost in the crowd by the new surveilling agent.

At 1900 hours, again spotted and trailed him into the Yokohama Seamen's Club. A few minutes later, hailed the agent, came over to his table, and exhibited several books on Japanese ceramics. in his report wrote: "The agent, still believing he had been compromised, decided a close surveillance was better than none and stayed in close conversation with the subject."

was with his subject until returned to his ship at 2038 hours. Arrangements were made for the two to meet again the next day.

On 19 July, resumed his close surveillance of at the check point of the dock. For transportation, supplied his personal automobile, equipped with ficticious license and registration, and the two men were off on a curio hunt. purchased a big urn and being completely agreeable, transported it back to the Cleveland for him. While was taking his recent purchase to his quarters, the agent examined the motion picture camera the suspect carried, but no unusual features were discovered.

243 GHQ, FEC, O of the AC/S, "Historical Rpt," 1 Jan 1949 - 31 Dec 1949, Chap III, Part I, pp 40-41, (Secret) (Departmental Rec Br, AGO, Alexandria, Va).

By 1313 hours, the agent and the suspect were off on a joy-ride through the city. Several hours later they stopped at the Oshiro Hotel where intimated by his actions and conversation with the hotel help that he had been there the previous afternoon, accounting for some of his activities while not under surveillance.

had, by this time, established himself as a welcome and trusted comrade and began to discuss politics. When the two men returned to the ship, was invited to quarters. There he was given some Communist-inspired pamphlets to read.

later reported his recollections of line of conversation. The seaman had declared, "China is now liberated! The heroic efforts of Madame Mao, the mother of the great Mao Tse Tung, have finally paid off in freedom for the mass of Chinese people. Only those who have been in China regularly can appreciate the vast difference between the real democracy of Mao and his Communists and the phony democracy of the Fascist Chiang and his 'money-grabbing wife's family'."

turned to the American attitude toward Red China. "Americans must realize that there is a great 'People's Movement' sweeping the world. We must awaken to the words of our progressive leaders lest we be overwhelmed. Look at the taxes we all pay now because of the money we have poured down Chiang's rathole."

It was inevitable that should discuss the investigations into communism being conducted on many fronts. "Real patriotic Americans are contemptuous of the Fascist groups like the House Un-American Activities Committee and Tenney's California Un-American Committee. They are contemptuous, likewise, of the goals of the FBI and Military Intelligence, but not, however, contemptuous of their methods."

indicated he was aware of the possibility that he might be under investigation. He declared to "To speak of these matters in the present police state in Japan is dangerous. You must not repeat what I have said. Don't speak of these things unless you are alone with a friend you trust implicitly and then swear him to absolute secrecy. If some spy should overhear these things discussed, an immediate investigation would result. I have been through the 'mills'. I was pulled off my ship at the beginning of the war by Military Intelligence. They thought I had Fascist connections or leanings because of my birthplace... Me, of all people, Fascist! If they only knew the truth! I almost laughed in their faces. Young man, I remained silent. Silence is the best policy. Communism is the People's Movement that is sweeping the world. People in all the dark corners of the world are becoming enlightened to its truths."

made arrangements to meet the next time the Cleveland docked in Yokohama. Ostensibly the agent was to receive more indoctrination in communism and some new Communist pamphlets from the seamen. After a bad start, the surveillance had produced valuable counterintelligence information.

CIC files contain no indication that was ever again investigated by the 441st. It is highly possible that 's surveillance uncovered enough derogatory information to end career as a Communist courier.[244]

Espionage: The Case of the Seven Persons

On 25 August 1948, the Civil Censorship Detachment intercepted a letter with the following passage: "According to stories I hear from in Shiga, it appears as though Assistant of General Affairs Section, Soga, was formerly a spy for the USSR. As soon as I investigate and find out who has been doing us harm, I will take proper steps..."

The receipt of this letter touched off a CIC investigation that was to cover five prefectures and take a period of nine months to complete. CIC worked to discover not only who Soga was and what he was doing, but also to obtain background information on the other persons mentioned or involved in the intercept. CIC was also concerned with why this apparently private investigation was taking place.

The writer of the letter, Yamaoka Kan of Osaka Prefecture, also mentioned two other persons identified only as residents of Kyoto. The writer requested the addressee, Nakamura Koji of Fukuoka Prefecture, to notify if he happened to run into what was nebulously referred to as the "seven persons."

CIC began the investigation by seeking information on the various personalities involved. investigated in Shiga Prefecture where he had worked in railroad construction in Manchuria from 1920 until the date of his repatriation, 19 October 1946. The investigation established that did not have Soviet contacts, was not a Communist, and was reputed to be of sound character.

244 GHQ, FEC, O of the AC/S, G-2, "Historical Rpt" for 1 Jan 1949 - 31 Dec 1949, Supporting Docu #30 (Office of the AC/S, G-2, GHQ, FEC, Summary of Info, Subj: Suspected Communist Courier, 19 Aug 1949) (Secret) Departmental Rec Br, AGO, Alexandria, Va); and Hq, Tokyo-Kanagawa CIC District, Subj: Suspected Communist Courier, 5 Aug 1949 /s/ P. L. Haggard and T. P. O'Neill, Special Agents, (Secret) (Cen Rec Fac).

"Seven Persons" Had Been Nabbed by NKVD

The investigation of the author of the letter took place in Osaka. [redacted] had joined the Manchurian Railway Company in 1942 as a railway track maintenance technician. He served briefly with the Japanese military forces in Manchuria, but returned to his original work when his unit was demobilized at the war's end. In January 1946, [redacted] and six other company employees, the "seven persons" of the letter, were arrested by the Mukden NKVD, charged with being escaped prisoners of war, and interned in Soviet Russia. The seven vowed to find out who informed on them. Originally, [redacted] was a prime suspect.

When Yamaoka was repatriated to Japan in 1948, he went to [redacted] home and questioned him about his part in the arrest. [redacted] disclaimed responsibility for the act, but pointed to a man named Sota (not Soga). According to [redacted], Sota had signed a pledge to cooperate with the Soviets to gain his own release from the NKVD. Yamaoka announced that he planned to visit this Sota to discover the truth for himself. As a passing thought, Yamaoka informed the CIC agents who questioned him that he intended to join the JCP, but only because they could find him a job.

To Shimane CIC fell the job of locating Sota. Once found, this mystery man told another side to the story.

Sota Unaware he is Sought by "Seven Persons"

Sota had also been employed by the Manchurian Railway Company. He had been head clerk in the Mukden office, a position which placed him in charge of personnel records. Upon taking over the railroad, the Russians had immediately confiscated these records. Shortly thereafter, the "seven persons" were arrested. The general impression given the remaining workers was that Sota had turned informer.

Sota did admit that the Russians, under threats of violence, had ordered him to report on certain of the railway employees. Sota stated his reports were usually negative. When he did supply information, it was when he felt reasonably certain the Soviets knew it already.

Sota had received a personal letter from Yamaoka asking for the particulars of the records confiscation, but he had otherwise been unaware of being sought by the "seven persons."

Sota's superiors at the Shimane office of the Commerce and Industry Ministry were contacted by CIC. Generally Sota was spoken of as a mild-mannered man of good reputation. He had no apparent political connections although it was felt his

views were somewhat leftist. Since his return from Manchuria, had been active in relief work for other repatriates.

The backgrounds of and the two men from Kyoyo were similar to the writer of the letter. They were among the "seven persons" and also sought as the man responsible for their troubles.

At this point CIC felt the EEIs were answered. was obviously seeking revenge with no clear facts concerning the supposedly guilty party. It was felt that rash actions and his motive for joining the JCP indicated a degree of irresponsibility and tended to discredit his information. When compared to the background and character of the man he accused, was entirely discredited. The case was closed officially on 16 May 1949.[245]

Series of Letters Touch Off CIC Probe

In early August 1946, First CIC Region began a lengthy investigation of possible espionage agents within the

A letter sent by the asking for the strength of Occupation Forces in Ishikawa aroused the curiosity of CIC. The officer, under CIC questioning, claimed to have sent only the letter to Ishikawa; but it soon developed that similar letters, all bearing the had been mailed to every prefectural government in Japan. Each communication had requested "the number of Allied troops in your prefecture as well as activities, condition, situation and state of Military Government and CIC." This information so closely resembled the EEIs of an enemy intelligence agency that CIC began a probe into the circumstances surrounding the requests.

The explained he needed the information to enlarge the liaison office commensurate with the corresponding growth of the Allied Occupation Forces. He claimed the portion about Military Government and CIC had not been in the original draft when it had been forwarded to for approval and mailing.

CIC promptly took its questions to The stated that to better serve the enlarged Allied Occupation Forces in , it had been decided to enlarge and reorganize the liaison office. To accomplish the reorganization, the query had been sent to other prefecture offices for ideas and suggestions.

He denied adding the fatal last words, but admitted responsibility for its since the letter had been sent out under his seals.

"A Mistake Based on Poor Judgment"

For two weeks, held vigorously to his story. When confronted with a draft of the complete letter in his own handwriting, he confessed and then proceeded to minimize the importance of the last sentence. He claimed to have made a "mistake based on poor judgment" and pointed out that he had been a very poor student in school.

Nationwide, this case was from the outset handled with a view toward possible subversive elements within the which had direct control over the governors and vice governors of the prefectures.

CIC was unable to come up with evidence of subversive elements within the Nevertheless, it was felt would not have added the request for data on Military Government and CIC without apparent motive or considerable appreciation of the grave nature of his act. His experience in 1942 as an official with the Investigation Section of the Imperial Rule Assistance Association indicated to CIC that he knew basic intelligence operations and therefore could not have been totally ignorant of the nature of his request.

was held pending trial for violation of the SCAPIN dealing with falsifying information in the course of an official investigation. He was released from custody when an investigation into the possibility that his actions might have been the result of a "foreign" request produced negative results.

Subsequently resigned as The Occupation authorities arranged to make his resignation permanent by "purging" because of his former contacts with the SCAP-banned Imperial Rule Assistance Association.

As is often the case, this investigation had no sharply-defined conclusion. The 441st wrote: "A careful review of the strenuous efforts made by and his to thwart CIC's investigation, even to the extent of deliberate and admitted lying by the indicates that despite unshakable alibi that the whole affair was simply a 'mistake based on poor judgment,' there is a strong possibility of a deep ulterior motive which he was prepared to hide even at the cost of sacrificing himself."[246]

441st Picks Up Two Chinamen -

On 25 November 1946, an External Survey Detachment of Central Intelligence Group in China reported to G-2, FEC, that two Chinese Nationalist Army officers posing as Japanese were enroute to Japan on a repatriation ship from Hulutuo, China. The two officers, were apprehended by CIC agents at the Sasebo Repatriation Center as they disembarked from the SS Haruki two days later.

At first the two Chinese officers, traveling under Japanese aliases, denied all allegations except that they had entered Japan illegally. Subsequent investigation in Japan supplemented by more information from the External Survey Detachment, pieced together a story the two men had to admit was factual.

was a captain in the Chinese Nationalist Army under orders from a colonel in Manchuria. apparently a civilian, was his friend and interpreter. They had been assigned an undercover mission in Japan which involved contacting 58 repatriated Japanese Nationals, all former employees of the Chinese Nationalist The contacts were to be made with an eye to establishing a net of "sleeper" informants.

carried a letter signed by his colonel and addressed to the in Japan." The letter identified the two men as "special representatives" and solicited cooperation from The two men also carried a large quantity of lighter flints, which, they later admitted, were to be sold on the Japanese black market. From the flints they expected to get one million yen to finance their mission.

Additional communications from the External Survey Detachment in China gave the 441st the information that in September 1946, He had also been active in "special investigation work" which required travel between Mukden and Changchun. Among his close associates was the head of the which had offices all over the Orient. The Tokyo Branch was reported to be the contact point for Chinese Nationalist intelligence agents in Japan. CIC learned the exact address of this office and proceeded to investigate activities there.

"Changchun emphasizes that all persons mentioned are not isolated cases, but are part of a large highly organized Chinese Nationalist plan for agent operations in Japan."

Although it was believed they would have carried out their assigned mission had they not been immediately apprehended, it was only possible to prosecute for illegally entering Japan and smuggling black market commodities into the country. The sentence imposed was a fine of 25,000 yen and deportation to China.

The 57 persons were to seek out in Japan were all formerly connected to the They remained under periodic surveillance for any evidence of further connections with underground organizations.[247]

Disaffection Group Handles DAC Investigations

One of the more sensitive areas of CIC operations in Japan involved investigation of subversive and disloyal members of the Army Establishment with particular emphasis on Department of the Army civilians. As early as January 1947, within the Special Activities Branch of the Civil Intelligence Section, a special section known as the Disaffection Group had been established to supervise the surveillance of individuals under investigation for activities inimical to the Occupation, activities ranging from disaffection to downright subversion

Department of the Army civilians slated for sensitive jobs in the Far East Command were cleared on the basis of Zone of the Interior investigations. The 441st CIC detachment routed all reports of these security investigations to the

247 GHQ, FEC, MI Sec, Gen Staff, Civil Intel Sec, Summary of Info, Subj: 27 May 1947, (Secret) (Departmental Rec Br, AGO, Alexandria, Va); and GHQ, FEC, MI Sec, Gen Staff, CIS, Summary of Info, Subj: 18 Aug 1947. (Secret) (Departmental Rec Br, AGO, Alexandria, Va).

Disaffection Group. If the report of the stateside investigation indicated possible disloyal tendencies, a set of EEIs were drawn up by the Disaffection Group and sent to the 441st. When necessary Military Intelligence Division in the Pentagon and other Zone of the Interior contact were alerted for further investigation in the United States.

In cases involving Department of the Army civilians, where disaffection, disloyalty, subversion of communism were established beyond a reasonable doubt, the information was summarized by the Disaffection Group and sent to the GHQ Committee on Loyalty Investigations of Civilian Personnel for review and eventual disposition.

In its initial action, the Disaffection Group set up personality card files on the nearly 4,000 Army civilians in the Far East Command and SCAP agencies. Earmarked in files were the cards on those with Russian or Russian satellite backgrounds. Until the individual committed some overt act which indicated disloyalty, his name and personal history remained in this carded file. The employee became the subject of a dossier only after derogatory information had been received, usually from CIC or the Civil Censorship Detachment.[248]

Cleared DAC Comes Under CIC Scrutiny

The following is cited as an example of an investigation of a Department of the Army civilian who came under CIC scrutiny after the uncovering of derogatory information. The subject was initially investigated in the Zone of the Interior. Her statement of personal history is stamped with the notation: "Nothing Derogatory. Adequate investigation, including check of appropriate confidential files, has been completed. The investigation disclosed no reason to question the loyalty or character of the subject." The notation was made by the office of the Director of Security and Intelligence, War Department General Staff, on 9 January 1946.[249]

The subject, a government employee since 1939, had appeared before a special hearing on 7 July 1943 to answer questions on her membership in the Washington Bookshop Association, a group listed by U.S. Attorney General as subversive. The subject had claimed she had attended one meeting of the organization and paid a dollar in dues, but otherwise had not been an active participant.[250]

250 Fourth United States Civil Service Region, Investigations Division, Rpt of Partial Interview and Special Hearing, dtd 7 Jul 1943, (Conf) (Cen Rec Fac X5155039).

Although the clearance of the subject for sensitive duties with the Department of the Army was approved on 9 January 1946, she had begun working as a research expert for the SCAP Government Section in November 1945. She was transferred to the Policy and Planning Unit of Civil Information and Education on 8 April 1946. On 3 July 1946, CIC initiated an investigation that brought this woman under suspicion.[251]

Leak to Press From Government Section Investigated

In the 3 July 1946 edition of the Christian Science Monitor there appeared an article under the by-line of the paper's chief Far East correspondent headlined: "Democracy Levied On Japan After Own Fumblings by Tokyo." The article asserted that the new Japanese constitution had been "prepared by the Government Section of the Allied Headquarters and imposed upon a reluctant Japanese government" and "through skillful manipulation of the Japanese press it was made to appear that the initiative ...had come from within the ...Imperial Palace."

To lend credence to statements such as these, the Monitor quoted a speech made at a closed planning session by the Government Section's chief, Brig. Gen. Courtney Whitney. The disclosure of the contents of this speech and, more particularly, the general policy of the Government Section, was considered to constitute an unauthorized release of classified information - a violation of AR 380-5.

Who Was There?

From the executive officer of the Government Section, Lt. Col. H. E. Robison, CIC obtained a list of the 22 persons attending General Whitney's closed planning session. It was felt anyone able to provide the Monitor with the information which was printed must have attended that meeting. Colonel Robison further added that the article did not include the complete story of the drafting of the constitution, being concerned only with the initial stages. This led the colonel to conclude the information was supplied to the Monitor by someone who had left the group working on the draft prior to its completion.

Colonel Robison noted that a woman, employed as a local government analyst by the Government Section and in attendance at the meeting described by the Monitor, had been transferred at her own request to the Civil Information and Education Section on 7 April 1946, a date prior to the completion of the constitution's draft. The woman was known to be interested in labor problems and had often given her view on labor to the press although such matters were outside her

251 GHQ, AFPAC, Opns Div, CIS, G2, Memo for Info CI&E Section, GHQ, 23 Sep 1946, (Secret) (Cen Rec Fac X5155039).

official field. Persons in Colonel Robison's office were able to tell CIC that the woman had been seen at lunch with the Monitor correspondent.

Interview Woman's Boss at CI and E

CIC contacted Lt. Col. D. R. Nugent, Chief of the Civil Information and Educatio. Section, in an attempt to gain information on the woman, now a subject of CIC investigation. Colonel Nugent remembered the woman had been recommended to his section by the former chief of the Planning Division, Civil Information and Education. This man has since returned to the United States after a security check revealed he was of questionable loyalty. In regard to the subject, Nugent felt she tended to talk to the press without authorization on matters which were not connected directly with her work. The woman was cited as being of leftist tendencies, and the colonel felt she was slanting some of her material in that direction.

CIC requested Colonel Nugent to ascertain discreetly from employees in his section the extent of the subject's association with the Monitor correspondent and the identification of her most frequent social contacts. To further glean information on the woman's activities, CIC enlisted the aid of trusted female employees of the Civil Intelligence Section who resided in the same billet as the subject. CIC sent a radiogram to the FBI in Washington requesting a file check on the subject.[252]

Further CIC investigation in Japan revealed the subject had listed among her references for employment in Far East Command a of the Allied Control Commission for Germany.[254] the prime figure of a highly controversial CIC investigation in occupied Germany, later defected to the Soviets.[255]

Subject's Translator Believed a Communist

The subject's place of employment in Far East Command changed for a third time in December 1946 when she was transferred to the Research and Statistics Division of the SCAP Economic and Scientific Section. Among her close associates after her transfer to this job was a Japanese national, employed as her personal translator and advisor during field trips. On several occasions these two had met socially during off duty hours. The Japanese national was closely connected with the JCP and was known to pay frequent visits to Communist Party Headquarters, entering the building without being challenged by the guards on duty. He was known to be in close contact with both American and Japanese individuals under investigation by CIC for Communist sympathies.[256]

Subsequently, the subject's Japanese interpreter was released from his job for security reasons. He promptly obtained employment with the Tokyo Branch of the Tass News Agency.

Subject Linked With Many Others Under Investigation

Reports from informants and a series of surveillances by CIC linked the subject with many other Department of the Army employees in the Far East suspected of Communist sympathies.[257] An FBI full field report from the United States indicated contacts with a galaxy of Communist sympathizers had preceded her assignment to the Far East.[258]

On 16 February 1950, the Committee on Loyalty Investigations of Civilian Personnel met to consider the case. A review of CIC and FBI reports led the committee to conclude that "Subject's association with Communists, her affiliation with Communist front organizations and the fact that she was strongly suspected of being responsible for divulging confidential information to a newspaper correspondent, constitute Subject as a security risk in the Far East Command, and above facts can be construed as disloyal."[259]

On 15 August 1950, before action was taken on this case, the subject departed by plane to the Zone of the Interior. Her Intelligence Field File was transmitted to the Fifth Army CIC since the subject's listed forwarding address was in [260]

Some Evidence That Investigation Had Been Compromised

This investigation - like so many of its type - could not produce legal proof of Communist affiliations. Yet there were significant enough indications of Communist belief uncovered to warrant continued investigation of the subject.

Unfortunately this case - again like so many others of its type - was compromised in spite of efforts to handle discreetly the inquiry into the subject's background. The modus operandi for the investigation-surveillance, the establishment of an informant net among trusted persons who would be able easily to associate with the subject, and the questioning of the subject's superiors - was such that the dangers of compromise were high.

Two reports reflect the compromise of this investigation. A document dealing with one of the male associates of the subject stated this man had told a CIC informant he was aware of the "Red baiting" investigation being conducted on the subject.[261] Just prior to the subject's leaving Japan, another informant reported a conversation in which the woman indicated she knew of at least one person in the United States who had been questioned about her activities. Furthermore, she had been told by a Nisei friend of CIC's surveillance and later had been able to identify the jeep following her.[262]

Postlude: A Screeching Halt

On 25 June 1950, the North Korea Communist Forces invaded the Republic of Korea. With that blow, the Far East Command underwent an immediate and drastic change and CIC was no exception. The period of peacetime operations in Japan had come to a halt.

CONFIDENTIAL

Appendix 1

THE COUNTERINTELLIGENCE SECTION OF "OPERATION BLACKLIST"[263]

263 GHQ, FEC, MI Sec, Gen Staff, "Opns of CIC in SWPA," Vol VIII of "Opns of the Intel Service in the SPA," Appendix 22, (Uncl) (Cen Rec Fac)

3936

CONFIDENTIAL

Operation Blacklist:

1. The surrender of Japan or substantial part thereof will alter the general mission of Counter Intelligence operations. In addition to insuring military security by denying information to the enemy, Counter Intelligence personnel will be confronted with the problem of suppression of organizations, individuals and movements whose existence and continued activities are considered an impediment to the lasting peaceful reconstruction of Japan. The nationwide character of organizations and movements within this category, and the dislocation of population which may precede our occupation will necessitate coordination and control of Counter Intelligence activities by General Headquarters, USAFPAC.

2. Personality Cards containing names of persons constituting a menace to Allied security should be compiled from Counter Intelligence files, to be supplied to Armies. Counter Intelligence staffs in the field will seek out and arrest all persons in Annexes A, as qualified thereafter by CinC AFPAC, especially members of the KEMPEI TAI, TOKUMU KIKAN, KOKURYU KAI, NISSHO and other extremist societies; see also Section 1, paragraph 4.

3. Internment camps, for apprehended persons, will be established in accordance with local requirements; the Intelligence control remains the responsibility of Intelligence staffs, to be allocated for this purpose by Commanders; armies will provide for interrogation facilities at Internment camps, as necessary; further particulars regarding interrogations are in Section VI.

4. Lists of Headquarters of KEMPEI TAI, TIKUMU KIKAN, the KOKURYU KAI and other extremist societies are being supplied to Armies, covering towns and districts on their axis of advance. Commanders will arrange for seizure of such premises. All persons found therein will be detained pending the arrival of Counter Intelligence Officers. All documents will be seized and preserved for expert-examination. (See Section V; also Annex A of this Section).

Elimination of Extremist Societies and Prevention of Their Rebirth:

5. The KEMPEI TAI, TIKUMU, KIKAN, the KOKURYU KAI, other extremist societies such as NISSHO, and all affiliates will be dissolved. See Annex A and B, this section.

Disposal of the Japanese General Staff:

6. G2 GHQ will collect lists of all officers of the General Staff, to be furnished Naval Commanders, Armies and Air Staffs for coordinated action.

7. GHQ AFPAC will be responsible for the control and disposition of Japanese Imperial Headquarters. Army Commanders are charged with the control and disposition of subordinate headquarters and echelons of command within their respective areas of responsibility. Certain elements of these headquarters and echelons of command will be retained in being for the period necessary to disarm and demobilize the Armed Forces of Japan.

8. All General Staff Officers who have not been taken into custody as Prisoners of War, Officers who have adverse records, or are on Counter Intelligence Personality Cards, or listed as War Criminals, and any officer who is regarded as potentially dangerous, will be detained. In cases of officers functioning in headquarters temporarily retained in being as outlined above, they will retain such liberties as are essential to performance of their assigned duties, subject to surveillance arranged by Counter Intelligence in consultation with military authorities concerned.

Prevention of Japanese Espionage, Sabotage, and Subversive Activities:

9. Normal Counter Intelligence activities against enemy espionage, sabotage and subversive activities will be continued vigorously and intensive education programs will be instituted to alert the troops to the vigilance necessary while present in enemy territory. The employment by Japanese or foreign nationals for espionage must be balanced by an adequate counterespionage service coordinated with the theater G-2 on matters of theater level interest.

Responsibilities of GHQ, AFPAC:

10. This Headquarters will be responsible for the following:

(i) Direction of Counter Intelligence policy in Japan.

(ii) The supply of all necessary Counter Intelligence information. In order to discharge this function, Counter Intelligence will undertake the maintenance of a Central Card Index of suspect personalities. It will also maintain a central record of all persons arrested and their locations.

(iii) Establishment of a policy regarding disposal of arrested suspects.

(iv) The setting up of a joint C.I. and O.I. organization for interrogations. For particulars, see Section VI.

(v) Technical research on sabotage and advice concerning preventative measures.

(vi) Coordination of Counterespionage on Theater level.

Responsibilities of Armies:

11. Armies will be responsible for the following:

(i) Measures to implement the policy of GHQ.

(ii) Execution of Counter Intelligence measures in their respective areas.

(iii) Build-up and organization of Army and Corps (District) C.I. Staffs.

(iv) Organization of central registry and record system.

(v) Coordination of the interchange of information between subordinate units.

(vi) Report to GHQ.

Navy and Air:

12. For particulars of Naval and Air Counter Intelligence, see Section VII and VIII respectively. These staffs will work in close cooperation with Army C.I. staffs.

Lists of Arrested Persons:

13. It will be necessary for a record of all persons arrested and their locations to be held centrally, so that immediate information is available to ascertain whether a suspect has already been arrested and where he is held.

ANNEX "A" SECTION X:

1. When the American Forces occupy Japan it will be necessary to arrest and detain a considerable number of persons in order to achieve the two main objects of safeguarding the security of the American Forces and accomplishing the destruction of Japanese organizations.

2. In addition to the Black List, the following categories of suspects will also be arrested and detained: (See Notes Below)

*a. Imperial Household

b. Supreme Military Council: All personnel

*c. Privy Council

*d. Cabinet Ministers

*e. Vice Ministers

*f. Regional Superintendents - General of the 8 Administrative Districts

**g. General Staff (Army and Navy)

**h. Staffs of Military Districts in occupied countries and territories (Army and Navy)

i. Staff of Staff College (Army and Navy)

j. Staffs of Military and Naval Academy

k. Staffs of Training Establishments (Army and Navy)

l. Kempei Tai

m. Tokumu Kikan (Army and Navy)

n. Koku Sui-to (Extreme Nationalist Party)

o. CHIZAKURA (Connected with Manchuria)

p. Kokuryu Kai (Black Dragon Society)

q. NISSHO and other extremist or terrorist societies.

r. Administrative Officials of the TEIKOKU ZAIGO GUNJIN KAI (Imp. Reserve Assn.)

s. Administrative Officials of SOTEI DAN (Union of Able-Bodied Men)

t. Administrative Officials of SEINEN DAN (Young Men's Assn.)

*Subject to such limitations and detailed instructions as are specified in directives on Military Government, to be issued.

**Subject to such limitations and detailed instructions as are specified in directives covering disarmament and demobilization of the Japanese Armed Forces, to be issued.

ANNEX "B" SECTION X:

Offices and organizations which will be disbanded and cease to function at once, and in the case of which no problem of the disarmament and disbandment of para-military formations arises. Dissolution must cover all branch offices.

1. Political Association of Greater Japan (DAI NIPPON SEIJI KAI).

This association extends through Regional Prefectural and City or County levels down to District Group or City Ward Branches and Neighborhood Associations. For the purposes of Military Government by means of Hoko it may be desirable to preserve the lower levels of the above organizations such as the District Group or City Ward Branches and Neighborhood Associations.

a. Political Affairs Committee.

b. Headquarters, sub-divided into the following sections.

(1) Propaganda and enlightenment.

(2) National Defense.

(3) Civilian Life.

(4) Increased production.

(5) Youth movement.

(6) Party organization section.

(7) House of Representatives Section.

2. Nation-Wide Associations.

a. Combat Corps.

b. People's Volunteer Corps.

c. Student Corps (GAKU DO TAI) succeeds Young Men's Association (SEINEN DAN).

d. Industrial Patriotic Service Association.

e. Agricultural Patriotic Service Association.

f. Patriotic Service Corps.

g. Mechanized National Defense Association.

h. Maritime Transportation Total Superintendence Section (with control offices at Kobe, Niigata, Fushiki, Tsuruga, Funakawa).

i. Shipping Management Association.

3. Organizations of Scientists.

a. Technical Board.

b. Japanese Technical Board.

c. Science Mobilization Association.

d. All-Japan Science League.

MISSION OF THE COUNTER INTELLIGENCE CORPS

"The mission of the Counter Intelligence Corps is to contribute to the operations of the Army Establishment through the detection of treason, sedition, subversive activity, and disaffection, and the detection, prevention, or neutralization of espionage and sabotage within or directed against the Army Establishment and the areas of its jurisdiction."

Auth: AR 381-100

SUBJECT: CIC History

TO: All Personnel Reading this Document

1. This volume is a portion of the History of the Counter Intelligence Corps which has been compiled in draft form by this headquarters.

2. Distribution of the History is being made as the volumes become available so that addressees may profit by the problems and accomplishments of the Counter Intelligence Corps in previous years.

3. When completed, the History will cover in as complete and accurate detail as possible, significant incidents and events leading to the organization of the Corps of Intelligence Police during World War I and the Counter Intelligence Corps in World War II. Events, accomplishments, changes, and problems encountered up until 1950 will be included in the thirty volumes planned.

4. In spite of the diligence of researchers and writers, there may be inaccuracies and omissions, since no records are available for some of the more than two hundred CIC detachments which were operational during World War II. Even some of the major campaigns were poorly documented.

5. Any comments should be forwarded to the Commanding General, United States Army Intelligence Center, Fort Holabird, Baltimore 19, Maryland, ATTN: G-3.

Part I: Operations in the Philippine Islands

CONFIDENTIAL

Part I

OPERATIONS IN THE PHILIPPINE ISLANDS

In the summer of 1945, when the last Japanese gun was silenced in the Philippine Islands, General MacArthur's promise to return had been fulfilled. Long after the fighting had ended, American troops remained on the islands - first to prepare for operations in Okinawa and Japan, and then to act as a protective force.

When the war in the Pacific came to an abrupt halt with the capitulation of the Japanese Empire, the Philippines were "home" to 74 CIC units, all operating under the 441st CIC Detachment.[1] The majority of these units were moved into Japan with the 441st Headquarters in the weeks immediately following the surrender. On 14 November 1945, counterintelligence in the Philippines was coordinated under the First CIC Region of the 441st CIC Detachment.[2]

Jurisdictional Boundaries Established

Under a Memorandum establishing jurisdictional boundaries, issued by 441st Headquarters in Tokyo on 27 August 1945, CIC activities were greatly curtailed after "official VJ Day," the date of the signing of the armistice with Japan. Under this directive, Memorandum 31, CIC was to cease investigation of wartime collaborators and turn over all records to the Department of Justice of the Philippines Commonwealth Government. After that date, CIC would not even be permitted to make record checks in regard to collaborators at Commonwealth agencies.[3]

Galloway, Lt Col, Commanding), (Central Records Facility).

Beginning on 2 September 1945, CIC relinquished reports on a grand total of 6,047 proven or suspected collaborators.[4] About half the persons covered in these documents were already under lock and key.[5]

Investigation of U.S. Army personnel and the security of U.S. military installations remained CIC's responsibility. Espionage investigations under CIC jurisdiction were limited to those involving civilian or military personnel violating the Articles of War.[6] Cases of civilians violating espionage statutes of the Philippines or the United States Penal Code were not CIC's concern.

In addition to maintaining military security, First Region was to "keep appraised of the local situation." The memorandum stated: "CIC detachment commanders will remain cognizant of developments in their respective areas. Activities of organizations and political developments which may physically endanger the remaining American force in the Philippine Islands will be noted and immediately reported to this headquarters. It is to be noted that information in this connection will be discreetly obtained through the use of trusted informants in all possible cases."[7]

CIC Continues Several Collaborationist Cases

Up to the end of 1945, First Region's main activity involved the transfer of collaborationist cases to the Commonwealth authorities. In a few important investigations, CIC continued to probe for evidence, aiding local agencies in an attempt to bring the cases to a successful conclusion.

One of the cases that CIC continued to investigate involved [redacted] a Philippine citizen, frequently named as a prominent economic collaborator in the war years. Even while the Americans were still liberating Manila, allegations

Galloway, Lt Col, Commanding), (Central Records Facility).

and accusations concerning sifted into CIC. was accused of making millions in Japanese occupation currency ("Mickey Mouse" money) through the sale of automobiles and automotive parts to the Japanese. Most sources claimed he invested heavily in real estate with these profits. There were several allegations that had supplied Filipino laborers to the Japanese.

The investigation in its initial stages looked simple enough. Accusations against were so extremely easy to obtain that CIC expected no difficulty in getting evidence for conviction. When it came to a show-down, however, CIC ran into a general reluctance among Filipinos to testify against the suspect.

CIC's interrogation of produced an admission that he had indeed grown wealthy during the Japanese regime. He admitted investing in real estate and jewels with his profits. claimed, however, that he frequently contributed large sums to the support of those who had been maltreated and imprisoned by the invaders.

The agents investigating were forced to set up an informant network and to employ several undercover agents to seek confirmed information. These operations eventually uncovered several persons willing to testify against .

It was confirmed that openly expressed pro-German sentiments during the war, going as far as to display a swastika flag on his automobile. Unconfirmed allegations accused him of claiming German citizenship and of planning to return to the Reich. had been allowed to license his automobile, a privilege accorded only those who strongly endorsed the invaders. Former employees of were checked and interrogated. The great majority had been ardent Nazi sympathizers and outspoken in their opposition to America during the war years.

One informant emphatically insisted that had been one of the first merchants in the Islands to come forth and offer to sell to the invaders. A check of financial assets at the Philippines Trust Company in Manila showed the suspect had managed to accumulate 17 property titles, 45 stock certificates and a considerable amount of cash.

While many of fellow Philippine citizens had also traded heavily with the Japanese, one important distinction was established. While most merchants had donated much of their profits to the guerillas, in spite of his claims to the contrary, had clearly kept all of his loot for himself.

Several months after VJ Day, CIC had collected enough affidavits confirming the original allegations to turn the case over to local authorities for prosecution.

was found guilty of treason by the People's Court of the Philippine Republic and sentenced to a lengthy prison term.[8]

Information Transmitted to Commonwealth in Unevaluated Form

Unfortunately, few of the collaborationist cases were completed in the same manner as the case. The files that CIC gave the Filipino government contained a preponderance of unsubstantiated allegations, gossip, rumors and even malicious political intrigue. Mountains of information had been gathered, but there had not been enough time to evaluate or substantiate most of it. Some of the reports concerned persons who were to reach powerful government positions and command financial prestige in the Commonwealth. The release of the information to the Philippines government in an unevaluated form was unfortunate and in subsequent months led to several embarassing incidents for CIC.[9]

1135th CIC Detachment Activated

Until early 1946, CIC operations in the Philippines were closely directed by the 441st CIC Detachment Headquarters in Tokyo. On 23 January 1946, First CIC Region was disbanded, and counterintelligence in the islands became the responsibility of the newly activated 1135th CIC Detachment. The CIC redesignation was part of a general military reorganization in the Far East, where the Army had operated in the first months after the war as one command, United States Army Forces Pacific (AFPAC). In January the Army command in the Philippines was designated United States Army Forces Western Pacific (AFWESPAC). In March the Ryukus Islands were added to the command. Ultimate control of AFWESPAC rested with AFPAC which remained the supreme command in the Far East.[10]

Just as Army operations in the Philippines under AFWESPAC were freed from complete control from AFPAC, so the 1135th CIC Detachment, although subject to some supervision from the 441st, operated more independently than had the old First CIC Region.[11]

[redacted]

In January 1947, AFWESPAC was renamed the Philippine-Ryukyu (PGILRYCOM).[12]

With the establishment of the 1135th CIC Detachment, the number of CIC offices in the Commonwealth was greatly decreased. In addition to the Manila Headquarters, offices operated on Luzon at Baguio, Tarlac, Cabanatuan and San Fernando. Elsewhere, CIC offices were maintained at Cebu City on Cebu; Iloilo on Panay; and Davao, Zamboanga and Iligan on Mindanao.

The great distances involved made communications a major problem. CIC had the use of a C45 plane for four days a week to make a round trip to the various offices. The 1135th also utilized a QS6 boat for monthly supply runs to agents at Cebu and Zamboanga. An FS17 boat stationed at Zamboanga serviced the Davao and Iligan offices.

A Table of Organization drawn up at the time the 1135th was activated provided for 24 officers, 22 warrant officers and 58 enlisted men. In contrast to these 104 spaces, actual strength of the detachment was 51 officers and men.[13]

1135th has Eight Different Commanders

During its three years of operation, the 1135th CIC Detachment had eight different commanders.

At its inception, the detachment was commanded by Lt Col Carl E. Winkler. On 11 February 1946, 1st Lt Malcolm P. Youker assumed command. With the discharge of Lieutenant Youker on 15 May 1946, 1st Lt Peter K. Waering and 1st Lt Richard A. Holman each commanded the detachment for several weeks with Capt William F. Lorenz taking over on 11 June. The detachment's sixth commander for 1946, Lt Col Ronald E. Hobbs, assumed the position on 2 October.

The next command charge was on 13 August 1947, when Capt Arthur Litton replaced Colonel Hobbs. Capt Clifford L. Sawyer relieved Captain Litton on 13 March 1948.[14]

Mission Falls into Two Categories

The operational mission of the 1135th CIC Detachment was divided into two broad categories as originally outlined for First CIC Region in Memorandum 31

12 Historical Data Card, 1135th CIC Detachment, Unclassified.

13 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 1, 1 January 1946 to 31 January 1946, dtd 17 April 1946, (CONFIDENTIAL) (Central Records Facility).

from the 441st. Like detachments all over the world, the 1135th was entrusted with maintaining the security of the Army Establishment. The usual CIC activities, probing for disaffection within the Army and espionage against the Army, and conducting security surveys and clearance investigations, comprised most of the cases in this general category.

The second broad classification of CIC operations involved "keeping appraised of the local situation" - reporting information on the political, social and economic situation in the Philippines. This part of the mission made the 1135th, in its own words, the "listening post of the Occupation." Although AFWESPAC authorities were not permitted to take action on whatever information CIC dredged up, it was still essential they be informed of developments in the Commonwealth. The great bulk of CIC reports were devoted to fulfilling this second mission.[15]

Average 200 to 300 Clearance Investigations Per Month

The greatest number of cases in the first general category were security clearance investigations. During 1946, the 1135th CIC Detachment was concerned with from 200 to 300 such cases each month, closing an average of 90 monthly. Cases of disaffection averaged around 20, but most of these were pending from month to month. Throughout the year, the 1135th rarely had more than five espionage cases under investigation at one time.[16]

Demobilization Movement Among GIs Claims CIC Attention

A strong movement among U.S. military personnel urging rapid and immediate demobilization claimed much of the 1135th's attention in the first months of 1946.

First hints of trouble came when an advertisement purporting to be the voice of ten thousand GIs stationed near Batangas on Luzon appeared in 15 newspapers in the United States during January 1946. The advertisement vigorously protested the slow demobilization of American troops. In part it read, "There is no military necessity for the maintainance of hundreds and thousands of troops in nonhostile areas such as the Philippines, Australia, Guam, Saipan, and countless others."

Shortly after this advertisement appeared in the newspapers in the United States, U.S. soldiers staged a mass demonstration in Manila "which caused the

15 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 1, 1 January 1946 to 31 January 1946, dtd 17 April 1946, (CONFIDENTIAL) (Central Records Facility).

16 These statistics on average monthly case loads are drawn from "Summary of Investigations" tables of the 1135th CIC Detachment. These tables are found in the detachment's "Monthly Reports" for the months January 1946 through November 1946. (Central Records Facility).

U.S. Army much embarrassment and the United States to lose some of the respect it had enjoyed in the Philippines."

CIC agents were dispatched to circulate through the crowd and determine the identity of the ring leaders. One of the more prominent of the instigators was a sergeant from Sub Base "R" in Batangas. The agents on the scene reported that this sergeant exhibited "tendencies toward radicalism and Communism."

Agents were immediately dispatched to Sub Base "R" where they learned from interviews that the sergeant had been directly responsible for the advertisement as well as the incitement of the personnel of the installation.

Radiograms to the Zone of the Interior for information on the sergeant were answered with the news that he had been a CIO organizer and the president of a United Automobile Workers local, prior to entry into the Army. He had been a member of the Proletariat Party and the Proletariat Youth League during the early 1930s, and had reportedly joined the Socialist Party.

Interviews with the soldiers and officers who had served with the sergeant indicated he had always been an excellent soldier, performing his duties in a superior manner. There had never been any hints that he was a potential trouble maker. One of the interviewees felt the sergeant might be a Socialist, but no one doubted his loyalty to the United States.

In the belief that transferring the sergeant out of the Philippines might lessen the movement for rapid demobilization, he was sent to Okinawa and appropriate notation made in his Intelligence Field File to limit his future Army assignments to those of a nonsensative nature.[17]

under CIC Scrutiny

Another important case dealing with disaffection and possible subversion within the Army Establishment involved the "communistically inclined"[18] CIC agents attended this organization's meetings in Manila and reported in detail all proceedings. On one level this group was a sounding-board for soldiers' gripes particularly about discharge regulations; but the meetings usually went outside this province and dabbled in world affairs. The

17 GHQ, FEC, MI Section, General Staff, "Operations of the Civil Intelligence Section," Volume IX of "Operations of the Intelligence Service in the Southwest Pacific Area," Selected CIC Investigations, (CONFIDENTIAL) (Central Records Facility).

18 Hqs, Philippines-Ryukyus Command, Office of the AC of S, G2, To: AC of S, G2, Sixth Army, 17 December 1947, (CONFIDENTIAL) (Central Records Facility).

organization went on record as favoring immediate withdrawal of the U.S. Army from China and the sending of UNRRA supplies to Northern (Communist-held) China.[19] Speakers at the group's meetings dubbed United States pre-war policy in the Philippines "imperialistic" and criticized the Army for "sentencing no collaborators."[20]

In July 1946, the took an important step toward becoming a Communist mouthpiece when they began planning an official publication, ' Angered over the censorship policies of the "Daily Pacifican," the Army newspaper for Philippines personnel, the soldiers took matters into their own hands. Their first step was the hiring of a civilian to edit their newspaper. This civilian was also appointed Chairman of the Membership Committee of the Manila Chapter and became a frequent speaker on current events at the organization's meetings. His statement at the 15 August session that the United States always managed to do the wrong thing when problems appeared is typical of his ravings.[21]

The first issue of the "Bulletin" contained an editorial condemming AFWESPAC's censoring of the "Daily Pacifican." It was charged that: "News on demobilization, on constructive criticism of Army policies, on fundamental questions of American policy in the Philippines, and on the reasons for maintaining so large a force of American troops in the Philippines was almost totally eliminated."[22]

A Letter From the Editor

The editor and recruiter was already well represented in the 1135th's files when on 10 September 1946, he dashed off a letter to CIC, requesting information on four women who were seeking to work as traveling representatives of the editor's import-export firm.[23] CIC politely

replied that they were not authorized to provide information to private citizens.[24]

A records check on the four women turned up indications that at least one was an ardent Communist.

Meanwhile the Military Intelligence Division in the Pentagon had been digging into the past of the editor's wife; their Summary of Information, dated 31 October 1946, stated she carried a Communist Party membership card. Sometime between 22 November and 1 December 1946, the editor headed back to the United States via Hong Kong and Shanghai. Reports of CIC's investigation were forwarded to the proper agency in the states. His comments and speeches at Committee meetings, and his wife's Communist Party membership constituted the most significant of the facts transmitted by CIC.[25]

Meanwhile, the influence of the had faded. At the session, with the scheduled to speak, seven persons were present in the auditorium. Two GIs, the editor, two Filipinos, an unidentified woman, and CIC's representative attended.[26]

Explosions Rock Depots in Batangas

Early in the afternoon of 14 February 1949, a muffled roar, accompanied by a series of lesser explosions rocked the 13th Air Ammunition Depot and the Sub Base "R" Engineer Depot at Batangas. Immediate efforts succeeded in keeping the resultant fire from spreading and personnel of the depots returned to their normal routines.

Then at 1400 hours, an electric current seemed to charge the atmosphere: buildings rocked, windows shattered, the ground shook, and a gust of wind swept through the area like a practicing midget typhoon. Then there was a great roar. A huge black cloud rolled up over Sub Base "R". One of the depot's 26 magazines, containing 28 tons of dynamite, had exploded.

25 Philippines-Ryukyus Command, Summary Report Re: From: AC of S, G2, PHILRYCOM, Dates of Investigation: 7 August 1946 - 12 February 1947, dtd 15 December 1947, (CONFIDENTIAL) (Central Records Facility).

26 Hqs, 1135th CIC Detachment, AFWESPAC, Memorandum for the Officer In Charge, Subject: dtd 7 September 1945, (Unclassified) (Central Records Facility).

CONFIDENTIAL

The two installations, covering several square miles, contained a vast amount of weapons, engineer equipment, and explosives, once slated to be used for an invasion of Japan. Now the explosives were waging a war of their own.

When 1135th CIC Detachment Headquarters learned of the explosions, two agents were dispatched to the scene, equipped with Speed Graphic Cameras and with M-209 Convertors for communication with the home office.

Upon first inquiry, no one was able to supply a complete picture of what had happened. The agents were still conducting their initial survey of the situation when an alarm alerted the depots, and another revetment spewed incendiaries, rockets, cans of napalm, antiaircraft shells and sheet metal into the air. Small fires began to threaten other dumps. Realizing that they alone could not investigate the catastrophe, the two agents, put in a call for reinforcements. Soon the 1135th's Assistant Investigations Officer and several other agents appeared on the scene.

While the area was still threatened by small fires, CIC deployed to determine the cause of the explosions. A Filipino agent was instructed to go under cover in the city of Batangas and the neighboring Barrios to determine if any members of the Communist-inspired Hukbalahaps (Army of the Country Against the Japanese) had been seen in the area recently. Another agent talked with residents of the city to learn what they knew of the explosions and seek possible motives for sabotage. The mayors, police chiefs, detectives and civil officials of Batangas and nearby Bauan were contacted. Two agents circulated through the bars and cafes of Batangas hoping to overhear conversations which might give clues on the case.

Looting of Explosives by Filipinos Common

From police officials CIC learned that looting of the depots by the natives was an everday occurance. Filipinos, who wanted only the shell cases to sell to Chinese merchants, had developed the practice of dumping highly inflammable powder from the shells within a dangerous proximity of the ammunition and explosive magazines. TNT and dynamite caps had been stolen in profusion by Filipino fishermen. The police officials pleaded that they had been powerless to halt the looting.

While agents circulating in the town decided the Hukbalahaps were not involved, CIC at the scene of the explosions learned that depot personnel and guards had been collaborating with those natives stealing and black marketing explosives and ammunition. It was considered possible that the fires had been started to destroy evidence of the pilfering.

To CIC, it looked as if efforts had been made to make the looting easier. The various revetments, magazines, and dumps were in a horrible state of

disrepair and many were never guarded. Thick bushes provided natural cover, and the close proximity of native houses made pilfering a simple matter.

Guard Makes Three Mile Run to Report Fire

Interviews with 13th Air Ammunition personnel brought to light another shocking factor. The fire which touched off the stack of bombs causing the first explosion had been discovered by a guard soon after it started. For lack of immediate communication of any sort, the guard had been forced to run three miles to report the fire. By the time the fire truck had arrived, the revetment containing the bombs was already in flames. The firemen sprayed water on the blaze until their supply ran out, and before they returned with more water, the blaze was out of hand.

Agents also discovered fires had been started in the past as a ruse to draw guards to one section of the depot while natives pilfered another section.

CIC and Ordnance Inspectors Review Scene

When the initial furor had passed, an inspection was made of the facilities by an AFWESPAC Ordnance inspector, an Ordnance explosives expert, and one of the CIC agents. It was recorded that 25 of the 26 magazines were open storage sites protected only by barbed wire enclosures. A well-worn path, utilized by looting natives, led to the rear of nearly all the magazines.

Looters had scattered loose blocks of nitro starch and TNT within the magazines' perimeters. The inspectors learned that a month before the explosions, some 60 tons of dynamite had been declared unserviceable but comparatively little had been removed for destruction. Instead it had been allowed to simmer in the sun, exuding the deadly sweat of nitroglycerine.

The inspectors noted that fire brakes around the magazines were nonexistant. The fire-fighting apparatus of the depots was found most inadequate. One of the two fire trucks had been totally inoperative on the day of the explosion. Had it been able to spell the other truck, there would have been a chance of extinguishing the fire before the initial explosion.

It was decided that negligence rather than deliberate sabotage was the most likely cause for the explosions.

CIC and Ordnance inspectors made their report to the Commanding Officer of Sub Base "R". It was recommended that fire brakes be constructed around each magazine, shelters erected over the magazines to protect them from the sun,

and dunnage used between layers of boxes of explosives. It was recommended that the munitions be moved to a more isolated region, or that the area around the depot be evacuated of Filipinos.

The military and civilian personnel responsible for the negligence and those involved in blackmarketing were replaced. Defective ammunition and explosives were destroyed. Serviceable material was stocked in new magazines with adequate security as well as fire and weather protective measures.[27]

CIC Hunts Sources of Rumors and Slander About the Army

A minor part of CIC's mission of maintaining the security of the military involved tracking down the source of rumors and slanderous statements about the U.S. Army.

Rumors were likely to concern troop movements. In April 1946, agents in Davao and Zamboanga hunted down the source of a rumor that 20,000 American troops were being moved into the Del Monte area. CIC traced the rumor to several wholesalers who apparently hoped to ignite a business boom. The fact that local businessmen were eagerly awaiting this influx of troops indicated the rumor had accomplished its mission.[28]

Slanderous statements about Army policy printed in local publications were reported to AFWESPAC authorities. A typical article attracting CIC attention involved charge in the Manila Courier that AFWESPAC was discriminating against Filipinos in policies applying to civilian employees. The article declared, "AFWESPAC is sabotaging American-Filipino friendship born on the battlefields of World War II."[29]

CIC: The Listening Post of AFWESPAC

The 1135th's major activity, the one that earned it the accolade, "The listening post of AFWESPAC," centered around coverage of the Commonwealth's political-

29 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 6, 1 June 1946 to 30 June 1946, dtd 18 July 1946, (CONFIDENTIAL) (Central Records Facility).

situation, developments in the field of economics, and activities of subversive elements in the indigenous population.

In collecting data on developments within the Philippines, the 1135th relied heavily upon informants. Throughout 1946, CIC policy was to seek information from open sources. Attempts were made to contact persons from all walks of life, people "representative of all segments of society and public opinion." The detachment's aim was "to record the events of the day from an impartial and 'panoramic' viewpoint," a tall order in view of the confusing political tangle of the Commonwealth after the war.

Informants of the undercover variety were utilized in two areas. In Central Luzon, where the activities of the nomadic Hukbalahaps called for careful investigation, an effective net of confidential informants was maintained and guarded with great secrecy.

Confidential informant networks consisting of 500 men were maintained in Manila. In particular, the coverage of inaccessible groups like the Chinese and other foreign elements and "spy conscious radical organizations" necessitated undercover work in the capital city.[30]

Later in 1946, the 1135th began to make greater use of individual paid informants, especially in sensitive areas where the language barrier seriously hampered the work of Caucasian agents.[31]

By mid-1947, the 1135th's policy called for large scale utilization of full-time paid informants. The high cost of living in the Philippines made it possible to get reliable Filipinos to work as "uncredentialed civilian agents." These full-time informants were generally selected from the best of those who had volunteered their services for patriotic reasons.[32]

In regard to the detachment's use of informants, an agent, who served in the Philippines from December 1946 to October 1948, wrote: "Informant nets in the Philippines seemed quite successful. Nets were rather easily established even among the higher class of Filipinos. A lot of Filipinos seemed as eager to help the United States Government as they were their own. You can tell many of them

that you are from CIC and still get their cooperation, while there are others who have to be handled differently. Once an American establishes friendship with a Filipino, it is usually a solid affair."[33]

First Post-War Elections Observed

In the first half of 1946, a major CIC effort was directed at collecting data on campaign activity for the national elections of 23 April. The elections were being held to name a government to take office on 4 July, when the Commonwealth was to be given full independence.

CIC particularly focused on the activities of the two main rivals, President Sergio Osmena and Senate President Manuel Roxas. These two men, both allied with the Nacionalista Party, had split that organization into two factions in January. Osmena, who led the liberal faction of the Nacionalista, made news more startling than the split when he organized a coalition between his group and the militantly radical Democratic Alliance, described as a front for the Communist Party.[34]

Just before the election, the 1135th CIC Detachment compiled statistics on the frequency of particular charges and promises made by each faction. The Roxas claim that Osmena was "practicing terrorism, intimidation, and fraudulent electioneering" was by far the most frequent charge of either party. Roxas was most often accused of being both an opportunist and a collaborator. Both factions most often made the promise to raise the standard of living.

When returns were in, Roxas had won the presidency, and Osmena officially promised his support to the new administration. Not the least bit satisfied, the Democratic Alliance "pledged itself to continue its struggle against Fascist tendencies on the part of the government."[35]

In the months following the election, CIC sought public reaction to Roxas' election and to the new administration's most significant bill, the Philippines Trade Act known popularly as the Bell Act. The most controversial portion of this bill gave American citizens and U.S.-owned businesses equal right with

Filipinos to the exploitation of the island's natural resources and in the operation of public utilities. It goes without saying that the Communists sounded loud and clear against this act.[36]

Laurel Returns to Prominence

By May 1947, CIC reported a significant rise in the political activity of extreme right wing elements, spearheaded by Jose P. Laurel, the wartime puppet president of the Philippines. Laurel, although arrested as a war criminal by the 441st CIC Detachment in Japan, had been granted his freedom by General MacArthur. It was generally recognized that Laurel had cooperated with the Japanese only when it had been absolutely necessary and had otherwise worked for the benefit of his country.

Laurel's return to prominence was a matter of great concern to CIC. In 1947, it was felt he had about a three-to-one chance of landing the presidency in the 1950 election. The 1135th warned: "Should he become president, Laurel would spare no effort to rid the Philippines of every vestige of U.S. Army intelligence, with first emphasis on the CIC."[37]

Data on Reds Crucial to Command

Far more crucial to the command than information on right-wingers Osmena and Laurel, was data on the rising Communist menace. The Philippine Communists outlined their demands in a letter from Pedro Castro, General Secretary of the Communits Party, to High Commissioner Paul V. McNutt on 9 January 1946. The basic Communist demands were:

(1) Removal of the US Army from the Philippines.
(2) Independence at all costs.
(3) Removal of all US military, naval, and air bases.
(4) Rehabilitation designed to stabilize Philippine economy.
(5) Abolition of free trade with the US.
(6) Breakup of large estates.
(7) Ouster and trial of collaborationist officials.
(8) Reorganization of Osmena Cabinet to purge those of Fascist or reactionary tendencies.
(9) Remove US troops from China.

36 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 6, 1 June 1946 to 30 June 1946, dtd 18 July 1946, (CONFIDENTIAL) (Central Records Facility).

37 Hqs, 1135th CIC Detachment, PHILRYCOM, Monthly Report Nr 5, 1 May 1947-31 May 1947, dtd 6 June 1947, (SECRET) (Central Records Facility).

Nine days later the Communist Party of the United States outlined a Philippines policy greatly similar to this in a 1,500 word article in the Daily Worker.

Action Speaks Louder than Words

But action speaks louder than words, and the Communist Party leaders had at their disposal a healthy guerilla force which acted in a highly positive manner. The Hukbalahap, known popularly as the Huks, had been organized as a Communist guerilla band in 1942 to fight the Japanese, but their wartime record showed that most of their attention was directed toward surviving as comfortably as possible. With the liberation, the Huks seized the power of government in Central Luzon, totally ignoring the existance of the Commonwealth.

The leaders of the Huks were all staunch Communists, and the chief, Luis Taruc, was on the directorate of the Philippine Communist Party. It was estimated that from 80,000 to 100,000 Huks possessed a grand total of 40,000 weapons.[38]

Responsibility for quelling the Huks went to the Philippine Army's Military Police, who began their campaign in January 1946. CIC agents were dispatched to witness and report on the attempt to subdue the bandits.[39]

In spite of the Commonwealth's continual efforts, an elusive enemy forced the Military Police into scattered small-scale conflicts. Rarely was anything approaching a battle waged.

Indicative are CIC reports for early September 1946. Only sporadic clashes were noted. Even an attempt to surround the Huk headquarters in Pampanga, the campaign involving the greatest number of men, saw the Huks suddenly vanish when it seemed the Military Police were ready for a final assault. Apparently six to seven hundred Huks had been in the area, and according to remors Supreme Commander Taruc had been among them. Although the Huks were on the defensive at this time, their nocturnal raid for supplies were still unchecked. The 1135th report for September 1946 concluded, "CIC estimate of the situation is that the

38 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 1, 1 January 1946 to 31 January 1946, dtd 17 April 1946, (CONFIDENTIAL) (Central Records Facility), and Hqs, 1135th CIC Detachment, AFWESPAC, "Communism in the Philippines," dtd October 1946 with supplements dated January 1947 and June 1947, (SECRET) (Central Records Facility).

39 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 1, 1 January 1946 to 31 January 1946, dtd 17 April 1946, (CONFIDENTIAL) (Central Records Facility).

CONFIDENTIAL

reticent attitude of the Huks should not be misinterpreted as a weakness since a Communist sponsored revolution will be propagated openly and secretly until the very last leader has been tracked down."[40]

Huks Lose Control of Central Luzon

By January 1947, the Philippine Army's Military Police had been successful enough for CIC to predict the Huks would be little more than remembered bandits by January 1948. But the 1135th's observers were over-optimistic. The Commonwealth's campaign did not succeed in totally wiping out the Huks. It was successful only in breaking them up into small gangs forced to move frequently to avoid extinction. However, with the Huks disorganized and on the run, the Commonwealth was able to regain control of Central Luzon.

As more and more data on the outlaws reached CIC, it became apparent that while the principal leaders were avowed Communists, the rank and file numbered only about two percent party members. Whether men joined the Huks for the easy life of a bandit, for adventure, or because of political ideology made little difference. In spite of the Huks' failure to hold the reigns of government in Central Luzon, they had succeeded in watering the seeds of agrarian strife much to the advantage of the Communists.

Communists Turn to Agitation of Labor Situation

The presence of an active Communist guerilla force in a non-Communist country must be recognized as a deviation from the usual Red efforts at subversion. When the star of the Huks dimmed, the Philippine Reds stepped up a campaign more in line with world-wide Communist tactics. Labor was made the prime target. The Reds sought to gain control of individual unions and eventually consolidate these unions into one large body. Feeling that labor was bound to rise to a dominent position once it was highly centralized, the Reds figured to rise with it. The majority of Filipino Communists, either directly or indirectly, turned their attentions to enlarging the Congress of Labor Organizations (CLO). CIC summarized the CLO objectives as "to organize, indoctrinate and bring into power the easily led masses of laborers who will serve the dictates of Moscow."

Shielded by the Democratic Alliance, backed up with force by the Hukbalahap, and supported by contributions from the CIO in America, the CLO had corraled fifty-four unions with a total of 80,000 members by the end of 1946. In spite of this great degree of success, CLO-instigated strikes met with general failure in 1946. The most important CLO-inspired dispute was the Manila City Laborers

40 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 9, 1 September 1946 to 30 September 1946, dtd 14 October 1946, (CONFIDENTIAL) (Central Records Facility).

CONFIDENTIAL

Strike. The CLO managed to tie up Manila refuse collection, power, water and transportation facilities, but a failure to provide the basic needs of the strikers doomed this bit of agitation.[41]

CIC covered all labor disputes and demonstrations with a particular emphasis on indications that the CLO was involved. For example, agents and informants of the 1135th kept close tabs on the strike of the Philippines Match Factory in Manila in June 1947. Strikers from this plant were prominent in a general demonstration before the offices of the Court of Industrial Relations, a mediation group. Placards denouncing the Court as an "agent of the scabs" were carried by the mob. One of the strikers was heard by a CIC informant to say, "We can't depend on Roxas or Truman now. They are imperialists. We must call on Stalin, the real defender of democracy." The strikers of the Philippine Match Company, after three weeks away from the job, met in front of the Court of Industrial Relations to hold a plebiscite. They voted by the slim margin of nine ballots to form a union to be affiliated with the CLO and to reject the establishment of a company union. Several days later the 300 striking workers of the Philippine Refining Company, who had joined the match-makers in their placard carrying demonstration, voted by a narrow margin to throw in with the CLO.

Spurred on by the vocal element of Communists within their ranks, striking workers had done just what was desired of them. By hooking up with the CLO, the two groups, whose membership was not totally Communistic, added their weight to the Communist movement.[42]

Reds Hide Behind "Respectable" Front

The Philippine Communists were also adroit at infiltrating once-respectable political groups. Whereas the Democratic Alliance was Communist-organized from the start, the Civil Liberties Union, which by 1946 was Communist-dominated to the core, had sprung from more innocent beginnings. Organized at the inception of the Commonwealth in 1934 by a band of progressive intellectuals, the Union was pledged to the defense of the principles of the American "Bill of Rights." Dormant through the Japanese occupation, the Civil Liberties Union was revived after the liberation and immediately became a front for the Communist Party. When the Red agitator, Jesus Barrera, was elected chief, the purposes of the organization were clearly evident. To sum up the Union's position, CIC quoted a "competent observer of Philippine Communism." It was said of the organization "that though it wields but slight inherent power, its buffer potential has secured the safety of the Communist Party of the Philippines."

41 Hqs, 1135th CIC Detachment, AFWESPAC, "Communism in the Philippines," dtd October 1946 with supplements dtd January 1947 and June 1947, (SECRET) (Central Records Facility).

42 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 6, 1 June 1947 to 30 June 1947, dtd 5 July 1947, (SECRET) (Central Records Facility).

CIC Observes Foreign Nationals

Foreign nationals active in Communist affairs also came under CIC scrutiny. Although the number of Chinese Communists in Manila was greater, CIC saw more potential danger from the Russian colony of three hundred. The tie-up between some of these Russians and the American and Philippine Communists had been firmly established by the end of 1946, although there was some question as to whether the group was being directed from Moscow.[43]

The Russian colony was well populated with "night life" characters, and the CIC agent in charge of reporting their activities wrote in a style befitting his subjects' backgrounds. No account of the activities of the 1135th CIC Detachment would be complete without liberal quotes from the "Cholly Knickerbocker" of counterintelligence.

> "The Cozy Club continues to be the leading center for Russian hostesses in Manila. At least ten Russian girls, most of whom appear to be politically inclined when intoxicated, specialize in American customers."
>
> "The Blue Elephant night club, once the center for the Manila Russian community, has lost its last white hostess and appears to be losing money for the owners."
>
> "Vera Veronic Cohen, formerly with the Blue Elephant, has transferred to Ye Olde Mansion. Veronica is currently considering a trip to Hong Kong to secure a divorce from Jack Cohen of the El Cairo Club. The incentive for this move appears to be an American Army Ordnance captain."
>
> "Jenny Veinerman, also formerly of the Blue Elephant, tried the life at Ye Olde Mansion briefly, but soon shifted to partying around town with various groups of American officers and civilians and receiving her commission from the clubs visited by the parties. Most recently, Jenny has accepted a secretarial position in the Wilson Building which may or may not curb her nocturnal activities."[44]

"Vera Konvicki, Russian ex-hostess at the Cozy Club, recently moved out of the club after six years of residence with the owners, Mariana and Eugenie Morozava. Konvicki, who is reported to be the widow of an American Naval officer and appears to have an independent income, has been seen recently in the company of L. "Tex" Hunt, who will soon open a new night club and cabin camp at Tagaytay under the styling 'Hunt's Lodge'."

"Two of the stateless who freely predict an early war between the United States and Russia, recently moved to a new apartment in the though supposedly 'unemployed' at the time. Meanwhile another formerly a is announcing her coming marriage to an American lieutenant with whom she has been living for several months without benefit of clergy. makes no mention of her supposed spouse, an American now in the United States."[45]

has been identified as the former wife of espionage expert and author formerly living in Shanghai. She has also been identified as a wartime 'hostess' in a Russian bar who was well known to Japanese officer patrons as allegedly because of her nymphomaniacal tendencies."[46]

Nothing escaped the "Listening Post" !

Counterintelligence Only Secondary in

The most spectacular case handled by the 1135th CIC Detachment involved counterintelligence only as a secondary feature. Except for a rather flagrant violation of AR 380-5, the Case properly should have been the responsibility of the Criminal Investigation Division.

On 5 May 1947, Capt Oliver B. Fulton, Chief of Investigations of the 1135th, received a phone call from the 10th General Hospital in Manila. in the hospital for medical observation, impatiently requested a conference with Captain Fulton. As a for the Manila had come into possession of some explosive information. He was certain

45 Hqs, 1135th CIC Detachment, PHILRYCOM, Information Section, Semi-Monthly Activities Report, 16 July to 31 July 1947, dtd 1 August 1947, (SECRET) (Central Records Facility).

46 Hqs, 1135th CIC Detachment, PHILRYCOM, Information Section, Semi-Monthly Activities Report, 16 June to 30 June 1947, dtd 1 July 1947, (SECRET) (Central Records Facility).

his life was in danger. He felt CIC was the only organization he could contact without jeopardizing his life and compromising his information.

When CIC agents arrived at his bedside, related the immediate cause for his hospitalization. That night, shortly after left the home of his girl friend, something hit him on the head, and the vehicle he was driving crashed into a wall. had revived him and brought him to the hospital..

Then haltingly informed Captain Fulton he would relate a long story containing derogatory information on leading personalities with the Philippine Base Command (PHIBCOM) and the Manila Engineer Depot. Before he could say another word, passed out in exhaustion. Captain Fulton left the hospital with no idea what the knew that placed his life in jeopardy.

"Larceny on the Loose"

The following morning Captain Fulton, while scanning the Manila Evening News of 5 May, noticed an article on blackmarketing in the Philippines. The meat of this article, entitled "Larceny on the Loose," consisted of paragraphs supposedly quoted word for word from an official Army document of 7 March 1947. It seemed to Fulton the quoted report was much too "hot" for release to the general public. The publication of the data smaked of a rather serious security violation.[47]

The document quoted by the Evening News read in part: "Information compiled...pointed out that certain key American civilian and military personnel, as well as their business associates, had been trafficking in falsely-requisitioned government property from Base Depots. This information was substantiated.... It had been proven that entire convoys of critical engineer supplies, loaded at Base Depots on false requisitions, have been side-tracked and purposely unloaded by civilian concerns and organizations in Manila. Estimates of property lost through false requisitions had been placed at approximately $50,000 a week... Total loss of government property through all PHIBCOM depots has been placed at $500,000 a week....

The Evening News also quoted the rather desperate final paragraph of the report. "It is generally felt that if higher backing from PHILRYCOM can be obtained, that investigations will break blackmarket activities now under way in Luzon....To further cite pressure being brought on investigator forces at this time, it is pointed out that in the case of (name deleted) certain high authorities

47 1135th CIC Detachment, narrative account entitled, (CONFIDENTIAL) (Central Records Facility).

[redacted]

in PHIBCOM, and possibly in PHILRYCOM, are interested in protection of persons involved in blackmarkets."[48]

Another Call From

Captain Fulton's musings over the possible security violation were interrupted by a phone call from He too had seen the Evening News. The document quoted in "Larceny On The Loose" was a report he had compiled and signed. Now certain his life was in danger, the requested CIC to supply a body-guard.

Arrangements were made with the Manila Provost Marshal's Office to provide a body-guard 24 hours a day. In addition, CIC instituted a constant surveillance of Agents posing as patients, ward personnel and visiting enlisted men kept a continual watch on all persons coming in contact with the All phone calls to were monitored. The Commanding Officer of the hospital was persuaded to permit no visitors for except those the personally approved. Food intended for was examined and tested before being served.

When was well enough to talk, he was given a three-day pass from the hospital and taken to 1135th Headquarters. Under constant CIC guard, dictated a twenty-page report dealing with the various personalities involved in the blackmarket operations.

Seek Source of Security Leak

Meanwhile Captain Fulton had instructed one of his better agents to drop everything and concentrate on tracking down the breach of security that had permitted the information on blackmarketing to be released to the public.[49]

On 8 May the agent interviewed the Manila Security Officer, at the time he was hospitalized. This officer asserted that the information printed in the Evening News had not been authorized for public release. He added that had compiled the quoted report and classified it "Confidential." To the Security Officer's knowledge, three copies had been made and disseminated. The woman who typed the copies concurred on the last point. The agent obtained a copy of the 7 March document and found that it matched word for word the quotes in "Larceny On The Loose."

48 Clipping from The Evening News, Manila, Philippines, Monday, 5 May 1947, (LARCENY ON THE LOOSE - A REPORT ON THE SURPLUS SITUATION), (Unclassified) (Central Records Facility).

49 1135th CIC Detachment, narrative account entitled undated, (CONFIDENTIAL) (Central Records Facility).

To his dismay, the CIC agent learned the Security Office had no measures for the security of its own documents. Manila investigators informed the agent that case files were carried in their personal brief cases to insure protection. There was no accounting system for classified papers. This haphazard security set-up left innumerable openings for a leak of confidential information.

From the Major, who had been Security Officer at the in March, the time of the dissemination of the document on blackmarketing, it was learned that many more than three copies of the report had been made. He revealed that the PHIBCOM Commanding Officer, the commander, and personnel with the PHILRYCOM Criminal Investigation Detachment, the Judge Advocate General and the Inspector General Section and the G-3 offices were acquainted with the contents. He confessed the Veterans of Foreign Wars and the Veterans Administration in the United States and an correspondent in Manila had also received copies. By now the security leak looked more like a flood.

Any attempt to uncover the security violation was dropped at this point. So extensive was the report's distribution that a complete listing of all the persons who had seen it would have had little value. The damage had been done. About all CIC could do was recommend security measures for the Manila Security Office and hope they would undertake the corrections.[50]

CIC Given Job of Confirming Report

Normally CIC would only have been concerned with the security violation at the Security Office. Confirming information should have been the responsibility of PHIBCOM Criminal Investigation Detachment. However, since the list of persons involved in the blackmarket ring included a number of it was decided during a conference with the Commanding General, the Chief of Staff, the AC of S, G2, and the Manila Provost Marshal Commander that CIC should conduct the investigation to its full conclusion.

To confirm charges, the agents contacted individuals the claimed had knowledge of the blackmarketing operation. It was necessary to interview all of these people surreptitiously so that CIC's concern with the case would not be compromised. One of the Deputy Chiefs, a lieutenant colonel, was

50 Hqs, 1135th CIC Detachment, PHILRYCOM, Memorandum for the Officer In Charge, Subject: Compromise of Classified Document, 17 June 1947, (CONFIDENTIAL) (Central Records Facility).

[redacted]

interviewed behind a pile of engineer equipment where there would be no danger of observation or eaves-dropping. Other informants were casually offered rides and interviewed while enroute to their destinations. Midnight rendezvous in remote bars were the order of the day.

CIC had four good reasons to believe they were chasing something hot. One of the men on list was ambushed and killed, while driving along a highway in Pampanga Province near San Fernando. Another potential informant was waylaid on a Manila side-street and beaten unconscious. Two U.S. Army men, alleged to have information, were hastily transferred out of the theater before 1135th agents could get to them.

So great was the pressure on that eventually he cracked under the strain. About a month after his phone call to Captain Fulton, he suffered a complete nervous breakdown. He was returned to the United States as a serious mental case.

The pressure was on CIC too. While the investigation was still in progress, Captain Fulton received a call from an unknown individual. The voice on the other end of the line issued a warning: "Fulton, keep your nose out of this if you want to stay healthy." After this threat, investigation was immediately intensified. The agents were sure they were striking home. On the other hand, the call also indicated that CIC's concern with the case had been compromised.

Two Extensive Rings Uncovered

Attempts were made to follow the progress of individual pieces of engineer equipment that had disappeared. In one instance, an item was traced to Shanghai, but there the trail ended. It was learned that discrepencies in three contracts had cost "Uncle Sam" $450,000 more than should have been paid.

To gain documentary evidence, agents surreptitiously entered various offices to search file cabinets. Under cover they entertained people known to be acquainted with the suspects. Plied sufficiently with alcohol, some of these men blurted out important facts.

It was learned by the agents that there were at least two well established, cunningly operated, blackmarket rings in the Philippines. These rings included among their operatives clever lawyers, influential politicians, military personnel, wealthy business interests, depot guards, and plain ordinary thugs. The rings were so well organized that they had informants in every major office or organization of PHILRYCOM. The rings' tactics included bribery, coersion, blackmail, and murder.

CIC worked night and day to piece together the complete story of the two [illegible]market rings. On the morning the investigation was completed, the facts were taken to the theater commander. As a result of CIC's findings there was a complete turnover of personnel in many units. PHIBCOM was completely deactivated, many of its personnel were discharged "with prejudice," and its mission given to PHILRYCOM.

The 1135th's summation of this case concludes, "(CIC) itself gained some prestige and reputation for reliability during the course of this investigation."[51]

Strength of 1135th Drastically Reduced

On 15 December 1947, the 1135th CIC Detachment's authorized strength was drastically reduced. In contrast with the former Table of Organization of 104 spaces, CIC was authorized only 27, 10 officers, two warrant officers, and 15 enlisted men. Concurrent with the reduced T/O, the 1135th lost counterintelligence jurisdiction over Okinawa as PHILRYCOM was split into two commands - the Philippines Command (PHILCOM) and the Ryukyus Command (RYCOM). The Ryukyu office of the 1135th became Headquarters, 526th CIC Detachment.[52]

Such personnel cuts were also in line with the diminishing CIC mission. Throughout the last months of 1947, CIC's collection of civil intelligence had been gradually cut back and by mid-1948 the overall mission was almost completely confined to security of military personnel and installations. During this period considerable controversy centered around different interpretations of the phrase "keeping appraised of the local situation." Between June 1947 and August 1948, there were three different theater G2s, and each had his own version of the role of CIC's responsibilities. For instance, the second in this line of staff supervisors deemed that CIC should not seek data on Manila's foreign element. His successor wished CIC to start this operation again in spite of the difficulties of reestablishing a discarded informant net.[53]

229th CIC Detachment Activated

On 20 September 1948, CIC in the Philippines underwent both a redesignation and another cut in authorized strength. The new 229th CIC Detachment was to

53 CIC Operational History of Theaters, "Philippine Islands, 1945-1948," (Unclassified) (Central Records Facility).

CONFIDENTIAL

consist of only two officers and six enlisted men. The 229th limited its activities solely to military security.[54]

At the time of the activation of the 229th, Maj Clifford L. Sawyer was the commanding officer. He was succeeded on 28 December 1948 by Capt John M. Davis, who was in turn relieved on 9 January 1949 by Capt Paul R. Lutjens.[55]

Laundry Manager's Complaint Opens Case

One of the 229th CIC Detachment's investigations was initiated after a complaint to PHILCOM authorities by the manager of the Luzon Commercial Laundry Company of Manila. The irate businessman had been told by two friends that derogatory information in CIC's files had kept him from getting Fort McKinley laundry contracts. Since CIC files were not supposed to be public knowledge, the 229th opened an investigation of the matter. Attempts to determine if the business man had been wrongly treated were also initiated.

A check of the 229th's outgoing correspondence file revealed that there had been no transmission of CIC's information on the laundry manager to other PHILCOM agencies. Any leak of classified information would have had to come from within the 229th. Furthermore, no decision to reject the subject's application for Army contracts could have been based on CIC reports.

CIC interviewed the laundry manager on 3 and 7 December. In January 1948, he had informally discussed a laundry concession with a colonel in the PHILCOM Quartermaster Section. The subject claimed he eventually got around to submitting his plans to Fort McKinley authorities. He had received no answer, but two friends, a market owner and the manager of a bar, had tipped him off that derogatory information in CIC files had blocked the application.

On 7 December, CIC quizzed the bar manager and learned that three months before, an American civilian, about whom nothing else was known, had been talking at the bar about the laundry manager. According to this mystery man, the subject had not received Army contracts because CIC knew he had collaborated with the Japanese.

The market owner admitted he knew the subject, but he denied he had told him about any derogatory information in CIC's possession. The market owner confessed he had once associated with a CIC agent no longer in PHILCOM.

Two Pertinent Facts Unearthed

After a series of somewhat unproductive interviews on Fort McKinley and in Manila, CIC landed on two pertinent facts through records checks.

A check of the PHILCOM CIC files implicated the subject in the theft from the U.S. Army of a large power crane valued at nearly $50,000. This bit of information would have been enough to block an attempt to get an Army contract.

Then CIC took a look at the files of the Fort McKinley Central Exchange Service, where applications for Army concessions were supposed to be submitted. There was no record that CIC's subject had ever made such an application. No one in the office recalled even a visit to inquire about correct procedure for gaining a laundry concession. Apparently all the laundry owner had done was make verbal arrangements with his contacts at the Quartermaster Section without filing the correct application through the authorized section.

CIC closed its investigation on 16 February 1949, feeling that further probing would produce little information of value. Although the source of the security leak had not been uncovered, CIC was assured that the laundry manager had not been unjustly deprived of Fort McKinley concession.[56]

Deactivation of 229th Terminates Philippine Activity

CIC's post war activities in the Philippines were terminated when the deactivation of the 229th CIC Detachment was ordered on 29 August 1949 to be effective on 15 September 1949. CIC's always diminishing mission in the Philippines had become nonexistent.[57]

Part II: Operations in the Ryukyus Islands

[redacted]

Part II

OPERATIONS IN RYUKYUS ISLANDS

For a short time after World War II, the counterintelligence coverage of the Ryukyus, the important chain of islands stretching from Kyushu to Formosa, rested with the Fifth CIC Region of the 441st CIC Detachment.

On 1 March 1946, concurrent with the switch of the islands from AFPAC to AFWESPAC, the three officers and four agents representing CIC in the Ryukyus were transferred to the 1135th CIC Detachment and operated as a field office of that headquarters. CIC activity in the Ryukyus was almost entirely confined to the largest of the islands, war-torn Okinawa.

No Regular Newsgathering on Okinawa

Especially in the first years, the activity of the Okinawa Field Office differed somewhat from postwar operations in the Philippines. CIC on Okinawa was not regularly involved in "the gathering of news regarding sociological developments and trends, but concerned itself with work more closely related to the military, such as espionage, sabotage, and security investigations." Although regular newsgathering was not attempted, CIC did make periodic studies of civil affairs during subsequent months.

Use of individual paid informants in Okinawa was particularly essential because of the language barrier, the great number of islands to cover, and the small number of agents to cover them.[58] Probably for the same reasons they were so operationally essential, informant networks on the islands were not properly established during the first three years of CIC activity.[59]

Surveys Hunt Potential Elements of Discontent

It became the practice of the Okinawa Field Office to dispatch agents to areas in the islands to survey local conditions. By circulating among the people, CIC sought to uncover points of discontentment and potential elements of subversion.

For instance, in August 1946, a survey of local government was conducted in the northern region of Okinawa. Thirty-one villages were visited. CIC found that all but three had mayors elected by the people. In these three villages, the

58 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 1, 1 January 1946 to 31 January 1946, dtd 17 April 1946, (CONFIDENTIAL) (Central Records Facility).

59 CIC Operational History of Theaters, "Okinawa, 1945-1948," (Unclassified) (Central Records Facility).

"honcho" of the district had selected the mayor from a list of prominent citizens approved by the people. CIC reported: "All of the mayors, as well as the vast majority of the natives, stated that they prefer the present form of government because they have more freedom than they did under the Japanese."[60]

In late November 1946, agents journeyed to the same area for another look. It was observed that the people in the north were generally contented in contrast to the war-torn and unhappy populace of southern Okinawa. The northern half of the island which was "off limits" to American troops, had been largely unaffected by the war. Military government had provided rough lumber and considerable gasoline for use in saw mills, with the result that there were many buildings under construction. Military government had also provided boats for the native fishermen. A good crop season had combined with other factors to keep the situation in the north untroubled.[61]

Surveys of the southern half of the island showed the natives were greatly concerned about rebuilding war damage. Many ruined homes were still being reconstructed in December 1946. Getting the land in proper condition to plant rice was also noted as a major reconstruction problem in the area.[62]

Although periodic area surveys were the main method utilized to collect civil intelligence, the Okinawa Field Office occasionally dispatched agents to cover potential danger spots. In April 1947, an agent was sent to Yaeyama Island to investigate a so-called "labor union" of 100 demobilized and repatriated men that had been causing trouble for the local government. First and foremost on the agenda for this "union" was a May Day demonstration. Civil authorities summoned the leaders two days before the scheduled demonstration, and issued a warning that they were violating Military government regulations. The leaders were cautioned to observe the military government regulations in their actions, speeches and writings. On 29 April, one of the leaders began disseminating posters "detrimental and disrespectful" to the government, and the "union" continued to plan for a big time on May Day. On the next day the two men were arrested.

60 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 8, 1 August 1946 to 31 August 1946, dtd 17 September 1946, (CONFIDENTIAL) (Central Records Facility).

61 Hqs, 1135th CIC Detachment, AFWESPAC, Month Report Nr 11, 1 November 1946 to 30 November 1946, dtd 26 December 1946, (SECRET) (Central Records Facility).

62 Hqs, 1135th CIC Detachment, AFWESPAC, Month Report Nr 12, 1 December 1946 - 31 December 1946, dtd 10 January 1947, (SECRET) (Central Records Facility).

On 2 May, the "union's" leaders were tried, found guilty of violating military government regulations and sentenced to six months in prison.[63]

Personnel Shortage Hampers Port Security and Travel Control

Port security and travel control were also part of the activity of the Okinawa Field Office. A shortage of CIC personnel made a thorough accomplishment of this mission difficult. By 1947 CIC agents were inspecting all vessels docking at Naha, Okinawa's principal port, and checking passenger and crew lists against a rather lengthy black-list. In July 1947, a conference attended by the theater G2, the A2 of the 1st Air Division, and a representative of the Okinawa CIC Field Office resulted in a plan to strengthen travel control procedures in spite of the personnel shortage. In conjunction with the training of various air force units in the Ryukyus, an aerial reconnaissance of the island chain was planned. All surface craft in nearby waters were to be listed and their locations pin-pointed on a large map of the islands. All strange or suspicious patterns of travel were to be investigated immediately. It was hoped that this and subsequent aerial observation would either confirm or disprove the frequent reports of illicit traffic in individuals and materials in the East China Sea area.[64]

As an additional security measure, the Okinawa Field Office received permission to give a counterintelligence briefing to all individuals being transported by sea or air to China. Upon the tourist's return to Okinawa, he filled out what was called an "interrogation of returnee" form and submitted it to CIC.[65]

One instance of illegal entry into Okinawa occurred on 25 July 1946. CIC agents and civil police investigated a small boat that docked at the Itoman Harbor in the southern part of the island. On board were 40 Okinawans who had been in the Japanese Army on Formosa. For fifteen hundred yen they had been given passage, believing they would be free to return to their homes upon arrival on Okinawa.

According to the returning Okinawans, a rather chaotic condition existed on Formosa in respect to ex-Japanese soldiers. Apparently there had been no measures taken to intern these men. As far as authorities on Formosa were concerned, they were free to leave whenever they could arrange transportation.

63 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 5, 1 May 1947 - 30 May 1947, dtd 6 June 1947, (SECRET) (Central Records Facility).

64 Hqs, 1135th CIC Detachment, PHILRYCOM, Monthly Report Nr 6, 1 June 1947 - 30 June 1947, dtd 5 July 1947, (SECRET) (Central Records Facility).

65 Hqs, 1135th CIC Detachment, PHILRYCOM, Monthly Report Nr 3, 1 March 1947 - 31 March 1947, dtd 8 April 1947, (SECRET) (Central Records Facility).

The crew of the boat admitted they planned to make a regular business of transporting the ex-Japanese soldiers home to Okinawa. Although in this instance there was no indication of infiltration of subversives into the group of returnees, agents saw that such unregulated procedure left the door wide open to all manner of undesirables. Recommendations were made to the military government in the Ryukyus for a controlled repatriation of those Okinawans left on Formosa.[66]

Security: Everything Wrong at Headquarters

Routine security surveys and inspections formed a necessary part of the Okinawa Field Office's activity. On 24 and 25 February 1947, for example, agents thoroughly inspected Army headquarters in the Ryukyus for violations of AR 380-5. Almost everything was wrong. The offices were unlocked and unattended during nonworking hours, and documents classified up to "Secret" were improperly stored. CIC made plans to continue security inspections of headquarters "in an effort to gain adherence to AR 380-5."[67]

In January 1947, CIC was called in to investigate the disappearance of two "Top Secret" documents from the Adjutant General Section of the 1st Air Division. The last transfer receipt of each of the documents was dated in April 1946, and in both instances the officers last signing for the papers had been transferred to the United States for discharge. Other than uncover these facts and transmit them to CIC in the Zone of the Interior, the Okinawa Field Office could do nothing. The two violations of AR 380-5 had occurred too far in the past for agents to locate the exact causes.

Another violation of military security was uncovered in January 1947, when an Okinawan civilian arrested by civil police was found to have a bundle of "Restricted" booklets in his possession. CIC asked to be allowed to interrogate the Okinawan. The suspect, who could neither speak nor read English, pleaded that his intentions were to use the booklets for toilet paper. It was impossible to prove otherwise.[68]

Checking the Army's Popularity Rating

In maintaining military security, it was important to know of the conduct of the troops was alienating the otherwise friendly native Okinawans. Consequently, a small portion of CIC's time was devoted to reviewing incidents which reflected adversely on the U.S. Army and endangered friendly relations with the indigenous population.

The majority of these incidents involved criminal acts by American soldiers. While the provost marshal's office dealt with the aspects of illegality, CIC defined what effect the criminal act had on the Army's public relations.

For example, reports from October 1946 reveal that some American military personnel were engaged in "surreptiously obtaining valuable souvenirs" from the civil population to the great detriment of the attitude of the natives toward the Army.[69]

The frequent instances of rape of Okinawan women by American troops were also felt to effect adversely Army public relations. In April 1947, a peak total of 11 rape cases were noted by the Okinawa Field Office.[70]

It was recognized that closely linked to the Army's popularity rating with the native population was troop morale and discipline. In September 1946, CIC reported that morale had soared with increased utilization of native labor and the expected arrival of dependents.[71]

But by July 1947, CIC had to report that morale of both officers and enlisted men was "not high." Poorly prepared food and the Army's failure to ship over many of the families were given as the prime reasons for the decline.[72]

Although troop discipline was reported as constantly improving, CIC noted that in April 1947 there were five incidents of soldiers and marines attacking civil policemen. Typical was the instance of 7 April when five marines, two

69 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 10, 1 October 1946 - 31 October 1946, dtd 19 November 1946, (CONFIDENTIAL) (Central Records Facility).

71 Hqs, 1135th CIC Detachment, AFWESPAC, Monthly Report Nr 9, 1 September 1946 - 30 September 1946, dtd 14 October 1946, (CONFIDENTIAL) (Central Records Facility).

72 Hqs, 1135th CIC Detachment, PHILRYCOM, Monthly Report Nr 7, 1 July 1947 - 31 July 1947, dtd 10 August 1947, (SECRET) (Central Records Facility).

armed with bayonets, had jumped a policeman. The patrolman was robbed and his police insignia ripped off for souvenirs. The policeman was left with two severe cuts on his head.

CIC interest in such affairs was explained at the end of the report dealing with the five assaults of April 1947. "While no disaffection, subversive activity or security violations are involved in these incidents, they are pointed out because poor discipline tends to promote disaffection, subversion and lax security." Although not mentioned directly in this report, poor discipline in general and attacks on civil policemen in particular figured also to hurt the Army's popularity with the natives.[73]

CIC Goes Grave Hunting

One investigation that can hardly be called within the counterintelligence mission began with reports from troops stationed on Taira Island that the natives had knowledge of U.S. Army personnel buried there.

The military government Intelligence Officer and an agent from the Okinawa Field Office journeyed to Taira on 11 January 1947 to investigate these reports. A search located the graves of four American soldiers. On three of the bodies there was enough evidence of physical beating to call in a War Crimes investigator from the Far East Tribunal. He accompanied a second party to Taira on 16 January. All possible information on the four bodies and possible atrocities was gathered and forwarded to the proper agencies.[74]

Statistics Show Security Investigations of Personnel Most Frequent

Okinawa Field Office case load statistics, while not indicating the relative importance of individual investigations, do offer clues to what was being accomplished. In a typical month, May 1947, the office dealt with 76 security investigations of personnel, of which 41 were closed. There were three pending and one closed subversion cases. One sabotage case was pending and four probes of security violations were closed. There were no cases reported in other categories (i.e., espionage, sedition, etc.). During the month, the office was involved in 15 cases classified under "miscellaneous." Cases dealing with war crimes, blackmarketing, prostitution and narcotics along with investigations into economic and industrial conditions in the Ryukyus were all lumped into this catch-all category.[75]

73 Hqs, 1135th CIC Detachment, PHILRYCOM, Monthly Report Nr 5, 1 May 1947 - 31 May 1947, dtd 6 June 1947, (SECRET) (Central Records Facility).

75 Hqs, 1135th CIC Detachment, PHILRYCOM, Monthly Report Nr 5, 1 May 1947 - 31 May 1947, dtd 6 June 1947, (SECRET) (Central Records Facility).

526th CIC Detachment Activated

On 15 December 1947, the 1135th CIC Detachment was absolved of counter-intelligence responsibilities in the Ryukyus. The 526th CIC Detachment was activated to take the place of the 1135th's Okinawa Field Office. At the time of activation, the 526th was authorized a strength of four officers, four warrant officers, and nine enlisted men. This Table of Organization was increased by one warrant officer and ten enlisted men on 15 September 1948.[76]

More Time Spent Observing Okinawan Politics

An increased amount of CIC's time in the Ryukyus was spent delving into the twists and turns of Okinawan Politics, particularly probing the increasingly prominent Communist elements. Volumnous staff studies and monographs on the political situation appeared with some regularity. On 15 October 1947, the field office of the 1135th had published a "Monograph on Okinawan Politics." The 526th printed an up-to-date study under this title on 15 April 1948. Another volume, the first volume devoted exclusively to the Communists, was "An Analysis of Communist Influence on Ryukyuan Politics," dated 17 August 1948.

This volume on the Communists concluded: "...in the Ryukyus Islands there exist four Communist factions sufficiently trained and organized to control the major geographic subdivisions of the Ryukyus once the status of the islands is determined or in the event the military government lessens the present system of control."[77]

Another important contribution to RYCOM intelligence was a three volume study entitled "Third Year of Ryukyuan Politics," published in August 1949. Part I dealt with the civil administration, legislative assembly, and political parties of Okinawa, while Parts II and III concerned similar matters in the Northern Ryukyus and Southern Ryukyus respectively.[78]

Who Cut the Cable?

Statistics and reports from Okinawa show that sabotage cases, especially those reaching any concrete conclusion, were few and far between. One of the

77 Hqs, 526th CIC Detachment, RYCOM, Subject: An Analysis of Communist Influence on Ryukyuan Politics, To: Commanding General, RYCOM, 17 August 1948, (SECRET) (Staff & Faculty Library).

78 Hqs, 526th CIC Detachment, RYCOM, "Third Year of Ryukyuan Politics," Three volumes, 15 August 1949, (SECRET) (Staff & Faculty Library).

more conclusive sabotage investigations began on 8 January 1948, when the 526th CIC Detachment received information that an important telephone and radio cable had been almost completely severed.

Mechanical devices designed to locate the exact spot of the trouble were utilized. Investigation in the locale of the incident put the blame squarely on a group of school boys. Just before leaving classes for winter vacat[illegible]he children had been instructed to practice handicraft over the holidays. Apparently they decided to make small brooms from a kind of grass known as "Susuki." While looking for the grass, they discovered an abandoned piece of cable. They decided to use it to bind the grass in their brooms. Needing more cable, the children dug in the area of their initial discovery. A foot beneath the surface was another cable and the boys eagerly attempted to cut out a piece. The job was nearly complete when sparks began to fly. The boys realizing they were tampering with a cable still in use fled the area.

CIC was forced to conclude there was no deliberate intent to sabotage Army communications.[79]

CIC Seeks to Control Potentially Subversive Seamen

One important aspect of the 526th CIC's effort to maintain the security of the Ryukyus was the control of potential subversives on the crews of merchant vessels docking on the islands. One such individual was the Third Assistant Engineer of the USAT Sgt. Jack J. Pendleton, which arrived in Naha from Yokohama on 26 February 1949. An "associated government agency" had reported this seaman to be a member of the Communist Party in San Francisco.

Under verbal orders of the Commanding General, RYCOM, CIC requested the ship's captain to restrict the seaman to the ship for the duration of the stop at Okinawa.

On 4 March 1949, the seaman, growing weary of his restriction, put through a call to CIC Headquarters. He claimed he had no Communist connections and wished to set the record straight on the matter. He told CIC, "Somebody must have misunderstood some remarks I have made, but I cannot think what it could be." CIC politely informed the seaman the restriction order had come from a "higher authority" without any reason given for the action.

The same day, Agent Nicholas L. Gustin informed the ship's captain that the restriction on his Third Assistant Engineer had been lifted for the 12-hour period from 1000 to 2200 on 5 March. Gustin was allowed to speak to the seaman who

79 CIC Operational History of Theaters, "Okinawa, 1945-1948," Unclassified, (Central Records Facility).

CONFIDENTIAL

Part III: Operations in the Marianas and Marshall Islands

proceeded to explain his position. Although once again CIC pretended not to know the reason for the restriction, the seaman assumed that he was a "Communist or subversive suspect." The subject explained his position: "I am Jewish and have a persecution complex; whenever there is a bull session aboard ship on politics and labor I side with the minority...I think that all capitalist governments could borrow ideas from the Communist ideology."

When the suspect left the Pendleton at 1235 hours on 5 March, CIC had him under surveillance. A visit to 526th CIC Headquarters to further discuss his restriction was one of the stops on his itinerary. His contacts at various bars in Naha were all subjected to a long disertation on his restriction by CIC. At one point he told a fellow drinker he read Communist literature for the same reason people read authors like Hemingway and Shakespeare. The seaman returned to his ship at 2346 hours - one hour and 46 minutes later than the pass allowed. CIC's surveillance ceased at this point.

"I Know More About Communism Than the Goddamn CIC"

But for sheer coincidence the case would have ended when the suspect returned to his ship.

At 0100 hours, 6 May, Special Agent Frank T. Hughes of the 6001st CI Squadron, returning to his headquarters from Naha Air Force Base, was hailed by a civilian on the road north of the Naha port area. When his passenger climbed into the jeep, Hughes noticed that he seemed intoxicated. The passenger began to tell Hughes about being unjustly treated by CIC, explaining that he had been restricted to his ship, the USAT Sgt. Jack J. Pendelton, by an order from CIC, since someone somewhere had the mistaken impression he was a Communist. The seaman told Hughes: "I am a student of world affairs. I know more about Communism than any of those people in the Goddamn CIC." In their one-sided conversation, he also told Hughes that he had jumped ship for a night on the town. When he had dropped off his passenger, Hughes immediately reported the incident to the 526th CIC Detachment. From his description of his rider, agents of the 526th concluded it must have been the Third Assistant Engineer of the Pendelton.

Early the following morning, the seaman was roused from his slumber and brought to CIC Headquarters for interrogation. In regard to his political convictions, the subject continued to profess a degree of sympathy with Communist ideals but stoutly refused to admit he belonged to the party. He called his violation of the restriction order "very poor judgement" on his part.

While the seaman was being questioned, his quarters were searched and agents made a list of the many leftist publications in his possession.

The remainder of CIC's investigation consisted of interviews with crew members of the Pendelton and some of the subject's casual contacts in the various bars he visited in his brief stay ashore.

When the Sgt. Jack J. Pendelton left Naha port on 8 March, CIC forwarded to the proper stateside agency the information collected on the suspect, trusting the complicated channels of communication would function properly and the subject would either be restricted or surveilled at future ports of call.[80]

80 Report of Investigation (WD AGO Form 342), Investigation Made By: 526th CIC Detachment, Subject: Date Submitted: 18 March 1949, Dates of Investigation: 17 February 1949 - 16 March 1949, SECRET, (Central Records Facility).

CONFIDENTIAL

Part III

OPERATIONS IN THE MARIANAS AND MARSHALL ISLANDS

Essential to the United States postwar defense establishment were the 15 Marianas Islands. Guam, with an area of 225 square miles, v[illegible] group's major island and the largest point of land in the Pacific Ocean between Hawaii and the Philippines and between Japan and New Guinea.[81]

After the cessation of hostilities, Guam became a U.S. mandate under Navy control. The Navy had complete jurisdiction over the civil employees on the island, including those of the Department of the Army.[82]

Only Air Force CIC on Guam Until Mid-1947

Sub-detachment "G" of the 607th CIC Detachment, the Far East Air Force CIC unit, was the only CIC organization in the Marianas from the end of the war to mid-1947. Sub-detachment "G" operated in conjunction with Headquarters, 20th Air Force on Guam.

The situation on the Marianas at the end of 1946 posed no cause for alarm. The 607th reported: "The counterintelligence situation at this base presents no unusual problem. The morale of the troops is good and cooperation with the natives excellent."[83]

502d CIC Detachment Activated

On 10 May 1947, the 502d CIC Detachment was activated as a unit of the Marianas-Bonin (MARBO) Command. Authorized strength was three officers, one warrant officer, and three enlisted men. On 5 June 1948, this Table of Organization was increased by two warrant officers and three enlisted men.[84] Like other CIC units in the Far East, the 502d obtained personnel and investigative

supplies from the 441st CIC Detachment in Japan. The 441st was also the office controlling the issuance of agent badges and credentials.[85]

Of principal concern to CIC on Guam were security matters pertaining to military personnel and Department of the Army civilians. The one year tour of duty for civilians meant a constant turnover and provided considerable clearance work. When it happened that persons holding sensitive jobs on Guam were still under scrutiny by CIC in the Zone of the Interior, it was necessary to maintain "some sort of surveillance" over the uncleared employee.

The 502d CIC Detachment dealt with only scattered instances of suspected sabotage, subversion, and espionage.

The Man Who Asked Questions

One of the more significant complaint-type investigations handled by the 502d CIC Detachment originated when a civilian engineer was asked to answer a list of questions by a fellow employee. The engineer became suspicious and reported the incident to the security office of his construction company. From there the matter was referred to CIC.

A search of the suspect's quarters uncovered four rolls of film showing airstrips, coastline features, and the central water supply system of the islands. There were documents giving details on all the construction work being done by the suspect's employers as well as information on numbers of workers and their morale. The suspect was brought into CIC Headquarters for interrogation. He claimed he had compiled the information for his own personal interest.

While it was impossible to prove espionage, CIC suggested that the engineer be relieved of his position. The suspect was returned to the United States with the recommendation that he never be employed by the Army in any position involving contact with classified material.[86]

A Ham on Guam!

While counterintelligence on the relatively isolated Marianas was usually a matter of routine, there were exceptions to this generalization.

---

85 GHQ, FEC, MI Section, General Staff, "Operations of the Civil Intelligence Section," Volume IX of "Operations of the Intelligence Service in the South West Pacific Area," Part I, Chapter VIII, pp. 95-96, (SECRET) (Central Records Facility).

86 CIC Operational History of Theaters, "Guam, 1945-1948," (Unclassified) (Central Records Facility).

At 2330 hours on the night of 30 December 1947, an amateur short wave radio operator using facilities provided by Special Services, MARBO, was contemplating turning in for the night. He lingered for one more twiddle of the dials. Out of the rainy night came the call letters of station W9PD. The operator knew these had to be the call letters of a station in the United States. He brought the signal in clearer and answered with the call letters of the Guam Special Services station. W9PD turned out to be a ham operator from Southport, Indiana. The stateside operator had been trying to raise Guam for several hours and had nearly given up hope. He poured out an urgent message.

> "There is an American soldier in North China hiding from the Russians in a cave. He is an amateur operator - call letters ACIT - and wishes to talk to Army authorities on Guam."

The message was repeated several times to make sure the Guam operator received it correctly. The Guam radio ham signed off and took the message to the Special Services officer. Immediately a call was put through to Capt Charles H. Silvester, commander of the 502d CIC Detachment. Captain Silvester and the radio operator spent the rest of the night trying to raise ACIT. The two gave up the ghost at 0400 hours, but agreed to try again after catching some sleep.

At 0800 hours, 31 December, Captain Silvester reported the message to MARBO G2. It was the G2's suggestion that all ham radio operators on Guam be requested to attempt to pick up the North China station. A check of a ham operators' guide book showed that ACIT was not listed, indicating that it was unauthorized and operating in an emergency.

Captain Silvester and other members of the detachment contacted every ham station on Guam. They commenced an immediate monitoring of the airwaves. The monitoring continued throughout New Year's Eve and New Year's Day. At 1500 on 1 January 1948, a station in the Navy Joint Communications Commission area picked up a call identified as ACIT, but before any message could be received, the station faded from the air.

The AC of S, G2, FEC, in Tokyo was notified of the incident and he directed that efforts be continued to locate ACIT. Every short wave station on Guam monitored the airwaves throughout the month of January, but no further contact with ACIT was established.

However, the month-long activity was not a total wash-out. As a result of the short wave monitoring, CIC learned that three stations, operating in North Korea under Soviet auspices, were beaming great quantities of Communist propaganda into Guam. Ham operators were encouraged to make contact with these

stations and report the messages received to CIC. In the remaining months of its operations, the 502d CIC Detachment continued to enlist the aid of ham operators in the collection of Red propaganda.[87]

Quarters "Second to None"

Although other than routine investigations were scarce, agents of the 502d were never lacking for something to do. From mid-1948 to April 1949, officers and men of the detachment constructed their own offices and billets. Unhappy with their old unpainted, unsanitary quonset hut, the men assembled "the necessary equipment and materials from various contacts" and put up facilities "second to none" in the MARBO theater.[88]

On 14 March 1950, CIC ceased to operate in the Marianas with the deactivation of the 502d CIC Detachment.[89] (Records fail to indicate who requisitioned CIC's "second to none" offices and billets.)

Agents From 401st CIC Detachment Handle Security of SANDSTONE

In November 1947, the 401st CIC Detachment in Hawaii sent four agents to Eniwetok and Kwajalein in the Marshall Islands with the advance parties for Operation SANDSTONE, the atom bomb tests. To this group were added two agents from CIC with the Hawaiian Air Force Department.

By February 1948, Task Force 7-5, the security group operating under the J2 of Joint Task Force Seven and composed of agents of the 401st CIC Detachment, was activated under the command of Lt Col Philip R. Cibotti, Jr.

Task Force 7-5 CIC agents delivered security lectures to all Operation SANDSTONE personnel when they reported for work on the project. In essence this lecture took pains to indicate what persons could and could not do from a security standpoint.

Weapons and cameras owned by individuals assigned to the project were taken into CIC custody and returned at the conclusion of the tests.[90]

Although CIC was suspicious that many home made cameras were constructed by the more inventive members of the test party, enough proof for prosecution was collected in only one instance. In this case, the photographs showed [illegible]n Hawaii. They were traced back to a member of the SANDSTONE group on Eniwetok. Although the pictures had been taken strictly for personal pleasure and there was no indication of intentional espionage, the individual was arraigned before a courts martial for his serious security violation.[91]

Throughout the operational area, agents regularly conducted a type of security check they called a "sweep." At unannounced times, agents checked the passes and identification cards of all individuals in the area.[92]

369th CIC Detachment Activated

Security of vessels participating in the SANDSTONE tests rested with the 369th CIC Detachment, activated at Camp Holabird and composed of agents drawn from assignments in the Zone of the Interior. This group commanded by Capt Eugene J. Kolb, arrived at Eniwetok on 22 February.[93]

Case load statistics for March through May, the three months the 369th was actively engaged in investigative activity, show the detachment handled 23 cases. Eight were violations of AR 380-5, five were security surveys and five were security inspections. There were two cases of disaffection and one each of espionage, sabotage, and subversion.[94]

Although investigative activity ceased after May 1948,[95] the official date of deactivation for the 369th CIC Detachment was 1 October 1948.[96]

Part IV: Operations in the Hawaiian Islands

Part IV

OPERATIONS IN THE HAWAIIAN ISLANDS

The security of the Army Establishment in the Hawaiian Islands during the years after World War II was the responsibility of the 401st CIC Detachment with Headquarters in Honolulu, Oahu, T.H. The detachment maintained a branch office at Hilo, Hawaii, to handle the large volume of work encountered there. Leads and cases on the other islands were handled by agents dispatched from Headquarters on temporary duty.

Immediately after the war, the 401st was commanded by Lt Col Philip R. Cibotti, Jr., with Maj Gero Iwai serving as Executive Officer. Major Iwai, whose total service with CIP and CIC in Hawaii came to 15 years, was appointed commander of the 401st on 23 September 1947. On January 1948, Lt Col John W. Ehrle took command to be succeeded by Maj Thomas E. Smullin in June 1948.[97]

T/O Strength Decreased During Period

Authorized strength of the 401st CIC Detachment immediately after the war stood at 19 officers, 9 warrant officers, and 27 enlisted men. On May 1947, this was decreased by seven officers, three warrant officers, and seven enlisted men. A further reduction in November 1949 placed authorized strength at nine officers, six warrant officers, and 20 enlisted men.[98]

The first priority of CIC investigations included background checks of an extremely large number of Hawaiian-born Japanese, who were receiving intelligence assignments with the Army in the Far East. Their linguistic ability was urgently needed. Investigation of subversive activities within the military was also considered a first priority CIC activity.

Travel Control A CIC Responsibility

By virtue of a working agreement with the ONI and the FBI, CIC was the operating agency for travel control. Particular emphasis was placed on surveillance of suspected subversives coming into Hawaii by air. CIC was able to acquire lists of air passengers from San Francisco in advance of their arrival in Honolulu. A lack of cooperation from the Far East nations made it impossible to acquire similar lists of passengers flying in from the Orient. When a passenger was on

CIC's rather bulky black list, a discreet investigation into all his activities during his visit was made by the 401st.

The 401st's work at the Hawaiian airfields was conducted notwithstanding the presence of Air Force CIC Detachment 700-H which was concerned strictly with the security of air installations.

CIC Watches Labor Movements

Because of the great strength of labor unions on the islands, CIC kept tabs on the movements in order to insure the general security of the military. Exemplary of CIC's part in coverage of labor groups was activity in connection with the intra-union disputes which crippled the Honolulu transportation system in July 1946 and on occassions in 1947 and 1948. During transit tie-ups, the Army had to provide transportation for its civilian employees. On the occasions of these strikes, CIC was able to notify the appropriate military commanders in sufficient time to place an Army bus system in operation, preventing a bog-down of Army administrative facilities.

Utilize Surprise Security Checks

When the 401st CIC Detachment conducted a security inspection of an Army unit, it was usually a surprise check. Available CIC agents attempted to gain possession of classified documents from the organization either through subterfuge or outright pilferage. The collected documents and a complete report of CIC's survey were sent to the commander of the unit inspected. Usual procedure was for agents to return delinquent units to inspect corrective measures about two weeks after the original check.

The Case of the "Sure Victory" Group

One of the 401st's investigations in the immediate postwar period concerned an element of the local Japanese population that was certain the sons of Nippon had emerged victorious. This group formed into an organization known as the Hissho-Kai - the "Sure Victory" group. These die-hards, mostly elderly persons, spread rumors and propaganda to the effect that Japan had really won the war. They claimed newspapers were spreading lies about an Allied victory to lead the public astray. The Hissho-Kai collected money from its members for the purpose of defraying the expected expenses in welcoming the Japanese fleet and royalty when they arrived in the territory.[99]

One of the leaders of the Hissho-Kai was

Under custodial detention during the war, was released in September 1945 and immediately began speaking on behalf of the doctrine that the Japanese had really won the war. CIC worked to compile the evidence that led to the prosecution of on charges of violating the revised "disloyalty statutes" of the Territory. The indictment of on ten counts was believed to set a record for the longest indictment in the history of Hawaiian jurisprudence. However, demurrers filed for the defendent in May 1947 were su[illegible]d and part of the "disloyalty statutes" were declared unconstitutional. continued haranguing his ultranationalistic doctrines to his fanatical followers until his departure for Japan in late [100]

Part V: Operations in the Caribbean

Part V

OPERATIONS IN THE CARIBBEAN

At the end of World War II, counterintelligence operations in the Caribbean were performed by four detachments. The two ground forces units were the 470th CIC Detachment in the Panama Canal Department and the 471st with the Antilles Department. Two other CIC units, attached to air commands, were the 606th CIC Detachment with Sixth Air Force and the 472d CIC Detachment with the Antilles Air Command.

Superimposed over these four detachments was a small headquarters unit, the 369th CIC Detachment. Initially this unit supervised the activities of the field detachments and disseminated broad policy decisions to the field. It soon came to operate only as a "paper" detachment and in early 1947 was deactivated.

Headquarters, 470th CIC Detachment was at Quarry Heights, C.Z. Detachment commanders in the 1945-1950 period were Capt Glenn E. Curry, Maj Victor Trask, Capt Harold R. Aaron, and Maj Lloyd L. Hanes.[101]

470th's T/O Sharply Increased During Period

The Table of Organization at the war's end gave the 470th three officers, six warrant officers, and 13 enlisted men. In December 1947, a revision in authorized strength added three warrant officers and six enlisted men to the Table of Organization. A sharp increase in personnel was allotted in September 1948 when the T/O was set at ten officers, 13 warrant officers and 25 enlisted men. Another increase in March 1950 gave the detachment 19 officers, 18 warrant officers, and 37 enlisted men.[102]

About 50 percent of the 470th's personnel were of Latin extraction. While their linguistic ability in Spanish was essential to operations, too many of them were found to be extremely deficient in English. Often case reviewers found that the reports of these men were difficult to comprehend and required considerable revision.[103]
